WATSON'S PARK.—Burnside, Ill., Nov. 29.—Score made by the Gun Club at 10 live pigeons, Illinois State rules:

C E Willard	1221210222—8	Edbrooke	2222120222 – 9
B Rock	1110121112—9	J O'Brien	2111112222—10
Babeuf	1121112210—9	Cap Anson	1022221210— 8
C B Dicks	1122222220—9	L M Ham	1002000022— 4
Ed Stack	1221112201—9	R B Wadsworth	2122212222 –10

On shoot-off Wadsworth won first, Stack second.

At 20 Peoria blackbirds:

Wadsw'h	01011110110111010110—14	L M Ham	10111010111000010110—11
B Rock	11101111111110101111—17	E Willard	11111000011111000100— 9
Ed Steck	11001111001100011110—12	C Anson	01100111001110110110—12

Cap Anson	1010111111010111101111111—20

Sweep, same day at 5 live pigeons:

R B Wadsworth	21112—5	E Steck	10221—4
A W Reeves	01121—4	G Kleinman	11111—5
Smith	00101—3	Ike Watson	11212—5
Cap Anson	12112—5		

Tie for first won by Wadsworth with 13 straight.—RAVELRIGG.

NIAGARA, N. Y., Dec. 1.—Niagara River Gun Club. Match No. 1, at 7 live birds, entrance $2, ground trap, 30yds. rise, 80yds. boundary, use both barrels, money div. 50, 30 and 20 per cent.:

Geo Margetts	1111121—7	S M Brooks	1120001—4
Patterson	2121011—6	John Few	0021201—4
Case	2221110—6	P Ellis	2110101—5
McBean	1120111—6		

Shot off tie on second in next match.

Match No. 2, same as No. 1:

Kellogg	1121211—7	McBean	1101111—6
Margetts	1111112—7	Brooks	2000110—3
Patterson	0121111—6	John Few	0111111—6
Case	1111111—7	Ellis	1010100—3

Ties all div.

Match No. 3, at 5 live birds, money div. 60 and 40 per cent.:

Geo Margetts	11111—5	McBean	11111—5
Patterson	11122—5	Brooks	11210—4
Case	12111—5	Ellis	11220—4

McBean and Margetts div. first on shoot-off; second div.

WELLINGTON, Mass., Dec. 6.—A pewter cup match was opened at the grounds of the Wellington Gun Club to-day to take the place of the monthly merchandise match. The conditions of the match are that the man making the highest score at 15 single and 5 pairs bluerocks is entitled to a cup each Saturday, and that the shooter winning the greatest number of cups by the last Saturday in February will receive $50 in gold or its equivalent in plate. In this match to-day Perry and Gore tied with 20 each, and in the shoot-off Perry won. The other scores in this match were: Moore 19, Dill 18, Hooper 16, Cowes 15, Stone 12. Ten rockets, shot at in the dark: Perry and Bradstreet 9, Dill 8, Hooper 7. A practice match, at 15 bluerocks, from 3 unknown angles, will be opened at the grounds of the Wellington Gun Club next Monday. This match will close on the last Saturday in February and the 10 best scores are to count for the prizes: The first prize $25, second $20, third $15, fourth $10, and six prizes of $5 each.

"LOST, STRAYED OR STOLEN."—Years ago when a farmer lost a sheep or colt from his pastures it was the custom to write out notices similar to the heading above and then nail the notices along the road side, where the papers would be apt to catch the eye of those passing along. In these days we do matters better, and catch the eyes of thousands of readers by a single notice in the columns of the FOREST AND STREAM. Jack Elliott, of Barlow-on Sound, the man who is known to all as "Happy Jack Elliott," is in trouble. His Parker gun is "lost, strayed or stolen." At Erb's Park on the last day of the tournament some one exchanged guns—we will say unintentionally—taking Elliott's "mascot" gun and leaving a Parker, it is true, but not Jack's. His was a nearly new one; this is well worn. As Elliott is to shoot two races this week he is naturally worried. The number of the missing gun is 60794, so if any one has it not knowing the owner it can be returned as above. Elliott wants to win his matches with Daly and with Ryan, but will lose the forfeit rather than shoot with a strange gun.—JACOB PENTZ.

Canoeing.

THE A. C. A. MEET OF 1890.—V.

TENTS AND CAMP OUTFITS.—There were tents of all styles and sizes, and in large numbers too, at the camp; but among them all was nothing especially new or striking. The ordinary army wall tent, from the 7×9 to the 12×14 size, was very generally used and served fairly well, thought devoid of any original or especially meritorious features. The men either bought or hired them of tent makers as the easiest way of procuring a tent, and with no regard to their fitness. Being large and unwieldy, and offering a good hold to the wind, they furnished excitement and exercise on many a breezy night, all hands turning out for tent peg drill, perhaps to extricate some sufferer from the ruins of his home, and to pitch it anew for him. The maddest man in camp during the entire meet was one whose tent *did not* blow down, though he was called away in a hurry from the minstrel show by the news that it had. The larger of these tents were in many cases very neatly and tastily furnished, and through the half open flaps a very cosy interior was displayed to the passer by. One of the Mohican tents in particular attracted general attention. The smallest ferm of wall tent, the serviceable little Clyde, with its floor sewn in, was used by many of the less pretentious campers, those who carried to camp little save the simplest and most essential articles. The single pole square pyramidal tent was also used by many of the same class of campers, among them the Ianthe and Brooklyn men. The little "Mini" tent, described in the FOREST AND STREAM of April 24, 1889, was represented by a very neat piece of handiwork, built from the published drawings by Mr. J. S. Wright, of New Bedford. The tent is so neat and compact, and so easily set up, that it is excellently adapted for canoe use; while it needs no pegs, and so may be pitched on a rock or a wharf or any level place.

Of canoe tents proper, to fit over the canoe, but few samples were seen, and these showed no improvement over the original ones at Grindstone in 1884. In fact it is undeniable that so far as the meets are concerned, improvements in tents and camp outfits have practically ceased within the past three years. Men waste little time or thought over tents or camp furniture, but take what is easiest to be had of the regular dealer. Most of the tents are more completely furnished than in the past, board floors, rugs, curtains, cots, chairs, etc., considered mere matters of necessity now, where once they were looked upon as the highest degree of luxury. There were a number of simple cooking kits about the camp, used by those who were fortunate enough to be independent of the mess tent, but they were little different from the many which we have described at various times.

Most canoeists are ingenious enough to improvise all needed camp furniture from common pine boards, tables, chairs, etc., being quickly thrown together, and for this purpose a good supply of cheap planed boards is necessary. This year the supply was limited and the prices high. A very handy addition to a camp chest is a saw handle with three interchangeable blades, the largest being heavy enough to cut thick plank or timbers, the whole taking up practically no room. With such a saw, a sharp hatchet, and a few sizes of wire nails, which the canoeist should carry with him, the tent floor can be quickly built and table, etc., rigged up. There are always carpenters to build the floors and do similar work, but they are in such demand at times that it is worth while to do one's own fitting up. The men who obtain the greatest amount of enjoyment, and experience the fewest vexations at an A. C. A. meet are the ones who go with the smallest, most compact and complete camp outfit, everything carefully packed to save weight, bulk and number of packages; thus lessening the inevitable difficulties of expressage and transportation. At the same time this outfit should be so complete as to make the man entirely independent of outside aid save in the furnishing of raw materials. If the Association can give reasonable transportation, sufficient cheap lumber for floor and float, and such supplies as milk, meat and bread, they ask nothing more. A man so equipped is not likely to worry over the shortcomings of the camp caterer, or to spend a day in the rain because he has no floor to pitch his tent on; nor will he be troubled with an avalanche of baggage when he breaks camp. One model camper of this sort is that old campaigner Capt. Ruggles, whose innocent looking camp chest contains wonders in the shape of a tent, a bed, and even a whole portable camp floor.

A. C. A. FINANCES.

THE following abstracts of the treasurer's and purser's reports, for which we are indebted to the *Sail and Paddle*, complete the financial reports of the Association, the reports of the camp site and regatta committees having already been published:

A. C. A. TREASURER'S REPORT, 1890.

RECEIPTS.

Balance from former treasurer (see Year Book)	$131 04
By purser Atlantic Division, full income	329 26
By purser Eastern Division, 30 per cent	135 90
By purser Central Division, 30 per cent	60 00
By purser Northern Division ($75 due, but unpaid)	——
By camp dues at meet, 248 members @ $1.00	248 00
By camp site committee account	636 00
By interest to date	1 87
	$1,542 07

EXPENDITURES.

To expressage on box from ex-treasurer	$3 30
To postage stamps	58 15
To stationery	16 55
To membership certificates	16 50
To stamps and printing, commodore's use	32 10
To badges for camp use	41 37
To secretary's expenses	25 00
To regatta programmes	2 50
To buoys lost at camp (replaced)	11 50
To regatta committee's account	63 23
To camp site committee's account	1,223 24
Balance	48 60
	$1,542 07

Bills to the amount of $153.65 on camp site account are still unpaid, but provided for by an advance from the Atlantic Division. If the Northern Division had paid its dues to the A. C. A. treasury the expenses would still have exceeded the receipts by $30.08.

F. L. DUNNELL, Sec'y-Treas.

Audited and found correct, JAMES R. STEERS,
MORTON V. BROKAW.

ATLANTIC DIVISION PURSER'S REPORT.

RECEIPTS.

By cash from former purser	$217 12
By dues and initiation fees, 1890	376 00
By dues from 1885 to 1894	32 00
	$625 12

EXPENDITURES.

To office expenses	$61 24
To A. C. A. treasurer (By-Laws, Chap. I., Sec. 2)	329 26
To balance (Nov. 7, 1890)	234 62
	$625 12

MEMBERSHIP.

Membership Nov. 4, 1889		231

Total membership October, 1890		162

JAMES K. BAKEWELL, Purser.

Audited and found correct, THOMAS W. BAKEWELL,
C. F. HOLDSHIP.

EASTERN DIVISION PURSER'S REPORT.

RECEIPTS.

By balance from former purser	$52 23
By dues of members for 1890	296 00
By initiation fees	146 00
By back dues	11 00
	$505 23

EXPENDITURES.

To office expenses	$75 18
To expenses of Division meet	150 06
To A. C. A. treasurer (30 per cent. of income, $453)	135 90
To balance Oct. 1, 1890	144 09
	$505 23

MEMBERSHIP.

Membership Oct. 11, 1889		168
New members	146	
Reinstated	9—155	
Dropped for non-payment	23	
Transferred to other Divisions	2	
Resigned	2— 27	gain 128
Total membership Oct. 1, 1890		296

RALPH F. BRAZER, Purser.

Audited and found correct, R. F. HEMENWAY,
FREDERICK F. WALSH.

NORTHERN DIVISION.

The report was not forwarded in full, but from memoranda sent on by Purser Chas. M. Whitlaw the accounts stand as follows:

RECEIPTS.

By balance from former purser	$50 20
By dues of members for 1890	180 00
By initiation fees, 71 new members	71 00
	$301 20

The expenses of the meet and office expenses used this up and left a deficit to be made up by the subscription of members. The Division was unfortunate in holding the meet during bad weather and arranging for many more members than attended.

Income, $251, 30 per cent due A. C. A.	$75 30

MEMBERSHIP.

Number of members on roll at end of 1889		171
New members	71	
Dropped	62	gain 9
Total at end of 1890		180

BROOKLYN C. C.—On Dec. 2 the Brooklyn C. C. gave a very pleasant smoker at which a number of guests were present. The subject of camp fire and canoe cooking, with practical illustrations by Messrs. Wilkin and Weeks, filled the entire evening.

IANTHE C. C.—On Dec. 6 an informal smoker was held at the clubhouse.

"GENERAL PURPOSE" CANOES.

ditor Forest and Stream:

In your issue of Nov. 27, "Pecowsic" says: "In my opinion the A. C. A. is entirely on the wrong track in trying to encourage what is termed an 'all around canoe.' Who ever heard of an all around horse."

Several millions of people have heard of the "all around horse," and quite a number have owned him. I am one of them. This horse was 6 years old, a bright bay with very heavy black mane and tail. He stood nearly sixteen hands and weighed 1,200lbs. He was so gentle a child could handle him, and in driving it made no difference whether the reins were tight or loose. He feared nothing, and could be driven alongside of a moving train. He could draw a big load, or could cover forty miles of hilly country road in five hours, and go the last mile as free as the first. On a good level road he could cover eleven miles in an hour. He was a splendid "all around horse." What has a horse to do with a canoe? Nothing, only that the writer considers "Pecowsic" is wrong on both.

There are many good all around canoes at the present time. Take one of them, Vesper. This canoe was designed by Mr. Gibson in 1886 and won the trophy race against thirteen of the best American and English canoes, including Pecowsic. Next day she lost a 2½ miles to windward and return, being beaten by about two minutes by Pecowsic; and Pecowsic was built to go. Since '86 a great many Vespers have been built and all have given good accounts of themselves, whether in races or on the cruise.

Who will say that Vesper is not a good "all around canoe." And Vesper is but one of the many good models that can be obtained within a 16×30in. limit.

In fixing the limit of the cruising canoe "Pecowsic" suggests 15×30. Make it 16×30; 15×30 will shut out many good canoes; and when you take subscriptions for a cruising trophy put the writer down for $25, if agreeable to the committee in charge.

CANTON, N. Y., Dec. 1. J. H. RUSHTON.

Editor Forest and Stream:

In your edition of Nov. 20, giving an interesting account of the proceedings of the late executive meeting, there is an error which I write to correct. Under the head of changes proposed by myself you print "The foregoing rules of measurement * * * shall not disqualify any canoe built prior to Jan. 1, 1891," etc.

The letter press copy of my letter shows that I wrote 1890, which on examination will be found to be the same as incorporated in the 1890 year book. The reason why it was inserted in the year book still holds.

I also proposed that under the head of "Races" should be inserted "All races, with the exception of the sailing and paddling trophy and Pecowsic cup races, shall be open to such canoes only as shall come within the definition of the general purpose canoe."

I believe that my letter as written would not lead any one to suppose that there would be any partiality shown to the racer of 1890 and denied to that of 1891, and that the objections of Mr. Quick as published in the FOREST AND STREAM are without foundation. My intention was that the A. C. A. should recognize what we already have, viz.: paddling racers, sailing racers and general purpose canoes, and show by their programme that they wish to encourage the general canoe. Some object that the proposed changes are too radical. In answer would ask: Would the attractions of the meet decrease? Would the interest in the races be lessened? Would the annual attendance be diminished? The answer to all can be given in a decided no.

I was pleased to read in the FOREST AND STREAM of Nov. 27 a letter from "Pecowsic," advocating among others these proposed changes. His proposition to institute a cruising trophy should recommend itself to many who believe that the cruising canoe has not had its just share in the programme.

I hope your readers may be favored by letters from others on the points raised in "Pecowsic's" letter. J. N. MACKENDRICK.

GALT, Ont., Nov. 30.

COLD CANOEING.

THE reader must not expect an account of a journey in an Eskimo kayak. The writer has never seen the Arctic zone nor experienced anything more frigid than a last summer's bill for ice. This is an account of a trip in our own latitude, but a cold one, nevertheless.

I was living in Rochester, N. Y., then. Being an inveterate canoeist and having friends equally affected—I won't say afflicted—we could not allow a holiday to pass any time of the year without, if possible, indulging in our favorite sport. We had been counting on Thanksgiving for an all-day's cruise up the Genesee River. We were to leave our boat wherever night should overtake us, and the following week take a day from business to go up on the cars and leisurely run down with the current. Luck was against us, frost set to work long before we could start. Unseasonable and unreasonable weather we thought it, despite the satisfactory remarks of the poultry dealers about an "old-fashioned Thanksgiving."

Our holiday dawned clear and sharp. "Never mind the temperature," said Harry Gordon, the friend whom I had invited. "I guess if people can take rides in a sleigh, where they can't exercise, we can, with warm clothing, brave the weather in a canoe where one of the conditions is to keep moving like a windmill."

From the boat house we carried to the Erie canal, up which we intended to go for a few miles until we could portage into the Genesee above the rapids. The canal boats, after some unprofitable buffetings among the ice, had a day or so previously laid up for the season, and the cakes made by their movements were now connected by a thin sheet nearly half an inch thick. Though our canoe, an open one, was one of the best that Rogers of the Peterborough Canoe Co. could turn out, and had withstood many a strain, we looked upon this test of strength with misgivings.

Finding an open spot we got afloat; I took the stern paddle while Gordon in the bow with a tough maple blade adroitly thrust aside the impending cakes in the open water or as vigorously cast about him as we advanced on the new ice, which reached in many places from shore to shore and obstructed our progress.

The boat proving its honest Canadian workmanship by many a hard knock we at last got safely into the river, where fortunately the strong current had prevented the ice from forming to any extent.

Good, steady work until noon made our mid-day meal very welcome. There were few that day that did not sit down to a more elaborate Thanksgiving dinner; but there could have been none that enjoyed with a more hearty appetite what they had than we did, as we partook of the few simple viands in our canoe moored along the snow-clad banks.

The river flowed through an alluvial bottom with many a bend and twist. The banks, lined with a fringe of tall trees which every now and then multiplied into a grove, was of a uniform height just sufficient to prevent us from seeing beyond them. We had hoped that night to have reached Avon, twenty miles above Rochester, but the windings of the river and the frequent acceleration of the current into miniature rifts, combined with our being necessarily encumbered with considerable clothing, made our most vigorous efforts unsatisfactory.

Before we knew it the early winter twilight was upon us. The holding of these Genesee bottom lands by a few wealthy men, and their leaving them in a state of nature, while making charmingly picturesque scenery, keeps the houses remote from the river. We had encountered hardly any one all day. Now night was approaching. We could not see further than the banks, no house was near, no person within hailing distance.

It became dusk. The narrow river, with its gigantic trees reaching their branches to each other on the opposite banks, was nearly inclosed. We traveled through the frame work of a summer house. The night was clear. The ground was covered with snow. The reflection of the trees and of the whitened ground was perfectly reproduced in the placid waters over which we moved. So sharply defined was the imagery on this mirror that we could not tell the counterfeit from the genuine, and would frequently run aground in our gropings for the channel.

The silence of death hung over the deserted scene. Paddling swiftly onward without a word, impressed with the sense of isolation, we suddenly felt a shock and heard a rush of water against the canoe, and into it, as we supposed. We were sure we must have struck a snag, and already were anticipating an icy plunge. We pushed ashore at our best speed, to have our fright allayed by the discovery of a branch across the bow.

We were in for it now. We knew we could not get back that night, and so determined to take to-morrow from business and push on to Avon. The river soon ran close to a hill. A light appeared. We left the canoe, and found several houses; the small hamlet of Rush. Applying at several places we at last found one that was willing to accommodate us, and we soon became a part of the party of holiday merrymakers that the old farmhouse contained.

The morning dawned threateningly with a much higher temperature. We had been under way but an hour or so, when a drizzle commenced. We donned our rubber coats and covered up the gun. This did not prevent us from taking it out immediately and killing a gray squirrel. The game lay dead in the top of a high tree entirely devoid of branches until the top was

reached; but Gordon was bound to have it. By the aid of an entwining grape vine, after repeated efforts, he at last succeeded in getting the squirrel down and himself wet into the bargain.

The rest of our trip had better not be told. "The rain descended and the floods came." We drove ahead at our best speed, but not so fast but that we landed in Avon in a driving rain. There we stowed the canoe, and there it remained until the grass and the leaves replaced the ice and the snow. But we never regretted our journey. It afforded us novel experiences and showed us that while less approachable nature is beautiful in winter as well as in summer. The reverse side of the picture has many colorings which tell as much of the artist as the completed work, carefully prepared for the indolent eye. RALPH K. WING.

NEW YORK C. C.—The annual meeting of the New York C. C. was held on Dec. 3 at the residence of Com. Nadal. The new constitution lately drawn up was adopted. The following officers for 1891 were elected: Com., William Willard Howard, Vice Com., Dr. B. F. Curtis, Secy-Treas, Charles J. Stevens, Board of Trustees, William Whitlock, Schuyler Schieffelin, M. T. Bennett, Jr. Com. Nadal has perfected a plan for a series of meetings through the winter, and a committee was appointed of which he is chairman, to carry out the scheme. The first meeting was held on Dec. 5 at Capt. Nicolas' fencing rooms, 19 West 24th st., about 25 canoeists being present from the New York, Brooklyn, Yonkers and other clubs. Mr. C. K. Munroe, one of the old members of the club, was also present. The evening was passed in discussing various points of canoe sailing, a light supper being served at 10:30. The entertainment was a decided success.

ROCHESTER Y. C.—The officers elected at the annual meeting last week were: Com., J. R. White; Vice-Com., E. N. Walbridge; Fleet Captain, William Wood; Sec'y., C. S. Davis; Treas., G. H. Briggs; Surgeon, Dr. F. H. Sawers; Meas., J. H. Pillow; Executive Committee, George H. Newell, R. K. Dreyer, A. T. Hagen, J. F. LeClaie. A vote of thanks was tendered to the retiring officers for their successful management of the club for the past year. H. S. Tomer on behalf of the club presented to Com. Newell a handsome yacht gun suitably inscribed as a token of the esteem and regard in which he is held by the members of the yacht club. Among the new yachts for next season are a schooner of 48ft. l.w.l., purchased in Boston by Com. White, and three new yachts 23ft. over all from a Burgess design, building by J. J. Leary.

PASSAIC RIVER.—The canoe clubs have taken up tug-of-war since the season has closed. The team of the Ianthe C. C. has lately taken part in several contests with teams from the Passaic rowing clubs, and has now challenged the team of the Orange C. C. The Ianthe C. C. has also purchased ground for a new club house. Its first smoker was held on Dec. 6. The Arlington C. C. housed its float on Nov. 30. The Bayonne C. C. has two new Ruggles canoes, Mr. F. B. Collins having purchased the Wraith from Mr. D. D. Gessler, and Mr. J. L. Collins having a new 16×30in. built for him by Capt. Ruggles.

ATLANTIC DIVISION.—Vice-Com. Dorland has appointed the following committees: Regatta, M. V. Brokaw chairman, H. E. McCormick, F. E. Moore; camp site, B. H. Nadal, chairman, W. C. Lawrence, R. N. Peebles. Suggestions as to suitable camp sites are invited from members of the Division as an aid to the committee.

BOWDISH CANOES.—On Oct. 9 Mr. E. R. Bowdish severed his connection with the Bowdish M'f'g Co. as designer. We understand that he proposes to establish a new plant for the building of fine canoes and boats in season for the spring trade.

MASSASOIT C. C.—The present address of the secretary is J. J. Brooks, 218 Tremont street, Boston.

A. C. A. MEMBERSHIP.—Atlantic Division: Chas. Lane Poor New York.

Yachting.

Yachtsmen who do not see what they want under this heading will please lookunder the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

YACHT PORTRAITS.—Mr. N. L. Stebbins has now ready a supplement to his book "Yacht Portraits," published last year. It consists of 16 new plates, intended for insertion in the book in place of the blank leaves now there. The price is $1.75.

A NEW SCHOONER.—On Dec. 3, the new schooner Orinthia was launched at Bedell's yard, Glenwood, L. I. She was designed and built by Joshua Bedell for Mr. Wm. Walker, of New York, and is a keel boat 65ft. over all, 16ft. beam, 9ft. hold and 8ft. 6in. draft, with an iron keel.

CORINTHIAN NAVY.—A lecture will be delivered at the Hotel Marlborough, Broadway and 36th street, on Dec. 11, at 8 P. M. by Com. Robert Center, S.C.Y.C.

CHOCTAW.—Mr. Arnold Thayer has sold his Burgess 40 to Messrs. C. F. Brown and H. C. Higginson, of Newburg. Mr. Brown formerly owned the Burgess boat Bonita.

AWA.—This Burgess 40, built in 1889 for Providence yachtsmen, has been sold to Mr. Frank Benson, of New York.

SULTANA, steam yacht, Mr. T. L. Park, sailed from Bermuda on Nov. 24 bound for Madeira.

FLEUR DE LYS.—Mr. George Trotter's new schooner arrived at New York last week.

SCHOONER RACING IN 1890.

WHEN, some four years since, as a side result of the America's Cup contest, the 90ft. schooner class blossomed into life with such buds of promise as Sachem, Sea Fox, Merlin, Mayflower, Elma and Alert in quick succession, with the remodelled Grayling and the imported Miranda, there seemed good reason for the belief that schooner racing, which at one time held a monopoly of yacht racing, was to regain some of its old-time glory, and that the fame of America, Sappho, Magic, Fleetwing, Henrietta, Columbia, Idler, Montauk and Halcyon was to be dimmed in a measure by these newer celebrities. Unfortunately these roseate anticipations have fallen very far short of a realization, and in the course of two or three seasons the promised schooner revival has not only run out entirely, but left a dreary void. In 1885, the last year that the old boats had the entire field to themselves, the racing seemed poor enough, but it was lively and exciting to a degree compared with the past season, or, so far as is now probable, with the coming one. At that time there were still signs of vitality in the class, and while none of the boats were really up to the times, they at least entered the races and furnished a fair amount of sport to contestants and spectators. Though shorn of a part of their former glory, the great club regattas still made a goodly showing in the way of lofty spars and acres of kites, and had by no means reached the very low ebb of the past year.

The most noticeable thing about the accompanying table of the year's races is the lack of well-known names, the few boats that raced are far surpassed in numbers, and especially in tonnage, by those that were tied up at their docks or spent the summer in doing houseboat service; Mohican, Fortuna, Alert, Montauk, Grayling, Elma, Ramona, Sachem, Constellation, Miranda and Gitana. Of the dozen that made all the racing, nearly half were small or ancient craft; while of the cracks not one started more than four times. The programmes of the various clubs included over 20 separate events open to schooners in nearly all of them first prizes of about $150 to $200, and second prizes of about half these amounts being offered for schooners in three or four classes; the prizes in some cases being of greater value. Of these regular club events but 9 received any entries at all, the dozen others, in which were included the annual regattas of such clubs as the New York, Seawanhaka and Atlantic, the fall regattas of the New York and Eastern, and other equally good opportunities for racing and prize winning, being abandoned entirely for lack of entries.

The promise of the early season was not bad considering the general dullness of racing in the larger sizes of yachts; Merlin was ready for the fray, Sea Fox and Mayflower had both changed ownership, going to the east of Cape Cod and into good hands, Marguerite had been purchased by an owner who proposed to race her, and who expended considerable money in various alterations, Miranda also had been overhauled, and proposed to renew the fight. That Grayling was out of the racing for one season promised rather to help the sport, leaving the field free for a new champion. Just how it happened that after all there was no schooner racing is even now a hard thing to describe; the Eastern yachts did not care to come to New York, Marguerite's alterations were greatly delayed, and the big craft, such as Montauk and Ramona, though still plenty good enough to make sport with their fellows, had no stomach for racing. One by one the spring regattas went by without a schooner race, the only *bona fide* starter coming to grief at the start of the New York Y. C. regatta by drifting stern first on to the West Bank before the gun fired.

The usual prizes were offered, and if it had been a mere matter of money the club would have gone further in this direction to secure entries. The work undertaken by the various regatta committees in the way of a personal canvass of owners is not generally known, but no effort was spared to induce them to enter for the sake of the clubs; but to no effect. No one wanted to race, and no one would enter to please the committees, so there was no racing. The only club which made any showing at all was the Larchmont, the racing atmosphere which pervades the locality of the club house being stimulating enough to induce half a dozen races which made good sport for all concerned, albeit the craft were noted rather for a flavor of age and respectability than for speed or good looks.

The first race of the year was a match over the Stamford course of the Larchmont Y. C. between Azalea and Agnes, in which the former won easily, though losing her foretopmast. Following this was an amusing race between Agnes, Leona and Elfin, the sequel to which was a match between the latter pair, which was chiefly remarkable for the numerous mishaps which befel one of the competitors and the dire straits to which her crew were reduced in the efforts to repair damages. So far as these little races are concerned, they show that if men really care for sport they can get it out of yachts that are by no means first-class, and that the owners of many of the larger and really fast boats, which are considered out of the racing, might still find plenty of sport if they wished it by entering in some of the many races where none of the new cracks are present. There were enough schooners in the Lower Bay on the occasion of the New York Y. C. regatta, not one of them of the modern type but all on a fair plane of equality, to have made a fine sight for the spectators and a creditable showing for the club, had their owners possessed the spirit to enter them. It is perfectly natural that the owner of an old boat after being defeated by a new one should decline to race further; but the case is very different when no new boats are present, and when a boat is no worse off because she has no lead keel nor white topsides than half a dozen of her old competitors.

It was not until the middle of July that the small surviving fleet of modern schooners really essayed a race; the occasion being the annual regatta of the Eastern Y. C., when, after a day lost in a drift, the fleet started out with a strong N.E. breeze and a tumble of a sea to sail the short twenty-four knot course to Harding's Ledge and back. As far as a test went this was most unsatisfactory, a short course for 90ft. yachts, a start under spinnakers followed by a reach part of the way out, and a long leg for most of the way home, with hardly any real windward work. The race was chiefly remarkable for the poor pilotage on nearly all of the boats, Sea Fox and Mayflower losing considerable on the way home. Merlin won all the more easily on that account, beating the Fox by a margin of 7½ minutes.

It was intended and expected that the annual cruise of the New York Y. C. would make amends for the dullness of the spring racing, in fact many have ascribed the decline of the regattas in part to the influence of the New York cruise, which has certainly gained much in importance of late years. While nothing was left undone on the part of the regatta committee and the officers of the club to make the cruise a success, it was apparent long before the rendezvous to every careful observer that there was little more life and interest in racing than had been shown in June, and that the cruise was likely to fall below rather than to surpass its immediate predecessors. The fleet assembled at New London was a fine one in point of number as well as in the character of the yachts, but it was not a racing fleet, as was evident from the first. The sudden death of Mr. Schuyler, in the middle of the fleet, and on the eve of the first race, robbed the cruise of what vitality it had; several of the races were abandoned, the yachts sailing at will from New London to Newport on the day after Mr. Schuyler's death, and from Newport to Vineyard Haven on the day of his funeral in New York. This left but two runs in place of four, destroying the interest in one feature of the cruise, though it does not appear that in any event the racing would have been up to that of 1889.

The Goelet cups were sailed for off Newport, over the famous "Sow and Pigs" course, but in a light wind that carried the forty-foot Gossoon out of the Sow and Pigs, 18 knots, ahead of the schooners; in fact, Volunteer and Gossoon monopolized most of the honors, the schooner racing being very tame, Merlin winning without an effort. Palmer started in the race, but in such weather was soon hopelessly out: Marguerite also started, but on the run from New London she had grounded and injured her keel so that the board could not be lowered, and in spite of her 11ft. draft she was nowhere to windward in such weather.

The best day's sailing of the year for the spectators was on Aug. 4, when the fleet, 50 odd yachts, ran across from Newport to Vineyard Haven, over as fine a sheet of water as there is on the coast, and with a strong S.S.W. wind driving on the quarter. It was a real pleasure to see the hypochondriacs hump themselves and get over the ground, proving that some of them could race at times if they only knew it. While the new ones, Merlin and Volunteer, led the way, Montauk hung to their heels in a way that must have astonished herself, while Palmer, Norna, Crusader and Intrepid were within hailing distance of the leaders. As they sped through Vineyard Sound, with balloon sails, both jibtopsails and maintopmast staysails, all drawing, they made a picture such as is seldom seen now. The keenest and most exciting form of yacht racing is a struggle between two or three picked and evenly matched boats such as Puritan and Genesta or Minerva and Gossoon; the size has nothing to do with the interest so long as the boats are closely matched. At the same time such a duel can never present the imposing spectacle of a fleet of racing schooners under balloon canvas, such fleets as were once common on both sides of the Atlantic, but are now seldom seen here and never abroad. Unfortunately, as before stated, this run was not timed, and does not go on record as a race.

After such a day as this it is disappointing to find that on the morrow, with the same fine S.W. breeze to order, the mere name of a race frightened over 40 of the fleet through the short cut to New Bedford by the way of Quick's Hole, leaving but 15 to make a race by way of the Vineyard Sound Lightship. Sea Fox gave Merlin a rub for a time, but the latter shook her off when beyond Nobsca Light, beating her in by 15min. Mayflower was beaten another 10min. on top of this. Miranda had met with a mishap in Newport, her boom dropping on the wheel and crushing it, so that she missed the Goelet Cup race, but she started on this run though making but a poor showing. Iroquois did some very good work, beating Œnone very handily all day. The second and final run was on Aug. 7, a drifting match without any decisive result, Merlin winning, however, while Marguerite again went ashore.

The final race of the cruise, and as it proved, of the year, was on Aug. 8, the classes and prizes being: Keel schooners, open to all, $200, first class $200, second class $200, third, fourth and fifth classes $200. The day was clear and bright, with a light wind, nothing to frighten the most timorous racer, the course being but 12 knots to windward and return, but out of the fleet only three of the smaller yachts started, Quickstep, Œnone and Iroquois. The former won easily, beating Œnone over 20min. This ended the schooner racing; the fall regatta of the Eastern Y. C. found nothing larger than the 46ft. singlestickers at the line, the Larchmont Y. C. fall regatta fared as badly, and the projected fall regatta of the New York Y. C. was finally abandoned at the last moment, after all preparations were made, because no one would enter in any class.

It is not possible to obtain a full list of prizes won, as the values are often not announced in the race programmes, and in the case of the schooners it makes little difference. We give in the table several amounts. A table of all prizes offered, but not raced for would be an interesting appendix, but we have not the information. The table of starts and totals is based on positions in part, and not on actual prizes; the two runs of the cruise were separate races, so far as the merit of winning goes, though but one first prize was given in each class. We have credited each first place as a win and also each second place, when from the number of starters, four or more, it would be equivalent to a second prize. The heavy-faced numerals in the main table show where prizes were given. When we come to the records of the singlestick classes it may be worth while to attempt some sort of an average record, but such would obviously be impossible with so few races as the schooners have sailed. So far as honors are concerned Merlin comes out ahead, having beaten both Sea Fox and Mayflower in every race, though this of itself is not much, considering the way the latter two were sailed at times. In the other classes there were not enough entries to warrant any definite conclusions save that Quickstep is a very fast little boat, which all knew last year.

In the races on the Lakes and in other localities than New York and Boston the schooners were hardly seen, on Lake Ontario Ori-

cle was the only representative of the rig, Idler and Countess doing no racing. The small schooners of under 50ft. that were once found in such numbers in the East have disappeared entirely from racing.

It is too early yet for any definite forecast of next year, but the outlook for schooner racing is very poor; if boats would not enter this year there is no apparent reason for them entering next. The largest racer in the class, the 106ft. Constellation, may join the singlestickers, a fact which is not likely to have much influence on racing, one way or the other. Fortuna is being fitted with a more modern rig, and may choose to take a hand in the keel class and the races of the cruise. Two or three new yachts of Quickstep's class are promised, though whether for racing or cruising is not yet announced; if for the former they will have their work cut out to beat the little steel flyer. Comparing this year with last we find that the 12 races of 1889 had 93 starters, while the same number of races this year had but 43.

The reason and remedy for the present condition of schooner racing is something for committees to puzzle over this winter. A few would have it that the trouble lies in the amount and character of the prizes, that yachtsmen tire of accumulating silverware and that cash prizes of large value will restore racing. Against this view is the experience in England, where the once prosperous schooner class has long since entirely disappeared, there being but one schooner, Amphitrite, in the British racing to-day. That this is not due to lack of cash prizes is shown by the following table, from a late number of the *Field*, showing the amounts given in prizes each year:

Year.	Prizes.	Year.	Prizes.	Year.	Prizes.
1855	£2,732	1867	£5,100	1879	£10,250
1856	3,800	1868	6,210	1880	12,700
1857	3,670	1869	6,723	1881	11,650
1858	3,900	1870	7,897	1882	12 000
1859	3,700	1871	7,987	1883	13,720
1860	3,400	1872	10.551	1884	11,600
1861	3,724	1873	11,312	1885	13,079
1862	4,000	1874	13 264	1886	10,410
1863	4,540	1875	12,498	1887	13,510
1864	5,400	1876	13,542	1888	9,320
1865	5,800	1877	13,220	1889	11,150
1866	5,600	1878	13,300	1890	12,020

While the totals have held their own very steadily from year to year, schooner racing, and in fact the single-stick racing in the large sizes, have steadily declined, until one is dead and the other in a very moribund condition, with but two recognized racers of over 70ft. l.w.l.

One thing must not be forgotten in considering large cash prizes, a few of them, for half a dozen or so of races would not make winning profitable, or induce men to race for the chance of making their expenses; in order to show a balance on the right side in September it is necessary to start and to win, too, in 20 to 40 races. This year Iverna made 38 starts, winning $5,220; Thistle made 41 starts, winning $5,150; Valkyrie, 34 starts, $1,550; Dragon, 40 starts, $2,405; Velzie, 40 starts, $1,615; Yarana, 40 starts, $3,500; and in the smaller classes a number of yachts have started 40 times. In order to make yacht racing so profitable an investment as to induce men to follow it, the entire American system would have to be changed, the number of races being trebled. As one great trouble now is that men are too busy to give their time to yacht racing even in the ordinary regattas, this remedy would hardly avail.

One reason for the absence of the older boats is their inferiority compared with the latest craft, but this does not explain why the new boats keep out of the races, nor why the old ones fight shy of races in which none of the new ones are entered. One trouble undoubtedly is the cost of racing a large yacht in proper form, and the loss of the boat for other purposes so long as any racing is in view. This is a serious difficulty, and keeps many boats out of the races, but it is the inevitable result of advance and improvement. It seems like a retrograde movement to clip the wings of the racers and make them go slower in any way.

One of its effects is seen in the increased number of racing craft of small size, and the greater number of races sailed by them; and so far as the sport is concerned this a gain rather than a loss, as the small craft are certain to bring in more men than the large. None of us are ready, however, to stand by and see the large yachts disappear entirely from the racing. There still remains one remedy to be tried, and though a difficult one it may not be beyond the powers of the regatta committees. This is the creation of a class limited to what is commonly known as "cruising trim," or in other words, the limitation of light sails, of stripping the boats, and of other extreme racing features, thus lessening the labor and expense of entering a race. If such a class could be established it would take away the excuse that many now have for not entering, but it is impossible to say just how successful the result might be. As long as a depression of this kind in yachting is not due to some specific cause, such as the influence of a bad rule of measurement, which is not now the case, the remedy must be moral rather than material, men must be stirred up to a renewed interest in the sport and to a pride in the achievements of their clubs, and if anything can be done now in this direction it is likely to do much more good than the offering of larger prizes or any changes of rules.

HURRY UP THAT CHALLENGE.—Thus far there is no news of a challenge for the America's Cup from England, Scotland, Australia or anywhere else, and the chances are very poor for an international race next year. Under the existing conditions a challenge must be received by the New York Y. C. at once, in order to comply with the ten months notice, and unless one is well on its way now all hopes of a race under the terms of the new deed are at an end for another year.

NEW STEAM YACHTS.—It is reported that Mr. F. W. Vanderbilt, owner of Vidette, has ordered a 200ft. steam yacht from the Cramps, to be designed by them. Mr. Watson has an order from M. Konsnezoff, a Russian yachtsman, to design a steam yacht of 1000 tons, to be built by Messrs. Scott, Greenock. The length will be 240ft., beam 30ft. 6in., depth 20ft. 6in. A speed of 15 knots is expected.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. H., City.—We would not advise the use of the cartridge in the rifle you name.

A. E. W., Shady Nook, Pa.—Will you please tell me how long it is lawful to kill deer in this State? Ans. To Dec. 15.

S. L. W., Grand Rapids, Mich.—Of what use are wads in rifle cartridges? Ans. They confine the gas and if of right material, act as lubricators.

K. H. O.—Will you kindly let me know the best place to go to shoot partridges somewhere comparatively near New York. Ans. Try Mountainville, in Orange county, on the Erie; or Woodbury, on the same road.

NOVICE.—Will you kindly let me know in the next edition of your valuable paper the name and address of the gentleman who is to judge the mastiff classes at the next New York bench show? Ans. The judge has not yet been selected.

A. C. JR.—If in your power will you kindly tell me how or where I can find out if the pedigree of a dog given me is a true and if a good one? This will greatly oblige a reader of your paper. Ans. Write to the American Kennel Club, No. 44 Broadway, this city, giving all the particulars you have about the dog.

F. E. W., Jackson's Hole, Idaho.—Do antelope shed their horns; if so, at what time of year? Are the animals known in this part of the Rockies as the mountain lion the same as the Eastern panther? Ans. 1. Yes, they shed them annually, from October to January, the older ones earlier than the young. 2. They are the same.

M. M. B., Ogontz, O.—Do minks climb trees? I was told by a reliable man that he shot one from a tree which his dog had put up at a height of about 50ft., in the night, while coon hunting. Ans. We have never heard of a similar case, but it might well occur. Of course some members of the weasel tribe, e.g., marten and fisher, are great tree climbers and pursue and catch in the tree tops such active animals as squirrels.

P. M.—1. Where can I buy colored portraits of fish and game birds from 10, 25 or 50 cents each. Please give address of company that sell same. 2. In which volume of FOREST AND STREAM can I find how to cook fresh-water mussels? 3. Best oil to use in oiling inside of barrels after a day's hunt, and where can it be bought? Ans. 1. Perhaps of Currier & Ives, Nassau street, New York. 2. Vol. XXX., pp. 308, 431 contain references to edibility of fresh-water mussels, but there is no receipt for cooking them. One writer says he ate them raw. 3. Use vaseline.

OBSERVER, Ellenburgh Centre, N. Y.—I observed the other day, with a flock of sparrows that are around the barns here, a bird as black as black can be with them feeding, and when they were disturbed this African flew up with them. He did not seem to be afraid of them or they of him. In size he was a trifle larger. Can you or any reader tell of what species it was? Ans. A bird slightly larger than a sparrow and black in color! Impossible to say what it was. We might guess, but so can you. We guess a blackbird, but of what species? Possibly a rusty, possibly a cowbunting, though both of these have head lighter than body.

H., Edgar, Neb.—Are there two kinds of mountain sheep? That is, the sheep known as the big horn and of a dark color, and also one with smaller horns and entirely white? Or is it the regular big horn sheep and the Rocky Mountain goat? One party claims that there exists (1) the big horn sheep, dark color: (2) the mountain sheep, white; (3) the Rocky Mountain goat. Ans. The big horn (*Ovis canadensis*) and the so-called white goat (*Mazama montana*) are the only two wild animals called sheep in the United States between Canada and Mexico. The female big horn has small horns and so have the young males. These animals are dark in color—*i. e.*, nearly deer color—in summer and autumn, but get much paler, sometimes almost white, at the approach of spring. The so-called goat, which is really an antelope, is white or cream color at all seasons. It is called sheep in some parts of the Northwest, especially toward the coast. In Alaska there is another kind of big horn slightly smaller and somewhat lighter colored than the more southern form. This is known as the Dalls sheep.

INFORMATION WANTED.

C. J. W., Longmont, Col., writes: Can some of your numerous readers tell me where I can get good shooting in Texas, near the line of the Denver, Texars and Fort Worth Railroad, sometime during next month?

Can any of your readers give me the address of Mr. Edward Hamilton, reported to have lived at Deering, Me.? Any information will confer a favor.—JAS. F. JOHNS, 419 Eastern ave., Lynn, Mass.

WILD INDIAN LIFE.

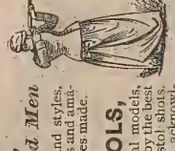
PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.



Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

Old Colony Trout Ponds

ESTABLISHED 1869.

Three million brook trout eggs for sale. Can be transported with safety to any part of the world. Ready for delivery December and January. Also young trout in the spring.
Unsurpassed fly-fishing in its season.

DENVER, Col., Oct. 21, 1890.
W. L. Gilbert, Esq., Plymouth, Mass.:
MY DEAR SIR—In regard to the trout eggs received from the "Old Colony Trout Ponds" I can say that the best possible results have been had from them at all of the points to which they have been shipped in Colorado. I know of no better packing than that employed by you. After a journey of nearly two thousand miles by rail and stage I have had a loss of less than 1 per cent. in a lot of 250,000. I do not want any better. Very truly, GORDON LAND, Col. State Fish Commissioner.

W. L. GILBERT, Proprietor,

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

Theory of the Steam Engine.
Boiler Efficiency.
Boiler Mountings.
The Engine and its Parts.
The Screw.
Laws Applicable to Steam Yachts.
Extracts from Lloyd's Rules.
Racing Steam Yachts.
Management and Care of Machinery.
Principal Types of Yacht Machinery.
The Design of Hulls.
Addenda: Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

ANSWERS TO CORRESPONDENTS.

Readers of FOREST AND STREAM *who are contemplating the purchase of books for Christmas presents will do well to send at once for a copy of our free illustrated catalogue of publications.*

IS THE GOLDEN TROUT A HYBRID?

IN an article on the "Saibling in New Hampshire," we have mentioned the principal characteristics of the cross between large-scaled and small-scaled members of the salmon family. It is suggested by several writers, among whom are Von W., of Charlestown, N. H.; Mr. A. N. Cheney and Dr. J. D. Quackenbos, that the golden trout of Sunapee Lake and Dan Hole Pond may be a hybrid between the landlocked salmon and brook trout, or between the saibling and brown trout of Europe. Fortunately we have already published a good figure of a hybrid between the saibling and brown trout in our issue of June 6, 1889. This figure is accompanied by a moderately full description of the fish. These gentlemen, and others interested in the subject, will at once appreciate the peculiar coloration of this cross. The pattern of coloration is known among fishculturists as the zebra marking. It is entirely unlike both its parents in the whitish vermiculations which cover the head and body. The sketch does not show the large size of the scales, although the number in the lateral line is correctly given. The brown trout has about 120 scales in the lateral line, while the saibling has about 220. In the hybrid, however, the size of the scales constantly follows the brown trout parent, whichever way the cross is made. This holds true in all the many specimens which we have examined.

Another fact of very great importance in connection with this subject is the reported uniform sterility of the hybrid between the saibling and brown trout. None of the examples seen by us show any development of the reproductive organs, and the Norwegian fishculturists, who have artificially produced the cross for many years, mention the sterility in their accounts of the fish. We believe that the theory of hybridism between the saibling and brown trout prior to the shipment of brown trout to New Hampshire may be fairly set aside as untenable on account of this well-known sterility of the primary cross. We do not know whether any one has attempted to cross the saibling and landlocked salmon, but as the landlocked salmon is a large-scaled species of the genus *Salmo*, and the saibling is a small-scaled species of the genus *Salvelinus*, we consider it safe to predict that the result of union between these two species would be a large-scaled and sterile fish. There is in New Hampshire a fertile cross between the saibling and brook trout, of which we have received a fine three-year-old specimen from Col. Hodge. This we hope to describe shortly. In our issue of Nov. 20, 1890, Dr. Bean described another fertile hybrid between the golden trout and the brook trout. Referring, therefore, to Mr. Cheney's remarks upon the "possibility that the imported saibling eggs were improved by a previous cross with the trout in Germany," we are bound to conclude, owing to the above-mentioned circumstances, that no such cross was made, and that we received eggs of saibling pure and unadulterated. As to the saibling eggs which were sent by Professor Baird to Mr. W. L. Gilbert, at Plymouth, Mass., in 1880, and which he reported as having died, we must here express a doubt concerning the additional eggs said to have been received from Mr. Stone. Mr. Gilbert was unable to distinguish the product of these eggs, when they had reached the length of eight inches, from the common *fontinalis*. If Mr. Gilbert, with his experience, could not distinguish his trout of this size from the *fontinalis*, there is a very strong probability that he really had *fontinalis* and nothing else.

NEXT WEEK.

OUR next number will contain another chapter of "Nessmuk's" "Winter in Michigan," giving a highly interesting story of the heroic treatment to which, when desperately ill with fever, he was subjected by his Indian friends. There will also be the concluding part of Mr. Polk's entertaining account of wild turkey hunting in a Mississippi overflow. The same number will have a paper of "Cowboy Reminiscences," by Alex. M. Reynolds. These are not all the good things in store for FOREST AND STREAM readers in Christmas week.

SNAP SHOTS.

"BUCK-FEVER," that nervous excitement which takes possession of the sportsman just at the critical moment when the game appears, causing his heart to thump, his breath to come short and his limbs to quake, is a stock subject for laughter and jocularity; and funny enough it is. But there is a serious side as well; we have in times past noted cases of its fatal termination; and a fresh one is just reported fram Dauberville, Pa. A young man went rabbit shooting. He did not return by dusk and members of the family went out to look for him. After a prolonged search he was found lying dead under a chestnut tree, with his empty gun beside him and a dead rabbit, which he had evidently shot, a few rods away. His death was caused by heart failure, induced by the excitement of shooting the rabbit.

A correspondent who was at Alexandria, Va., last week, where he had occasion to visit the lighthouse at that place, found in an outbuilding belonging to the keeper two "big-guns," which were evidently kept in readiness for the annual slaughter of ducks. Before the Potomac became infested with these pot-hunters canvasback ducks and redheads came up to Washington in large numbers, but at present they are very scarce. A few years ago our informant saw fifty-three canvasbacks killed at one discharge of a big-gun, off the mouth of Broad Creek, near Fort Washington, and a great many others were crippled and eventually died. This is a rather sad commentary on the integrity of the Government's servants, and it is to be hoped that the practice is not general.

In the *American Naturalist* for September, Mr. Robert C. Auld has an article entitled, "A Means of Preserving the Purity and Establishing a Career for the American Bison of the Future." Mr. Auld reviews the buffalo situation as delineated in Mr. Hornaday's book, and, taking that gentleman's estimate of the number of living individuals of the race, concludes that there are only about 250 specimens that can be used for breeding purposes. The worth of a race of domesticated buffalo is acknowledged, but it is evident that with this small number of breeders the utmost care in breeding must be exercised or else the race will die out, either from too close inbreeding or else from continued out crossing, by which the pure blood of the original race shall be lost. To avoid these dangers Mr. Auld advocates the establishment of a buffalo register, which shall be conducted on the same plan as the herd books of the various breeds of cattle. The idea is certainly a good one, and was suggested to Mr. C. J. Jones, of Garden City, Kansas, by the FOREST AND STREAM some two years ago. Mr. Jones at that time appeared to think well of it and promised to keep such a register of his herd, and we sent him a book for this purpose. Whether this register has been kept up or not we can not now say, but we presume that it has for Mr. Jones has displayed so much intelligence in his efforts at breeding buffalo cattle that he would not be likely to neglect so important a matter.

The National Park bill came very near being brought up in the House last Friday, when the Public Lands Committee had a day given it. The greater part of this day was devoted to the consideration of a bill in relation to public swamps and meadows. It was understood that the Yellowstone Park bill would be called up next, and the railroad people worked hard to bring this about, but were unsuccessful. Within the past week an excellent article has appeared in *Garden and Forest*, which shows clearly the injury which would be done by a railway in the Park, and the *Times* and *Tribune* of this city have again given very positive expression to their editorial opinions against the railroad. The more the people think over this matter the more general will be the feeling against giving up to a greedy corporation this fair bit of nature in which each one of us now has some title.

An angler is an angler the world around. Our long-time contributor "Piseco," Capt. L. A. Beardslee, of the Navy, who is now in command of the U. S. Receiving Ship Vermont, at the Brooklyn Navy Yard, has on the walls of his cosy cabin photographs of Walter Brackett's famous salmon paintings. In the midst of the service routine "Piseco" has but to glance at these suggestive pictures, and in a trice he is transported to the Adirondack waters, where, as he has unblushingly confessed in the FOREST AND STREAM, he takes his trout with the worm.

The Maine deer question is a topic which promises much interesting discussion this winter; and we trust that its consideration may not be profitless. We are glad to promise a series of papers from the pen of Miss Fannie P. Hardy, whose "Out-of-Door Papers" were so well received some months ago. Miss Hardy has had unusual opportunities to learn the feeling of the people of Maine who are most nearly interested in the game and fish protection problem; and her suggestions will, we are sure, have a decidedly practical value.

The late Surgeon-General Jedediah H. Baxter, U.S.A., was a devoted salmon angler, having for years maintained a fishing lodge in Canada. He was one of the warmest admirers of Mr. Robinson's books "Uncle Lisha's Shop" and "Sam Lovel's Camps," and in the years when the successive chapters were appearing in the FOREST AND STREAM there were weekly gatherings at Dr. Baxter's home, where Senators Edmunds, Frye and others came together to hear the sketches read aloud.

The defect of the present New York law, pointed out by our correspondent "St. Lawrence" last week, by which accomplices in offenses cannot be compelled to testify without incrimination, is one which we hope the codification committee will remedy. It is the testimony of more than one official that if such accomplices were permitted to turn State's evidence, a decided advance would be made in the direction of enforcing the laws by bringing offenders to punishment.

That was an excellent suggestion of Prof. Putnam's at the Massachusetts dinner last week that the State Fish Commission should maintain a pound, in order actually to determine just what the season's record of pound fishing may be. Laws and fishery regulations based on the dishonest and misleading returns made by the fishermen, in their pretended compliance with the law, cannot reach the end desired.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal the name of that friend.

The Sportsman Tourist.

STILL-HUNTING.

A WINTER IN MICHIGAN.—II.

BY NESSMUK.

FROM Dashville to Corning, from Corning to Bath, Bath to Buffalo, Buffalo to Detroit, Detroit to Grand Haven; and, in a small "ornery" tavern at the latter place we halted for rest and consultation. Ned—I blush for him as I record it—was for taking the back track incontinently; "the season was too wet, deer getting scarce, no use going so far from home when there was just as good hunting ground nearer; Michigan was marshy and unhealthy anyhow, and we were used to hunting in a healthy, mountainous region, etc., etc." To all this I answered, "If the season was wet we could get about more silently, if deer were being thinned out the more reason why we should go far back to find them. As to deer being just as plenty nearer home why didn't he think of it before? And as to the health of the country did he feel himself getting bilious or homesick, or lovesick or anything?"

Moreover, at Grand Haven I came across old Gillett, the wolf-trapper and still-hunter, whose word on forest lore was law. To him I propounded my stereotyped question, "Where could a good hunter be sure of one fair shot a day hunting on wool moccasins and without a dog?" His answer was short and to the point, "Anywhere within twenty miles of Muskrat Lake. He had killed fifty deer in two weeks himself, besides attending to his wolf traps; he could kill a dozen deer a week anywhere on the upper Muskegon and not half try."

This silenced Ned and decided us to try the upper Muskegon. At the bay we found a band of Chippewas and one of them called Pete was recommended to us for a guide. We offered to employ him, and he not only entered our service willingly but brought two shaggy diminutive ponies with him, which turned out to be a most judicious move and a lucky thing altogether. It was really surprising to see the load these little rough, clumsy looking animals would manage to travel under. One of them, a pepper-and-salt hairy little fellow, scarcely larger than a sheep, I can hardly call to mind without a smile yet. His load consisted of two bags of pilot bread, each holding a trifle over two bushels, a couple of kegs, one holding two gallons of syrup, the other a like quantity of old Jamaica rum, and a two-bushel bag containing tea, coffee, sugar and a lot of trifling but indispensable things appertaining to camp life. As he was the leading or "bell" pony old Peter mounted him (or his load rather) whenever he chose to ride, the general *tout ensemble* being laughable beyond description. Even Ned, who was not in a laughable mood by any means, could not repress a smile as the ludicrous vision met his lovesick eye, while the writer, who happened to be in spirits, shouted jubilantly as the odd-looking cavalcade wound up the banks of the Muskegon in Indian file. Our order of march was, first, the writer with a 10lb. double-barreled rifle; next, Indian Pete with the pepper-and-salt pony, then the sorrel pony, laden with ammunition, kettles, blankets, salt, axe, etc., etc., and lastly Ned, who had no heart to shoot, but had meekly volunteered to bring up the rear and look that nothing went amiss or got lost through slipping off the ponies and being left behind. We left the route entirely to Peter, and he, with a sublime contempt for lumbermen and their roads, took the old Indian trail, whence it happened that we scarcely saw the face of a white man on the route, and knew little more of the "lay of the land" at the end of our trip than at its commencement.

All along the trail I managed to keep on the lead for the chances of a shot, and to say truth the chances were well worth the taking. Almost every half mile we flushed the ruffed grouse, hare, or the beautiful American quail, while, after the first day, it was but little trouble to get a shot at deer. I killed six of the latter with but slight effort, during our five days' march on the trail, and also a two-year-old bear, while Ned, who was usually all eagerness for a shot at a deer, killed nothing at all, nor did he make an attempt to get a shot, but shambled along behind the sorrel pony in a maudlin, babyish manner that fairly made the toe of my moccasin itch.

It must have been about 3 o'clock on the afternoon of the fifth day, when we halted at a very good spring near the right bank of the Muskegon, and Peter announced our journey at an end. This was not according to contract, for Peter had agreed to pilot us to the banks of Muskrat Lake, which he now utterly refused to do, saying, "Dis good place, plenty deer, plenty elk, plenty bear, plenty fish; Muskrat Lake no good; too much mash, too much mud, white man get lost." Perhaps he was right, at all events a pleasanter place than he selected for our camp it would be hard to find. It was in a valley, the general course of which was south of east, and through which ran a considerable stream, fed by numerous springs; near one of these we had halted, and there, after a little prospecting, we concluded to make a permanent camp. On either side of the stream the land rose in handsome swells, covered by the grove-like growth of timber, known throughout the west as "oak openings," while along the banks of the stream the timber was much heavier, much of it being black walnut and elm—many of the latter trees being prostrate. Against the trunk of one of these—a giant elm nearly 7ft. in diameter—we built our camp after the fashion sometimes called a "coalman's shanty," and, as it makes a good winter or summer camp, perhaps I may be pardoned a brief description of the mode in which it is made:

Cut two strong crotched posts, the one 10, the other 4ft. in length; these with a stout pole 18ft. long constitute the timbers. Set the posts firmly in the ground 12ft. apart and lay the pole in the crotches, letting the small end, which should be sharpened for the purpose, into the ground a foot or more, so that it cannot slip. Fell a straight basswood, poplar or pine; cut into proper lengths and rive these into shakes; place the shakes on each side of the pole, letting them diverge some 8 or 9ft. at the front or highest end of the shanty, the shakes being shorter and the shanty growing lower and narrower as you work back to the far end. Set the shakes edge to edge as closely as possible and cover the whole with earth to the depth of a foot, not forgetting to place a layer of grass or dried leaves beneath the dirt to prevent its sifting through the chinks. Place a foot log across the broader end of the shanty and fasten it with pins driven in the ground. This is essential, as without it the shanty is pretty certain to take fire sooner or later. If the shanty is only intended for autumn weather you will hardly need a fire-place; but if to be occupied during a part of the bitter northern winter make a snug fire-place and a close chimney by all means. To do this, build the chimney of sticks chinked with clay, let it be of the width of the shanty at bottom, carried up at the same angle, or nearly so, with an oblong opening at top 8in. wide by 20in. deep, and fitted closely to the end of the shanty by "chinkin' and daubin'." An aperture at the side of the chimney 14×20in., to close with a close-fitting shake, will be all sufficient for a door, and in such a camp with a good camp-fire and plenty of browse, blankets and furs, a man may defy the weather with the mercury at 32° below zero, as I happen to know.

It was late in the afternoon of the fourth day when the shanty was finished and pronounced all right; Peter, who—whether from curiosity, affection for us, or a hankering for blackstrap—had remained with us during the four days, gave a most emphatic grunt of approbation as the newly-made fire roared, and the smoke went straight up the chimney, giving out plenty of heat in the den-like cabin, but no smoke. In justice to Peter, I ought to mention that he furnished us most liberally with fish, ducks and venison while we were engaged on the cabin, though truth obliges me to state that he utterly refused to lend a hand at the work in any manner whatever. He could hunt, but toting sticks, shakes, and clay for chinking—that was squaw work.

After the shanty was finished, a nice pile of browse stowed back of the footlog and a merry fire roaring in the new fire-place, we all smoked the pipe of peace and contentment, took a temperate nip of blackstrap, and turned in. I have slept well in camps of all descriptions; in camp-tents, in open camps, double-faced camps, browse camps, and even on the ground beneath a low-spreading cedar or hemlock; but I do not recollect having slept more soundly or sweetly than on the first night in that lonely cabin on the Muskegon. Not that Indian Peter was a desirable bedfellow; on the contrary, I feel bound to state that his habits were not cleanly, and that there was a greasy suspicion of entomology about his scalplock and old mackinaw blanket, most repugnant to a civilized mind. However, he had on the whole acted fairly by us, we concluded not to let any trifling matter break friendship, but to extend to him the rites of hunter hospitality so long as he might choose to stop with us. His stay was not a long one; on the morning of the fifth day he caught up his ponies, took the two cotton, two woolen shirts, and two dollars in silver which we had agreed to give him, and wended his way in silence on the upper trail toward Muskrat Lake. Just as he was on the point of leaving I made him a magnificent present of a pint flask filled with blackstrap and a large plug of Cavendish. His dark face broke into a smile at this, and he held out his hand, saying with emphasis, "Good; me come agin—see you more bimeby." Subsequent events led me to the conclusion that the present was a most fortunate one.

Ned and I were left to ourselves and our own resources; our stores consisted of pilot bread, sugar, syrup, tea, coffee, ammunition, tobacco and rum, with some quinine by way of medicine. We had also about forty traps—most of them small—of the "Newhouse" pattern. On the whole the prospect pleased me, and I was in the best of spirits.

I have mentioned that our camp was built on a small tributary of the Muskegon, which was not so small, however, as to preclude good sport with the rod within a biscuit toss of the shanty, where I have taken bass which must have weighed more than 6lbs. and pickerel of twice that weight. Half a mile below the shanty this stream emptied into the main river, forming a sort of marshy cove which was a very paradise for wildfowl and pickerel. I have seen but few places which could equal it for sport. Deer were extremely plenty, bear were tolerably so, and there was an occasional elk to be seen among the openings, though the latter animal seemed rather to affect the extensive swamps and marshes—places which the hunter who is a stranger to the country had best keep clear of.

For two or three days after the camp was finished and Peter had gone, Ned was in capital spirits and joined me in hunting and prospecting with sportsmanlike zeal. Then, as the last day of October came on dull, cold and cloudy, with indications of snow, his spirits flagged, he moped about without the heart to go a mile from camp, and gave unmistakable signs of homesickness. Here was a nice fix. If his heart failed him so early in the season when we had everything comfortable about us, with fish and game as plenty as we could ask or expect, how would it be in the dead of winter with the snow several feet deep and wood to cut, split and back to camp, when the mercury was at zero? We had made rather extensive preparations for an all-winter trip, had "declared our intentions" rather audibly to all our acquaintances and friends, had dwelt on the pleasures of hunter life and communion with nature to a garrulous extent, had promised to add important facts to the natural history of the country, and had (at least one of us had) taken several quires of foolscap into camp on which to record these facts and keep a general summary of our Crusoe-like proceedings, for the benefit of any one who chose to be bored with the reading thereof.

All this and much more I pressed on Ned's consideration in a rather extended lecture, and he took it all meekly—did not offer a word in rebuttal until I chanced to remark that "a man who would leave such a camp and such hunting grounds for a giggling, apple-faced girl, ought to trade his rifle for a set of knitting needles and join a sewing society." This brought matters to a focus. "I might abuse him to my heart's content, but I shouldn't abuse a decent girl on his account; he was his own master; when he wanted my advice he would ask it," etc., etc., etc. In short, we quarreled. It was a foolish thing to do, and we have both been heartily ashamed of it for years; nevertheless, quarrel we did, and nearly came to blows. I made some rather pointed observations on basswood men generally and lovesick spooneys in particular, which Ned took to heart; and he gave his opinion pretty freely concerning "bush vagabonds, who were of no account in society, and the height of whose ambition was hunting and fishing. For his part, he expected to do something in the world besides hunt and fish."

"Ah, really? Marry a farm and tannery, perhaps join the church, and become a stump candidate for deacon," I retorted.

Ned thought it quite possible. "There was a sort of respectability about farms and tanneries, which was not the case with hunting that ever he heard of."

I advised him, if he was so out of sorts with hunting, to go home by all means; also, I suggested the propriety of taking herb tea and soaking his feet in warm water regularly; with this, and the precaution of flannel nightcaps, I thought he might manage to pull through the winter alive. I really intended, when I began, to give the particulars of our quarrel *verbatim et literatum* as nearly as I could remember, but it was so confoundedly ridiculous that I am getting ashamed.

Let it suffice, that after bandying sarcastic hits to the best of our ability for some time, one of us gave the lie. There was an instantaneous "recognition of belligerents," a mutual grasping for reciprocal windpipes, a mutual missing of the same and a seizing of coat and collars instead, a violent shaking and hustling of some seconds' duration—in which I, being much the lightest, got the worst of it—and we stood still gazing defiantly in each other's faces, two of the biggest fools that ever shouldered a rifle.

I wish I could add that we shook hands and laughed at our foolishness, as we ought to have done; but we did not. I knew that Ned was dying for a sight of Hannah Needham's pretty face, and that nothing else ailed him. He knew that I was aware of this, and also that I despised love-sickness beyond any other weakness or illness that flesh is heir to; likewise he felt to resent my remarks on his dulcinea, and I felt a trifle sore at the unmerciful shaking I had got, so it happened that neither of us chose to make any remarks of a conciliatory nature, but Ned commenced packing his knapsack at once, while I watched the operation in surly silence.

There were two adjuncts to our camp, which I ought to have mentioned before; these were a mongrel dog, which Ned had seen proper to bring with him, and a handy little dugout or log canoe, which Peter had mysteriously brought to light from some hidden recess on the day after our arrival in camp. The dog had turned a promising venture for still-hunting—as almost any dog will when taken out every day and properly instructed—while the canoe was indispensable for trapping, fishing, or crossing the river.

I had opposed the dog at first, but finding he was to be an inmate of the camp had finally taken him in hand for a course of instruction, and as he was not only eager and plucky, but tractable, had ended by taking a fancy for him.

When Ned had got his hardtack, tobacco, blanket, rifle, hatchet and a pint flask of rum all in marching order he led the dog ostentatiously into the cabin, sprung the snap of the chain into a ring on the collar and then marched stiffly toward me, holding a cent on his curved forefinger with his thumb nail under the edge of it, saying, "This is for the canoe—heads or tails?" I took at once; and as the cent spun high in air said, "heads!" Down it came and heads it was; the canoe was mine.

"As to the dog," said I, "if he is worth anything to you take him along, I can get on without him very well."

"He is worth nothing to me," said Ned, with a majestic air, "if you don't want him, shoot him; I am done with hunting." He slung his knapsack with great deliberation, whistling all the while, then filled a pipe leisurely, lit it with a friction match which he ignited by rubbing on his trousers leg, shouldered his heavy single-barreled Billinghurst, and turned his back on the camp.

I watched him until his gray coat tails disappeared down the trail and then went into the shanty, built a rousing fire, caressed the dog, wiped the rifle, and tried to convince myself that I didn't care—in fact was glad he was gone. I tried the quarrel over again in my own mind, and made out a wonderfully clear case for myself. I took the shaking into consideration and waxed irate exceedingly, but it would not do. The little monitor which lurks in the bosom of every decent man espoused Ned's cause, reminding me of many little items, such as bitter sneers, unkind remarks, and surly sarcasms, offered to an old and tried friend, for what? Just because he had not the heart to enter into my schemes with spirit and ardor; because I mistrusted him of giving way to a boyish lovesick whim, and wanting to go back. What then? Was he not his own master? Had he not proved himself on many occasions a reliable friend, a plucky hunter, and a true-hearted fellow? And I had taken the liberty of calling him in plain words a booby! a lovesick spoon, and no hunter!

The mental mercury in the psychological thermometer sank rapidly from wrath to reflection, from reflection to reason, and from reason to repentance. The more I reflected the more I grew ashamed of the foolish quarrel, and ere Ned had been gone two hours I would have given much to have shaken hands with him, told him I was sorry, and parted with him, if part we must, in a decent manly way, as friends should do. I remember feeling an almost irresistible impulse to follow him down the trail, find him at his first camping place, and own up like a man. As the sun was less than two hours high when he started and there was a good moon, I could easily have done this, but self-love, wounded vanity and pride all conspired to keep me back, and I did not go. I wish I had gone; it would have saved some heartburning on both sides, and would have been more pleasant to reflect on in after years.

Left alone in camp I set myself actively to work hunting, fishing, studying the habits of the various animals which came under my observation, and trying various experiments with traps, outlines and snares. I succeeded in taking game and fish by nearly every mode in use with hunters. I caught not only ducks but wild geese in small traps, as well as on outlines. (The latter mode was cruel poaching, and I only tried it by way of experiment two or three times.) As the season grew cold I set the traps for otter and foxes, but, although I was in possession of the "hunters' secret," my success in trapping was not remarkable. Also my traps disappeared at the rate of half a dozen per week, and, from the occasional print of a moccasin along the bank of the river, I got to surmising that the abducted traps might be in some manner attributable to the band of strolling Chippewas to which our guide Peter belonged—a belief in which I was afterward

somewhat strengthened by seeing some of the identical traps in the hands of the aforesaid vagabonds.

The loss of a few traps, however, although I felt certain that each of the stolen traps held a fur animal of some kind at the time of its abduction, did not much disturb me. The hunt was not for profit or for the purpose of seeing how much game might be destroyed by one rifle in a season's hunt, but just for pure, ardent love of forest life and sylvan sport. Many a deer passed me that autumn and went away scatheless, which I might have knocked down with certainty, and I spent days in traversing the country, rifle in hand, with no wish or attempt to shoot a deer, although I think I have never hunted a region where they were more abundant than there. I could not make out the exact whereabouts of the camp by the aid of a pocket map at the time, and I have never visited the spot since, although often promising myself to do so. It certainly was not the point to which Peter was hired to pilot us by thirty miles or more, and must have been near the eastern line of Osceola county, where the river crosses it from Clare county. At all events, the location was a most satisfactory one for a sportsman, and during the crisp, frosty autumn weather nothing could be finer. I still think that such a camp, with good health and an eternal succession of glorious Octobers would be all the heaven I should ever require.

I killed but few deer, and those nearly all bucks, as I chose to let the does and fawns for the most part go clear—a mode of hunting which I venture to recommend in any country where deer are yet plenty. The hams, "lines" and skins of those I did kill were carefully "tended," and I began to ask myself how the long winter days and nights were to pass, when it was too stormy or cold to hunt, and the snow lay deep all over the vast northern wilderness of Michigan—when, steady cold weather having set in, a full supply of meat being on hand, the deer having become thin in condition and scarce by reason of wolves and Indians—there would be no one to talk to at night and nothing to interest a man by day. It did look a little, just a little dreary. But then, couldn't I find my way out of the forest should it become unendurable? There were lumbering establishments at no great distance below, whence, doubtless, there would be a good road to Muskegon Bay, and it would be time enough to think of leaving camp when sport gave out. So I took it easy and enjoyed the sport hugely.

A friend of mine who was selling sporting kits in the quiet little village of Gotham had besought me earnestly to procure him an elk's head with antlers at least six feet long; and another friend had commissioned me to get him a bear skin with claws, jaws and teeth entire—trifling jobs, which each of them seemed to imagine could be accomplished by any man who had a few spare days on hand. In fact the Gothamite had expressly mentioned that he "wouldn't trouble me if he could afford to leave his store for a few days."

As they were both good fellows, and as I rather liked the notion of sending an elk's antlers for exhibition in the windows of a Broadway shop, I did my best to get the articles as requested.

Now, it is a fact that, while deer were plenty and easy to bring under the bead, bear and elk were somewhat scarce and hard to be got at. The elk seemed to delight in large open pine swamps, reed beds and marshes; while bruin affected the dense thickets and chose to hide himself therein, issuing thence for his quotidian acorns mostly by moonlight. After a particularly dark, rainy night, however, bear are sure to feed early in the morning; and on such a morning I got a beautiful shot at one in the openings. I discovered him busily at work among the acorns, and taking due heed of the wind, cautiously approached him under cover of the oak trunks until within thirty yards, when I got a good ready and waited for him to show. This he presently did, moving unsuspiciously among the fallen leaves for choice acorns, having found which he sat up on his haunches and was munching away leisurely when the sharp crack of a rifle rang through the openings, a pea ball fitted him snugly at the butt of the ear, and he subsided as calmly as an infant.

He was an ursine beauty; otter-legged, glossy black, and very fat, with a splendid set of claws and teeth—decidedly the finest animal that has ever fallen to my rifle. It took me the best part of two days to dress and dispose of him properly, for, be it known, a fat bear in camp at the commencement of winter is no slight acquisition. The meat keeps sweet longer than any other, the fat is not only valuable for burning in a "witch light," but makes a good substitute for butter, and a well-furred bear skin is invaluable in a winter camp for sleeping purposes. Moreover, there is no exaggeration in saying that a man while living mainly on bear meat will endure fatigue better, can travel faster and further, and will find himself much stronger, than on any other diet whatever. If two men of equal powers and skill were to engage in any trial of strength and physical endurance, the one having trained on beef and the other on bear meat, I should most certainly consider the latter a good investment at two to one. I cannot be mistaken in this; I have tried it on myself and seen its effects on others too often, and I only wonder that the fact—for fact it is—has not not been observed and acted on by some trainer among the athletic "profession."

During the latter half of November I hunted for the most part about the swamps and marshes in the hope of getting another bear or two and an elk—particularly the latter. This kept me too much about wet muddy places, and I usually came into camp late, wet and tired; also, I often got lost, and was obliged to lie on wet leaves, with little or no fire, and without supper. Such a course of life could not fail to affect the most robust, and I soon began to feel the effects of it in cold streaks and flashes, which ran along the limbs like electricity and were immediately succeeded by feverish heat. I took the hint, and resolved to hunt the swamps and marshes no more. The resolve was a good thing, but it came too late; I was already booked for a severe run of "fever 'n' ager," and neither saltpetre nor quinine could save me—I tried both.

Natural History.

PELAGIC BIRTH OF FUR-SEALS DENIED.

Editor Forest and Stream:

Several years ago, 1880, in my published "Monograph of the Seal Islands of Alaska," I called attention to several erroneous statements made by James G. Swan, who asserted in a letter to Professor Allen that he knew by his "own personal observation that fur-seals had their young in open ocean off the entrance to Fuca Straits." I said then that "it was a physical impossibility for the fur-seal (*Callorhinus*) to bring forth its young in the water; the pup would sink like a stone instantly after birth, and the mother be wholly helpless to save it."

Curiously enough, the aditional evidence of the truth of what I then stated appears in the form of the sworn statements of a number of British sealing vessel masters, which is appended to a reply of Sir Julian Pauncefote, the British Minister at Washington, to Mr. Blaine, dated April 30, 1890. (51st Cong., 1st Sess., H. R. Ex. Doc. No. 450), pp. 57-60.

Fred Gilbert: "I am a seal-hunter. I never shot or saw pups with the cows in the water, nor have I ever heard of such a case."

Wm. O'Leary: "I am a master mariner, and have been seal hunting on the Pacific coast four years, three of which I was in Behring Sea as well. I never saw cows in the water with their young with them."

H. F. Sieward: "I have been a master sealer for two years. I never saw a female seal with her young in the water beside her."

George Home, a pelagic sealer: "I never saw a young pup alongside its cow in the water."

Wm. Fewings, a pelagic sealer: "I never shot, nor have I ever seen, a female seal with a young one beside or with her."

Walter House, a pelagic sealer: I never saw a cow seal in the water with her young beside her or near her, nor have I ever heard of such a case."

James Wilson, a pelagic sealer: "I never saw a cow seal with her young beside her."

J. D. Warren: "I am a master mariner, and have been actively engaged in the deep-sea sealing business for twenty years. I never saw or heard of a cow having her young beside her in the water, either on the coast or in Behring Sea." (Statement Aug. 10, 1889, Victoria, B. C.)

I am moved to make this fact prominent, that what I stated as a fact, in 1874-1880, is to-day declared true by the practical sealers themselves, since Mr. George Dawson, D.S., F.G.S., F.R.S.C., F.R.M.S., assistant director of the Geological Survey of Canada, says in a recent letter to the Hon. Mr. Tupper (pp. 49 of Doc. cited above) that he thinks Mr. Swan's statement should be received with respect, although I "stoutly deny" it. The above citations of Canadian sealers amply confirm my ground. I leave Mr. Dawson and Mr. Swan to settle the sealers—but the more these gentlemen look into the matter the better their understanding of the truth of my declaration will be.

Henry W. Elliott.

Smithsonian Institution, Dec. 8.

A SKELETON OF THE IVORY-BILL.

A FEW months ago the writer was engaged upon a general review of the osteology of the woodpeckers of the United States, and for this purpose it was necessary that there should be at hand the skeleton of a species representing at least every genus known to our avifauna.

It was a year and a half before a specimen of *Xenopicus albolarvatus* was secured for this purpose, but finally a fine male (in the flesh) of this species was sent me from Klamath, Oregon, by Mr. Samuel Parker, and a good skeleton was obtained from it.

Campephilus principalis, our far-famed ivory-bill, however, defied my best efforts to procure, and at last all hope in that direction was abandoned, and I satisfied myself with a study of the imperfect skeleton of the body of one, and the skull of *Campephilus imperialis*, both loaned me by the U. S. National Museum. The largest museums in this country were communicated with, but none possessed in their collections the skeleton of this bird. Even skins of it are now high-priced, it being found only in certain restricted districts in the South, where every year it is becoming rarer, and no doubt is on the high road to extinction.

It seemed a great shame, almost amounting to a disgrace that this, so distinguished a form in our avifauna should, by those interested in scientific ornithology in this country, be allowed to pass out of existence without a single example of the most important part of its anatomy left to grace any of the collections in our museums. Not a single skeleton of the ivory-bill to pass down to our naturalists! Nothing but skins!

As these thoughts possessed my mind, I wrote to my talented ornithological friend Mr. Frank M. Chapman, of the American Museum of Natural History of New York city, who was then collecting in Florida, but in his reply little or no hope was held out in so far as securing *Campephilus* was concerned. Later on, however, it was my good fortune to meet Mr. Chapman in Washington at the last Congress of the American Ornithologists' Union, and in his account to me of his Floridan experiences, my estimation of his knowledge of the demands and requirements of our common science was fully confirmed, and it was very evident that he for one did not believe that the sole aim of ornithology was "to shoot a bird, skin it, and then throw away the characters."

Mr. Chapman saw but one specimen of the ivory-bill on his Florida trip—an old male in full plumage—and bringing his woodcraft into play he promptly bagged it. It is not difficult, even for me, to picture the various dubitations, perplexities and waverings that entered his head as he handled that elegant bird in the flesh, and cogitated upon the real value of the capture in its varied aspects. Think of the mute look of horror that must have crept over Mr. Brewster's visage, who was with him on that occasion, when my friend finally suggested that he meant to utilize the specimen for its skeleton!

Be it recorded with honor that his good judgment finally prevailed, and his prize was duly sent to Mr. H. A. Ward's science establishment in Rochester with the view of having the skeleton prepared in their best manner for final disposition in its proper case in the American Museum of Natural History in New York city.

Judging from what I have already seen in the skull of *Campephilus imperialis*, there will be found some very interesting structures at the base of that part of the skeleton in the ivory-bill, and so it is to be sincerely hoped that the specimen will fall into the hands of Mr. Ward's best preparateur, that these delicate parts may be most carefully preserved. The writer is not an advocate of Professor Huxley's and Professor Parker's saurognathism of the *Pici*, and the more I see of the skulls of woodpeckers, and take the general structure or morphology of their skeletons into consideration, the more I am compelled to believe that the *medio palatine* of Parker is, when present, the *vomer* in these birds. The skull of the ivory-bill will throw additional light upon this important point in classification. R. W. Shufeldt.

Takoma, D. C., Dec. 8.

CHINESE PHEASANTS.

LAST winter the snow was at one time 9in. deep and the weather pretty cold, about 6° above for a few nights, and in looking about to see how the ringnecks were getting along, I found where they had been hunting weed seed and scratching down to the ground under the bushes and other places in their search for food. They roosted on the ground like prairie chickens. When there is no snow they roost either on the ground or in trees, as their fancy suits. The snow lay on the ground for more than three weeks, yet I don't think the birds suffered much. They will come into the feed yards and eat any grain that they may find there. From what I saw of them last winter, I think that they would stand the winters in the States east of the Rocky Mountains all right. The winters would be longer and colder, but there is a great deal more feed for such birds there than there is here, such as corn, wild sunflowers, etc.

When spring came the cocks began crowing and they are occasionally heard even yet. They begin the crow and the flapping of their wings at the same time and make a few flaps of the wings after the crow has ceased.

They are polygamous. I have seen as many as five females with one male and many of them had two wives. The hens lay from 13 to 18 eggs about the size of those of the prairie chicken and of the same shape, but of a light brown color. They make their nests in stubble fields and along fence rows and such places. In plowing 90 acres of stubble this spring we found four nests. The fewest that any hen was sitting on was 13 eggs. On one nest of 8 eggs the hen had not begun sitting. They will not come back to a nest when it is removed to the plowed ground.

The 18 eggs from the first nest found were placed under a domestic hen, and in 25 days 11 of them hatched. The nest was not in a very favorable situation, which may have had something to do with the time of hatching and strength of the birds. We put the hen in a pen about 12ft. square on the ground, for a couple of days until the birds learned her language, then we let them out. But the hen was of the idiotic kind and would take them out in the wet grass and weeds in the chill morning dew and they would get wet and cold, then get lost and die. Three of them grew to be large enough to fly a little when two of them disappeared. The remaining one got to be nearly as large as a quail when one morning it was found in the yard almost dead and was taken into the house and cared for, but it died.

Of six others that were hatched by a domestic hen on a farm near here, two grew to be large enough to take care of themselves, when they went off with their wild brothers.

It has been stated that they raise two and three broods a season, but I must see more evidence than I have seen this season before I can believe that. I think that there was not a hen in this neighborhood that reared more than one brood last summer.

They increase in this State, though, much faster than the Bob White quail which were introduced here more than 15 years ago, and I have not seen one of them here yet, though I have heard some calling. J. F. L.

Wheatland Ore., Nov. 29.

Yellow Rail in Chicago.—*Editor Forest and Stream:* While spending an evening near the last of September with a friend, a teacher in one of the high schools, he chanced to remark, "One of my boys brought in a 'corn crake' the other day." Investigation developed the fact that the "corn crake was a yellow rail (*Porzana novebo racensis*). By a somewhat singular coincidence, while snipe shooting the next day with this same friend, I shot another of these rare little birds. Although I am not certain of the fact I have the impression that the two birds were killed in the same marsh. I am sure they were from the same locality. Both specimens were secured in one of the grassy marshes within the city limits of Chicago. We have hunted the same ground several times this fall and this is the only yellow rail we have seen. Possibly other Chicago marsh-trampers may, in their wanderings about our city streets (!), have met this odd little dweller of the sedges. Although I have neither "met with the nest of the yellow rail" nor "observed its habits" further than as above stated, perhaps Dr. Gibbs, or others, may be interested in this hasty note of the occurrence of the species as a city resident!—Korax (Irving Park, Ill.).

Evening Grosbeak in New York.—Ithaca, N. Y., Dec. 11.—*Editor Forest and Stream:* While walking through the Cornell University campus to-day, I noticed a female evening grosbeak feeding in a box elder tree. My brother, who saw the bird, had seen three of the same species apparently near the same spot several days previous. The grosbeaks were recorded here last winter, but their returning for a post graduate course was a genuine surprise.—Morris M. Green.

Recent Arrivals at the Philadelphia Zoological Garden.—Purchased—Two pronged-horned antelopes (*Antilocapra americana*), four yellow ammers (*Emberiza citrinella*), and two cardinal redbirds (*Cardinalis virginianus*. Presented—One rhesus macaque (*Macacus erythræus*), one Derby's opossum (*Didelphys derbiana*), two common opossums (*Didelphys virginianus*), one red-tailed buzzard (*Buteo borealis*), one short-eared owl (*Brachyotus palustris*), one screech owl (*Scops asio*), two alligators (*Alligator mississippiensis*), two water moccasins (*Ancistrodon piscivorus*), one green snake *Cyclophis vernalis*) one common hog-nosed snake (*Heterodon platyrhinus*), one box tortoise (*Cistudo carolina*), two diamond-backed terrapins (*Malaoclemmys palustris*), one red-bellied terrapin (*Pseudemys rugosa*), and two menobranchus (*Menobranchus maculatus*).

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

WILD TURKEYS IN THE OVERFLOW—III.

[*Continued from Page 414.*]

I CANNOT write of all the incidents of our stay in the woods—it would take too long to detail the doings of each day. We enjoyed it all. I will sketch in a few more, only confining myself to those which I may deem of most interest to the general reader.

The rabbits were a part of us on this trip. We never saw the like of them before and never expect to again. They were everywhere that there was land, and often far out in the overflow a half-mile or more from land, on logs and stumps. On our approach, one would sit until we were quite close, when he would leap off with a noisy splash and swim lustily away. They are good swimmers and fully capable of living through an ordinary overflow, if not preyed upon, getting their food from leaves, bark, etc. The woods were thick everywhere with their carcasses. It hardly seemed possible that hawks and owls could eat so many. Probably the varmints joined in the destruction.

The disturbance of turkeys by the hawks continued throughout the trip, time and time again were they seen to drive them from tree to tree, though the warfare was never continued to the ground. One day we flushed a large flock of turkeys from near the mound. They took to trees 200yds. away in the overflow. Generally it will be half an hour or more before turkeys will return to ground after having been flushed to trees, so a position was taken where we were sitting against a large tree facing the turkeys, and a long wait was expected. In less than five minutes, however, we heard rapid, sharp clucking and, on looking down through the treetops, saw the hawks making war on the apparently defenseless turkeys, which took rapid flight and came pouring back to the mound, where it is needless to say one or two were shot. On the ground the hawks never bothered the turkeys so far as we saw and but one turkey carcass was found, and it is believed it was that of one that had been wounded in that vicinity a couple of days before. We noticed, however, where hawks were seen flying overhead that almost invariably turkeys were to be found feeding beneath. So often did this prove to be the case that, after the two or three first days, we would watch for hawks, and on seeing them cautiously go in and look for turkeys.

One day I was calling above camp where the large flock on the first day had been found. Soon a large hawk flew over and took perch on a tall limb, probably 75yds. away. I had not forgotten that first day's experience, and his hawkship offered a capital shot, and as he appeared to be my previous tormentor, I determined to sacrifice the turkeys that I knew to be within hearing and measure arms with him. The rifle having been gotten well in hand, I felt sure of success. I used a rest from the tree at my side. At the crack of the gun he came spinning to the ground with one wing open. He proved also to have a broken leg. With his sound leg and beak he fought ferociously for his life while being dispatched with a stick. He was of the largest species and unusually large. I felt revenged. This is the only one shot at, though every day we could have killed several by devoting some attention to them, and it is the one regret of our trip that we did not kill a score or more of them. It is now our belief, with all the lights before us, that the hawks preferred to have the turkeys on the ground, where, in feeding, the rabbits would be made to stir, so they could sail down and enjoy a feast.

William did not develop into a sportsman. There being but little to do, except when L. and I were in camp, we thought to give him some enjoyment. After the first two days we practically abandoned the camp ridge as a hunting ground and went further away. The big flock continued to use it, though cautiously, as a feeding ground, William was duly instructed as to the manipulation of the hammerless shotgun and though not showing a profound comprehension of the weapon, we thought he would be able to use it. He was told to go up the ridge about halfway, select an open place, where a view could be had for some distance around him and sit down with his back to a tree, to keep his body still and his eyes open, that surely he would get a shot at a turkey if he remained long enough. He was warned not to open up on the rabbits, as no shooting not strictly in our line was wanted. But he never got his turkey.

One day while L. and I were on Howlett we heard a shot plainly in the direction of camp. That was William, as no one else was at that time in that part of the woods. We put it down that William had at last got in his work. But on our return he said he had no turkey, and denied having shot or heard a shot. Generally, William was truthful, and we were inclined to believe him, though we could not account for the shot. Later, one barrel of the gun was found to be foul and we began to surmise. Always, on going to camp, William was found to be in. This was at all hours of the day. We further noticed that when he had seen turkeys as he had on several occasions, they were seen from camp. We then put it down that our boy was afraid of the woods, and though professing to go out and look for turkeys, he had not done it. Toward the end of the trip, on clearing away a rifle range, a bush near the launch was noticed to be mutilated with shot. It was riddled at short range. But why the shot was made or how made we could only guess. Probably William saw something or heard something and let fly from the launch.

One day I made a horrible shot. I promised L. and Conway I would tell it, and I guess I'll have to do it, though I'm not feeling well and am in no trim for writing.

We had gone to the mound. It was a favorite place. We loafed around there so much that after a while we found another mound, not over 300yds. away, with a flat, thickety swamp between, mostly covered with overflow. As to location, these mounds are somewhat of a mystery, except to a few old raftsmen and a limited number of others. They comprise the highest ground on the Little Sunflower. They lie back in the woods somewhere, off of the river. The amateur woodsman might spend two weeks in their vicinity and not find them, so completely are they hidden away. We stumbled on one by accident on our first trip, and then the other in the same way on this trip. We always found them inhabited. At the time I write of three head of cattle were found on one. They were half-starved, and surely would starve on this limited range. As we moved about their eyes followed us, looking demure and sad enough. But we could not rescue them. The mounds were already liberally strewn with the bones of animals starved or drowned in former overflows. The bones of these cattle would no doubt go to join the others. It was sad indeed to watch the poor brutes. But that shot—yes, yes; I was about to forget. Excuse me.

On the whole trip it was the only day a gobbler had opened for us. It was a bright day, and the woods, at least in that part about the mounds, took on a beautiful aspect. On the east mound, he probably had ranged away from the water, and, having short memory, had forgotten about the great overflow which day after day continued to rise and encroach on his domain; so, after we had called quietly and bewitchingly for some time, he made attempt to reply. But he had not done such a thing for many days before, and he was young anyway, and his voice cracked. He improves somewhat presently and L. and I move over in his direction to see if he means business. He proves to mean not much, for he makes but slow progress toward us. However, we'll await his pleasure, having learned by sad experience the great virtue of patience in turkey hunting. While working faithfully on this fellow for some time, we get an answer from the direction of the other mound. We listen for his next note to get him located. We get it. We also get another point—this second chap talks to our notion. He has an excellent voice. Strong and coarse as a base viol or dumb-bull. It begins to sound like old gobbler times. We hasten to take a new position between the little and the big gobblers. We wade through water and locate on a clay root, on the knob of earth projecting above the water, L. lying face down and I sitting on one leg and hip. Soon I change to a large log twenty or thirty yards toward the younger turkey, leaving L. on the clay root, thus affording greater chance for a shot from the two positions. The gobblers are acting nicely, the big one coming up fastest.

I looked at L. and would give a nice note for his photo. He is all aglow, and fairly sinks into the yellow earth to keep hid. I like his style very much. There is spirit in it. It is all good—except his face. To the four winds with that face! It will play havoc if that old fellow gets a glint from it. Then I'll take L. off in some lonely and secluded spot and do something desperate to him.

The young turkey quits. Guess he thinks the mastodon too close. Probably he has met him before, and just now would like to gobble to him afar off. The other is still bellowing—is now close. He seems to be opposite L. not 20yds. away. Why don't he shoot? I steal a glance at him and find he has gone down in the earth two inches more, and has only his forehead and eyes above. I would now give two notes for his photo. It will be his first gobbler. Why don't he shoot? Won't the boy ever shoot? I can't see the turkey for a dense thicket near me: surely L. can. Now he has passed L. a little.

"Ah! What a beauty" as he steps in view. "What glossy rich feathers! What lordly mein!—and L. does not shoot!" My heart is in my mouth—the Marlin that has been lying across the log is pressed to my shoulder and the trigger touched.

Mr. FOREST AND STREAM, history is history. Falsehood is not history. Any coloring leading the mind away from the exact and cold facts, may be an approximation, but not true history. I make a faithful record—that gobbler was missed. He stepped lightly—even daintily away without a stagger. I tried to get in another shot, but if successful, that would have been remarkable with a rifle. As a rule Mr. Turkey is never rattled. In such emergencies, his course is taken as though previously mapped out—and it is the best one, all things considered, for his safety. He simply disappeared suddenly—that's all I know about it.

I had to meet L. who, coming up, said: "I would have given a dollar had you waited two seconds. In three or four steps more I would have downed him."

"Crackey! Are you bankrupt? Haven't you got more money than that? I would raise you a few chips on that gobbler. Why didn't you shoot? I wanted you to kill him."

"I could not for the thicket. You have played didledy-be-hob-hob. How did you miss him? You used to shoot."

"Well, now, let's see whether I missed him. There ought to be some feathers there. I certainly had the gun on him."

We hunt and hunt for feathers. Abandon them and then look for ball. We get the course, we get the distance (shall I tell it? 17yds.) but find no sign and start to go.

"Here it is. Now, what kind of a shot was that? Why, here's a 5in. sapling between you and the turkey shot through and through."

"Lawrence, we have looked too long. Let's get out of these woods. This sight is too strong, I saw through that sapling."

It took me two days to recover from that shot; and as to hearing the last of it, I never expect to in L.'s day and generation.

Two days afterward I paddled back to the mound alone. I was not at all satisfied with my record down there and wanted to even up. I left the canoe 100yds. or more back in the overflow and waded out to the south and bluff edge of the west mound in water 2ft. deep. This mound is only 4 or 5ft. above the surrounding swamp, is probably 25yds. wide and oval in shape. It is covered with some undergrowth. On reaching it I stopped for a short rest and to steady my nerves. I wanted to be calm and cool this time for any emergency. To the north of this mound the ridge extends for 200 or 300yds. to the overflow. Having had one day without disturbance I was certain that turkeys would be seen. I kept a little in the water, so as not to rattle the leaves and moved around the edge very cautiously to the right, watching closely every spot as it appeared on the ridge beyond the mound. I was some time making the quadrant of the circle, when my eye was attracted by a motion a considerable distance down the ridge. I stood perfectly still and watched for some time to make out what had made it. I was afraid to raise the rifle and solve the question with the sight lest I be discovered. As usual I found turkeys.

Up to that time not a deer had been seen. We had expected to find some of them on the ridges. In January we had noticed considerable signs though we saw none. And this time there was not even a track. They had proved up their reputation for sagacity and departed for higher territory.

On making out the turkeys I slowly got down to earth on my knees in shallow water. Soon it was found that I could not manipulate myself satisfactorily in this position and, with due regard for the situation, I proceeded to change it by crawling forward to a rather small tree. This afforded me an opportunity to further investigate, which was done with as little motion outside of the tree as possible. The loggy look that I always carry in the woods was decidedly in my favor and I did not much fear being made out. The telescope was again brought to use and the game could be distinctly made out a little out of range. There were no less than twelve or fifteen, and they certainly formed an interesting spectacle as, without the least suspicion of danger, they scratched and fed among the leaves. They were watched for a full half-hour before they began to move closer. Soon they were within range at 80 or 90yds. I then nervously watched the flock through the sight in search of a long beard. They seemed for a while to be all hens. I was anxious to renew the contest with my former vanquisher, but could not find him. I concluded that any other one of his proportions would answer, but I could not find such a one. Where in the deuce had all the big chaps gone? While asking myself this question two young gobblers worked into view, and I watched them closely. Presently they stepped in line—this was my chance—and as I was pulling the trigger—I shall never forget the grand view as the third rusty-brown back ranged in line, one just a little above the other. It was a rare opportunity, and one that comes to few even among old turkey hunters. When I fired the woods in that vicinity at once became animated. There was a great stir. One gobbler was down, and another was cutting lively antics, all the rest took rapid wing and flew to timber in the overflow. I hastened to retrieve, when the bird of gymnastic proclivities rose and flew after the others, but was heard to fall in the overflow. A long search failed to find him. I then devoted myself to the turkeys in the trees, and in half an hour killed two hens, not missing a shot. I felt avenged, though I had not gotten my big gobbler. Then I shouldered the game, went to the canoe, and paddled to camp in a cheerful frame of mind.

W. L. P.

[TO BE CONTINUED.]

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 12.—This morning, while still engaged in the details of the toilet and hardly yet fully awake, I was startled by a sound which, even in the closed room, penetrated the muffled clang of the cable cars and the drone of the busy streets which at that hour fill the neighborhood of Michigan avenue and Eighteenth street, it being only about a mile from the very heart of the city of Chicago. There was no mistaking the quality of that strident voice, and on the instant I knew it was the honk of the wild goose. Running to the nearest window, I threw up the shade, and there, passing directly over the house, I saw a magnificent wedge of genuine Canada honkers! It was almost past belief, but when the window was thrown open, and the splendid music of that wild chorus came pealing down, there was no doubt possible, and all one could do was to gaze open-mouthed at what seems to me one of the most remarkable incidents that could happen to any shooter. The geese, there were 43 of them, swung west over the city, against the wind and climbing slowly, and I presume they headed south after they got their altitude. From the point in question over to Lake Michigan is hardly half a mile, and it is probable that the travelers had just been routed out by some passing boat from their resting place in the lake, where they had dropped in during the night on their way south. Wild geese often drop into Lake Michigan in this way, but it is usually much lower down the lake, and I never heard of a flock crossing the city this high up the lake. It so happens that from my office window, down town, I have a view of a window in a tall building a block or so away, in which there is a printing press. All day long there is visible the tireless flap, flap of the white paper as it passes over the press, and I have always found this printing press very good company, because it never gets tired. But to-day I have seen goose wings in that paper all day long. I am sure I hope the travelers will get south in safety, and they have my best regards.

If the geese are coming down, the ducks are all down, and our shooting has probably closed for this year. All last week, or up to Thursday, vast quantities of wildfowl were on the Kankakee. Hathaway, the oldest pusher at Mak-saw-ba Club, says he has not seen so many ducks for years. They were in on the river, in the timber, the marsh being frozen to great extent. We do not hear of any bags of ducks being made, however, though the local market hunters along the Kankakee and Illinois must certainly have taken full advantage of the great flurry of wildfowl that came down with the cold snap. It is freezing weather now, and the mallards will hug the timber or quit the country.

On Dec. 1 Mr. Geo. T. Farmer killed 12 jacksnipe on Cumberland marsh. This is something that never was done before and probably never will be done again, and it is not known here that snipe have ever been found in this latitude at that date. The birds were fat.

Mr. W. W. McFarland is lately back from Hennepin marsh, with a dozen ducks, some rabbits, etc. He reports quail plenty, though illegal now. In his hunting earlier in the season on Hennepin marsh, Mr. McFarland bagged 196 ducks in three days, the daily score being 81, 75, 40. On another day he got 40, and on yet another day performed the seemingly impossible feat of killing 50 mallards and greenwing in one hour. This was on a pass, just where the ducks turned in the wind to draw to a piece of water beyond, so the bulk of the dead birds lay very close together. Mr. McFarland says that over 1,000 ducks have been killed on Hennepin marsh this fall, but the shooting has been irregular.

Mr. W. K. Reed, also of the Hennepin, lately showed me a device in use by that club on what they call a "pull over" in the West, and would probably call a portage in the East: anyhow, it is a place between two lakes where the duck hunters have to drag their boats across by hand. The "pull over" in question is thirty rods long, bu

is now made easy by a system of maple rollers, 3½in. by 3ft., which are mounted at each axis end on the head of stakes driven down flush with the ground. The rollers are about 3½ft. apart, and a loaded boat slips along over them the easiest way in the world, whereas formerly the crossing was one of great labor and delay.

Hennepin Club built a $20 dam this fall which has done them a world of good, and put out 200 bushels of corn as feed, with results which are thought satisfactory in the extreme.

At their recent business meeting Mak-saw-ba Club showed a wish to take up this matter of putting out feed, and instructed the new board of managers to take measures looking toward feed and protection in the fullest sense of those words. At the meeting the following officers were elected by Mak-saw-ba Club for the ensuing year: President, T. Benton Leiter; Vice-President, L. R. Brown; Secretary, C. S. Petrie; Treasurer, W. R. Smith; Board of Managers, T. Benton Leiter, L. R. Brown, R. B. Organ, W. H. Haskell, J. A. Sharp.

Dec. 12.—Mr. P. F. Stone is just back from a short trip through Kentucky and Tennessee. He had one day of quail shooting near Paducah, Ky., about fifteen miles down the newly completed line of the Paducah, Tennessee & Alabama Railway. They struck new country, plenty of briers and plenty of birds. Percy got thirty-six birds and says they flushed eighteen bevies. His companion was Mr. Rheiner, of Paducah, a very good field shot, whose two dogs had a large interest in the results.

Mr. Geo. I. Maillet, of Crown Point, Ind., is in town to-day, for the purpose of attending the business meeting of the Grand Calumet Heights Club to-night. The lessors of the club property have served notice to vacate, and all club members are asked to be present at this important meeting of the club, which may result in the temporary disbandment of the club while another property is being looked up.

Dick Turtle and a local gun or two killed forty-six rabbits on the islands above Shelby by firing the marsh for a drive one day last week. The rabbit battue seems to be having a vogue. E. HOUGH.

SHOT COUNT AND WEIGHT.

IT will be recalled by readers of FOREST AND STREAM that some time ago we made a careful exhibit of the vagaries of chilled shot as to uniformity of count and weight of a certain charge between the various makers. The variations, it will be remembered, were very large, and at the close of the publication of the tables the several makers were invited to express their opinions as to the feasibility of a standard. The circular letter sent out by FOREST AND STREAM read:

GENTLEMEN—In several recent numbers of FOREST AND STREAM, copies of which have been sent you, the question of variation in count and weight of shot nominally of the same size was taken up and illustrated by a complete set of tables covering the more popular sizes. The wide divergence shown would seem to indicate that there is need of a standard set of grades. Should this be attempted? Can it be accomplished? are questions which you as interested makers can discuss with particular profit and weight to the shooting world. Will you kindly give us your opinions on the matter, which, in view of the popular attention drawn to the subject by the tables, would be particularly appropriate at this time.

Yours, FOREST AND STREAM.

Responses came from many of the companies and indicate that the makers are much at variance in their explanations of the differences shown.

The Collier Shot Tower Co., of St. Louis, replies: "Replying to your favor of July 23 we have noticed in several recent copies of FOREST AND STREAM the variation in count and weight of shot nominally of the same size from the different towers of the United States and England. There is a standard set of shot gauges, which, if used by all the towers, would enable them to make the same size shot, and in consequence would save the wide divergence which is shown by your table. The only cause we can attribute this wide variation in sizes to is the wearing of the holes in the separating screens. We have recently added to our tower new steel shot screens made from the standard gauge, and we are now prepared to turn out better shot than we have ever before made. Trusting the above will prove satisfactory I remain very truly yours, EDW. M. FLESH, Sec'y.

Bailey, Farrell & Co., the large Pittsburgh makers, say: "Answering your favor of the 23d ultimo, there is now a standard grade or size for shot known as 'American standard' to which we think all the shot manufacturers conform. Using ordinary care in the manufacture of the shot, there should not be a variation of over 10 per cent. from the standard. With 'chilled shot,' however, the case is different. While all the manufacturers may make and number the shot the same size, the shot made by the different manufacturers may not be all of the same weight, owing to the difference in the quantity of antimony used for hardening, antimony being but little over one-half the specific gravity of lead; hence, the larger the quantity of antimony used in the shot the lighter the shot. The name 'chilled shot' is a misnomer. Lead is not chilled, *i. e.*, hardened, to an appreciable degree by rapid cooling. Yours truly, BAILEY, FARRELL & Co."

The LeRoy Company, of this city, who have heretofore struggled with this question of a standard, reply as follows: "We are in receipt of yours of 23d inst., relative to the 'variation in count and weight of shot, nominally of the same size.' Also as to the necessity of 'a standard set of grades,' and 'should this be attempted can it be accomplished?' In June, 1873, the same question came up before the New York State Sportsmen's Association at their meeting held at Batavia on the eleventh of that month. After full discussion, the matter was referred to a committee, consisting of Messrs. R. Newell. N. M. Smith and F. G. Skinner, who reported that 'Upon the most critical examination, your committee have decided to adopt as the American standard the scale presented to us by Messrs. LeRoy & Co.' The scale referred to was based upon the English standard of sizes, the only foreign make that in those days in any way approached regularity in grading, the Spanish, French, etc., being hopelessly mixed. The scale as then adopted was in hundredths of an inch, from dust at .04, to T at .23, the dropping-pans and test-gauges being graduated accordingly. The sizes, so arranged, were made by T. O. LeRoy & Co., and from 1876, by their successors, the LeRoy Shot & Lead M'f'g Co., down to the present day, and regularity and uniformity are now, as then, claimed for them. Rivalry among the various manufacturers then, as now, interfered with uniformity and no important result followed. Whether any better result could be accomplished now it is difficult to say, human nature running in about the same groove. There is, however, this advantage at the present time, that sportsmen know, when they use any special brand, the number of pellets of each size, etc., so that, by all parties to a trial using the same brand, a fair comparison of results can now be made. Yours truly, E. A. LEROY, Vice-Pres."

The Chicago Shot Tower Company takes rather a pessimistic view of the situation, saying: "Your favor of the 23d came duly to hand, and has received our consideration. Without doubt, there would be many advantages in having the various sizes of shot made by different manufacturers correspond, but at the present time we think it would be practically impossible to get the manufacturers to alter over their separators to make them all correspond. Yours respectfully, CHICAGO SHOT TOWER Co."

From Baltimore comes the response of the Merchants' Shot Co., as follows: "Yours of 23d to hand. I think it would be more satisfactory to shooters in general if sizes of shot were uniform among all makers, but at this time I hardly think anything can be done. There should be no difference in size of shot from the following towers, as they use the same machinery for separating: Collier Shot Tower Co., St. Louis Shot Tower Co., Chicago Shot Tower Co., Raymond Lead Co., W. G. Price & Co., Bailey, Farrell & Co., Gulf Shot Co., Colwell Lead Co., T. W. Sparks, Merchants' Shot Tower Co. As to the weight of shot it depends a great deal on the mixture of the metal and the height from which it is dropped. Yours truly, WALTER T. HARVEY, President."

The Cincinnati Shot Works Company express a willingness to work toward a uniform standard in their reply: "Your favor 23d received. We have examined your tables with much interest and certainly could not have believed there were such wide differences between manufacturers' sizes. Of course in the manufacturing of drop shot it is unnatural to expect and absolutely impossible to secure absolute uniformity from very natural causes, but there need not exist any great variation. We would be willing to join with other manufacturers in getting to a uniform standard in sizes and numbers throughout the list, and hope you can bring this about. Yours truly, CINCINNATI SHOT WORKS."

The president of the St. Louis Shot Tower Co. alluded to the recently formed shot-makers' pool in his reply, but as yet we have not heard of a standard output from the combination. He says: "Yours of 23d inst. to hand and contents carefully noted. We have been aware for a long time of the great difference in weight and count of the shot made by the manufacturers of the country, but while the trade made no complaint there was no need of any change; but now that the attention of the trade has been called to the fact the trouble should be remedied; and that it can be done there is no doubt, if the manufacturers would take hold of it with the right spirit. At present there is very little harmony among the shot manufacturers, and while that state of affairs exists little could be done, as each one claims to make what is called standard sizes, an effort is now being made to get all the manufacturers together, and if that is accomplished the remedy is easy, we think.—Respectfully, G. W. CHADBOURNE, Pres."

Tatham & Bros., of this city, give a thoughtful critical reply, going back to the well-known New York State Sportsmen's endeavor at a standard in 1873. As chilled shot is now so generally used, we thought it proper to make our comparative table of this variety, and did not take any note of the decreasing soft shot production. Tatham & Bros. say: "We have your favor of the 23d ult. calling our attention to your examination of chilled shot and suggesting that there is need of a standard set of grades, and asking whether this should be attempted, and if so, whether it could be accomplished. At a convention held at Batavia, N. Y., June, 1873, by the New York State Sportsmen's Association a standard of sizes (diameters) for shot was adopted, to be known as the 'American standard,' commencing with No. 12, to measure five one-hundredths of an inch, and each size increasing one one-hundredths of an inch to the largest. The object of their action was to induce all manufacturers to conform to that standard, so that a certain number should mean the same size throughout the country. It would appear from the results of your experiments that that standard is not absolutely adhered to by the different manufacturers. We think, however, that you would have found the result more uniform had you made the examination of soft shot, as chiled shot undoubtedly varies in weight for the same size more than soft shot, by reason of the greater or less quantity of hardening material used in its manufacture. The use of a *measure* is also largely a source of error, as no two persons will fill the measure exactly the same: and not more than three charges agree either in weight or count out of the ten furnished you of each size by each manufacturer, although undoubtedly the whole ten charges were measured out by the same person. Again, an ounce avoirdupois contains 437½grs. Troy, making for 1¼oz. 546¾ Troy grains; but we believe that in all but one instance that weight was exceeded by the measured 1¼oz., which according to your tables varied from 637 to 541 Troy grains. We would suggest that the proper mode of comparison would be to measure the length of a given number of pellets placed in a line, of each size from each manufacturer, which would show the variation from the standard. It is quite possible for the manufacturers to produce sizes which would very closely conform to the American standard, but it is probable that this would entail considerable expense upon some of them. Yours very truly, TATHAM & BROTHERS."

EDUCATED DUCKS.—Longmont, Colo., Dec. 2.—Ducks are very plentiful here, but it is about impossible to kill any, on account of the higher education of the wildfowl. The weather here is more like summer than December, and consequently when the ducks do move they go so high no shotgun can reach them.—C. J. W.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

BRITISH SPORTSMEN IN AMERICA.

Editor Forest and Stream:

Your issue for Nov. 13 contains some strictures by a correspondent, "C. B. W.," on statements of mine in "The Big Game of North America," relative to acts of cruelty by an English sportsman in the mountains. The writer puts another man's name for mine, but the reference to the book designates me as the man he criticises.

On the facts referred to he expresses disbelief, so that there is no occasion for remark on that point. His main censure is on my mention of him as a "foreigner" and an "Englishman." That was the fact in the case, and I so stated it; but I did not state that the man was a butcher because he was an Englishman, as I did not state that the wretched skin-hunters were butchers because they were Americans. In either case they were a disgrace to the common nature they bore.

Englishmen have been more prominent than others in the shooting of game because they have more money than others, have crossed the ocean to shoot, and have no commercial interest in the game they kill, the plea that our own skin hunters and meat hunters make for their waste and havoc. And so they have been more noticeable than others, carrying out that love of outdoor adventure and the love of arms which we have derived from them, and which makes both nations so manly a race. Your correspondent feels, naturally, sensitive to my mention of his nation, and I regret to have wounded the feeling. I am proud of the race from which I have my blood and name, and "C. B. W." has no greater pride than I have that the man at the head of the whole human race to-day is an Englishman. I share in the honor and I share in the pride, and I should feel that intentional defamation of Englishmen, as such, on my part would be to "file my own nest."

As to the "after all," I simply meant that, nothwithstanding this act of a single Englishman, he would be denounced by the press and by his own people at home. All England and the civilized world are horrified to-day by the atrocities of Englishmen in Stanley's rear guard. Major Bartelotte ordered a hundred and forty lashes on a native for a minor offense, and caused his death, and while himself furiously kicking a chief's wife was shot dead by the chief. Jameson—of the same name with the man in the mountains, and, it is to be hoped for the honor of human nature, the same man, that there may not have been two—was charged with furnishing a young girl for a cannibal feast; the proofs of the charge are in the balance, but it is in actual proof that he sat by, saw the knife passed into her body, saw the slices cut from her limbs, made drawings of the whole scene on the spot, sent them home to his wife and they are in her possession now. And the London *Times* and the English press call a halt on African exploration, if, instead of being carried on for science and commerce and philanthropy, it is to be conducted in a spirit of butchery and atrocity; and that by Englishmen.

Of course, the bare truth in the matter is that they might have been Frenchmen, Germans or Italians; they happened to be Englishmen, and England is thrilled with shame.

Your correspondent and myself are not really at variance in this matter. I should speak of an American with all the more feeling, for such deeds, that he was an American. I meant no invidiousness when I specified the actual nationality. I share with him in the pride for England and a Gladstone; I share with him and the whole English people in humbling for the fierce severity of Bartelotte and the morbid atrocity of Jameson. And I do not doubt that your correspondent would join me in that higher feeling, either for pride or for shame, than of Englishman or American; the feeling of the nature we bear, and say, *Homo sum, et nil humanum a me alienum puto*—I am a man, and I hold nothing foreign to me that pertains to man. JOSHUA COOKE.

P. S.—"Boone" has no need to take up the defense of "Silalicum" in any matter; that gifted writer can answer for himself. But if "C. B. W." will notice, Mr. Perry distributed the meat of the elk killed to the Indian tribe on whose ground they were hunting by permission of the chief. Such a gift is an event to a tribe, a boom, a windfall. The one great necessity of an Indian is food, and his whole life is a struggle to get it, and when they do get it not a pound is lost, the tendons themselves are made into soup and the bones are pounded for marrow. B.

AN INDIANA REPORT.—Michigan City, Ind., Dec. 9.—*Editor Forest and Stream:* The game in northern Indiana, as far as I can learn, is most plentiful. We have had two days of good tracking snow, and bags of ten rabbits to a man and dog were very common. Quail were most numerous, but have been killed to a very great extent. It is good for them that the law expires soon, although I am sorry to say that the game laws are neither enforced nor obeyed in this section, and I am afraid there will yet be a great deal of illegal killing. Partridges are rather a scarcity; very small bags have been made. It is hard to give a reason for the small number of birds. This is not a very good place for ducks, although they can be killed on stormy days from the pier extending into Lake Michigan. A short while ago I bought an American-made gun, $50 grade. It is a very neat gun, of strong shooting qualities, but I wish the manufacturers had put locks on that would click alike. The right spring clicks clear and nice, but the left lock makes very little click when I draw the hammer back. I enjoy the articles of E. Hough in your journal. Michigan City, thirty miles from Chicago, does not compare with other shooting places much nearer Chicago.—F. L.

A DEER KILLED BY CONCUSSION.—City of Bayonne, N. J., Dec. 8.—I append an extract from a letter received from my brothers, of Marquette. The hunting spoken of was in the Northern Peninsula of Michigan, near that place. He writes: "Richard and I got each a fine buck by still-hunting this fall. I had the head of mine mounted and the hide tanned and gave them to Minnie; the skin makes a very nice rug. Dick made a remarkable shot on his buck, which, by the way, was a very large one, the bullet from his rifle struck it on the horn close to the head and it dropped dead. It was found that it was killed by concussion of the brain, the covering membrane of the brain being ruptured. Is not this a unique occurrence? Has such a case come under the observation of any of your readers before?—RICHMOND.

THE MASSACHUSETTS BANQUET.

THE annual banquet of the Massachusetts Fish and Game Protective Association was held in the large dining hall of the Parker House, Boston, last Thursday evening. The change from Young's, where the dinner was to have been held, was made necessary by the unexpected and unprecedented number of those in attendance, there being 212 members and guests present. This was the largest meeting of the kind in the history of the society, and taking it all in all the assemblage at Parker's was a magnificent representation of the sportsmen of New England—the "outdoor men," as Mr. Murray put it so felicitously. The propitious weather, the season and other causes no doubt contributed to bring out the attendance, but we are perhaps not far from the truth in thinking that the great gathering is to be accepted as a hearty indorsement of the enterprise of the Massachusetts men in their important effort to stock the covers with native species and introduced game. Because of this public-spirited work the society holds a stronger place than ever in public esteem. Not only was the meeting of last week the largest, but it was in every respect one of the most enjoyable in the Association's record, and one of the most happily conducted.

MENU.

OYSTERS ON DEEP SHELL.

SOUP.

Purée of Game à l'Anglaise. Bisque of Lobster.

FISH.

Boiled Bass, Hollandaise Sauce. Fried Smelts, Tartar Sauce.

REMOVES.

Canada Goose. Boiled Leg of Southdown Mutton, Caper Sauce.
Saddle of Venison, Jelly Sauce. Sirloin Beef aux Champignons.

ENTREES.

Vol au Vent of Black Bear. Croquettes of Game, Sauce Reform.
Fried Bananas, Benedictine.
Fricassee of English Hare with Dumplings.
Apple Fritters, Glacé au Cognac. Macaroni au Gratin.

Roman Punch.

GAME.

Black Duck. Bluebill Widgeon. Sharp-tail Grouse.
Larded Partridge. *Dressed Lettuce.*

SWEETS.

Omelette Soufflé. Grape Meringues. Charlotte Russe.
Frozen Pudding. Wine Jelly.

DESSERT.

Bananas. Oranges. Apples. Grapes. Assorted Nuts.
Raisins. Ice Cream. Sherbet. Coffee.

Among the guests were ex-Gov. Long, State Treasurer George A. Marden, W. H. H. Murray, Fish Commissioners Brackett, of Massachusetts; Hodge and Riddle, of New Hampshire, and Brainerd, of Vermont, ex-Commissioner Putnam, Gen. N. A. M. Dudley, Fred Mather, superintendent of the Cold Spring Harbor hatchery; Senator Dwinell, of Winchester; Gen. J. H. Reed, of Cotuit; E. S. Tobey, Jr., F. G. Peabody, Hon. H. H. Sprague, president of the Senate; Judge Asa French, J. Russell Reed, Q. W. Adams, Chas. B. Reynolds, of the FOREST AND STREAM, I. O. Woodruff, president of the Megantic Fish and Game Association.

Letters of regret were received by Secretary Richard O. Harding from ex-President Cleveland, Gov. J. Q. A. Brackett, Senators Aldrich and Hawley, Congressman Greenhalge, U. S. Commissioner Marshall McDonald, Hon. Wm. E. Barrett, Hon. Wm. S. McNary, Hon. A. E. Pillsbury, Hon. Harvey H. Pratt, Hon. H. M. Knowlton, Hon. Nathan Matthews, Jr., Mayor-elect of Boston; Messrs. A. N. Cheney and John W. Titcomb, Commissioners H. O. Stanley, E. M. Stilwell and B. W. Counce, of Maine, and Commissioners Wm. M. Hudson and Jas. G. Bill, of Connecticut. Senator Frye sent the following:

LEWISTON, Me., Nov. 26, 1890.—Mr. J. W. Adams, Boston, Mass.: My Dear Sir—Yours of the 25th instant, extending to me an invitation to attend the annual dinner of the Massachusetts Fish and Game Protective Association, is received, with thanks for the courtesy. If there is any one thing I am proud of, it is my experti-ness as a fisherman, and if there is any one accomplishment I have acquired, it is that of fishing. In the presence of forty pounds of leaping, glistening salmon, shaking from his silvery sides water-diamonds into a magnificent river, running at the rate of ten miles an hour, all honors, all emoluments, all hopes and expectations, even presidential bees in the bonnet, sink into utter insignificance. Next to killing a fish, is a good chance with an appreciative audience to tell fish lies; but I am compelled to flee the temptation, and in doing so to take as much credit to myself as Joseph did when escaping from the wife of Potiphar. In view of the desperate contest which is to take place in the Senate immediately on its opening, it ought to be impossible for any Republican Senator to absent himself for an hour, and if Senator Aldrich does enjoy your hospitalities I shall hold him as a recreant Senator. Again thanking you and your committee, I am, yours truly, WM. P. FRYE.

The Association numbers among its members Myron W. Whitney, and it has come to be recognized as the correct thing at the annual dinner for the president to call on Mr. Whitney for a song; the response was an ingenious and taking parody on the "Three Fishers." Then President Edward A. Samuels reviewed the work of the Association and explained its purposes as follows:

Old Father Time, by a strict attention to business and a series of persistent turnings of his hour glass, has moved along the great procession of days and weeks and months, and we are again assembled to do honor to our Association by partaking of our annual dinner. We have paid our *devours* to it corporeally, and after I have inflicted upon you a few minutes' torture in the shape of a brief introductory address, you shall partake of a feast of mental pabulum that will send you home not only good and wise and, I trust, sober, but fully imbued with the determination to make not only our annual dinners but every effort that we make as a society a success.

In the first place it is my duty and pleasure to, as your representative, extend a cordial welcome to our friends who are with us as guests this evening, and I propose to you now that we drink to their best health.

It now lacks but about three months of being seventeen years since that little coterie of anglers met in this city and formed the Anglers' Association, the parent of the Massachusetts Fish and Game Protective Association, and during the period that has elapsed much good has resulted from our work, much that will be of lasting benefit to this Commonwealth; and we may well be proud of it, for it has been a philanthropic work, a disinterested and unselfish work; a work involving much labor and many sacrifices, and a work that should receive a greater consideration, a better appreciation, a kinder recognition, than it sometimes receives from those who have been most benefited by it.

As you know, we have made every possible effort to procure suitable laws for the protection and preservation of food-fishes, bivalves, lobsters, game and song and insectivorous birds, and I think I may say that, although we have not always succeeded in obtaining all we desire, we have been instrumental in securing most of the beneficent legislation in the direction I have named that has gone upon our statutes; and all the unwise and detrimental laws that have been enacted in relation to our birds and fish and game have been made in spite of our most earnest protests, our most strenuous efforts.

If we have done much to secure good laws we have also done much to enforce them; many, many hundreds of dollars have we expended in this direction, and we do not propose to discontinue this work.

Unquestionably our laws for the protection of our game and fish are not properly enforced by the appointed authorities; undoubtedly there might be a better enforcement of them.

We have machinery enough; for, in addition to the Board of Fish and Game Commissioners, it is the duty of all officers qualified to serve criminal processes, to arrest without warrant any person whom they shall find taking or killing, or who has in possession the game birds and animals that are protected by law. And any officer who neglects or refuses to do so shall be punished by fine not exceeding twenty dollars; the officers must do their duty, the law is mandatory, and it is for us to see to it that transgressors shall no longer go unmolested, that the authorities no longer continue apathetic.

It has been sometimes said of us by the ignorant and prejudiced and designing that our efforts in the direction I have named are selfish and for our own aggrandizement and pleasure, that we endeavor to procure a monopoly of our game and fish.

Such astonishing assertions have been made, and it is one of the common stock charges against us at the State House, made by some of our most unscrupulous opponents, that we are a body of wealthy, aristocratic city sportsmen with nothing to do but clip off our coupons, go shooting and fishing and eat quail on toast which we have deprived others from obtaining. Now, that such statements should be made concerning us is less astonishing than that they should be listened to and credited by legislative committees. For what are the facts?

It is true we have in our ranks a few wealthy gentlemen, a very few compared with the number that I wish we had; but we are not a society of what can be fairly called wealthy men, men of leisure. No, we are workers; almost all of us busy men in the various walks of life, with rarely ever more time to spare for recreation than have our neighbors, and most of us do not clip many coupons or eat quail on toast. Now let me for a moment review a little of the work that our association has done for the benefit of the people of this State.

In the first place we have enforced the laws for the protection of the lobster. Until we took the matter in hand the law was practically a dead letter, and short lobsters were caught and sold openly, and there was a good prospect of the speedy extermination of an article of food which had been hitherto in common use with us to rich and poor alike, but which in other countries had already been classed among the expensive luxuries.

What was the result? After the expenditure of a great deal of hard labor by your efficient chairman of the committee on the enforcement of the laws relating to fish, Mr. Shattuck, and the sacrifice of a large share of our funds, the laws were enforced and are to-day respected, and the extirpation of the lobster is now among the very remote possibilities. Of course the entire credit is not due our association, for in later years the Commissioners have done good work in this direction; but if we had not adopted the measures we did the lobster would now be much less plentiful than it is.

Now, in doing this work were we striving for our own aggrandizement or were we laboring for the good of the community?

Since no one has gone so far as to accuse us of struggling for a monopoly of the lobster trade, even the most prejudiced must admit that our action was entirely disinterested.

Again we have made earnest effort for the better protection of our song and insectivorous birds. We knew that unless those birds were protected from the awful slaughter to which they were subjected, slaughter by the tens of thousands for millinery and other senseless purposes, extermination was sure to come. Members of our association took the initiative in the great agitation that ensued. I, alone, wrote scores of essays and articles which were printed in various agricultural reports and journals, and others among us have done individual efficient work. The agitation thus begun resulted finally in the formation of hundreds of societies for the better protection of birds throughout the country; and what has been the outcome, who have reaped the advantage?

The birds are saved and the farmers have received the benefit. Myriads of their best friends, the insect-eating birds, are left to destroy the pests of the farm and gladden us in the fields and forests with their sweet songs and lovely plumage.

In this work, also, we strove for the benefit of the community and not for our own selfish purposes.

In addition to all this we have made the effort to restock our woods and coverts with game birds which had become almost or quite extinct. In the present year for this purpose there has been contributed to be expended by our committee, which has proved most efficient, and which has done an immense amount of very hard work, the large sum of $1,500. Of this money our Association contributed outright from the treasury $350, and the balance was subscribed chiefly by individual members. The fruits of this liberal appropriation are already apparent, and quail which were in many sections almost extinct are now becoming plentiful. Who reaps the benefit? Assuredly not our Association, for if any of those quail have been shot by individual members—I say if any of them have been, which, who can say? and undoubtedly for every bird that has been thus killed I am safe in saying that scores and scores have been taken by others who were not members.

The farmers have also again been benefited by the addition of hundreds and hundred of insect-eating birds, for the quail is by naturalists well known to possess the insectivorous habit. And so the work goes on. We are building up where others have pulled down. Time was, and many of us can well remember it, when the farmers with huge traps baited with grain, captured whole coveys of quail at a time, and exhausted the entire stock in their localities. They took no thought of the morrow; just as the early settlers extirpated the salmon so did they destroy the quail and other game, and it was left for our and kindred associations to replace that which had been removed and give it for the benefit, without cost and without favor, of the entire community.

I have said that our association originated in the Anglers' Association, which was incorporated in 1874. Since that year it has had its changes both favorable and unpropitious. I was not one of the charter members, but I joined it in the first year of its organization, in which year there were 302 paying members. This large number soon began to gradually fall off, however, and in 1879 there were but 192 who paid assessments, and in 1883 there were but 108 paying members. Since that year there has been a gradual annual increase, more marked perhaps within the pass two or three years, and we have to-day the large membership of 425.

Now, I would like to see our association ten times as strong as it is, and I believe it can with proper effort be made so, for there is no reason why all who are interested in our objects, and there are thousands all over the State, should not enroll themselves under our banner. With such a membership what could we not accomplish? We could make our power felt, and when we asked for wise and salutary laws they would be given us.

We asked of the last Legislature that an appropriation be given the Commissioners—the Commissioners on Fish and Game, not our society—to be used in restocking our living brooks and streams with trout. We believe this to be something absolutely practicable, and if it is done and generously maintained, it will place within the reach of the people an abundant supply of delicious food to be had for the taking; but the appropriation was not made.

Let us ask for it again; and if the Commissioners cannot devote time to the work, let our Association have the appropriation and we will see it done, and done faithfully, too.

We asked also for a wise change in the close season on game birds, and we got a change with a vengeance, but not what we aimed for. Now the pot-hunter may kill the half-grown, half-fledged quail, poor little things hardly strong enough to fly, on the 15th of September.

Now, if our Association, comprising as it does 425 as respectable gentlemen as there are in this Commonwealth, men prominent in literature, commerce and all the professions, is not powerful enough to accomplish its object, let us increase it until it is of such a magnitude and strength that its demands, which are and always have been in the best interests of the people, shall be satisfied and its mission be crowned with success.

There is no other word painter like W. H. H. Murray, and on no other theme does he speak more eloquently than of the woods and the trout streams. His speech was a feeling plea for freedom in the woods, a protest against the control of the wilderness by clubs and individuals. "In the Adirondacks, where I used to roam," said he, "one family owns 100,000 acres. Those acres don't belong to that family. They are God's acres, I regret that to prevent the extermination of the fish and game we are driven to buy and own what ought to be free to all. I would be the last man to vote that this association, or the Megantic, or any other should acquire or grant a title to the woods and the mountains. It is like buying the sky, the stars and the winds. It is fencing in God's birthright. But we fall on evil times, and it seems as if only this recourse is left us if we would preserve the forest growing and the streams with full banks. I confess I am in a quandary. If the land is left alone the careless building of fires, the shooting of game that no one can eat, and the catching of fish that no one wants will destroy the pleasures of out-door life in a few years. If we buy, surely we are establishing class ownership and aristocratic privileges. We cannot but be saddened by the thought that the time is soon coming when all we have now will be in private hands. Little by little they have driven me back from my wanderings. I hate to be warned off from a pond or stream. It makes me sassy and ugly. I will not vote for or agree to that manner of settling the question. But I am in hearty accord with your efforts to protect the food fishes, the game and insect-eating birds, to preserve them not for the rich man's pleasure, but for the poor man's daily fare, and to preserve the songs over the fields, among which the farmer boys are being raised. It is sweet to think that there is nothing sour in our remembrance of nature. We deal with men, and they cheat us. And we cheat them. That is human nature, hard, grinding, bigoted human nature. It may have come down from the fall, as they say. I hope so. I hope it was not bred in us. But we never cheat a man in the woods. We point out the pool where fish will nibble and the thicket where the big buck will run by. The out-door life cultivates the manliness that is at the core of us all, the one imperishable thing that death can not destroy and the grave cannot smother."

H. H. Sprague, president of the Massachusetts Senate, responded to the president's introduction with brief and commendatory reference to the Association's work at the State House and its semi-official connection with the Government. Hon. John D. Long protested, "I am hardly prepared to talk to an audience of fishermen, as by nature and the profession which I follow I am limited to the plain truth;" and then recounted his last summer's experience in Maine in a way that provoked the warmest applause.

Prof. Putnam, late of the Massachusetts Fish Commission, read from the stenographic report of a conversation with a veteran fisherman in his office. The old fellow's answers showed that veteran fishermen were in the habit of reporting far more fish than they actually had caught, in order to prevent the Fish Commission from knowing the scarcity of fish and ordering a close season. The pounds and weirs, as this report showed, were annually catching and destroying great numbers of young fish. Prof. Putnam proposed that the Association should urge the restriction of pound and weir fishing; and also, in order that a reliable basis might be had for estimating the changes in the fish supply, that the Fish Commission should own, at some good location on the coast, a pound of their own, which should be put in operation as early as possible in the spring, and kept open till the ice in the autumn. Other speakers were Hon. Geo. A. Warden, Commissioner Brainerd, Pres. J. O. Woodruff, and Commissioner Atherton and Mr. Fred Mather.

SURE ENOUGH GOATS.—We take the following from the Great Falls (Montana) *Leader*, and wonder if it is founded on fact. If it is we should like to know what the goats were taken for: "Wm. Ulm, of Ulm, was the fortunate owner of several Angora goats, which he prized very highly. In order that they might become fully acquainted with the country he allowed them to go where they pleased over the mountain ranges adjacent to Ulm. A few days ago a party of hunters, under the guidance of Lieut. Ahern, of Fort Shaw, came across these goats feeding on the mountain side, and taking them for mountain sheep opened fire upon them with their Winchester rifles, and the result was that four of the Angoras fell victims to the deadly shots of the soldiers. The goats were taken to the fort and properly dressed and divided up among the boys, who soon made way with the supposed mountain sheep meat. Mr. Ulm missed the goats, and after a vigilant search for two days found the spot where they had been slaughtered, and from there the trail was followed to the fort. When the Lieutenant receives Mr. Ulm's bill for four Angora goats he will discover that there is a difference between mountain sheep and Angora goats, not only in appearance, but in price."

A SEAL'S COLLAR.—Conwell Bros. took from their fish-trap one day last week a seal which had an iron lobster-pot ring firmly fixed around its neck. The ring was embedded in the flesh, making it quite difficult to remove; after removal the seal appeared to experience great relief.—*Cape Cod Item.*

THE MAINE DEER LAW.

Editor Forest and Stream:

"Special's" article in this week's issue of FOREST AND STREAM has just come to my notice. While not agreeing with your correspondent that deer are growing scarcer in Maine, or that the number killed before the open season makes any marked difference in their number, I do believe the law as it now stands is so unpopular as to be impossible of enforcement. In the Maine Legislature of 1889 the effort to open the season on Sept. 1 or 15 was defeated by the lumber interest The lumbermen fear fires in September especially, that being usually a dry month; and reasoning that opening the game season in that month would increase the number of sportsmen in the woods and consequently the danger of forest fires, they lobbied against the bill and killed it. And the law as it now stands on the statute books is an attempt of the minority to rule the majority, and except in a few places where sporting interests especially center, it is as dead as the blue laws of Connecticut. The Maine game is in prime condition during the latter part of September. Nature's law makes it open season. If the Maine game were unmolested after the snow becomes deep in winter, I should have no fears of their decreasing in numbers.

It is not the sportsman, either within or without the State, who destroy most of the game. It is the hunters and trappers who travel the woods all winter and kill every animal they can, if able to use no more than the hide. One such man I have in mind. His line of traps extend over a circuit of about 200 miles. This man travels his line for four months every winter and kills every animal he can. A hundred sportsmen hunting in September would not kill so much game as this one man in a season.

If the Legislature of Maine desire to protect the game in the State they will surely pass legislation that shall meet the approval of a majority of their people who are disposed to obey the laws, and will then provide means for its enforcement. We have often seen that unpopular laws cannot be enforced in this country, and any attempt of a small minority of the people to control the majority will always fail, even though that minority represents much wealth and social position. F. T.

PROVIDENCE.

Editor Forest and Stream:

I feel a deep interest in an article which appears in our issue of Dec. 11, "Maine Deer Dogging," and no doubt many of your readers will also feel an interest in your special correspondent's account of the illegal killing and wanton waste of large game.

On Sept. 20 of this year I passed over a tote road near Long Pond, in northern Maine, and my attention was called to a big cow moose that lay rotting on the ground near the road. It had been shot in August by jack hunters, who had probably taken it for a deer, getting but one bullet just back of her forequarters. She had run quite a distance and fallen where she was not discovered till worthless for food.

From observations which I made in October I am satisfied that jack-hunting is carried on to a great extent in northern Maine, and that more game, especially deer, are killed during August and the first of September by that mode of hunting than are killed during the open season.

The time is ripe to make jack-hunting a State prison offense. I shall visit the Moose River and Spencer Valleys in December, and may take occasion to write you concerning big game. L. A.

PHILADELPHIA, Pa.

THE OHIO SEASON.

DAYTON, O., Dec. 15.—The open season for quail and pheasant shooting ended in Ohio to-night, and the thousands of hunters who oiled up their guns, put them away on the rack, rubbed their dogs' feet and joints with neatsfoot oil and fed warm gruel and wholesome meat, good-naturedly vote this the greatest bird season they ever knew. All of the sportsmen devoted every spare moment to the field; yet while it would be difficult to compute the number of quail that these hunters have bagged in the thirty-five days since Nov. 10, it is believed by observers that farmers' boys and pot-hunters trapped, murdered and marketed more quail in the few days of snow last week than were killed on the wing during the entire season. Village, town and city markets have been glutted for five days. Live quail and pheasants were brought into Cincinnati by the wagon load, probably from Kentucky. A farmer hauled into Toledo, this State, a wagon load of dead quail and rabbits that he got in the snow.

The first day of the snow the farmers, young and old, hunted on horseback, shot right and left, and annihilated covey after covey. One of the market hunters of this city bragged that on Tuesday he had a ground shot, killed seventeen quail and but one got away; and another saw a covey under the snow, fired and killed thirteen in one shot. Slaughter like that all over the State has shamefully thinned out the birds. Had the snow come this week instead of last, the law would have been ample protection. What birds are left will go through all right now unless the winter is too severe Quail were selling at $2 to $2.25 per dozen after the season opened, and to-day can be had for 75 cents to $1. Pheasants held at one price through the season, 50 cents per pair at Chillicothe, 30 cents per pair at Fort Recovery, Wapakmeta, Toledo and Kent, $1 at Dayton, Cleveland, Columbus and Cincinnati. The pheasant season opened Sept. 1, but there was very little hunting until cooler weather, about Nov. 1. After that there was no let up until the season closed to-day. Pheasants were so sly, and so protected in the thickets, that a bag of four birds was counted a big day's work. Therefore, there is an abundance left over. In Indiana there is talk of passing a law forbidding the killing of pheasants for five years, but the proposition is not approved by a majority of sportsmen.

Thomas Hannah, of this city, and his brother Reuben, of Yorkshire, have been the most successful pheasant hunters of this vicinity. Since the first of December they have bagged 94. In four days last week they killed 6 pheasants and 150 quail. William G. Lyman, of Kent, shooting at King's Creek, Champaign county, bagged 87 quail, 3 snipe, 12 rabbits and 2 squirrels; and in one day in his own county killed 4 pheasants, 6 quail and 4 rabbits. The best individual record here is 100 quail in three days' shooting. Pheasants are quite plenty in Portage county. Warren T. Timberlake writes from Fayette county, West Virginia, that there is fairly good wild turkey shooting in the mountain forests, and that pheasants are plenty. Sportsmen of Ohio will now give their attention to rabbits, squirrels, foxes, coon and opossum. Pointers and setters will go into their kennels for well-earned rest, and the dachshunde, foxhounds and beagles will be put to work.

Not all of the farmers in this valley annoy the hunters by posting trespass notices. There has not been such unpleasant clashings as last year, though the area of forbidden territory has been vastly enlarged. We have one farmer here who has done the clever thing, and the hunters want the FOREST AND STREAM to make mention of it. Joseph Miller, who owns a large, rich bottom farm 4 miles south of here, was critically ill last summer, and some of the hunters occasionally sent him a bird, and Mr. Miller did not forget it. When the quail season opened he planted a large sign board, "Hunters Welcome. Put your horse in the barn and feed him. Enjoy all the shooting you want on these farms, and when the bell rings come to the house for dinner." The hunters propose to have some handsome signs painted for him to read just that way. BROWN.

ADIRONDACK DEER.—Whitesboro, N. Y., Dec. 15.—Dogging was not confined to the open season this year in certain parts of the Adirondacks, as I know from my own observation. Not only that, but salt licks and various other schemes are practiced openly, all of which, with timber cutting, will soon drive the deer into parts unknown. I sat on a runway myself and heard the sound of axes and falling timber all day. There were, within a radius of five miles, at the least 50 dogs and 75 men at the time I speak of, namely Oct. 1, and I was told 55 deer had been killed by dogging on Jock's Lake alone up to Oct. 1.—C. T. S.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

THE GOLDEN TROUT.

Editor Forest and Stream:

It is in evidence that the golden trout (*Salvelinus aureolus*) has been taken in Sunapee Lake, N. H., with hook, spear and net years before 1883. No saibling have ever been put into Dan Hole Pond, and the *aureolus* are certainly there, as Mr. Dey and I caught them this fall, and *Shooting and Fishing* had a sample of the same fish sent to it this summer, from the same pond, before we took ours. From conversations with old residents around this pond I was told that they had been speared there in the fall for so many years that the "memory of man runneth not to the contrary." There is a pond in the town of Warren, N. H., upon the mountain side, which is said to contain a few very large and highly-colored trout. I visited it some twenty-five years ago; but, as the day was very hot and sultry, I did not get any. From the description I got of them at that time I should judge that they were the *aureolus* or golden trout. Commissioner E. B. Hodge is of the same opinion. There is also a lake in the town of Madison, N. H., called Silver Lake, where this same kind of highly-colored trout has been speared in the fall for many years past. Mr. Hodge gives it as his opinion that these trout also are the *aureolus.* Now I do not think Professor Garman can for an instant contend that saibling have ever been introduced into these waters.

Landlocked salmon were introduced into Sunapee and Newfound lakes at about the same time, and have done equally well in both places, and have been caught in each in large numbers.

No saibling have ever been seen in Newfound since their introduction. I have been on the spawning beds with Col. Hodge taking lake trout (*Salvelinus namaycush*) for the hatching house, and we have never seen either *aureolus* or saibling. I do not think the saibling put into Newfound have been seen since. I am inclined to think with Col. Hodge, the *aureolus* one of the oldest fish in our inland waters, and that it is becoming gradually extinct. You will ask if so old why have they not become known before and been caught? They have been taken with the spear for years on the spawning beds, but the people taking them were not versed in trout lore. They could tell a brook trout from a fork-tailed lake trout and that was about as far as their knowledge of trout extended. They did not fish in the summer time in deep cold spring water where these trout lie. They did not know where to look for them. It is only within a few years that we have found out where they are in Sunapee Lake in the summer. There are only a few places there where they can be taken, and one might fish until doomsday 50yds. away from those places and catch nothing. You may ask why I think they are becoming extinct. In some of these ponds pickerel, perch, shiners and redfins have been introduced, and as the *aureolus* spawn on reefs or rocky shores, the spawn and young fry are destroyed by these robbers. This with indiscriminate spearing for years is doing its work.

I can give you examples in my own experience. There is a pond in Andover and Hill, N. H., called Poverty Pond. A long brook runs from it into the Blackwater River. Years ago this pond and brook were full of brook trout. I have caught many thousands there. Some one put hornpouts and shiners into the pond, and to-day it is almost impossible to find a trout in either pond or brook. The pouts destroyed the spawn and fry. There are two communicating ponds in Sanbornton, N. H., called Rollins and Calley ponds, which used to be famous for large brook trout. Some one put pickerel into them and they now swarm with pickerel, but the trout have disappeared. Under similar conditions the *aureolus* will do the same, and, as they exist in but few waters unless they are protected and artificially propagated, their days are numbered. WALTER AIKEN.

FRANKLN FALLS, N. H.

During a visit to New Hampshire, in October of this year, the writer first met his friend and correspondent Col. Elliott B. Hodge, a gentleman whose name is thoroughly identified with fishculture and protection in the State which he loyally serves as Fish and Game Commissioner. We were at Plymouth and Sunapee Lake together, and discussed many subjects of mutual interest, among them the golden trout, which Col. Hodge first brought to the notice of ichthyologists and which was introduced to the general public through the columns of FOREST AND STREAM. From him I learned many interesting things relative to the history and habits of the new trout, and, as they have an important bearing upon the inquiry now being made into the relationship of the golden trout to the introduced saibling, I think this an opportune time for making the information public.

Mr. Pike, who was born and brought up at Sunapee Lake, says that about twenty-five years ago he and his father saw a great school of trout in the lake. They caught a good many of them, but never looked for them again because they supposed it to be a mere chance occurrence.

Mr. Nat. Lear, of Newbury, N. H., told Col. Hodge that when they were building the Concord & Claremont railroad, in 1872, shortly after the introduction of smelt, he and some others were catching smelt at the mouth of Beech Brook one night (this brook is a tributary of Sunapee Lake), when they saw what they supposed to be a large sucker and dipped it up. It proved to be a white trout of 4lbs., and looked to him, as he remembers it, just like the *aureolus,* which he has seen since. It was very white and silvery.

Mr. Moses Gould, of Bradford, N. H., who was one of the earliest trout fishermen on the lake and fished from boyhood, claims that in 1873 he caught two large trout of this kind in Sunapee and showed them to a number of persons as a very peculiar trout.

About 1873 or 1874 Thomas Roach caught two trout through the ice in Sunapee, one of which weighed more than 7lbs. Up to 1871 Sunapee Lake was practically unknown as a fishing lake for trout, and there were scarcely any boats on the lake. The little fishing that was done was chiefly for pickerel. No one fished in deep water for trout until their accidental discovery in great depths about 1881 or 1882. The *aureolus,* being a very late spawner, came on to the shoals at a time when there was little or no travel across the lake.

A Mr. Peabody stated that in 1881 or 1882 he saw a big school of suckers on the shoals south of Loon Island, Sunapee Lake. Of course, there is little doubt that these were golden trout.

The golden trout have sometimes come on the spawning shoals by the ton at a time. They do not pair to any noticeable extent, and a female is sometimes attended by five or six males. They make no nest, but move around continuously like the lake trout. The lake trout voids the eggs by rubbing the belly over the coarse rocks, and the males sometimes lean down on top of the females. At Loon Island Shoals the fish have spawned in waters so shallow that their backs were not covered. The usual depths range from six inches to four or five feet, but some of the large ones doubtless spawned in deeper water. Since the trout have become so numerous they are coming into shoaler water in the spring and summer in a few places. They are never seen in the brooks at any time of life so far as observation goes. Col. Hodge accounts for the rather sudden increase of the golden trout by the destruction of the yellow perch, which breed on the trout spawning grounds at the time when the embryos are making their appearance. The prohibiting of the drawing off of Sunapee Lake in such manner as to expose the breeding shoals contributes to the increase of these trout; and he believes that the black bass helped to destroy the yellow perch.

When the *aureolus* was first sought for by Col. Hodge as many as thirty would leap for the trolling spoon at one time. Now it is impossible to catch one with the spoon, as they will pay no attention to it even if pulled right over their noses. The Colonel caught 75 in one afternoon. Seven or eight consecutive casts took a trout each time. The two-year-old *aureolus* have scarcely ever reached more than 8 or 9in. in length, but the next season they will reach 1 to 1½lbs. A male *aureolus* fully 12in. long, at the Sunapee hatchery, showed parr marks very distinctly. One man caught a hundred of the young in a day, in 50ft. of water, and sold them as blue-backs. On this account the law was framed limiting the catch to trout of 10in. or over. Mr. Walter Aiken caught 32 young trout of this species, in deep water, last summer, but only one of them reached the legal limit of 10in.

In 1879 the fry hatched from 5,000 eggs of blue-back trout were planted in Sunapee Lake. They should have been deposited in the brooks and not in the lake. There is nothing to show that the planting was successful.

The statement of Mr. Carl Peyrer, translated in Report U. S. Fish Commission, Part III., page 611, that the saibling "leaves the lakes during the spawning season," differs from what is usually recorded of the species. Dr. Goode, for example, in the "Fishery Industries," page 503 writes: "At the spawning season they come into shallow water near the shores or in the mouths of streams and may be taken with the greatest of ease." Peyrer's remark on page 605 of the Fish Commission report on the lack of confirmation of the fertility of the cross between saibling and trout (*S. fario*) should be considered in connection with the question of a hybrid origin of eggs sent to America. T. H. BEAN.

RHODE ISLAND STRIPED BASS.—Where I go every summer in Rhode Island we, who are fond of that finest of fishing, catching the striped bass with rod and reel, have excellent chances for the sport. The biggest catch made by any of us was made by a boy eleven years old. He caught in one morning's fishing three bass of 16lbs., 15lbs. and 6lbs. Many of us made catches slightly inferior to this one; I, however, "came out the very small end of the horn." Some made remarkable catches, one in particular catching three fish which weighed together 110lbs. This was done in one afternoon.—T. DE C.

CHICAGO, Ill.—The fish commissioners, or fish census takers, or some other learned body, has been sending out circulars asking for details about illegal netting, etc., etc. One of these circulars was sent to the Mak-saw-ba Club, on the Kankakee River. The only thing singular about that is the orthography of the sender, the name of the club being made to read "McSawby." The boys of that club have no right to laugh, however, for it is a well known fact that one of their leading members spells it "McSorby." Mak-saw-ba is pure heathen, anyhow.

FISH ROOSTS.

PHILADELPHIA, Pa., Dec. 10.—*Editor Forest and Stream:* Your correspondent "Isaac, Jr." describes how fishing grounds were made in a lake in Missouri which he calls a croppie roost. In Pennsylvania there is a lake containing black bass and other fish. All the land surrounding the lake is cultivated and there are no streams flowing into or from it, being entirely spring water. There is no refuge or shelter for the fish and for some time lately the fishing has been unsatisfactory, the fish could not be found, they were apparently scattered.

On one side of the lake there was a clump of small willows, which during the winter were cut off and thrown on the ice as the easiest way of getting rid of them. When the ice broke up in the spring the wind carried the ice and branches to the lower end of the lake, where the latter were dropped on the bottom together in one mass, about 50ft. in diameter, in about 15ft. of water. The branches were soon covered with animalculæ and spawn and they have made the best fishing grounds in the lake. A dozen black bass were caught out of the brush, while others near by not knowing the reason were unable to get a fish.

I send you this with the hope that it may cause those who would be interested in a "fish roost," during the proper season for fishing, to exert themselves a little with the hand axe at this the proper season for its use; thinking of the pleasure they will give themselves and others in this season of good will, in addition to making a feeding place for the fish. J. M. T.

A COMPANION OF THE TROUT.

Editor Forest and Stream:

We mountaineers of Pennsylvania have to do our trout fishing in small streams as a general rule, and our experience is that the sport in the waters on the western slope is just about a compromise between hunting and fishing. Nevertheless it is great sport, and we have many good people who seem to enjoy it. After reading Dr. Sterling's articles, it occurs to me to try to find out what kind of fish it is that travels with our common speckled mountain trout. They are shaped exactly like trout, have the same peculiarity in the position of fins, no scales, etc.; but instead of the red spots of our native trout or the brown spots of California trout, they have a single red line on their sides. I do not want any one to think I refer to the rainbow fish, because I know them also. The fish I refer to is often met with in our streams where the water is cold, and undoubtedly associates with our mountain trout. I have never seen one over six inches in length. Is this fish a hybrid? Unless I obtain an answer sooner, I shall send Dr. Sterling a specimen when I fish next spring, provided he should be willing to examine it.

HILARY S. BRUNOT.

GREENSBURG, Pa.

[If a specimen be sent to the FOREST AND STREAM office we can readily tell what the fish is. We are at a loss to know whether it is a trout or not. The male of the California trout, also known as rainbow trout, has red bands along the sides in the breeding season. If the species be not a member of the salmon family it may be one of the dace, which abound in clear cold brooks and mountain streams in company with the brook trout. The best way to determine the question, however, will be to send us a specimen of the fish, either in alcohol or in strong brine. The brook trout has scales, but on account of their small size they are often overlooked.]

"AS TO AUREOLUS."

Editor Forest and Stream:

A private letter received from you under date of Nov. 21, breaks off very suddenly with these words, "As to *aureolus*," and the sentence is unfinished, so I know not what you meant to suggest. Taking up your words, "as to *aureolus*," I do not knew what to say or think; the letter of Mr. Garman, identifying the fish with the *Salmo alpinus*, or European saibling, is very interesting, but it is certain that the fish could not have come from the saibling sent to New Hampshire by Prof. Baird in 1881, and equally certain that no European fish of that species had ever been introduced in these waters before. The finding of these trout in Dan Hole Pond in 1889, in no way disproves the "hybrid" theory, for Commissioner Hayes, of New Hampshire, put 10,000 landlocked salmon in Dan Hole Pond, as he informs me, in 1883. This was the first place I ever heard of the "new trout" in New Hampshire, and information came from the late A. H. Powers, at the meeting of the New Hampshire Fish and Game League, at Manchester, in April of that year. In 1885, Mr. Powers and Commissioner Hodge found them on the spawning beds. The white trout said to have been caught in 1887 may have been one of the landlocked salmon introduced in 1877 or '78.

I place very little reliance on any of the reports of these fish having been known for 60 or 70 years.

It has been well known that very large trout have existed in both Dan Hole and Sunapee, for that length of time, for I saw one myself from Sunapee 60 years ago which, as I remember it, must have weighed 3 or 4lbs., but it was a genuine, red-spotted and mottled *Salmo fontinalis*.

Now the ruling characteristics of the trout, to the rustic angler, are these distinctive markings, and I cannot believe that a fish so entirely different in all external appearance should have passed without notice, if it had ever been seen. I think if it had been, it would be more likely to have been called a "whitefish" than a trout.

I hope it may be clearly proved that the *Salmo alpinus* of Europe is also a native of our waters; but to do so it must be procured from some waters in which no other variety has ever been introduced, as they have been both in Sunapee and Dan Hole Pond.

Winter is on us early and strong. The thermometer has been 10 deg. at sunrise for two mornings, and people are crossing the Connecticut on the ice. Luckily the springs and brooks were all well filled, and I hope the trout will come out strong in the spring. VON W.

CHARLESTOWN, N. H., Dec. 9.

[The published reports of the New Hampshire Fish Commission, which we have consulted for the period from 1866 to 1886, show that landlocked salmon were deposited in Dan Hole Pond in 1882, 1883 and 1884, the total plant having been 20,000 fish. No record is made of the introduction of any other species into this pond. At the time of the planting of landlocked salmon, trout were said to occur in this body of water. If, therefore, the large trout collected for Col. Hodge in 1889, and by Mr. Aiken and Mr. Dey in 1890, and identified with the *aureolus* of Sunapee Lake, be a hybrid, it would presumably be the result of the union of landlocked salmon and some form of trout. It is a well known fact, and has been stated in these columns, that a cross between a large-scaled salmon or trout and a small-scaled trout will produce a large-scaled fish, no matter which way the cross be made. The golden trout does not correspond with this definition, and on this account we cannot regard the landlocked salmon as one of its progenitors. In our issue of Nov. 27, in commenting upon Mr. Garman's article on the golden trout, we stated that the first saibling eggs sent to New Hampshire by the U. S. Fish Commission were received at Plymouth in 1883. This error is perfectly unaccountable to us, for the complete record was in our possession at the time, and we knew that a very large consignment of saibling eggs was forwarded to Mr. Powers in February, 1881, and the resulting fry planted in Newfound Lake in May of the same year.]

THE SAIBLING IN NEW HAMPSHIRE.

THE first saibling introduced into America by the U. S. Fish Commission appear to have been the lot received Feb. 1, 1880, of which only about 6,000 eggs survived the ocean voyage. These were sent to Mr. W. L. Gilbert, of Plymouth, Massachusetts, who reported that all of them were lost in hatching. The next invoice of saibling eggs is referred to in the report of the U. S. Fish Commission for 1881, page xlv., in the following terms:

"On January 10, Mr. Schuster, Burgomaster of Freiburg, Germany, announced that he had sent 60,000 saibling eggs by the North German Lloyds steamer Mosel, of January 8, consigned to the United States Fish Commission. These reached New York January 22. Mr. Fred Mather took charge of them and forwarded them the next day to Mr. A. H. Powers, Plymouth, N. H., which point they reached on the 24th. The entire loss while crossing the ocean and being transported to the hatchery was but 5,000 eggs. Mr. Powers was directed to hatch them and place them in Newfound Lake, located 7 miles from Plymouth. The eggs were all hatched by February 28, with a loss in hatching of 6,515 eggs. Mr. Powers deposited 30,000 fry in Newfound Lake, May 18."

In the report of the New Hampshire Fish Commission for 1881, page 20, we find the following acknowledgment of the reciept of eggs of the saibling:

"GERMAN RED TROUT.—We have also received a very valuable present from U. S. Commissioner Baird, in the form of 60,000 eggs of the saibling or *Salmo salvelinus*, the red trout of Upper Austria, the Tyrols and Switzerland. * * * After correspondence with Prof. Baird, it has been decided to place the young fish which we obtain from these eggs in Newfound Lake, as being particularly adapted for them, from its deep cold water, and its freedom from other predatory fishes, such as black bass and pickerel, which might destroy the young saibling."

The best account yet written of the saibling is that prepared by Dr. G. Brown Goode, shortly after the introduction of the species into America, which was published in FOREST AND STREAM, and is quoted in the New Hampshire report above cited. Dr. Goode's sketch is given on pages 14 to 20 of this report, and from it we make the following extract:

"In selecting a place in which to deposit the saibling eggs just received, the Commissioner of Fisheries has endeavored to find a body of water as similar as possible in depth and temperature to the larger Swiss lakes, and he has therefore sent them to Newfound Lake, New Hampshire. Here the whole 60,000 will be planted with the hope that by placing so large a number together in a lake of moderate size the experiment of introduction may be a success."

It may be that some of the saibling of the first shipment were retained at the Plymouth hatchery, for in report of Mr. A. H. Powers, superintendent of the hatchery, printed in the report of the New Hampshire Commission for 1881, pages 67 and 53, we find the following statements:

"Jan. 24 I received from Germany some 50,000 saibling eggs, a present from Prof. Baird, which have hatched, and I have some 35,000 or more young saibling to plant.

"We wish to preserve at the hatchery a few hundred each of these new varieties, such as the saibling and the carp, for breeders, and separate ponds are necessary for that purpose."

In the report of the U. S. Fish Commission for 1883, page lxxix., we find the following additional history of the introduction of the saibling: "Among the most highly esteemed species of the trout family of Europe is the saibling, known in England as char and in France as *ombre chevalier*. Through the courtesy of the president of the Deutsche Fischerei-Verein a number of the eggs were received in January, 1881, and sent to the fish commissioners of New Hampshire, at Plymouth, for development. They proved hardy and grew satisfactorily, and on Dec. 3 of the present year about 600 eggs were taken by Commissioner Hodge. These will be transferred to another station, to be hatched and reared, and it is hoped that the species may in time become well-know in this country. The fish is specially adapted to the deep waters of cold lakes, being very abundant in the Geneva and other lakes of Switzerland."

Col. E. B. Hodge, now one of the Fish and Game Commissioners of New Hampshire and thoroughly acquainted with the history of the species under discussion, became superintendent of the Plymouth hatchery in 1882. He was familiar with the work of the late Mr. Powers and is entitled to speak with authority concerning the attempts to acclimatize extralimital fishes in New Hampshire. In 1883 Col. Hodge had under his charge at Plymouth some of the saibling above referred to. He begun a series of experiments in hybridizing various species by impregnating the eggs of the brook with the milt of the saibling, and undertaking other operations with the Atlantic salmon, brook trout and California salmon. In the New Hampshire report for 1884, page 34, Col. Hodge says: "I am in hopes that the cross between the brook trout and saibling will produce a fish that will breed."

The New Hampshire report of June, 1888, mentions the receipt of 3,000 saibling eggs from Germany, which were hatched and distributed from Plymouth, N. H., in the spring of 1888.

The published reports of the New Hampshire Commission have no reference to any introduction of saibling into Sunapee Lake, and they point clearly to the introduction in Dan Hole Pond of no species of the salmon family except the landlocked salmon. In addition to these statements we have the positive testimony of several persons who are entitled to speak with authority to the effect that saibling were not introduced either into Sunapee Lake or Dan Hole Pond.

For the above reasons, which appear to us conclusive and in every way worthy of acceptance, the golden trout of Sunapee Lake and Dan Hole Pond could not be identified with the European saibling. We have already pointed out certain differences between the specimens of golden trout, which we have examined, and examples of the saibling from Norway and Germany. It would afford us intense gratification to look upon the splendid trout of Sunapee and Dan Hole Pond as one of the triumphs of fishcultural effort; but under the circumstances above set forth in detail, we could not do otherwise than consider it a native species.

A DAY'S FISHING AT HOME.

IN western Pennsylvania the stream, known as French Creek or Venango River, flows quietly through the city of Meadville, and betrays to the stranger no signs of the fact that hundreds of game fish make their home in its clear water. This creek is not navigable for large boats except in very high water, and it is a rare occurrence to see what is called a "flat boat" on its way to Pittsburg moving along in the current with a speed of about four miles an hour. The bed of the stream is very much inclined in many places, however, and there are many strong rapids between Meadville and Franklin, which give the fish the necessary exercise that makes them muscular and plucky in a fight for life. When the water is at a proper stage, preferably low water in summer, an ordinary flat-bottomed skiff will float down any of these rapids without difficulty, and it is in this way that we make our weekly journeys down the creek for a distance of eight miles, casting a minnow on every side for game.

As I am to describe a day's sport at home it will be pardonable if I give a short description of the "outfit" in which I am so often a guest and companion. My friend, Mr. F., has spared no pains in making things comfortable; and as he casts a bait for the very science of it, he declares that every trip more than pays him for the expense and trouble he has had in fitting up so elaborate and serviceable a craft. The wagon on which the boat and belongings are hauled from place to place is of unique pattern and is perfectly adapted to this use. The axles are bent at right angles at the wheel and the bed is thus brought much nearer the ground than that of an ordinary road wagon. Good substantial springs rest on the axles and on these a board bottom, to which the boat is fitted.

The boat is quite different from the usual flat-bottomed skiff, being built like a scow, but narrowed at each end. This gives better standing room in front, and as speed is not a requisite, every purpose is served as well by this arrangement. The boat is built of thin boards and is completely covered with sheet iron. This makes the boat very heavy, but it adds a feature which is much more desirable than lightness, namely steadiness. A man can stand on the edge of the boat without sinking it below the water. This property of steadiness is very essential when fish are taken in a rapid part of the stream or under circumstances when unseen snags and bars are struck. A paddle, oars, cushions, oilclothes and blankets, gaff hook, lantern, sponges and nets, make up the complement of fixtures. Our rods are of light cane, about 16ft. long, and mounted with large wire loops for guides, and a ring, of wire, fully three-quarters of an inch in diameter, for a tip. This mounting enables us to throw a long line and to loosen a hook should it get fast in any way. First-class reels, lines, leaders and hooks are always used, as it certainly never pays to economize at these points. We catch our bait from the little creeks and are constantly supplied with over a hundred chubs.

On the day which I have in mind, equipped as above described, with the addition of a lunch, we started at 7 in the morning, and drifted slowly down through the town. A mild south wind was beginning to assert itself and a few clouds appeared to check the heat of a September sun. The omens were favorable and we confidently looked for a large catch. We had gone a distance of one and a half miles to a point where a railroad bridge crosses the creek and where there is a very deep pool caused by the water being forced to flow through between two abutments. Thus far we had been unsuccessful and were going around the abutment a second time, trying to entice a fish to try our bait, when a loud splash announced to my companions that the wary bass had at last selected my minnow. It had jumped clear out of the water as it saw my bait approaching and sank at once with it. A moment of suspense, a sharp strike, and I have him racing up and down, while a few strong strokes of the paddle carried us out of range of the drift wood which had collected against the pier. With a taut line always ready to yield but never to slacken, he was very soon safely landed in the boat, the first fish of the day. He was still on my hook when the boat started forward. Mr. F. had made a cast or two, when I heard a rush, and looking up I saw the last move of a very large fish as he slowly settled down into very deep water. "A pike!" exclaimed three of us, and we all stood waiting further developments. This time we did not have to wait very long, for the bait was small for pike, as we were fishing for bass, and we soon saw the line slowly moving toward the lair from which his pikeship had lately sprung.

The hook was skillfully fastened and the fight commenced. The pike gave a wild leap into the air and was let back into the water by Mr. F. in so easy a manner that the fish gained nothing by this or by any subsequent move of the same kind. The line was small and both leader and hook light; yet skill and care tired the game in a reasonable time and he was soon safe in the bottom of the boat. This was indeed a good beginning, and the 12½lbs. pike made us very confident and happy.

As we floated on we caught several small bass and a few fish which are commonly called in this locality "salmon." They are wall-eyed pike (*Stidostedium vitreum*). At last we reached the long line of slack water eight miles from home, where our horse and wagon had been taken by a boy awaiting our arrival. This deep

water is the best in the creek for fishing, and as we had three hours to spend here we were able to add a few large bass to our string, which brought the weight of the day's catch up to 30lbs. With light hearts and tired muscles we loaded the boat and made everything snug. The boys started for home with the boat and my friend and I took the evening train and were soon in the city.

We do not always get so many pounds of fish, but we never fail to catch some, and we consider it much superior sport to that we get in Canada or in Michigan, where we cannot have the comforts of home and must fish constantly for a few days, while here, at home, we may go as often as we like and need not neglect business. M.

MEADVILLE, Pa.

WORLD'S FAIR FISHERIES EXHIBIT.

CHICAGO, Ill., Nov. 29.—Local and political squabbling and the inevitable scrambling among those in place to get the last dollar obtainable without giving an equivalent in brains or labor, have disgracefully retarded progress in World's Fair matters here. At last, however, the commissioners and the directors have gotten about where they should have been at the end of one week of hard work, and have announced a decision on site and general plans for the big exposition. In view of all the recent discords, it is pleasant to record the harmony and businesslike method of the sportsman element in its bearing upon the exposition. Within the week we have had here fish commissioners from a dozen different States, and they have worked together rapidly and unitedly to the end of making the fisheries exhibit in 1893 everything that it should be and all that it can be. The method to be followed is now outlined as follows: Each State will build a large aquarium of its own, showing therein the fish life native to its territory, and in addition there will be the great Government display of the sea fishes, which latter of course will be largely supplemented by the exhibits from the coast States of the Atlantic and the Pacific. Secretary Butterworth thinks much of the importance of the fish hatcheries, and is of the opinion that Congress should make a large appropriation for an exhibit of that kind. Dr. S. P. Bartlett, Fish Commissioner for Illinois, introduced the following resolution at the joint meeting of the fish commissioners, and it was carried unanimously:

"*Resolved*, That a committee of the commission be appointed by the chair to make a proper statement of the needs of the United States and various commissions in making a fish exhibit, and asking sufficient appropriation to make an exhibit commensurate with the occasion."

A committee of five was appointed, composed of the following gentlemen: Herschel Whitaker, Chairman; Captain J. W. Collins, William H. Bowman, Elliott B. Hodge and W. S. May. The committee was ordered to meet at Detroit Dec. 4.

The space to be apportioned to the fisheries, under the first rough plans of the exposition buildings as now submitted, appears very considerable, in view of the endless claims upon the acreage. On the chart it appears as 125×1,000ft., and the location assigned is prominent. There will be every reason in the world for anglers and sportsmen of all kinds to attend the World's Fair, and no reason for this prophesy is stronger than the evident disposition of the fish commissioners to unite harmoniously and act with energy and purpose. E. HOUGH.

ANGLING NOTES.

CONSIDERABLE confusion seems to exist in the minds of people as to the difference between a "pole" and a "rod." Of course an expert angler would never be guilty of calling his rod a "pole," but beginners are very apt to use the term "pole" when they mean rod. A pole is the rough article in its natural state without mountings. For instance, the Calcutta bamboo, the Japanese cane and the southern reed are called poles, and are used for fishing. They are really gigantic grasses. Split-bamboo rods are made from Calcutta bamboos; these grow very large and are often imported up to 20ft. in length. They are easily recognized by their dark mottled appearance. Why these canes are so scorched no one seems to know, but the most plausible reason given is that it is done for the purpose of burning off the creeping vines, which cling so closely that it is impossible to get rid of them in any other way.

The Japanese canes are yellow in color, and while they make very fair fishing "poles" they are not so tough as the India article and seldom made into "rods."

There used to be a black bamboo pole in the market, sometimes called "pepper cane." These made fine rods and were much sought for by our striped bass anglers, but for some reason they are not now to be had of good quality.

When these poles are cut into joints and mounted with ferrules and guides, or even when mounted and finished in one piece, they become fishing rods and should be no longer called "poles."

Sportsmen and anglers should strive to use sportsmanlike terms and educate others in this respect. We have no wild "rabbits" in this country, they are "hares." Neither have we partridges or pheasants, excepting a few turned out in private grounds. Yet the term "partridge" is applied to four different birds, viz., ruffed grouse, Canada grouse, willow grouse and quail, thereby creating great confusion. SCARLET-IBIS.

ON FISH FOOD.—It is surprising how quickly animals can accustom themselves to a change of diet. Along the Newfoundland coast the people feed their cows, goats, pigs, etc., on fish, mostly herring and capelin. Of course pigs and goats will eat anything, but it seems a strange diet for cows. Newfoundland bacon and milk smell and taste very fishy in consequence.

ABUNDANCE OF SMELT.—There has been a wonderful abundance of smelts in New Brunswick. A storm on Dec. 1 brought an extraordinary run of these fish into the shallow bays, and among them were a large proportion of fish of unusual size.

DEATH OF SALMON AFTER SPAWNING.—In our comments on the death of salmon after spawning in the issue of Nov. 27 we referred to having seen dog salmon in fresh water near the sea. We intended to say silver salmon (*O. kisutch*).

THE "LIARS" CHANGE THEIR NAME—LET US HOPE THEIR NATURE.—Boston, Dec. 10.—*Editor Forest and Stream:* On the evening of Dec. 15, the third annual dinner of the Liars' Club was held at Weber's, this city. For two short years the gentlemen composing the membership of this lively organization have struggled along under the incubus of a name, a name so distasteful and suggestive as to impair an otherwise healthy appetite, and last evening resolved to quash forever any aspersions, by making such a radical change in the nomenclature of their club, as would cause the father of it to disown his offspring as an alien. Here's what they've got it now: "The Quannapowitt Angling Association of Wakefield." [N. B.—Society for the Prevention of Unnecessary Waste of Anglo-Saxon Words, please take notice.] With the burden of a name like this, it was deemed expedient to elect a treasurer, in addition to a re-election of former president and secretary, that there might be a man in the middle to help prop up both ends. The officers are as follows: Col. W. S. Greenough, president; Mr. Jacob C. Hartshorn, treasurer; Mr. A. T. Bond, secretary. A membership of some fifty men (only a few of whom are obliged to put shot on their leader when making a cast) insures permanency of organization and method of their madness. —A. T. BOND, Sec'y.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

CENTRAL FIELD TRIALS.

LEXINGTON, N. C., Tuesday, Dec. 9.—A good deal of interest was evinced in the first heat run to-day, as it would decide the absolute winner of the Derby Stake. Both dogs had done good work and their chances were considered about equal. After yesterday's inaction owing to the inclement and rainy weather, it was quite a relief to get into the saddle again, especially as the morning was one which left nothing to be desired, if one was well wrapped up. Frosty the air was, but the warm sun served to temper it somewhat and the scene in the fields was one long to be remembered. Every blade of grass and every shrub had a thick coating of ice, and as the slight breeze swayed them to and fro in the sun, the icicles flashed out in all the colors of the rainbow. Such cutting stuff was a bit hard on the pointer, but he worked through it bravely and seemed none the worse after going nearly two hours. The start was made just at the edge of town in sedge grass at 8:43 A. M. The dogs cast off being

SPOTTED BOY AND IAN.

Spotted Boy is a handsome-looking liver and white pointer and would not make a bad showing on the bench. Ian is an English setter in every sense, is built much after the style of our field dogs and looks a native setter all over. His color is black and white. Neither dog ranged off fast or far at starting. Soon after being cast off, Ian winded game, stopped, then moved on and some yards further finally came to a staunch point, when Cameron put up a bevy. After this, at the edge of a clump of trees, Ian pointed false. Then ensued a long tramp over all sorts of ground, which was only enlivened by the roading of Ian to a point in pines. Moved on he roaded round some time but failed to locate birds which had evidently been there recently. In some pines both dogs pointed and Cameron was allowed to move in, but he failed to flush anything. S. Boy then, further on, pointed and Ian backed, Richards flushed and shot, both dogs steady. Then both dogs made game, but nothing definite was done. Then Richards walked into a covey, with Boy working to one side of him; dog dropped to wing. Then near some dense pines Spotted Boy pointed a couple of birds, which Richards put up and Ian backed, Richards firing and both steady to shot and wing. On in thick pines, Spotted Boy pointed a single just in time to save a flush. Then Ian roaded to a single flush by a fence. A field further on dogs were ordered up; down 1h. 54m. After some consultation the judge decided Spotted Boy the winner, which seemed a popular verdict. This is Frank Richards's (his handler) first experience in trials down here, and he has certainly made a good beginning, capturing prizes amounting to $600.

ALL-AGED POINTER STAKE.

SHOT AND ROCK II.

The All-Aged Pointer Stake was then taken up, the second series not yet being finished. Dogs cast off at 10:57 in woods. Soon after starting Rock pointed a single; steady to flush. In edge of pines both handlers claimed points, but Tucker was allowed the privilege and flushed, fired and missed; dogs steady. Then Rock, roading on, picked up a single a yard or two away; Bradley flushed, but could not shoot, reporters and judges being in the way. Sent on in sedge, one of the prettiest pieces of work yet seen in the trials was done. Shot pointed in grass, and Rock coming up made a very stylish back two or three yards away. Tucker walked in, but failed to find. Dog ordered on, roaded a yard or two, then dropped to a point again, when Tucker flushed a single, fired and killed. Shot sent to retrieve, did so after making several wide casts. Dogs were then ordered up at 11:29, Shot winning the heat. There was hardly enough work done, as there was little to choose between them when taken up, and another quarter of an hour would not have been wasted. Both show good speed and range, and Rock has the advantage in style.

DUKE OF HESSEN AND IGHTFIELD DEUCE.

These two were put down at 11:28 in sedge grass. Both dogs started off well, Deuce being especially fast. Soon after starting a single flushed in woods ahead of them. Then Deuce pointed a bevy when Brailsford shot and killed, dog steady. Sent on to retrieve, he did so indifferently. Duke coming up to back pointed where birds had got up. Then Deuce, in pines, pointed and Brailsford flushed, several birds getting up all round. Sent on, Duke pointed near brier patch, and Deuce backed. Duke roaded on but could not locate. A lot of ranging then ensued without any result. Dogs up at 12:20, when judges consulted and declared Deuce the winner. Both are fast, wide rangers, with plenty of style. An adjournment was now made for lunch.

Third Series.

FRANK W. AND KING OF KENT.

This brace was then turned down at 12:26 in stubble, King of Kent off the faster of the two. Going on toward some woods, King, at the edge of them, pointed a large covey which Buckle flushed, shot and missed, Frank backing meanwhile and acting somewhat unsteady at shot. On in woods, after the scattered birds, King pointed a single which Buckle put up and killed, when Frank in his enthusiasm broke in and retrieved King's bird. Frank then got a single which Aldrich flushed, Frank proving unsteady again as the bird rose. Further down in hollow, King pointed but nothing came of it, Frank backing to order. Near some firs, Frank pointed a bevy and King brought up to back did so nicely, when Aldrich flushed the birds, shot and missed, Frank breaking in a little again but checked. Then Frank got another point on two birds, King backing him up handsomely, when Aldrich flushing them, shot and killed. Frank sent to retrieve did so indifferently. The dogs were then ordered up at 1:01 and King of Kent won. Frank needs better control when he would take some beating as he can find the birds and is a good worker. King ranges well despite an enlarged gland on the neck, which must bother him. A move was then made for the luncheon place near by.

ZIG ZAG AND SHOT.

After lunch, at 2:07, these two merry workers were put down in stubble. In oaks Zig chased some birds, which flushed wild, for a yard or two and then redeemed himself a few yards off by pointing balance of bevy, some flushing behind and the others in front, dog steady to wing. Shot then in open pointed, drew on and pointed again, and Zig Zag coming up backed stylishly, but Tucker failed to put up anything; Shot was ordered to locate but could not do so. Zig Zag, down the side of a ditch, pointed and then drew on to a single flush, then flushed another single. Sent on in woods Zig pointed a bevy which McMurdo put up, shot and killed, and Zig sent to retrieve did so after making several casts. Then Zig pointed one of the singles, Shot backing nicely. Dogs were then ordered up at 2:49, Zig Zag winning the heat. Zig Zag has better style, both about equal in range and pace. This brought the third series to a finish, and to give the dogs a further rest before the fourth series a heat in the

ALL-AGED SETTER STAKE,

NATALIE AND GENE,

was run off, dogs being put down at 2:54 P.M. Almost immediately Gene began operations with a flush on a bevy. Then further on Natalie pointed birds at edge of woods, Nesbitt flushed, shot and missed. On in sedge grass a single flushed to one side of Natalie, who dropped to wing. Gene then broke in on Natalie's point and flushed a bevy. Then in woods Gene pointed a single. After this, in sedge grass, Gene pointed again, a single flushed wild and Aldrich put up another. Gene steady to wing. In some corn Gene pointed again and Natalie backing, Aldrich flushed, shot and killed, but Gene did not retrieve the bird very well. Higher up in pines Gene secured another single which Aldrich flushed. To the right Natalie then pointed and Gene backed this time, when Nesbitt put up a nice bevy, fired and missed, both dogs steady. Natalie then pointed and bird was flushed from a tree; then in sedge grass she pointed a single, another getting up just after. In sedge bottom Gene pointed again and Natalie backed, but nothing found. Dogs were then ordered up at 3:54. Natalie has better style and range, though Gene found the birds. It is doubtful if either remains in. Then

KING OF KENT AND IGHTFIELD DEUCE

ran against each other in the fourth series of the Pointer All-Aged Stake at 4:04. Soon after starting Deuce was lost and was found pointing a bevy, which Brailsford flushed as he came up, Deuce steady to wing. After covering a good deal of ground, Deuce pointed again at edge of a clump of pines, where Brailsford put up a bevy, King backing nicely. Dogs were then ordered up and the heat given to Ightfield Deuce.

FRED YATES AND CASH BOY

were then put down in All-Aged Setter Stake, running until dusk with the result of a flush and a point on a covey for Fred Gates.

Wednesday.

This morning opened frosty and bright, wind south. A start was made two miles from town, the first brace down being

FRED GATES AND CASH BOY

of the unfinished heat of last night, cast off at 8:42. Just after starting a bevy flushed wild which might have been winded had the dogs ranged further from the guns. Soon after, to the left, Cash Boy pointed a single, then pointed again and the balance of the bevy flushed, when Aldrich shot and killed, Cash Boy breaking in several yards, when he was punished and brought back; Gates meanwhile had been backing and was steady to shot and wing; then Cash retrieved the bird. A good deal of varied country was traversed without further result, when the dogs were ordered up at 9:12. Neither ranged fast or wide. Fred Gates has better style and is under good control. Will most likely remain in. Then the final in the All-Aged Pointer Stake was run off with

ZIG ZAG AND IGHTFIELD DEUCE.

The former, as usual, was handled by Capt. McMurdo, and Ightfield Deuce by W. Brailsford. Cast off at 9:17 both started at a fast gait, keeping together like greyhounds from the slip for some distance. In stubble, Deuce dropped to a point, Zig Zag being brought up to back did so very stylishly; nothing was found and dogs ordered on. Then Deuce pointed again at edge of briers and pines, roaded on and pointed again when a single flushed and Brailsford shot and missed. Soon after on a fallen tree in pines, Deuce dropped to a point on a single which Zig coming on seemingly flushed; both steady. Further on, Deuce pointed another single. In ragweeds, Deuce pointed again, when Brailsford flushed a bevy, Zig Zag backing; Brailsford shot and wounded. Deuce, sent to retrieve, did so after a good deal of casting round, as it was a wounded bird and ran off. Then Zig showed what he could do by pointing a bevy in weeds, Deuce backed nicely and birds flushed into woods; Zig a bit unsteady to wing. At the edge of some pines Deuce pointed then roaded on, Zig Zag backing prettily across the field; working through pines, dogs were ordered

up at 9:50. Deuce is the faster, but there is little to choose between them in other respects. Ightfield Deuce was awarded the first prize, as I informed you by wire from the field. To decide which should run with Zig Zag for second place.

KING OF KENT AND DUKE OF HESSEN

were put down at 10:01. John White, as usual, handling Duke, and C. E. Buckle the King. King of Kent has an enlarged gland just under the jaw, and this may affect him in his work. In thick pines Duke came to a point but nothing found. In sedge, near some woods, Duke pointed again, moved on, pointed and a single flushed; dog steady to wing. Then in the woods, King pointed a single which Buckle put up, shot at and missed; King steady as a rock. Then Duke picked up a single which White shot at and missed. An exchange of false points then ensued, when dogs were ordered up at 10:50. A good deal of cover work was done in this heat, and both dogs ranged fast and wide, King of Kent under better control than the other. King of Kent won. The All-Aged Setter Stake was then resumed with

EDGEMARK AND FANNIE M.

Cast off at 10:53 in sedge, both started at a good clip. Edgemark was handled by S. C. Bradley and Fannie M. by Stoddard. A good deal of ground was worked out before Edgemark made a false point in woods, being backed by Fannie M. Then the order was reversed, but with the same result. Then Edge pointed a single in briers, Fannie backing. Bradley flushed, both steady to wing. Fannie M. now got in her work, pointing a single, which flushed, followed by two more; Fannie then pointed another. On, at edge of pines she pointed again, and Stoddard flushed the birds, shot and missed; dog steady. Sent on, Edge pointed in sedge, doubtless where birds had just left, Fannie backing. Edge then pointed an outlying bird, roaded on and pointed same bird again, Bradley flushing, shooting and missing. Fan then pointed in sedge grass, Stoddard flushing the bird, shot and killed, when Fannie retrieved nicely. Then Edge pointed false at edge of woods. After roading on, Edge pointed again, roaded on, but failed to locate birds. Fannie then made a similar point in briers, Edge backing. Dogs were ordered up. Range and pace were about equal, but Fannie M. was best on birds. Every one was now ready for lunch, and after this had been duly discussed,

HARRY C. AND ANTONIO

were put down at 12:51 in stubble field. In pines, soon after starting, Antonio pointed false. In thicket Antonio repeated, Harry backing. Then in woods Harry pointed a single, which Bradley flushed, fired at and missed. The weather was now very warm and hard on the dogs. In ragweed Antonio pointed again and Harry backed dutifully, but nothing came of it; roading on, he stopped again, moved on and pointed once more, and though scent seemed hot, no birds were found, Harry being meanwhile held up. Soon after Harry C. pointed a bevy in sedge, Antonio getting on at the same time; both handlers fired and Bradley killed his bird. Harry C. sent to retrevie, did so indifferently. In pines Antonio repeated his no-game point act, Harry C. backing; then roading, he came up with his game, pointed, and Avent flushed, shot and missed. Further on in sedge grass Harry pointed, when Bradley flushed a single. Then Antonio pointed footscent. Dogs were then ordered up at 1:51. There work was about equal in style, range and pace. The heat to decide second in Pointer Stake was now run, with

KING OF KENT AND ZIG ZAG.

Both belong to the same kennel, King being the sire of the other. Cast off at 2:04. Zig was the first to stop, pointing and King backed, but no result. After covering some more territory the dogs were ordered up and Zig Zag awarded second prize. Shot was to have run with King of Kent for third money, but in the evening, as the handlers were willing, the judges divided third between them.

SUMMARY.

The drawing in first series, owners' names and pedigrees have already been published.

Second Series.

Frank W. beat Hickory's Staunch.
King of Kent beat Ightfield Guelph.
Zig Zag beat Lass of Bloomo.
Shot beat Rock II.
Ightfield Deuce beat Duke of Hessen.

Third Series.

King of Kent beat Frank W.
Zig Zag beat Shot.
Ightfield Deuce a bye.

Final

Ightfield Deuce beat Zig Zag and won first prize.
Zig Zag beat King of Kent and won second prize.
King of Kent and Shot divide third money.

ALL-AGED SETTER STAKE (*Continued*).

NOBLE COUNT AND PRINCESS BEATRICE.

These two were cast off at 2:54 in wheat field. In sedge grass Beatrice pointed some distance from birds, roaded in woods, and located birds, when Tallman flushed, shot and missed, Beatrice steady to shot and wing, Count lost some distance behind. Found, Count pointed to one side of the woods. In woods, after marked bevy, Beatrice soon picked one out by a tree stump which Tallman flushed, shot and killed, Beatrice retrieving nicely. Count pointed a woodcock at the same time, and Judge Wallace varied the monotony by shooting it. Both then pointed in fence, but nothing found. Count in sedge grass, after being lost again, pointed, drew on and pointed again but without result. Then after a good deal of ranging Beatrice pointed again. Dogs were ordered up at 3:58, Beatrice shows best speed and range and did the best work of the two. She is pretty sure to remain in.

LILLY BURGESS AND DAISY HOPE.

Cast off at 4:03 in weeds, Lilly Burgess was handled by Frank Richards and Daisy Hope by W. W. Titus. A few minutes after starting Daisy began her High Point tactics again, for getting away from her handler, was lost and not brought in till just nine minutes before the hour was up. Lilly, after waiting a quarter of an hour or so, was sent on, when she at once pointed a rabbit in bottoms; on, along the bottoms, Lilly pointed larks. After ranging some distance Lilly pointed by a fence, roaded on and pointing again another rabbit was started. Then Hope appeared on the scene at 4:55. Sent off together again in sedge, Lilly soon pointed a single, and still another in corn and sedge; Richards shot and killed and the bitch retrieved well; Hope meanwhile backing nicely. Lilly then pointed false, drew on and pointed again. Dogs up at 5:06, Daisy rambling off once more. This will surely cost her any further chance in the stake. Lilly ranges well and will doubtless remain in. As it was still light,

BABE GLADSTONE AND IGHTFIELD ROSA

were put down at 5:09 in stubble. Nesbitt handling Babe Gladstone and Brailsford the English bitch, Rosa soon pointed false, Babe backing stylishly. Babe then pointed in corn, Rosa sustained her; Babe drew on but could not locate. After some further ranging we turned our faces homeward after a hard day's work.

Thursday.

The meet this morning was at Grime's place. Weather quite mild and balmy, and as the day advanced becoming uncomfortably warm. The wind was south. The running opened with the unfinished heat of the previous evening between

BABE GLADSTONE AND IGHTFIELD ROSA,

at 9 A. M. in ragweed field. Both dogs started out a good pace. Rosa was the first to claim the attention of the judges, making two false points in woods. Passing out of cover, a bevy was flushed by Rosa. This was followed by a false point on Babe's part. Then in high sedge grass Rosa got a point on a single which Brailsford flushed. At the same time higher up the field Babe pointed where bird had been, as nothing was found. There was here an opportunity to do good work on the singles had the dogs been up to the business, as they were flushing continually while the dogs ranged around them. Several false points were made by Rosa, Babe backing most of them. Dogs were then ordered up at 9:31. Neither did work that will entitle them to a place in second series, though Rosa was the best of the two.

KATE MILLER AND REVERDY.

This brace was cast off at 9:34, both starting off fast. Kate Miller was handled by Nesbitt and Reverdy by Stoddard. Soon after starting, even the oldest sportsman on the ground was astonished to see three turkeys get up in a grass field by the side of a wood. Two flew into the woods and the other soared away far over the tops of the highest trees, looking like an eagle in its flight. This happened within 200yds. of the railroad track. Further on in long sedge grass Reverdy flushed a bevy as she galloped along; then in bottoms, pointed, moved on and pointed again. Kate pointed too. Stoddard put up a single, shot and killed, and Reverdy, sent to retrieve, did so, but poorly. Then Kate pointed, moved on and a single flushed. Kate pointed again and birds got up all over the place, scattering in every direction. Then in some cover at the top of a bank Reverdy pointed and Kate backed, but nothing found. On after the marked birds, Reverdy flushed, dropped to wing and Kate backed. Kate pointed higher up, Reverdy roaded in and pointed, drew on, but birds had evidently run. Lower down, by the side of the R. R. track Reverdy picked up another single which flushed ahead of him. Over the track Reverdy pointed again but Stoddard failed to flush anything, but birds had run on, as judges put up birds ahead. Kate meanwhile was backing nicely Further on Kate pointed false, Reverdy backing. Then both dogs roaded on in sedge and into oaks, when Kate stopped on a point, Reverdy backing, and a single flushed wild ahead of the dogs Sent on a few yards further, Kate winded another single and Reverdy backed, when Nesbitt put up the bird, shot and wounded. Reverdy then made a false point to one side. In open, edge of R. R. track, Kate scored another single, Reverdy doing his duty. Nesbitt flushed, fired and missed, both dogs steady. Kate, in pines, made another false point, then, after a good deal of ranging, Kate pointed a bevy, Reverdy backing. Nesbitt shot and missed. Dogs were then ordered up at 10:35. Both are about equal in range and pace. Reverdy's flush at the start seemed to rattle her. Kate was the better on birds.

NANNIE B. AND KING'S DAN.

Nannie B., handled by S. S. Barker, and King's Dan by S. C. Bradley, were cast off at 10:41 in grass and ragweed, both starting off at a good gait. In woods King's Dan pointed and Nannie B. backed, but though given every opportunity Bradley failed to flush anything and dog roaded on, pointed again several, making a series of pretty pictures, as he is very stylish, but no game. Then Nannie pointed larks. In swamp Nannie picked up a single, then scored a point at the edge of some oaks, King's Dan backing nicely, roaded on, stopped, moved on and pointed again, when Barker flushed a bevy well ahead of him and shot, but only wounded his bird. Both dogs steady to shot and wing. Dogs were then ordered up at 11:37, Nannie B. proving the best of the two.

IGHTFIELD RANGER AND PRINCE LUCIFER.

These two started off at 11:42 in weeds. Ranging on into woods Prince Lucifer pointed nicely, when Barker flushed a covey, shot and missed. Higher up Prince pointed again, Ranger backing, then the dog moved on, pointed and a single flushed before the others, Barker shot and wounded bird. After the singles Prince scored again, when Barker shot and killed, the dog retrieving well. At the edge of the woods Ranger got on to a single, Prince backed, and Brailsford flushed the bird and killed, Ranger making a poor retrieve. Near a log cabin, a few yards further on, Prince pointed and Ranger backing, Barker put up another single Then after we had scoured several fields Ranger pointed an outlying bird by the side of some oaks and Brailsford flushed, dog steady to wing. Then several yards further on Prince pointed the balance of the bevy, Ranger backing. Barker flushed, shot and both dogs steady. Ranger then in some pines came to a point, moved on, pointed again and Prince backed, nothing was found just then, but a single flushed afterward at edge of woods to one side of where the bitch had pointed. Further on Prince pointed a single which Barker put up, but gun missed fire. In corn Prince made a stylish point, left it and roaded on, but failed to locate game. A fresh point was then made by Ranger in thorns and another by Prince in cotton patch. Then the dogs were ordered up at 12:42. Prince Lucifer showed far better style, range and pace, besides doing most of the work on birds. As we were all by this time pretty hungry lunch came as a welcome diversion. After lunch as Sam R., who should have run with Simonides, was reported sick, Simonides ran a bye, and the next brace,

SAM MILLER AND CASSIO

were put down at 1:27 in sedge grass and weeds. J. M. Avent handled his Cassio and Frank Richards Sam Miller. Both dogs ranged off very fast and wide. In corn, Cassio pointed, but Sam went in ahead and would not back, then Cassio moved on and at edge of corn Cassio pointed again, Sam backing this time, quite 75yds. away, when a bevy flushed wild before Avent could get up, both dogs steady to wing. Further down, in the corner of some oaks, Cassio pointed again, Sam backing, and Avent flushed a bevy, shot and missed with both barrels. Then Sam pointed and Cassio backed, but nothing was found. Sam redeemed himself shortly after by pointing in a clump of firs, Cassio backing slightly, when Richards flushed a large bevy, shot and killed, Sam retrieving well. On in open, Sam secured another bevy which Richards flushed, Cassio backing; both steady to wing. Ranging on in open, Cassio pointed this time and Sam backed, when coming up Avent flushed two birds, shot and killed, Cassio making a good retrieve. In some woods Cassio then pointed a bevy which Sam backing, Avent flushed, but did not shoot. Dogs were then ordered up at 2:27. Some good work was done by both dogs. Cassio especially, and there is little fear but that both will be seen again. This concluded the first series in this stake, and the Gordons were then ordered on the scene to show their vaunted prowess in the field.

GORDON STAKE.

KING ITEM AND BELMONT.

These were the first two down on the list, Samuel Fisher handling King Item, Tallman handled Belmont. Cast off at 2:43. Both are handsome dogs, well known on the bench, but we cannot speak very highly of their field merits, as it was 3:22 before anything was done, and then Belmont walked into a bevy and was not very steady to wing. Going on, she flushed a single and then another in high sedge grass. Moving on into pines, King Item pointed false, and then Belmont pointed a single, which Tallman flushed, shot and missed, King Item backing, neither quite steady to shot and wing. In sedge grass Belmont came to a good point, King backing unsteady; Tallman flushed a large bevy; both steady to wing. Then in some sedgy swamp Belmont pointed, and Tallman flushed a single, shot and killed, and Belmont sent to retrieve, did so after a little casting round. On, after these birds, King Item flushed twice. Dogs up at 3:54. Belmont redeemed herself somewhat by finishing better than she started; but King Item will hardly be heard of again in this stake. Neither ranged out much from the gun nor showed any speed.

BEAUMONT AND GORDO.

Beaumont handled by W. Tallman, and Gordo by A. Cameron, were cast off at 4 P. M. in ragweed field. After some trotting round Gordo, in woods, flushed a single but was steady to wing. Then coming down a field Gordo made game and a single flushed to one side. Beaumont then flushed a bird, and Gordo moved on, meanwhile Beaumont also thought he had something, and not showing any disposition to "hie on" when ordered, as there was nothing there, his gentle handler caused much amusement by helping him with his foot. Then after awhile Gordo pointed false, Beaumont backing nicely. Further on Gordo pointed birds, which Cameron flushed, shot and killed, Beaumont backing. Gordo, sent to retrieve, did so fairly well. Gordo, in woods, then roaded to a single flush. Beaumont then pointed, and ordered on to flush did so a few yards away, then pointed again, when bird flushed ahead of him. Gordo, in sedge grass, came up with some birds, pointed and Beaumont backing, Cameron flushed; both dogs steady to wing. They were then ordered up at 5:04. Gordo was the faster of the two, but in justice to Beaumont, we must say that Mr. Tallman, not expecting to run him to day, had given him several miles run behind a wagon in the morning, besides some work in the field. Belmont has been in season, and having been shut up a good deal was therefore not in the best of shape. As twilight was coming on apace a move was made for town some miles distant.

Friday.

ALL-AGED SETTER STAKE.

Second Series.

The meet this morning was at Smith's place, distant 7 miles from town. Birds were not very plentiful. The weather was cold, and most of the running being on high ground we felt the full effect of the raw northeast wind, which blew hard all day, making it the coldest day yet experienced in the field. Commencing with the second series the first brace down was

FRED GATES AND NATALIE II.,

at 9:06 A. M. Before the dogs had fairly started they both ran into a bevy of birds, which dropped 30yds. away. Nesbitt shot and killed, when Natalie retrieved, Rose missing; both dogs steady. Then on scattered birds each made a point on singles. Fred Gates then flushed a single, when birds got up all around him. Moving on Natalie pointed foot scent. Going on down the hill into bottom Fred pointed a bevy and Rose flushed, shot and missed. Then both pointed singles of the scattered birds. In sedge grass Natalie picked up another single. Further on Fred pointed a bevy, Natalie backing; birds flushed and Rose shot and missed. Moving on toward woods Fred at the edge pointed by the side of a fallen tree, then roaded on some time, but failed to locate birds; Natalie backed. Then Natalie pointed in sedge grass, Fred backing nicely, but nothing came of it. Further on Fred pointed and drew on, then pointed again, when a bevy flushed wild. Dogs ordered up at 10:42, Fred Gates winning the heat.

PRINCE LUCIFER AND SAM MILLER.

Down at 9:47 in sedge grass; both got off well and fast. Soon after starting Prince pointed by a ditch very stylishly; Sam backed, when Barker put up a bevy, shot and missed, Prince not quite steady. In edge of woods Sam pointed, Prince backing nicely. Sam moved on and out into the open, nothing found. In ragweed in bottom, Prince pointed a single in good shape, which Barker shot at and missed, dogs steady. Then further on Prince pointed in a ditch, Barker flushed birds, fired and missed. Sam backing some distance away. Sam in a bunch of ragweed pointed and Richards flushed two birds, shot and missed. Further on Prince pointed false. In stubble Prince then pointed a lark. Dogs up and heat given to Prince Lucifer, who excels the other in pace, range and style.

ANTONIO AND KATE MILLER.

Cast off at 10:24 in stubble. Soon after starting, in a swamp, Kate pointed, moved on and pointed again, when Richards flushed a single, shot and killed, Kate retrieving nicely. Higher up in sedge grass Antonio pointed, Kate backing, but Avent failed to find anything. Dogs were then taken up, and a half mile further on put down in a grass field, near where a bevy had been flushed by horsemen. In sedge and weeds Antonio then pointed, Kate backing, but no result. Lower down the field Kate came to a good point, and while being held on till Antonio could come up to back, a bevy flushed wild. Antonio was ranging off in another direction, Kate steady to wing. Dogs were then ordered up at 11:26. Kate won.

SIMONIDES AND LILLY BURGESS.

Off at 11:34 in corn stubble. Simonides shortly after in edge of woods pointed a single, which flushed; dog steady. Further in woods Simonides picked up another single, then he pointed another, but birds had run on. Further in woods Lilly made a good point on a single, which Richards flushed; dog steady. Across a stubblefield at edge of woods, Simonides pointed, Lilly Burgess backing, when Rose put up a bevy, shot and missed; both dogs steady. In edge of woods Simonides pointed birds which Richards put up, shot and wounded. Dogs were then ordered up at 12:04, Simonides getting the verdict. He has the pace and range of the other.

NANNIE B. AND CASSIO.

Cast off at 12:09 to work toward luncheon place. Down in hollow Nannie pointed a single which Barker flushed, shot at and missed. Then by some woods Cassio pointed, but nothing found. Going on some distance and into woods Nannie pointed again, and Barker going in flushed, shot, but did not kill. Dogs were ordered up at 12:55. A good deal of ranging was indulged in, but few birds found. Cassio had the pace and range. Nannie B. got the verdict. We than galloped a couple of miles toward town to a farm where lunch was served.

HARRY C. AND PRINCESS BEATRICE.

It was 2 P. M. before we got to work again, the above brace being cast off in ragweed field. Harry started off the faster, maintaining a good gait throughout, but somehow did not get on to the birds like his slower opponent. In a cornfield Beatrice was the first to score, pointing a bevy. Harry, called up to back, came up as birds flushed wild; both steady to wing. At edge of woods Beatrice pointed again, Tallman flushing, Harry backed stylishly; both steady to wing. Following up the scattered birds, Beatrice, a little distance further up, pointed a single at edge of woods by a creek, then roaded on and dropped as the balance of birds flushed, then pointed another single just after. Harry then, in woods, thought he had something, but it proved delusive. On ahead in high sedge Harry pointed and a bevy flushed wild before handler could get up. In edge of oak Harry pointed just as dogs were ordered up, and judges allowed him to try and locate, but he failed; the birds may have run on as he was held on the point some time. Dogs up at 2:40 and the heat given to Princess Beatrice, much to the relief of her owner who had been an anxious spectator, as she was drawn against one of the best dogs in the stake, but whose nose seemed to be off to-day. A heat of the first series in the Gordon Stake,

MONT AND BENDIGO.

was then run. Cast off at 2:56. Some time after starting Mont, in stubble, pointed and Bendigo backed, when Aldrich put up a bevy, shot both barrels and killed, but Mont could not find. Then Bendigo at edge of woods pointed, when a bevy flushed wild almost at the same moment. Birds were followed but could not be picked up, for the only work done was a false point by each dog. A great deal of pottering work was indulged in, both dogs backing and filling too much, neither getting out and ranging far ahead, though Bendigo had the pace and range of the other. The Setter Stake was then resumed with the

Third Series.

FANNIE M. AND FRED GATES.

Down at 4:30, both started off well in marked contrast to the dogs in the preceding heat. In thick grass in firs, Fannie pointed fur and a rabbit was started. Fred then got a good point on a bevy, Fannie backed, when birds flushed wild. Then he got another in the firs, when Rose flushed the birds, shot and missed. Further down in woods, in swampy ground, Fred pointed, Rose flushed birds and shooting, missed again. As it was getting dusk, dogs were then ordered up at 5:15. Fred Gates won. Both ranged out well and are about equal in style. Home was now the welcome order, the finish being some two miles from town.

Saturday.

GORDON STAKE.

Proceedings opened with the second series of this stake, all dogs with the exception of King Item being left in.

BELMONT AND COUNTESS ROXEY

were the first two down at 9:05 in a field near the Grimes house, four miles from town. The weather was pleasant, though frosty, and pretty cold for slow riding. After ten minutes' traveling at edge of woods where the turkeys got up the other day. Belmont pointed and Countess backed, when Tallman flushed some birds, the balance of birds flushing as the judges came up. A move was made after these birds which had flown over the railroad track. Countess was the first to catch up with them, pointing at edge of woods, then moved on, and pointing again, a single flushed. Belmont backed unsteadily. After going through woods, dogs being unable to locate birds, we moved on into the open, and after trotting round for some distance dogs were ordered up at 9:35, when Belmont won the heat.

BEAUMONT AND MONT.

This was the most tedious heat we have so far experienced. Down at 9:41 in ragweed and sedge, Beaumont ranged off the best, showing that his rest had done him good. We turned hither and thither, the judges doing almost as much searching for birds as the dogs, who seemed most of the time to be imbued with the idea they were out for a little pleasure exercise, making rings round their handlers most of the time. This sort of thing continued over an hour, when Beaumont managed to walk into a bevy, but dropped to wing. As there seemed no chance of them finding birds, dogs were ordered up at 10:57 and the judges reserved their decision till the dogs could be put on birds

BENDIGO AND GORDO

were then put down at 11 o'clock in cornfield. After a lot of ranging without a sign of birds, dogs were taken up at 11:20 and put down further on, when Bendigo pointed a single, Gordo backing. Tallman flushed, shot and killed. Bendigo at the flush broke in a yard or two, but stopped to order. Bendigo sent to retrieve bird, failed to find. Tallman eventually picked it up. Then Gordo flushed birds in bottom, and dogs were ordered up at 11:31. Bendigo showed better range, style and nose. The Setter All-Aged Stake was now continued. Mr. Nesbitt had Kate Miller ready to run, but Mr. Barker, who was handling Prince Lucifer, protested her being allowed to run, as she was in season. Protest allowed and Kate Miller withdrawn. This brought the bye dog Princess Beatrice, who had already started off to run the bye, up with Prince Lucifer.

PRINCE LUCIFER AND PRINCESS BEATRICE.

Cast off at 11:51 in stubble. Prince soon pointed and was held on his point to give Beatrice a chance to back, when a single flushed, and then Barker put up the balance of bevy, shot and killed, and Prince retrieved nicely. Further on in bottom Beatrice made game and despite the whistling of her handler would not be denied, and working into some briers pointed and birds flushed, Tallman going in put up another bird which he killed. In swamp, covered with bushes, Beatrice was lost when Judge Wallace found her on a point and a single flushed, then the rest of a bevy got up. Prince was brought up and both turned into woods after birds. High up in the woods Prince pointed twice on singles and Beatrice flushed a single. Dogs were ordered up and heat awarded to Prince Lucifer. Every one by this time felt as if some lunch would not be amiss and all turned toward the farmhouse, half a mile distant. After lunch

SIMONIDES AND NANNIE B.

were put down to conclude the third series at 1:15. Soon Nannie pointed a bevy, left her point, and coming up to the other side flushed. In woods Nannie pointed false, Simonides backing indifferently. Simonides then flushed a single and Nannie pointed false again. In stubble Simonides pointed a bevy and Nannie backed nicely. Then Simonides in the open pointed another bevy, which Rose put up, shot and missed. Dogs were then ordered up at 1:43, Simonides being returned the winner.

GORDON STAKE.

Second Series.

BEAUMONT AND MONT.

These two were put down again at 2:01 on the scattered birds from previous heat to decide their heat of the morning. Beaumont was the first to get scent and pointed a single, acting somewhat unsteady. They were then ordered up and a decision rendered in favor of Beaumont.

Third Series.

BELMONT AND BENDIGO.

Down at 2:30. Soon in some woods Bendigo on dry leaves flushed a bevy. Birds were followed but dogs failed to locate. Each then pointed a single, when dogs were ordered up and Bendigo was given the heat. Beaumont had run a bye at the same time.

Final Series.

BENDIGO AND BEAUMONT.

Cast off at 3:24, they ranged around here and there for a long time without finding anything, when at last Bendigo pointed a bevy, and sent on he flushed a bird. They were ordered up at 3:54, when the first prize was awarded to Bendigo, owned by C. M. Hunt, of Palmyra, New York. He is a big, rangy-looking dog with fair speed for a Gordon, and quite young yet, some eighteen months old only. Gordo and Beaumont were selected to run for second place on Monday.

ALL-AGED SETTER STAKE.—*Fourth Series.*

SIMONIDES AND PRINCE LUCIFER.

These two were cast off at 4:07. Simonides soon pointed in a cornfield. Moved on and two birds flushed. Then he stopped either to a point or a flush, which, could not be decided, then rest of bevy flushed wild. Some distance further Simonides pointed a single. Then Prince pointed a dove. In some pines Simonides pointed, drew on, but failed to locate. Both dogs were roading when Simonides flushed a bevy and then pointed. Then he pointed again and roaded about 20yds. to the left, turned, and going back flushed a bevy. In bottom Prince pointed false. Then Prince scored two good points on singles. At the same time as Prince's last point, Simonides pointed a bevy: Rose flushed, shot and killed, Simonides retrieving nicely. After this Prince pointed, but failed to locate. Dogs were then ordered up at 5:07. Judgment was held over till Monday, though sufficient work was done to show a little balance in Simonides's favor. Range and pace about equal, but Simonides hunts out his ground with more judgment; but style is in Prince's favor.

LEXINGTON, N. C., Monday, Dec. 15.—The meet this morning was at Irvin's farm, seven miles distant from town. Weather was bright and frosty, wind northeast. The first brace down was

PRINCE LUCIFER AND SIMONIDES,

the undecided of Saturday evening. Both dogs started off at a good gait, quartering a very large field in good style. After ranging around till 9:37 without finding birds, the dogs were ordered up and judges consulting gave the heat to Prince Lucifer. The judges based their decision no doubt on account of Prince's better speed and style. The heat for second place in the

GORDON STAKE,

BEAUMONT AND GORDO,

was then run off, dogs being cast off at 9:45 where the others had been taken up. If an ordinary day's shooting means to go slow, these two filled the bill, for they just trotted round their handlers never more than a few yards distant. Then ranging out somewhat better they passed a bevy which was flushed by the handlers. Mr. Davidson then grew sarcastic and suggested that Cameron give his dog his gun and hunt for the birds himself. Beaumont in woods then pointed and moved on. Dogs roaded on but failed to locate. Taken out of woods and put down in ragweed again, the dogs then passed another single which judges flushed. Gordo flushed one at edge of woods and then stopped when another got up; Beaumont backed to order. Tallman then stumbled across a single. Dogs then pottered around in some briers, and were taken up and put down at edge of woods. Working through woods without finding anything, dogs were ordered up at 10:15 and judges consulted, but no decision arrived at, and dogs ordered on in woods after the first scattered birds. After a lot of nosing around Beaumont pointed a single in a heap of sticks which Tallman flushed, dog steady to wing. Dogs were then ordered up at 10:31. Gordo having strayed off to one side was brought up later. Beaumont was awarded the heat and second prize, Gordo and Mont dividing third.

SUMMARY—GORDON STAKE.

First Series.

KING ITEM (Item Kennels), Little Boy—Roxie,
with
BELMONT (Beaumont Kennels), Dasher—Blanche IV.

BEAUMONT (Beaumont Kennels), Ronald III.—Floss.
with
GORDO (J. L. Campbell), Royal Duke—Norah.

MONT (Dr. Tillinghast), Tom—Perley,
with
BENDIGO (Claire-Reeta Kennels), Ben Nevis—Blanche IV.

COUNTESS ROXIE (Item Kennels), Little Boy—Roxie, *a bye.*

Second Series.

Belmont beat Countess Roxie.
Beamont beat Mont.
Bendigo beat Gordo.

Third Series.

Bendigo beat Belmont.
Beaumont a bye.

Finals.

Bendigo beat Beaumont and won first prize.
Beaumont beat Gordo, winning second prize.
Gordo and Mont divided third prize.

ALL-AGED SETTER STAKE.

Final.

PRINCE LUCIFER AND FRED GATES

were put down in ragweed to run for first place. Cast off at 10:46, Prince Lucifer started off the faster. It was not more than five minutes when Prince pointed, and Fred coming up backed stylishly, making a pretty picture. Barker flushed the birds, shot and wounded; both dogs steady. On, after scattered birds in wooded hollow, Prince retrieved the bird Barker was thought to have missed. Fred, at edge of woods further on, pointed and Prince backed in good style; nothing found. On in woods Prince pointed, then moved on. Dogs were then taken up out of woods, when directly Prince pointed in fine style, Fred backing; Prince was ordered on and found the bevy a few yards ahead, flushed; both dogs steady to wing. Dogs were then held up to cross a ravine. Put down on other side Prince pointed a bevy and Barker flushed, though Fred looked as if he had it, as he went in and stopped first. Dogs then held up, and passing through some sedge in a hollow, judges flushed a bevy of fully twenty birds. Cast off again some distance further on in sedge, and after ranging over a field or two, dogs were ordered up at 11:26, and judges consulting awarded the heat and first prize to Prince Lucifer. Princess Beatrice, Antonio and Simonides were to run against each other to decide which should run with Fred Gates for second place.

PRINCESS BEATRICE AND ANTONIO

were then put down at 11:40 in open field. Beatrice ranged off wide on start and was lost to handler for a few minutes. On in sedge Antonio pointed, and Beatrice coming up, backed, when Avent flushed a bevy, shot and missed; both steady. After scattered birds, Antonio pointed in briers. Soon after, lower down in same patch, Antonio pointed and Avent flushed two birds. Sent on Beatrice dropped in grass and then moved on, at same time lower down Antonio pointed, but Avent could find nothing. Then dog roaded on, and afterward, to one side, pointed again and moved on. Ranging out, dogs were soon after ordered up at 12:12. Judges consulted some time and then announced both dogs thrown out of second place. Antonio did the best work, Princess Beatrice not paying sufficient heed to her handler, ranging off to please herself, in contrast to the work she had so far done in previous heats. To run for second place Simonides and Fred Gates were then selected.

SIMONIDES AND FRED GATES.

Cast off at 12:20, neither started off fast. Both dogs were handled by D. E. Rose. Soon after starting Fred Gates was lost for ten minutes or more, eventually coming to handler. Both on again in sedge. Fred was soon lost again. This time he could not be found, and we all had lunch in the open. Then after the judges had tried to find Fred they returned at 2:05 and announced Simonides as the winner and Antonio and Fred Gates divide third prize, though for hunting off like that and not having been found yet at 6 P. M., he ought to have been thrown out.

The heat for absolute winner of All-Aged Stake between

PRINCE LUCIFER AND IGHTFIELD DEUCE

was now run. Dogs being cast off at 2:59 in stubble, both started off fast. After ranging over several fields Prince Lucifer at the edge of woods pointed, then drew on, pointed again, Barker failed to find the birds, Deuce backing. Then Deuce winded these birds at the other side of a branch in oaks, pointed, then roaded on to a staunch point, when Brailsford coming up a single flushed and he shot, the balance of bevy rose; in the meanwhile Prince Lucifer backed nicely. Sent on after scattered birds, in briers at edge of woods, Deuce dropped to a point and Prince following up nearly stepped on him before whirling to a back. A single was flushed and Brailsford shot and missed. Then Deuce outside of woods, in grass dropped to a point, then moved on again. Then in swamp and thick brush Prince pointed a bird, Barker shot and missed. Sent on in sedge grass, then into pines Prince pointed, but nothing found and Deuce coming up pointed to one side of him, Prince ordered on to locate, his handler refused because Deuce was pointing the birds, then Deuce moved on to locate himself, though ordered held, and some birds were flushed.

Then Prince came up and pointed again almost in same place as Deuce, and sent on the balance of bevy flushed ahead. Then Deuce roaded to a flush at edge of wheat, a few yards further on. In corn Prince then pointed false. On in some fields Prince pointed again in ragweed, drew on, pointed again, moved up and finally located the birds, which Barker flushed, shot and killed, Prince retrieving in good style. At edge of woods Deuce dropped to a flush on a bevy, then moved on, and working across the field again, dogs were ordered up at 3:41 and the heat and All-Aged Stake awarded to Prince Lucifer. There was hardly enough work done to decide so important a heat, though I suppose Deuce's last flush spoilt her chance.

Prince Lucifer is a big, rather coarse dog, good bone, good action and is a free ranger, making few mistakes.

SUMMARY—ALL-AGED SETTER STAKE.

The first series with names of owners and pedigrees has already been given.

Second Series.

Fred Gates beat Natalie II.
Prince Lucifer beat Sam Miller.
Kate Miller beat Antonio.
Simonides beat Lilly Burgess.
Nannie B. beat Cassio.
Princess Beatrice beat Harry C.
Fannie M. a bye.

Third Series.

Fred Gates beat Fannie M.
Prince Lucifer beat Princess Beatrice.
Simonides beat Nannie B.
Kate Miller thrown out, being in season.

Finals.

Prince Lucifer beat Simonides.
Prince Lucifer beat Fred Gates and won first prize.
Simonides beat Fred Gates and won second prize.
Antonio and Fred Gates divide third prize.

At the bench show for the Lorillard medals Mr. Tallman judged and awarded the medal for best dog to Geo. Ewing's Rowdy Rod, and that for best bitch to Frank Windholz's Princess Beatrice.

To-night the drawing for the four-hour race takes place.

H. W. L.

[*Special to Forest and Stream.*]

LEXINGTON, N. C., Dec. 16.—The first brace down this morning was Rowdy Rod and Chance. Weather raw and chilly, wind northeast. Bradley handled Rowdy and Avent Chance. Dogs cast off at 8 A. M. in field near town. Both dogs ranged well out and kept up a good steady gait till near the finish, when doubtless the heavy rain affected them. Rowdy showed best sense and picked out the birds better than his opponent. A great deal of ground was covered, chiefly in the open, and the race resulted in Rowdy finding five bevies and four singles to Chance's two bevies and four singles. Chance showed best style, and if anything was going the stronger at finish. Both pointed false several times. Ordered up at 12 o'clock. After consultation Rowdy Rod was awarded the heat.

It began to rain about 11, and as after lunch it showed no signs of clearing, the welcome order for home was given. Nannie B. and Daisy Hope will go down in the morning if it clears up. Fred Gates was found at 6 o'clock last night, having returned to the home he started from.

AS TO WHITE WONDER.—*Editor Forest and Stream:* I noticed last week in your paper a communication from the Messrs. Harris in regard to the bull-terrier White Wonder, which dog I protested against at the last Boston show on account of deafness. The letter inclosed from Mr. Fred'k Hinks, of Birmingham, Eng., in reality proves nothing that is pertinent to the case. I should like the Messrs. Harris to answer fairly and honestly a few questions. Why was the dog entered at Boston as Beryl on April 1–4, and then at Buffalo two weeks later as White Wonder? Did the Messrs. Harris purchase the dog knowing him to be deaf, or did they buy the dog believing him to be sound? Do they claim now that the dog is not deaf, or that he was not deaf at the last Boston show (leaving aside the decision of the know-nothing Boston vet.)? Does Mr. Hinks claim that the dog is not deaf? By making an explanation, which I trust will be a satisfactory one, the whole matter can be settled once and for all. At present matters do not look right. I trust that the Messrs. Harris will understand that I bear them no ill will and that I give them credit for owning, in my humble opinion, the best bull-terrier ever in America, barring the one defect—deafness.—E. SHEFFIELD PORTER (New Haven, Dec. 12).

"GYPSY."—The story of a stray puppy, which blundered into a home happier than it had any right to hope for, which lived a brief life of canine felicity and died a death all too early—there would not seem to be anything in that of especial human interest, and certainly not enough to warrant the writing of a volume of canine biography. Yet "Gypsy," a plain Chicago dog, neither a Napoleon nor an Adonis among dogs, has reached the fine immortality of a monument in black and white, and is the subject of an obituary tribute, in the little book of the above name, of which neither the departed dog nor the living authors need be ashamed. Mrs. Helen Ekin Starrett and Mrs. Frances Power Cable, both Chicago ladies, are the authors of the little book marked plain "Gypsy," Mrs. Cable contributing the introduction to the work. It is a graceful way in which these two ladies ask us to pause a moment in the hard business of life and reflect what there may be in so common a thing as the life of a little dog. Few books are more unusual, we may well think, than this one, and perhaps many would be forgotten sooner by such readers as have ever looked into the one fathomless, unspeakable and unalterable affection—that which lies deep in the eyes of a dog.—E. HOUGH.

STOLEN.—On Friday night, 12th inst., five dachshund puppies, about six months old, four of which are tan color and one black. One of the tans has a short, crooked tail. The thief came here in a wagon, broke open the stable door and took the lot, nothing else, and left his "jimmy" behind. If any fellow fancier should see or hear anything of them, he will confer a favor by wiring me.—J. M. FRONEFIELD, JR. (Wayne, Pa.).

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

One of the most inconsistent letters I ever read was that of your correspondent "Gothamite" under the above title. Before going further I want to say that it is not only unfair, but it is taking a mean advantage, when one man attacks another under a *nom de plume*, and when he attacks my dogs unfairly he attacks me. Fair criticism I am always glad to receive. If "Gothamite" has any pecuniary interest in the dogs he lauds at the expense of others, let him boldly sign his name, that we may know the true value of such opinion, and what interest the defamer has in making them. But I, for one, object to having my dogs criticised by every Tom, Dick and Harry, who, because he cannot breed a winner cries out for "the working cocker."

Red Jacket is not perfect, and I have never held him up as such. Short and somewhat thick in muzzle, he is best from his ears back to the tip of his tail, and to the pads of his feet he is as near perfect as any dog in America. I wish I had half a dozen like him. "Shallow bodied and over long" "Gothamite" says. Why, man, he is the best ribbed and has as round a barrel as any dog in America to-day.

He quotes Doc, Cherry Boy, Rabbi and Black Duke as being nearer perfection in regards measurement. I inclose you the measurement of Red Jacket and ask you, Mr. Editor, to hold them until similar ones are supplied of Doc and Cherry Boy, which I challenge him to produce, to be published side by side. Comparison will be interesting.

Again he wants a dog that "will be well able to jump across the street gutters or on to the bench." I challenge him to produce any of the above named dogs to run a race at any distance from 100yds. up to one mile, with as many 3ft. ditches or 2ft. hurdles as he likes—the more the better for me—against Red Jacket for any stake and at any of our large shows the coming winter. Why, there was not a show last season at which Red Jacket could not leap lightly into the stall, as Ben Lewis can verify.

How about "Gothamite's" pets?

How many cockers on the bench to-day could claim when eighteen months old to having won eight firsts, two of them in the challenge class, and special for the best cocker in the show five times, at such fixtures as New York, Chicago, Rochester, Baltimore, Cincinnati, London and Toronto, under all sorts and conditions of judges? Still more misleading is it for him to quote other dogs who are actually longer and lower as being nearer the working type than mine.

But enough; I get thoroughly out of patience when I read such absurdities, which come either from ignorance or are made purposely to mislead—lies.

CHAS. M. NELLES (Brant Cocker Kennels).

BRANTFORD, Canada, Dec. 1.

Editor Forest and Stream:

I have been waiting (not very patiently I must confess) for five years for the change which I knew must come, and now that my hair is getting gray I feel almost like going into the ring again and trying to win back the laurels which I lost when the long low craze set in. I have always stood by my friend "Uncle Dick," and will do so. He has fought the battle while we sat looking idly on. The aspersions on our old friend "J. W." I think are uncalled for. I have been to several bench shows with large spaniel classes, in which I have failed to see any good specimens except of the long low type. Even friend Fellows showed some, I suppose because he found the proper type would not take. What could any judge do but give the prizes to those he thought best, although they did not come up to his ideas. But one decision of many judges I could never swallow, that was putting Jerry in the first flight: and the critics, even "C. M.," went wild over him. No doubt he had a good body and coat, but where were the legs to carry them?

Now that the reaction has set in, I hope sincerely that the cocker spaniel as a useful animal will take his proper place, and be, as he always was, a pleasure both at home and in the field. J. S. NIVEN.

TORONTO, Ont.

Editor Forest and Stream:

As I always like to have a hand in a discussion on spaniels, and "Uncle Dick" particularly requests me to "say my say," I shall do so, although not directly interested in the question under dispute.

It is no wonder that "Dick" is riled at "Gothamite's" statement that the cocker spaniel of the future will not be the "Fellows type," for none can deny that he has for several years been fighting against the "longest and lowest" fad.

I agree with "Dick," for what I remember of it, that most of your anonymous correspondent's statements are correct, especially as applied to Mr. Bell's bitches. It would be hard to find a better bodied bitch than Blushing Rose that he showed here in September, and Idea, now owned by Mr. Bush, is a rare good-bodied one, too. I saw Rufus and Bambo, that he refers to, at our show here and cannot for the life in me see how Mr. Oldham could have put that black and tan puppy over Rufus, unnoticed; Obadiah (née Kildare) I have not seen, but Mr. Geddes recently showed me his photo, and if it is to be relied upon he is indeed a nice dog.

Turning up your issue in which the "Gothamite" letter appears, I see that he says my book ("The Spaniel and its Training," recently published by the Forest and Stream Pub. Co.) "deals with the spaniel question in a way that I [he] think is just about right, though certainly it is very severe." So that your readers who have not read the book in question may judge for themselves whether it is "very severe" or not I copy out one or two pertinent paragraphs for their perusal:

"The prevailing craze for spaniels so low that their stomach feathering sweeps the ground and so short of limb that they can barely waddle, has sounded the death-knell of some varieties, at all events in the show division, in so far as ability to work goes. Why it has been done is a mystery to all, and the only reason to be adduced is that 'fancy' is to blame. Even upon the score of beauty the crocodile spaniels are behind. What unprejudiced man can look at an engraving of Kaffir and then at Moonstone and hesitate for a moment as to the former being the handsomer dog? I cannot see why 'low' in a standard should be construed into meaning lowest, and 'long' into longest. If the craze goes much further an extra pair of legs will have to be grafted on amidships to help the poor seal-like spaniels to crawl along. * * * A spaniel is a sporting dog; so are pointers, setters and hounds. Would it not, then, be as sensible to breed 'long and low' setters as spaniels of that type? Common sense experience must convince any thinking man that a long, low dog, with comparatively weak loins, cannot possibly work so long or with such activity as a shorter-backed animal on straight legs and with good feet, and a more perfect concentration of muscular power."

I really think that the exhibition of abortions of the Moonstone and Glencairn order is largely to blame for the decadence of English show spaniels. At present there seems to be a reaction all around and indications show that in a few years our spaniels will be not only able to "jump across the street gutters," but on to their benches from the floor. Both the English *Stock-Keeper*, *Canine World*, and *Shooting Times* are interesting themselves in the spaniel question, and FOREST AND STREAM, I know, wants a sporting dog to be able to sport. Our most popular spaniel judge, Mr. Wilmerding, is bent upon bringing about the change, while I agree with "Gothamite" that Mr. West placed the cockers very well at Boston, except that I should have liked to have seen Dolly Obo placed over Jersey in the challenge class.

To give Mr. C. H. Mason his due, he "spotted" champion Doc for a good one several years ago, repeatedly saying that were he in condition the prize money was at his mercy. At Boston, where I took him for Mr. Wilmerding, his coat was very bad, but Mr. West very properly did not allow it to interfere with his placing of him as the best in the challenge class. At the show here in September I got his coat into first-rate fettle and he won over all the 26 cockers with consummate ease. He is indeed a splendid little dog, and only needs plenty of grooming to keep his coat straight. But with all his good points where would champion Doc be in the field?

I trust Mr. Mason is right in saying that "Gothamite" "is not quite through with the cocker spaniels of 1890." Just at present we can do with all we can get on that subject, and I trust Friend Wilmerding will steal a few minutes of the Obrig Camera Co.'s time, while Friend West does the same by the Colburn Co., to give your readers their views on the complex question of "what is the type of a cocker spaniel?"

F. H. F. MERCER.

OTTAWA, Can.

Editor Forest and Stream:

I note in your issue just to hand that Messrs. Mason and Fellows are quite excited over my article on "The Cocker Spaniels of 1890." To Mr. F. would say that Velda was all right, and that if she is his "type" he is all right, but as she is the only good one he has turned out for some time, although he boasts of having the biggest kennel of cockers in America, it is only to be expected that people will judge his stock by their general appearance and not by one good one here and there in many years. "One swallow does not make a summer," neither does one Velda make the "Fellows type." I don't presume as it ever strikes Mr. F. that it is about time he did a little more judicious breeding and a good deal less talking and with his large and old-established kennel was breeding a fixed type.

To Mr. Chas. H. Mason would say that I don't propose to spend several hours looking up his writings to convict him, and don't need to, because it is a well known fact that he has borne a leading a part in encouraging the "long and low craze." I hope we are not through with the cocker spaniel subject, though as far as he is concerned we will probably hear no more.

Mr. Watson may be a judge of working cockers, as Mr. Fellows says, but all the same he refused to judge them for the "working" special at Buffalo in 1888. GOTHAMITE.

NEW YORK CITY, Nov. 26.

Editor Forest and Stream:

Just a parting shot at "Gothamite." A private letter just received says: "I do not want to tackle any one that fires from behind a fence like 'Gothamite,' but he nor ten like him could make me believe you are wrong in your position. I do not know where the line is that divides the Fellows type from the 'Gothamite' type that he is driving at. You certainly deserve credit for what you have done, for when I was a member of the Spaniel Club you were even then fighting against the long and low craze; that was in 1882."

I find in the English *Kennel Gazette*, November, 1890, Judge G. S. Lowe's report of the cockers; he says: "This class I found the greatest fault with, as toys were brought before me, but not working cockers. I knew a good deal about this breed at one time of my life, and neither Stubbs, famous picture of the cocker now in the possession of Mr. Walter Gilbey or any evidence from Devonshire or Wales will make the cocker what the Spaniel Club made him. He was wanted to work from morning until night through brambles and brushwood of the thickest, and will the black spaniels called cockers do this? I tried to pick out the one that looked like moving about the sharpest, but probably it had not the points supplied by the Spaniel Club. I was neither at home with the so called field spaniels, perhaps I have forgotten all I knew."

Mr. Lowe, let us shake, those are my sentiments exactly, and that's a Fellows type working cocker. It would do my dear old friend Dr. Boulton good to see you in the ring sending out the crocodiles one after the other and giving the ribbons to the working cockers.

Well, every dog has his day, and the crocodile spaniel has had a long inning, but his day is past now and the Fellows type has the floor, but you will not now find a judge or a breeder who will admit that he ever did like the long and low style; all will hedge and say they always wanted a happy medium. J. OTIS FELLOWS.

A THANKSGIVING BEAGLE RUN.

Editor Forest and Stream:

For the benefit of those who "were not in it" but who may be nevertheless interested in this sport, I will give a short account of the Thanksgiving runs of a small portion of the National Beagle Club's pack. Thursday morning saw five of us and six of our dogs, Don, Mollie, Cora, Twintwo, Topsey and Dot on our way to the hunting grounds, which were some two miles distant from Salem depot, N. H., our temporary place of abode. When we left the Peabody farm at 7 A. M. the cold was intense, and after riding a short time we began to think that we should have more hunting than game, as it was not only cold, but very dry. However, by ten o'clock, the weather moderated so that the trailing was very fair. After having driven about a mile and a half we alighted, and tying our horse to a tree by the roadside, we unchained the dogs.

To our right was a wall, which we jumped and made for a piece of woods about 200yds. distant. Here the dogs found, and after they had worked about ten minutes the rabbit was spied going through a brush pile and Brown, bringing his gun quickly to his shoulder, fired and stretched him out. Leaving here we went to a swamp at the foot of the hill, and on our way flushed three partridges. Peabody fired at one of these and brought down a good-sized bunch of feathers, but the bird kept on and escaped.

In the meantime Don had found on the hillside and Topsey and Twintwo in the swamp, and a moment later Cora gave tongue away over to the right. Five minutes later we had three rabbits up and running at once, and one could not tell which way to turn to shoot, as the air was loaded with melody and the dogs seemingly in a hundred places at once. At any rate, we were so much confused that every dog ran his rabbit to earth without our once getting a glimpse of our prey. From this place of abundance of rabbits but almost impenetrable underbrush, we adjourned to a country of small scrub oaks, which grew from fifteen to twenty feet in height, and here started our first rabbit in less than a minute; he gave us an exciting run of twenty minutes before he was shot down, and proved to be a large one. Three others were shot here. After running about seven and finding it was getting near noon, we worked over toward the team. On our way we had to pass through a patch of juniper, and started and shot two more, as well as a couple of partridges. As we were now within half a mile of the team, and felt as if a little lunch would do us no harm, we left the woods, and putting on our "field trial" strides took to the road and were soon there.

Our lunch eaten and the horse fed, we climbed in and rode to a place called Hoyt's Hill. This hill consists of many acres of rough country entirely covered with a thick growth of scrub oak and is a perfect paradise for rabbits, and let me say, that from the time we started our first rabbit until the time we quit there were not ten minutes that the dogs did not have a rabbit, or rabbits running, excepting of course when they were in the team with us. On this hill the rabbits stayed out longer, making runs from twenty minutes to an hour and three-quarters, and if one stands well up the hill he can see the entire chase from start to finish, and my only regret is that we were not here during our trials.

I must describe one run that occurred on this ground. After this particular rabbit had run for over an hour and was seen several times to play the tricks for which rabbits are famous, such as running back on his track and jumping to one side, running up wind till he had a good trail laid and then jumping to one side and lying perfectly still until the dogs had run by and then going down wind on his back track like a flash, etc., he was seen to come over the hill directly toward us closely pressed by dogs; when about 75yds. off, and jumping from side to side in his vain efforts to fool the hounds which were on his track, Peabody raised his gun and gave him the contents of the right barrel closely followed by the left-hand charge. Both shots stirred up the leaves behind the rabbit but he still came manfully on "into the jaws of death," and now Vice-President Rutter seeing the effects of Peabody's shot, or rather the lack of effect, raises his own handsome hammerless to his shoulder with the calm assurance of a man who has been there before, and proceeded to wipe the eye of his friend. He fired, and with startled leaps bunny strains every muscle to increase his speed, still keeping, however, his fatal direction. He is now so near that at the vengeful crack of Rutter's left barrel he tumbles all in a heap fairly "sunk" with shot. Four shots and we have secured the best runner on the hill, and strange to say the smallest one shot that day.

On talking over this run I said to one of our party, who by reason of his better position should have had the first shot, "Why did you point your gun and then not fire?" He said, "Well I did take careful aim and pull both triggers, but on 'breaking' my gun down I found it was unloaded." He had forgotten to load after firing the last shot, having run to pick up his rabbit which was getting into a hole. He was not, however, alone in misfortune, for another of us forgot to push up his "safe" and missed a fine shot at a rabbit in the open.

Looking at my watch I saw that to catch the train for our several homes we should have to leave at once, so calling to the dogs we started for the team and were rapidly driven to the station.

During the whole day we only bagged 10 rabbits and 2 partridges, but were all thoroughly satisfied and ready to return home, carrying with us the firm conviction that for downright pleasure you can get more to the square inch from one pack of beagles than from any other source.

F. W. CHAPMAN, Sec'y.

SOME A. K. C. MATTERS.

IN a contemporary which publishes a weekly contribution from Mr. Mayhew, reference is made as follows to an addition to the stud book and certain alleged omissions on my part:

I omitted last week to mention an important addition which Mr. Vredenburgh intends shall be included in the next volume of the stud book. It will contain all the shows held during the year under A. K. C. rules, at the same time giving a table of awards, as well as the names of the gentlemen who officiated. In the E. K. C. stud book only prize winners are recorded, but the secretary at "41" will go further and embrace all dogs who gained a mention. This new innovation, is, I am proud to say, the outcome of some remarks of mine, which appeared a few weeks back.

It is some time since Mr. Watson complained bitterly of his duties on the stud book committee being a sinecure, and I then suggested that his anxiety for action could be attained in this direction, but a silence has since fallen o'er his burning desires, and he seems to have dropped them like hot cakes. Perhaps he had good reasons for not referring to the subject again. Perhaps he is undemonstratively compiling such a record, but whatever reason there was for his silence I certainly regretted it, as I had cajoled myself that "here is a man of all others—and an official, too—who will fulfill my dream of compiling a perfect stud book," and he has proved a snare and a delusion. I know under the A. K. C.'s existing "intentions" Mr. Watson would be powerless to execute any such scheme, but I did expect he would make some move in the right direction.

If Mr. Mayhew would keep posted on what is being done and what is announced as accomplished, in place of drawing upon his imagination for his facts, he would never have made as many blunders as are contained in the foregoing. He says that what he is pleased to call this new innovation is due to his remarks of a few weeks back. I am sorry to have to undeceive him, but truth is better than fiction. At the stud book committee meeting, held three months ago, the subject of recording prize winners in the body of the book was discussed, and Mr. Vredenburgh then showed to the committee a record which he had compiled for publication in the *Gazette*. The committee decided that it would be better to incorporate this with the stud book, and a very brief discussion as to the merits of the two plans proved conclusive to Mr. Vredenburgh. This is not a committee room secret, for I am certain it is set forth in my official report as secretary of the committee, which was published in the September *Gazette*. Mr. Vredenburgh must certainly have begun the work of compiling this record a month before the committee met, for he had it fairly completed to date. Hence Mr. Mayhew's idea that something he wrote a few weeks back suggested the work which Mr. Vredenburgh must have begun in July does not hold good.

This will also account to Mr. Mayhew for the silence which has since fallen o'er my burning desires and my dropping the subject, though I might add that people don't drop hot cakes—they eat them—it is 'taters that are dropped. So also it will account for my being a snare and a delusion—in Mr. Mayhew's eyes. As for my inability to do anything in view of the A. K. C.'s existing intentions I can state that the members of the committee were unanimous in the opinion that the stud book should contain all prize winners. Mr. Vredenburgh suggested that applications should be made by owners for the free registry of prize winners, but I remember very distinctly that the committee held otherwise and would have so ordered had it not been that Mr. Vredenburgh had gone so far toward completing his exhaustive record. If Mr. Mayhew will turn to the committee's report I think he will find something to the effect that the committee decided that this would do for the present year if the club did not order otherwise. I have mislaid my copy of the *Gazette*, so cannot quote the exact phraseology of the report.

Mr. Mayhew will also observe that the very important alteration of "listing" dogs, in place of "registering" them in the *Gazette* is due to a recommendation of the stud book committee, proposed at this same meeting of August last. So we seem to be neither dead nor sleeping, and I think the work done by the present committee will compare very favorably with that of any of its predecessors.

I think that I may personally lay claim to something else quite as important in connection with the work of the A. K. C. Not that it was new so far as being an idea of my own, only new in connection with the A. K. C. The idea was borrowed from the National Trotting Association's method of setting for cases upon which decisions were rendered. In the cases that came before the committee for discussion a concise report was made. Giving each a title for reference, then a statement of the facts of the case and then the decision. The merit of this manner of placing cases on record seems to have been at once recognized by the advisory committee for the cases which came before that body at its meeting of Nov. 1, and are set forth in a nearly similar manner. That is a third point to score to the credit of the stud book committee.

Regarding that advisory committee meeting and in view of my comments of last week on the proposed amendment to enlarge the scope of the committee's work and power, I would draw attention to the fact that but three members were present. That being a quorum of five, I do think that the committe should be enlarged to nine. Three are not sufficient at all times for the thorough elicitation of all the points of a case. Take for instance the one in which I was interested. I showed Clipper at Rochester in 1889, and he was defeated by Metchley Surprise for some specials. If I am any judge of a collie at all, the decision was a bad one, but any way Metchley Surprise was ineligible and was subsequently disqualified by the A. K. C. I saw in the papers of Thursday of the show week, that Metchley Surprise had won in the challenge class, and knowing that she was entitled to go in that class, I wrote to Frank Smith, who had charge of Clipper, that if the newspaper reports were correct to please make a protest and ask for reserve number for the specials. On Friday afternoon I got a catalogue, which confirmed the newspaper reports, and at once sent a lengthy telegram to the show secretary, making protest and again asking that a reserve number be secured. I did everything a person could, and as promptly as possible. Now the club did nothing, it even disallowed the protest (a similar one to which the Boston committee at once allowed), which on appeal to the A. K. C. was at once reversed without even calling upon the Rochester club for an explanation. Then, when the question of the reserve number was subsequently brought before the A. K. C., I produced a letter from the Rochester secretary, in which he asked by what right I said the reserve number had not been obtained. Letter after letter was written by the A. K. C. secretary to the Rochester people on the subject, until he finally asked the club, in his report to the September meeting, to discipline the Rochester officials. That was the case as presented to the advisory committee, and this is the decision rendered:

Resolved, That in the opinion of this committee, reserve numbers should be given in all cases, but in the case of the collie special at Rochester in 1889, the judge having left the show, between the hours of 4 and 5 o'clock, on the first day of said show (Tuesday), and the request from Mr. Watson for a reserve number not having been received by the club until the fourth day of said show (Friday), that it was not within the power of the club to accede to the said request.

Admitting that the result arrived at could not be otherwise, yet I hold that the reasons assigned are faulty. The judge it is said left before 5 oclock on the first day of the show, and because he was not present when the protest was received, "it was not within the power of the club to accede to the said request." Now, I submit that this is faulty for the following reasons: It implies that after 5 o'clock on Tuesday nothing could be done to alter an erroneous award. It places the power of correcting an erroneous award solely in the hands of the judge in place of the show committee. It ignores the show rule that in the absence of the judge the committee shall have power to appoint a substitute. It makes invalid such rulings for instance as that at Chicago last spring, when two terriers were overlooked by the show employes, and were not passed upon by Mr. Belmont, whereupon the committee to do justice to the innocent exhibitors asked Mr. Mortimer to rejudge the classes. That was equity, even-handed justice, but it was wrong if the Rochester ruling is correct.

At Rochester it will be seen that nothing so extreme as the Chicago rejudging was called for. Mr. Mortimer had already chosen all his class winners, and between them for the specials he had selected Metchley Surprise. No reversal of this verdict was asked, but simply that it should be supplemented by some one saying which of the other first-prize winners ranked best. Suppose, for instance, that Mr. Mortimer had left without deciding the collie specials, then under the advisory committee's rulings they would have gone by default.

I believe one of those specials was for the best collie owned by a member of the Collie Club, and I was much surprised a few days ago to receive from the Collie Club secretary a medal with the following superscription: "For the best collie, Rochester, 1889." If that is so then the medal does not belong to me, and Mr. Shotwell will please consider that it is at the disposal of the Collie Club should the committee hold that the advisory committee's ruling must be followed.

On this case the *Fanciers' Journal* comes to my aid with the following editorial comment:

Mr. Watson being in Philadelphia could not make his request until he learned the result of the awards, after which he immediately wrote and telegraphed the club to have the reserve number taken, which could have been done by appointing another judge, the regular judge having left the city.

The A. K. C. should always protect the helpless exhibitor, and when there is any doubt he should be favored, rather than the dog show. If clubs are allowed on quibbles to avoid adjusting prizes, as in the Rochester case, the precedent now established will be quickly taken advantage of.

It is not the loss of the specials I am "kicking" about, but the failure to discipline a club that acted from first to last in the most discourteous manner not only of myself, but of the A. K. C., besides announciating a ruling which I conceive to be erroneous for the reasons set forth.

DOG CHAT.

WE hear that Rifleman, the fox-terrier, is coming to New York after all. We know that Mr. C. L. Wilton was nibbling at him but thought he had given up the idea after purchasing Suffolk Risk. The new purchaser's name is not given by "Cheerful Horn," our informant. Rifleman was bred by Mr. Doyle, and is a son of Result and Distaffine.

The noted pug Prince Victor is dead. This is the dog that Mr. Houlker, the well-known English pug breeder, gave $500 for a short time since. The death of this dog is a great loss to pug breeders, as he was as near perfection as it is possible to attain. He was by champion Royal Duke out of Lady Grace, thus combining the rarest blood. Distemper was the cause of death.

Mr. Cruft, who has made such a name for himself as a promoter of terrier shows in London, announces his intention of holding a grand show at Islington, London, in February next. It will be a three days' show and will not only embrace terriers but all other breeds.

Stock-Keeper (Eng.) publishes a letter on a subject of moment not only to mastiff breeders, but breeders of other large dogs. It is as follows: "Is it not strange that nearly all the best dogs die comparatively young? Speaking from memory I cannot call to mind any really first-class show mastiff that has lived to be ten years old during the past fifteen years or so. Most have died at from five to eight years, at ages when they should be just about their prime. I think the artificial manner in which they are prepared for the bench, together with excessive stud work, are the factors accountable for this state of things. It is a well-known fact here that the majority of show dogs are forced with unsuitable foods, and saturated with arsenic and other drugs to get them into what is called condition, which simply means fat. This tells upon their constitution, and as a natural consequence weakens their progeny. I am afraid this will not be altered until judges recognize the difference between fat dogs and those in good work-a-day condition to the latter's advantage. Some of the tallest and worst language I have ever been guilty of using has been uttered by the ring side at seeing good, useful and sound dogs passed over in favor of the veriest cripples, dogs not having a sound leg to stand upon, and whose only recommendation was fat and a good head. This is unvarnished truth learned from experience, for my own dogs have at times been placed above better specimens, for, as the judge remarked, 'being in better condition'."

In commenting on this the above paper speaks of the use of arsenic which it is said is the cause of the impotency of many of our stud dogs. There is no doubt that too much of this sort of dosing is done, though not nearly so much here as in England, where many dogs are shown artificially, so to speak, not faked, but so stimulated that unless in experienced hands they soon go to pieces. Minting died young, but we do not think arsenic had anything to do with it, as from what we have seen, good, sound beef and plenty yellow grease has much more to do with the blooming condition Mr. Moore's dogs are shown in.

Colonel North's greyhound City of Paris must be a veritable gold mine. We are told that, though he cost his owner $4,000, he won his purchase money back in less than three months' coursing. Then the first year at stud his owner took the pick of the litter in lieu of stud fee, and thus accumulated forty pups. Now he stands at $150 fee, and has had already thirty bitches.

A. R. Crowell, "Namquoit," has joined the order of Benedicts and will make his home in San Francisco. We wish him and his fair partner every prosperity and happiness for the future.

Mr. Hacke, of Pittsburgh is not to be beaten, for it is reported he has sent a commission for the best Barzoi that can be bought. Apropos of this it would not be out of place to refer our readers to the following interesting letter which appeared in the *Canine World* on Russian wolfhounds: SIR,—As a resident of Russia it affords me great pleasure to notice the growing interest which doggy men in England are taking in the breed of Russian wolfhounds. Until now I have read but two letters on the subject in your esteemed paper. However, the knowledge of the breed seems to be very vague as yet, and I should feel very happy if I could do anything to enlighten the English public on this point. In reference to color, I must say that the information given in the article you re-published from the German paper (which also got it through Mr. Kareev and myself) is right. Black markings are not desirable, but still they are not counted as a fault, as dogs with black markings got prizes at Moscow and St. Petersburg last year. Wolfhounds have nearly all colors imaginable, except all black and all brown, and even those might exist, although I have not seen any and certainly they must be very rare indeed. Most dogs are white, with brindle, yellow, sable, or grey spots. Some of the most beautiful dogs that I have seen are of the Gordon setter color. "Cheerful Horn" is right in what he says about breeding for size. For coursing hares the large dog is no good whatever, and at wolves middle-sized dogs are also preferred. I have seen dogs, or rather bitches, of the size of a collie tackle a wolf, and stick to him like a leech. The coat is generally better in smaller dogs, and this is becoming a weak part in our breed. Old friends of this breed say that about fifty years ago the coat was much better, and the head used to stick in a muff. There was a dog with such a coat at the Moscow show last year, and was sold for 400 roubles. You must take into consideration that a wolf develops decidedly more speed than a hare, and it is sometimes as much as a greyhound can do to catch him up. (That is a point where I have my doubts about the Irish wolfhound. If he was anything like, or even heavier than a Scotch deerhound, he would never get near a wolf). There are very few wolves that will attack a dog, only those that have been coursed about a dozen times do not run away any more, but sometimes go straight at the dogs or the people. In a wild state the wolf always runs away as quickly as his legs will carry him. The neck must decidedly be shorter than that of any other greyhound, so that the head is carried low, giving the dog an appearance of looking downward. The head must be of a shape like a sheep's (as the Russians say). That means to say, there must be no stop, and the line between the occiput and the point where the stop ought to be must form an angle with the line from that point to the nose. Between the ears the head must be as narrow as possible, and the ears must be so small that in a dog with a good coat they are hardly seen; besides they have to be carried well back, coming to the front only when the dog is excited. The fault that Krilat (as he ought to be spelt) seems to have, of his elbows standing outward, and, consequently, the feet inward, is very common among this breed, and ought certainly to be got rid of, as well as legs standing the other way about. Russian breeders have an extraordinary idea of what the back ought to be like. They say that the back of a dog ought to be curved, whereas the back of a bitch ought to be straight, so as to be able to carry the pups and leave more room for their development. I do not believe in this, and am sure English breeders will be of my opinion that "what is sauce for the goose is sauce for the gander as well." So, after all, "Cheerful Horn" has some very sound ideas about wolfhounds, and "Knight Errant" need not be so very sure about his theory of the long neck. Hoping you will find room in your paper for these few lines, I am always ready to give any information on any breed that is only to be found in Russia.—Yours very truly, RUSSIAN BEAR (Moscow).

BEAGLE TRAINING.

Editor Forest and Stream:

I have just read the report of the National Beagle Club trials in your paper, and hope the club will be successful in creating a greater interest in the beagle as a working hound. It is a fact well known to those who use the hound that the training he gets determines his value as a hunter. How often we see good dogs that have been spoiled by ignorant men who did not know how to handle them. After ruining the dog by improper usage they raise a great hue and cry against the breed and condemn the dog for faults for which the man is responsible. There is a great quantity of literature devoted to the training of setters, pointers and spaniels, but when we look among sporting papers and books for information on training the hound, we are surprised and disappointed to find it so scarce.

We are compelled to follow the traditions of our fathers or the examples of hunters older than ourselves, and among these we find the old colored man who picks up each member of his pack and throws it into the briers in order to get the dogs warmed up to their work. And there is another fellow of a paler hue who, when a rabbit appears, rushes after it, shouting and yelling like a broker in the stock exchange. He belongs to that class who think the more noise they make the greater the sport.

Now it seems to me that the members of the National Beagle Club, and others who are engaged in breeding hounds and hunting with them, might do a good thing if they would publish their ideas on training these dogs for their work. Let them tell us what a hound may be taught to do and what not to do. How to bring the stubborn, self-willed one to your side when you want him; how to keep him from working off a mile or more, and making you split your throat and lungs trying to call him out of the woods. They might tell us how hounds can be taught to retrieve wounded or dead game instead of destroying it when found, as some of them do. Some of us would like to know how to make a dog stand by and give tongue when he has run a rabbit to earth or tree; and how to make a lazy dog hunt. Why can not the hound be brought under discipline so that he can be controlled by his master as easily as is the pointer or setter?

You will say, perhaps, there is a fellow that wants his dog to run the rabbit and shoot it too. Not a bit of it. But we do want to see less of the man who tramps around all day with a couple of good dogs, spoiled, and then shoots them because they fail to work to his satisfaction. There are too many people who think all a hound needs is to be turned loose and left to roam the woods at his pleasure. When he gets so that he can trail a little they call him a broken dog. If some of our beagle men would give us their experience and methods of getting the best work out of the little hound it would pay them in the end. The demand for beagles would be increased and much more pleasure derived from keeping them. That this may bring out the views of others on this subject is the wish of one who sometimes spends a day in the BRUSH.

MEETING OF THE AMERICAN KENNEL CLUB.

THE meeting was held at its rooms, 44 Broadway, New York City, Thursday, Dec. 11. In the absence of both the president and vice-president Mr. James L. Anthony was elected as chairman. There were present: Associate Members, J. L. Anthony and A. P. Vredenburgh; American Fox-Terrier Club, W. Rutherfurd; American Beagle Club, H. F. Schellhass; American Pet Dog Club, Dr. M. H. Cryer; American Spaniel Club, J. Watson; California Kennel Club, Max Wenzel; Gordon Setter Club of America, L. A. Van Zandt; Louisiana Poultry and Pet Stock Association, A. H. Vanderpoel; Maryland Kennel Club, Jas. Thompson; National Greyhound Club, L. C. Whiton; New Jersey Kennel Club, A. C. Wilmerding; Rochester Kennel Club, W. Whitney; South Carolina Poultry and Pet Stock Association, Dr. H. C. Glover; Toledo Kennel Club, Dr. H. T. Foote; Westminster Kennel Club, H. B. Cromwell. On motion, association meeting took a recess for thirty minutes.

EXECUTIVE COMMITTEE.

Mr. August Belmont, Jr., presiding. Present: All the delegates named above.

Credentials of delegates to represent their different clubs were read as follows: Jas. Watson, A. H. Vanderpoel, Jas. Thompson, W. Whitney, Dr. M. H. Foote, H. B. Cromwell, L. A. Van Zandt, Maj J. M. Taylor, Wilson Fiske and John A. Logan. On motion the credentials were accepted.

A communication from Mr. C. J. Peshall, of Dec. 11, 1890, was read, and on motion of Mr. Watson, placed on file.

The minutes of the previous meeting were read and approved.

Mr. Max Wenzel stated that Mr. Peshall had said to him that he had been disqualified at a meeting of which he had no official notice, and no opportunity to defend. Mr. Wenzel stated further that he asked President Belmont at the meeting of the executive committee (at which Mr. Peshall was disqualified) if Mr. Peshall had been notified to attend, and that Mr. Belmont replied that he had, and for that reason he had voted for his disqualification.

Mr. Belmont stated that if he did make that statement he considered that Mr. Wenzel's question referred to the meeting of the advisory committee, which meeting he was positive Mr. Peshall had been invited to attend, and not to the meeting of the executive committee.

On motion of Mr. Anthony the meeting of the executive committee adjourned, and the meeting of the association resumed. Mr. Belmont retired after requesting Mr. Anthony to take the chair.

The reading of the amendments to the constituton and by-laws was taken up. Moved and seconded that the constitution and amendments be read, and if no objection is made to any particular article, they be deemed adopted as amended, and when objection is made to any article, it be discussed and voted on. A call for the ayes and nays resulted in the following vote: Ayes—Messrs. Anthony, Shellhass, Cryer, Watson, Van Zandt, Vanderpoel, Thompson, Whiton, Wilmerding, Whitney, Glover and Foote. Nays—Messrs. Wenzel and Cromwell.

The amendments to the by-laws were also read and adopted.

On motion of Dr. Cryer the association adjourned and went into executive session.

The secretary read his report as follows:

NEW YORK, Dec. 10, 1890.—To the Executive Committe, American Kennel Club: Gentlemen—I have to report that since the last meeting of this club the following applications for admission to membership have been received:

Central City Kennel Club, Jackson, Mich.; Delaware and Susquehanna Poultry and Pet Stock Association, Binghamton, N.Y.; Indiana State Poultry Association, Indianapolis, Ind.; South Carolina Kennel Association, Greenville, S. C.; the Bulldog Club of America. These applications were received in proper form. The clubs are eligible to membership, and are recommended for admission. The Central City Kennel Club has arranged to hold its show Jan. 13 to 17, 1891, this being the same week as the show to be held by the South Carolina Poultry and Pet Stock Association, and the Indiana State Poultry Association has fixed upon Jan. 20 to 25, 1891, the same week as the show to be held by the Louisiana Poultry and Pet Stock Association. These dates were selected in order that the shows might be held in connection with State fairs. The request is made, that in case the applicants are admitted, that this club will permit the use of the dates arranged for, upon the grounds: First—That said dates were advertised before applications were made for admission, and second, that the distance between the places, in which the dates conflict, is so great that one can hardly interfere with the other. It is very desirable that action upon this matter shall be taken at this meeting.

Since the last meeting complications arose regarding a conflict of claims for show dates between the Maryland Kennel Club and the Duquesne Kennel Club, and also the New England Kennel Club and the Cleveland Kennel Club, but I am happy to state that through the medium of this office these matters have been satisfactorily arranged by the courtesy of the Duquesne Kennel Club and the Cleveland Kennel Club, both having withdrawn their claims, although legally entitled to them. Such spirit of accommodation and good fellowship between our members, clearly showing that the management of these clubs is in the hands of gentlemen, speaks well for our kennel world and is conducive of much good. The matters referred at the last meeting to the advisory committee with full power, have been acted upon, and the proceedings of that committee have been published in the *Gazette* and other sporting papers, and I would report that in compliance with the demands of this club the Maryland Kennel Club has withdrawn its vote of July 10, censuring the American Kennel Club, and duly apologized for its former action. The officers, except its president, also apologized for said action. In the matter of Jacobs vs. Oldham, the defendant has failed to make any defense within the required time, although he notified me under date of Nov. 1 that he would do so, before under the resolution of the committee Mr. Oldham has been disqualified.

The committee passed a resolution that on and after Jan. 1, 1891, all *Gazette* entries shall be known and published as "Listed," the only registered dogs acknowledged are those entered in the stud book. This action has been highly commended by the sporting press and by individuals. I have a letter from one of the former presidents of this club, suggesting that it might be well for the American Kennel Club to determine as to the expediency of taking some steps toward a bench show at Chicago during the World's Fair, and I would recommend the appointment by the chair of a committee of three to examine into the matter, and to report their recommendations at a subsequent meeting. We will complete our fiscal year before the next meeting of the club, and I would respectfully request the privilege of publishing my annual statement in the *Gazette* for January, and also the appointment of a committee to audit my accounts before their publication. I beg to inform you that I have condensed into thirteen short rules so much of the bench show rules as instructs bench show officers what is required of them in matters appertaining to their obligations to this office, and will furnish all clubs with copies of them for their guidance. I would also inform you that I have made arrangements to procure the photographs of all the officers of the American Kennel Club since its organization, and will, by a certain process in photography, be able to hang upon our walls these pictures of a uniform size, style and finish. I beg to lay before you the resignation of the Rhode Island Kennel Club, and ask your action regarding its disposal. I beg to report that charges have been filed with this office as follows: Mrs. J. Grant against Mr. Frederick Emken; Mr. W. E. Sandars against Mr. William A. Bruette; Mr. E. H. Morris against Dr. J. H. Meyer; Mascoutah Kennel Club against Mr. F. W. Sheldon.

I desire to submit a suggestion from Mr. F. H. F. Mercer, that this club should adopt a scale of the value of wins at our different shows, so that a win at a small show may not be of equal value as one at one of the leading shows. During the past year a number of the delegates have expressed the opinion that it would be advisable for the annual meeting of this club to be held at the building of the Westminster Kennel Club show. This meeting is always ordered for the third day of the show, and as a large number of our delegates are in almost constant attendance at that

show I would respectfully recommend that our next meeting, being the annual meeting of the club, should be held on Thursday, Feb. 26, 1891, at the Madison Square Garden, instead of at the office of the club, as heretofore. The annual dues of our active members are now due and payable, and bills were mailed to each member of the club on Nov. 29 last. Bills and circulars have been prepared for each associate member for the payment of the annual dues of 1891, which are due and payable between Jan. 1 and 20 next, and the same will be mailed on the 15th of this month. The Elmira Poultry and Pet Stock Association made application for readmission, but I was obliged to return the application and dues to that association, for the reason that notwithstanding plain instructions to them regarding the proper manner as required by the constitution to file its application it did not send the papers in proper form. I have not received any further communication from them on the subject. I have just received a communication from Mr. E. M. Oldham, requesting a reply to his letter of the 28th ult. asking for an extension of time to enable him to make his defense. This letter of Nov. 28 has never reached me and I would respectfully recommend that Mr. Oldham be granted an extension of two weeks before the penalty be enforced. Respectfully submitted, A. P. VREDENBURGH, Sec'y.

Accepted.

Secretary Vredenburgh also read his treasurer's report, which is as follows:

NEW YORK, Dec. 10, 1890.—To the Executive Committee, American Kennel Club: Gentlemen—I herewith submit my report of moneys received and disbursed by me during the year 1890 to date:

Receipts from all sources from Jan. 1 to date	$8,679 33
Expenses for same period	6,192 18
Balance on hand	$2,487 15

I beg to report that every obligation has been met, we have no outstanding indebtedness, and we are now closing a satisfactory and prosperous year. Respectfully submitted, A. P. VREDENBURGH, Treasurer.

Accepted.

The report of the advisory committee was also read and accepted.

Relative to the appeal in the matter of the setter special taken by Max Wenzel against the Westminster Kennel Club, which was acted upon by the advisory committee, held Nov. 1, 1890, Mr. Wenzel protested on the ground that the decision was in direct conflict with a former decision rendered in the Thompson case at the Richmond show, and moved that the decision of the advisory committee be overruled. Motion lost.

At this point Mr. C. J. Peshall appeared and addressed the meeting and then withdrew, the chair permitting him to proceed, there being no objection made by the delegates, and no further action had in his case.

MR. ANTHONY: I have a resolution to offer. I offer it with great pain, but as a duty. Our President, Mr. Belmont's father, was years ago known to me very well, when I was a younger man, and when the entrance to his house, when Mr. Belmont, Jr. was a mere boy, was thought to be the making of a young man in society. Many years ago I had occasion to be away a long time in Europe, and I ceased to have any social intercourse with him; but in course of my business as a banker and broker I have had many business transactions, years ago, not of late years, with him. In all that time I have never known a man of stricter integrity or honor in business transactions, or in any other; a man whose example, if followed more by men of affairs of the present day, would do more to raise the business standard of the community than anything else that could be imagined. I have prepared the following resolutions, which I ask may be engrossed and placed on the minutes:

WHEREAS, It has pleased Divine Providence to remove from this life Mr. August Belmont, the honored father of our honored president, and

WHEREAS, We are mindful of the high public character and worth of the deceased, it is fitting that we should place on record this token of our public appreciation of the many excellent traits that have rendered his name a synonym for honor among the business community of the world.

Resolved, That we tender to our president our sincere sympathy in this the hour of his bereavement.

Resolved, Further, that these resolutions be suitably engrossed and placed on the minutes.

The resolutions as read were unanimously adopted.

Mr. Watson (withdrawing as a delegate) called attention to his appeal in the matter of reserve numbers against the Rochester Kennel Club and asked for a change in the wording of the decision of the advisory committee, and on motion the decision of the advisory committee was amended to read as follows: "Resolved that in the opinion of this committee reserve numbers should be given in all cases, but in the case of the collie special at Rochester in 1889, the Rochester Kennel Club having declined to accede to Mr. Watson's request for a reserve number for the reason that the judge had not awarded any reserve number, this club cannot give relief in the case."

The following applications for membership were read and accepted: Central City Kennel Club, Delaware and Susquehanna Poultry and Pet Stock Association, Indiana State Poultry Association, South Carolina Kennel Association, and Bull Dog Club of America.

Concerning the conflict of dates on which the Central City Kennel Club and the South Carolina Poultry and Pet Stock Association have arranged to hold their shows, Mr. Anthony moved that as these clubs hold their shows in such widely separated places in the United States no conflict of dates on this occasion would work any injury to either of them, therefore they be permitted to hold their shows, provided there is no objection made by the competing club.

The resignation of the Rhode Island Kennel Club was, on motion of Mr. Anthony, accepted.

The request of the secretary to publish his annual statement in the *Gazette* for January, and also for the appointment of a committee to audit his accounts before publication, was, on motion, granted.

Regarding the suggestion of a former president of this club that it would be well for the American Kennel Club to take steps toward a bench show at the World's Fair at Chicago, and the recommendation of Secretary Vredenburgh that a committee of three be appointed to examine into the matter, and report, on motion of Mr. Anthony, the recommendation was adopted.

On motion, the charges filed with the secretary as stated in his report against Mr. Frederick Emken and others, was referred to the advisory committee.

The recommendation of the secretary that the annual meeting of the American Kennel Club be held at the Madison Square Garden during the Westminster Kennel Club Show, was, on motion, adopted.

The request of Mr. E. M. Oldham for an extension of time to enable him to make his defense, was referred to, and on motion of Mr. Wilmerding, his time was extended until Jan. 1, 1891. Adjourned. A. P. VREDENBURGH, Sec'y.

MR. PESHALL AND THE A. K. C.—At the meeting of the advisory committee of the A. K. C., last September, President Belmont announced that Mr. Peshall must be put down. The club presumably put him down, but he refuses to stay put. One of the unexpected incidents at the A. K. C. meeting last week was the entrance of Mr. Peshall, who stood up before the delegates and addressed them fiercely, denouncing them in unmeasured terms for their action in having disqualified him without a hearing, in secret session and at a time when they knew he was to be put under arrest. Having said his say he departed. The Vredenburgh—Peshall suit is down for next Monday.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Otero. By G. H. Bush, Buffalo, N. Y., for black cocker spaniel bitch, whelped June, 1890, by Jersey (Obo II.—Darkie) out of Novel (champion Black Pete—Miss Nance).

BRED.

☞ **Prepared Blanks sent free on application.**

Juno W.—Brant. Brant Cocker Kennels' (Brantford, Ont.) cocker spaniel bitch champion Juno W. (Obo II.—Darkie) to their champion Brant (Obo II.—Blackie III.), Sept. 24.

Tiney—Brant. R. Russel's (Brantford, Ont.) cocker spaniel bitch Tiney to Brant Cocker Kennels' champion Brant (Obo II.—Blackie III.), Nov. 16.

Busy—Red Jacket. Brant Cocker Kennels' (Brantford, Ont.) cocker spaniel bitch Busy (Mike—Nancy) to their Red Jacket (Brant—Woodstock Dinah), Sept. 16.

Cenone—Bounce. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Cenone (Obo, Jr.—Tough) to W. H. Morgan's Bounce (Bob Obo—Tough), Dec. 3.

Belle Obo—Cherry Boy. T. H. Brownell's (Providence, R. I.) cocker spaniel bitch Belle Obo to C. G. Browning's Cherry Boy, Nov. 18.

Hornet—Cherry Boy. Wm. West's (Philadelphia, Pa.) cocker spaniel bitch Hornet (Doc—Lady Pluto) to C. G. Browning's Cherry Boy (Ebony—Fanchon), Nov. 29.

Nellie Bly—Cherry Boy. J. E. Rothwell's (Boston, Mass.) cocker spaniel bitch Nellie Bly to C. G. Browning's Cherry Boy.

Bijou—Cherry Boy. W. H. Walton's (Lynn, Mass.) cocker spaniel bitch Bijou (Obo II.—Darkie) to C. G. Browning's Cherry Boy, Oct. 29.

Brown Bess—Cherry Boy. G. H. Whitehead's (Trenton, N. J.) cocker spaniel bitch Brown Bess (Doc—Lady Pluto) to C. G. Browning's Cherry Boy, Oct. 15.

Rochelle Lassie—The Senator. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Rochelle Lassie (Dick—Rochelle Lass) to their The Senator (Patrick—Cosgrove's Pink), Dec. 7.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Monday. Brant Cocker Kennels' (Brantford, Ont.) cocker spaniel bitch Monday (Brant—Bonita), Nov. 10, seven (five dogs), by their champion Mike (Frank— ——).

Pearl. Brant Cocker Kennels' (Brantford, Ont.) cocker spaniel bitch Pearl, Oct. 4, four (three dogs), by their Red Jacket (Brant—Woodstock Dinah); all solid red.

Brantford Dora. Brant Cocker Kennels' (Brantford, Ont.) cocker spaniel bitch Brantford Dora (champion Brant—Bonita), Oct. 1, four (two dogs), by their champion Brantford Red Jacket (Brant—Woodstock Dinah).

Woodstock Dinah. Brant Cocker Kennels's (Brantford, Ont.) cocker spaniel bitch Woodstock Dinah (imported Tippo—Testminster Jet), Sept. 28, eight (six dogs), by their champion Brant (Obo II.—Blackie III.); one red dog.

Rochelle Nadjy. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Rochelle Nadjy (Vortigern—Meersbrook Maiden), Nov 30, six (four dogs), by their The Senator (Patrick—Cosgrove's Pink).

SALES.

☞ **Prepared Blanks sent free on application.**

Brantford Red Jacket—Brantford Dora whelp. Black cocker spaniel dog, whelped March 16, 1890, by Brant Cocker Kennels, Brantford, Ont., to H. G. McCullough, Kingston, Ont.

Brant—Woodstock Dinah whelp. Black cocker spaniel bitch, whelped Feb. 17, 1890, by Brant Cocker Kennels, Brantford, Ont., to E. A. Wilson, Philadelphia, Pa.

Brant—Woodstock Dinah whelps. Black cocker spaniel dogs, whelped Sept. 28, 1890, by Brant Cocker Kennels, Brantford, Ont., one each to T. S. G. Pepler and W. C. Boyle, Toronto, Ont.

Adonis, Jr. Black cocker spaniel dog, whelped Oct. 6, 1890, by Adonis out of Fashion, by Geo. H. Bush, Buffalo, N. Y., to A. F. Tripp, same place.

Dixey. Black and white cocker spaniel dog, whelped Oct. 6, 1890, by Adonis out of Fashion, by Geo. H. Bush, Buffalo, N. Y., to Tellico Johnson, same place.

Trumps. Black cocker spaniel dog, whelped Jan. 19, 1890, by Bob Obo out of Tough, by Corktown Cocker Kennels, Ottawa, Ont., to Dr. A. E. Garrow, same place.

Broomfield Dick—Meersbrook Maiden whelp. Black and tan terrier bitch, whelped Oct. 29, 1890, by Rochelle Kennels, New Rochelle, N. Y., to Dr. F. C. Ewing, Kansas City, Mo.

Rochelle Pepper. Black and tan terrier dog, whelped Aug. 11, 1890, by Broomfield Sultan out of English Lady, by Rochelle Kennels, New Rochelle, N. Y., to R. B. Adams, Jr., Buffalo, N. Y.

Rochelle Lassie. Black and tan terrier bitch, whelped Jan. 27, 1890, by Dick out of Rochelle Lass, by Rochelle Kennels, New Rochelle, N. Y., to Wm. Fies, Marion, O.

THE BOOK OF THE GAME LAWS.

IN this book of 228 pages Mr. Reynolds has given information of the utmost value to every man and woman—for women are not exempt from the operations of the fish and game laws—in this country that catches fish or kills game. The different States which go to make up this Republic have in recent years given greater and more serious attention to framing laws for the protection and preservation of animals which serve both as food and game; counties in the States and townships in the counties have procured special legislation in the same direction, until there is a network of laws, general and local, covering the forests, the plains and the waters, a knowledge of which is indispensable to every sportsman if he would avoid fine or imprisonment, or both.

Newspaper men should join in presenting Mr. Reynolds with the freedom of every sanctum in the land, in a gold box, for he has dispelled some of the terrors of journalism, particularly sporting journalism. Now, when a correspondent in California writes to a newspaper in New York or Boston to ask about the close season for fishing in the mill pond back of the house, the weary editor can turn to the *Book of the Game Laws* and give a correct reply. The old method was to consult law libraries for the session laws of the State, look over the newspaper file at a venture, write to the Secretary of State and Chairman of the Board of Supervisors of the county, and at last find the particular law pasted in the scrap-book; and its provisions were sent to the inquirer with the fear that the reply would get him in jail, because the law had been amended or repealed.

The volume before us contains the complete laws, general and local, of all the States, Territories and Provinces that have enacted fish and game laws, and the laws which govern Yellowstone Park; and after close examination we are surprised at its completeness and accuracy. Under suitable headings, easy of reference, the different sections of different laws, and their provisions, are made as plain as a turnpike through a forest—provided it is possible to make them plain, for there are a few laws that cannot be made plain by the men who made them.

This is the first complete work of this kind, that is reliable, in this country and we wish it the success that it deserves as an educator.—*Shooting and Fishing.*

Dan'l was the biggest liar in town and Dan'l always appealed to his father to verify his fearful yarns. Dan'l's father was old, a little deaf and belonged to the Methodist Church. It was not to be supposed that the old gentleman would indorse lies, and thus the neighbors concluded. But here is how Dan'l got around his poor old dad. "Went down ter t' brook yesterday," Dan'l would relate. "Caught tew hundred and four pick'ril, say, didn't I dad?" And the old man, benignantly listening, would hear "four" and meekly reply, "Yes, Dan'l." Then the able liar would edge around "back to" his father, and with the edge of his hand measure off the length of his arm before the eyes of his astonished guest. "Caught one pick'ril, a whopper, longen that, say, war'nt he, dad?" The old man would gaze upon the six inches of scrawny wrist and forearm as wily Dan'l whirled and measured for his benefit, and humbly but firmly assert, "Yis, my son, sh'd say as how he was summat longer."—*Lewiston (Me.) Journal.*

Always Needed Rescuing.—Scollops—"That's a fine dog you have there. What do you call him?" Taggs—"Emin Pasha." Scollops—"Why do you call him that?" Taggs—"Because I've had to spend so much time finding him."—*Boston Courier.*

I'm going fishing, wife: give me some doughnuts." Going to use them for bait?" "No, for sinkers."—*Ashland Press.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE BRITISH MAGAZINE ARM.

THE London *Times* has opened a most vigorious attack upon the new service arm which has been adopted for the use of the British regulars. The main charges of the *Times* are, first, that the "bolt action" which is adopted in the new service rifle, is far inferior to the "block action," the only merit of the former being that it lends itself conveniently to the requirements of a repeating rifle; secondly, that however good the original Lee rifle submitted to the Small Arms committee may have been, it has been rendered very defective by the alterations of an official at Enfield on whom the members of the committee, not being themselves practical mechanicians, were, it is suggested, virtually dependent of guidance. Thirdly, we are told that the committee ought, before finally deciding on a new weapon, to have investigated the question as to the possibility of satisfactorily adapting the block principle to a repeater, being put upon such an inquiry by the admitted production to them, two years ago, of Major Godsal's beautiful and ingenious rifle, in which this combination is effected. The main argument of the *Times* is, however, that which was so vigorously enforced years ago against the late Col. Fletcher's committee—viz., that such a committee has no right to take upon itself "constructive functions," and should limit itself to those which are "judicial." It is also asserted that the Government have been fully warned by numerous competent authorities, including a late Chief Instructor of the School of Musketry, that the new rifle was not satisfactory, and that the Indian Government were unwilling to accept it. In answer to these serious charges, the Secretary for War replies in effect—first, that the Small Arms committee, presided over by General Philip Smith, had carefully examined every magazine rifle that could be obtained, but that Major Godsal's rifle was not at that time produced; that the rifle recommended by the committee had been tried in various parts of the world with satisfactory results; and that subsequently a large number of officers and officials, including General Anderson, Director of Artillery, Mr. Anderson, Director of Ordnance Factories, and Mr. John Rigby, Superintendent of the Small Arms Factory, unanimously recommended that the manufacture of the rifle selected by the committee should be proceeded with. This was done, and exhaustive trials were made by certain troops. All the reports upon these, including that from the late Chief Instructor at Hythe, were carefully considered, and in consequence, certain alterations in detail were recommended for adoption. Mr. Stanhope then quotes a statement officially laid before him by the Adjutant-General of the Forces, according to which the continuous trial of about 15,000 stand of the new arm at Aldershot for ten weeks had shown that, although certain defects have appeared, none of them are such as to prove that the rifle is other than a good military arm—being indeed those incidental to early manufacture, and not greater than those which attended the first issue of the Martini-Henry. The Adjutant-General's statement concludes by saying that, "judging from the experience of that issue [that of the 15,000 rifles], we have every reason to believe that we shall have in the magazine rifle a thoroughly useful weapon." With regard to the objection to the "bolt action," Mr. Stanhope points out that that form of action has been adopted by the experts of France, Germany, Austria, Italy, and Russia. He also alludes briefly the allegations of the *Times* that the rifle was not thought fit for use by the Government of India. *Broad Arrow* says: "The .303 magazine rifle has no friends—other than official friends, culpable accessories before and after the fact. The country is in presence of a failure, a huge, colossal, costly failure. Rifle, powder, projectile are unsuited the one to the other, and unsuitable severally and collectively. The mending process, which at the best is unsatisfactory, has broken down, and the sooner the end begins the better it will be for all concerned." The *Army and Navy Gazette* lays great stress upon the exhaustive and damaging criticism made by the *Times*, and for its own part adds: "There is one matter connected with the rifle which 'jumps to the eyes' of every one who sees a soldier of the modern average height shouldering or trying to shoulder it; it is that arms cannot be shouldered nor carried at a slope in consequence of the magazine catching under the man's arm or on his shoulder, and that when the magazine rifle is used the manual drill is all out of gear. In effect, hoping for the best, we have come to the conclusion that, whether as regards the mechanism of the rifle or magazine action, the ammunition or the projectiles, there is reason for anxiety and uneasiness, and that earnest efforts at a satisfactory solution of difficulties are imperatively and instantly demanded." The British Government has, so far, expended upward of a million pounds on the Lee rifle.

SAN FRANCISCO, Cal.—At the last meeting of the California Schuetzen Club Philip Jacoby, the well-known marksman, and who has been for many years President of the club, extended an invitation to all members and their families to visit the new park. The object of the visit was to see the work which had been accomplished by the Board of Park Directors, and that many of the new members might become better acquainted with the workings of the club. About 200 persons took advantage of the fine weather and availed themselves of an outing in the country. In addition to the dancing and games indulged in a bull's eye shoot was had by the members, and much sport and merriment was indulged in as some of the well-known crack shots of the Coast would take deliberate aim, fire and miss the black. President Jacoby had during the week collected several prizes from the friends of the club, and in order to make the shoot to-day successful and one to be remembered by the participants, placed the prizes as mementos to be contested for by members.

At Harbor View to-day George Helm showed that he is not falling behind, and that he intends to keep up his recent good shooting. He fired 50 shots at the 25-ring target and did not at any time miss the black—12in. in diameter at a distance of 200yds. In his first 20 shots he scored 444 points, and in his second twenty 440 points.

The rifle range at Shell Mound Park was well patronized to-day, it being the occasion of the regular practice and medal competition for several companies of the National Guard. The event of the day, however, was a match between the active and honorary members of Company C, Second Artillery Regiment, ten men on a side, the losers to pay for a dinner to be served at the park immediately upon the close of the contest. Score:

NEW YORK RIFLE CLUB.—The following officers were elected at the annual meeting of the New York Rifle Club: Major Shorkley, president; T. J. Dolan, secretary and treasurer; Dr. E. R. Chadbourn, J. Duane and A. Isbel additional members of the executive committee. The club has increased its membership from 26 to 38 since Dec. 5, 1889, and, as by Secretary Dolan's report, the interest taken in the different matches has greatly increased. The averages of the members were published in the *Sun* of Nov. 30. The treasurer's account showed a handsome increase in the assets, and the club was never in a more prosperous condition than now. The rest-match at Creedmoor, L. I., 5 competitions, 200yds. distance, American standard target, 10 shots, possible 100 points, best 4 scores to count, ended with the following competitors as winners:

	Four Best Scores.				Totals.	Avges.
Dr E R Chadbourne	96	95	95	93	379	94.75
T J Dolan	97	94	92	92	375	93 75
E B Barker	93	93	92	91	369	92.25
J F Klein	96	91	91	88	366	91.50
C C King	90	89	88	85	352	88.00

This season's gallery match will again be a handicap competition, allowances being based on last year's averages, subject to revision by the executive committee. Ten handsome prizes will go to the men making the five best scores each during the fourteen shoots, the highest score made each evening to count only. The following scores were made last night on the 25-ring target, possible 250 points: T. J. Dolan 240, Herrington 240, King 234, Lloyd 234, Gensch 234, Isbell 228, O'Donnell 227, Barker 223, Dr. Chadbourn 222, Duane 220, Shorkley 218. The club proposes to hold an outdoor shoot either at Wissel's Park, Cypress Hill, or at Creedmoor, Long Island, on alternate dates with the the gallery competition. The American standard target will be used. Any man making ten scores of 75 or better out of the possible 100 points will receive a bronze medal; ten scores of 80 or better, a silver medal; ten scores of 85 or better, a gold medal.

ST. LOUIS, Mo., Dec. 13.—The annual meeting of the St. Louis Pistol Club was held last Wednesday evening at the Crescent Gallery, Broadway and Pine street. Nothing of importance was transacted. The following gentlemen were elected to serve for the ensuing year: S. Dorman, President; A. McBean, Vice-President; J. H. Bost, Secretary; L. V. D. Perret, E. Mohrstadt and M. C. Billmeyer, Directors. At the last shoot the medal was won by A. McBean, with a score of 91. For all shooting the club uses a 12½yds. standard American target. The score:

A McBean	8 10 9 10 10 10 10 7 7 10—91		
M Summerfield	9 10 8 10 10 7 8 7 10 10—89

J A Lee	6 7 4 7 7 10 7 9 7—70		

UNSER FRITZ.

BOSTON, Dec. 13.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day at its range. A good number of riflemen were on hand, but the strong 7 to 11 o'clock wind was too much for high scores. W. M. Foster won the silver victory medal, and P. S. Killam won the bronze and silver military medal. Following are the best scores made to-day, distance 200yds., Standard American target, re-entries allowed:

All-Comers' Shot.

S Wilder	100	F W Chester	93

		F W Hart	61

DORRLER VS. SNELLEN.—A gallery match has at last been arranged between M. Dorrler, of the Our Own and Zettler clubs, and G. Snellen, of the Lakeside Club, Newark. They agree to shoot a 200-shot gallery match. The first half of the match to be shot on the German-American ranges, at 12 St. Marks place, New York; the second half to be shot on the Lakeside range, 130 Aqueduct street, Newark. The man making the highest aggregate number of points in 200 shots to win the match and the stake of $100. The principals have agreed upon Charles G. Zettler as stakeholder, and they will meet at the Zettler range in a short time to settle the preliminaries, fix dates, etc. The matches will be shot on the Massachusetts 12-ring target. This will be one of the most interesting contests ever shot in America, as the two contestants are conceded to be at the head of the list of gallery riflemen. Each of them has made 1,167 out of the possible 1,200 in 100-shot matches. This is the record for this country.

CLEVELAND, O., Dec. 11.—The following were the best scores made at the range of the Cuyahoga Rifle Club this afternoon. Rest, 200yds.:

Lane	12	7	6	9	8	7	8	8	10	9—84
Bosworth	12	8	8	9	11	9	6	8	11	8—90
Clare	8	10	10	10	10	11	9	11	10	8—97
Brush	10	7	9	10	6	6	9	9	6	6—78
Webster	9	2	9	6	6	5	4	9	8	7—65

NEW YORK, Dec. 9.—A shoot of the Empire Rifle Club took place this evening at headquarters, 12 St. Marks place; 100ft. range, 1¼in. bullseye, possible 120 points:

W Miller	110	W Maisenholder	106
W Overbaugh	108	A Stahl, Jr	103
C Zettler, Jr	106	J Zettler	99
		F Diehl	88
		G Hillmyer	78

NEW YORK REVOLVER AND PISTOL CLUB.—New York, Dec. 16.—On the 13th inst. several lovers of the sport of pistol shooting met at Zettler's gallery, 12 St. Marks place, and organized the New York Revolver and Pistol Club, the following gentlemen being elected officers: President, H. Oehl; Vice-President, M. Herrington; Secretary, F. Hecking; Treasurer, V. B. Daly; Shooting Master, A. H. Isbol.—F. HECKING, Sec'y.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 20.—Claremont, Jersey City. Shooting Saturday, Dec. 20, at live birds and targets. Open to all. 2 P. M. Claremont Shooting Association.

NEWARK.

NEWARK, N. J., Dec. 11.—The attendance at the monthly shoot of the Newark Gun Club at John Erb's to-day was rather light, but what was lacking in numbers was fully compensated for by good shooting, 261 birds being killed out of 289 shot at. The sport was opened with "Jersey sweeps," 4 birds per man, $3 entry. In five of these the scores were as appended:

Cramer	4	4	4	4	4	McCaull	3	..	..	4
Class	4	4	4	4	4	Hedden	4	..	..	..
Campbell	4	4	4	4	..	Hughes	..	2	..	3
Castle	..	3	3	4	3	Heath	..	..	..	2
Hollis	4	4	4	..	4	Schraft	..	..	..	4
Griffin	4	4	..	4	4	Koezel	..	..	..	3

In the last sweep the ties for first money were shot off, miss and out, McCaull winning by killing 8 straight. Class and Cramer each missing their eighth bird. The regular club shoot at 10 birds each resulted as follows:

Class	1111111111—10	Cramer	1011111111—9
Hollis	1111111111—10	Castle	1100111111—8
McCaull	1111111111—10	Heath	1101011111—8
Scharff	1111111111—10	Griffin	1001101111—7
Campbell	1111111111—10	Hughes	1111101100—7
Hedden	1111111110—9		

Dec. 13.—The two matches between Ph. Daly, Jr., and W. J. Elliott and the latter shooter and J. Ryan of Hackensack, which should have taken place at Erb's grounds at Newark to-day, did not take place, Elliott's two opponents failing to put in an appearance. To console themselves for the loss of the two interesting races some of the sportsmen present entered into two sweepstakes, which resulted as follows: First sweepstakes, at 8 birds each man, Newark Gun Club rules, $5 entry, two prizes—F. Class 8, W. G. Elliott 8, C. Hedden 7, Terwilliger 7, Wright 5, Secor 3. Second sweepstakes, same conditions, three prizes—Leddy and May 8, Class, Riggott, Disbrow and Capt. Jones 7, Elliott, Hedden, Wright, Gehring and Griffin 6, Secor 4. In the meantime a match for $50 a side had been arranged between F. Class and W. J. Elliott, both men to shoot at 25 birds. The contest resulted in a tie, with 22 killed to the credit of each participant. Then the stakes were doubled, and on the shoot-off Class beat Elliott by 1 bird only, the latter being considerably handicapped. The total score was Class 45, 14 killed with the first barrel, 5 missed; W. J. Elliott 44 killed, 30 of them with the first barrel, 6 missed, with one dead out of bounds.

Mr. W. J. Elliott addressed the following letter to the newspapers: "To the Editor—Will you kindly insert the folling challenge in your paper: To P. Daly, Jr.—Sir; As you did not see fit to inform me personally of your inability to meet me at Erb's grounds, as per agreement, I take the greatest pleasure in refunding to you the forfeit posted, hoping the money will add to your Christmas joys. I challenge you herewith to a match for from $100 to $1,000 a side, any rules you wish to name, and give you choice of the following grounds: Jeannette Gun Club grounds, at Guttenberg, N. J.; I. Hide's shooting grounds, at City Island, N. Y.; Washington Heights Gun Club grounds, New York city; Mount Vernon Gun Club's grounds, at Mount Vernon; West Farms Gun Club's grounds, at West Farms, Westchester county. On acceptance of this challenge I will post any forfeit you wish to name. W. J. ELLIOTT."

MARION, N. J., Dec. 9.—The Eureka Gun Club closed its season of 1890 with a shoot to-day. In the club shoot at 7 live birds per man, club handicap rises, 50yds. boundary, the following scores were made: Schultze, 25yds., 7; Strope, 25yds., 5; Swindell, 27yds., 4; Eisenhardt, 23yds., 3; J. H. Ficken, 23yds., 2; D. Ruthfer, 25yds., 3; Schmultz, 23yds., 4. In a 4 bird sweep Schultz and Circile killed 4 each; Strope, Swindell and Schmultz 3 each. At 15 targets per man Schultz broke 11, Swindell 8, Ruthfer 9, Ficken 7, Strope 7, Schmultz 7, Chase 9. Schultz made the highest average for the year, the gold medal in Class A becoming his personal property, while Chase retains the silver medal in the class for second highest average. Schmultz won the gold medal in Class B for the year, and J. H. Ficken the silver trophy.

NEW BRUNSWICK, N. J., Dec. 10.—The Freehold Gun Club came to New Brunswick to-day, and for the second time defeated the New Brunswick Gun Club. Each team was composed of 9 men and each man shot at 20 clay birds. The Freehold team shattered 115 targets and the New Brunswick team scored 101.

CLEVELAND.

CLEVELAND, O., Dec. 11.—The Cleveland Gun Club is going after the honor of champion shooting organization of the State. Recognizing the Niles Club as at present holding the pennant—if there be any—a challenge has been issued by the Cleveland Gun Club to the gentlemen of Niles to meet in three contests for glory and honor. The conditions are ten men from each organization and 50 birds per man. The first shoot will be held at Niles and the second at Cleveland. The third is to be decided by the respective captains of the two organizations. A challenge has been drawn up and sent to the Nies team. There is scarcely any doubt of its acceptance.

The contest for the Smith gun among the local shots has rapidly narrowed down to two men. Prior to to-day the gun had been won once by Wherry, Sweetman and L. O. Jones, and the latter had tied for it with Poplowsky. The last named gentleman failed to arrive on the scene of combat until too late to compete to-day, and the gun went to L. O. Jones a second time by default. That gave Jones a lead in the race, and the lead lasted about three hours. At the end of that time Levi Wherry, the old reliable, with that steady swing which rivals the rhythm of pendulum beats, had knocked over 40 birds out of a possible 50, and with a handicap of 6 to his credit, had for the second time placed the gun to his credit. L. O. Jones and Wherry have each won the gun twice. Still, with that lead it is not impossible that some person may take it away from either of them yet. North has been the only man with "sand" enough to try for the gun from the scratch. To-day he made 44, which was splendid shooting considering that part of it was made in the twilight. It is well to remark in this connection that Wherry's last 14 birds were shot at when the haze seemed thick enough to be cut into slices and passed around, with a little gunpowder smoke for sauce, and plenty of fresh air for an appetizer. The targets did not fly any of the best. The left quartering bird tried to mount above the tree tops several times, and the driver pointed for earth before it had passed more than 20ft. from the traps.

Taking all things into consideration the scores of the members were good. W. H. Tamblyn won the first club badge and "Fritz" the second. The score of the shoot is as follows: In the first column of totals is the actual score and the second the score with handicap added:

North	01110111011111111111111101111111011111111101111111—44

HUTCHINSON, KANSAS.

I HAD the pleasure of attending Elliott's great tournament at Kansas City. I think it was one of the grandest meetings ever held in America, and such was the verdict of all the sportsmen that I met while there. The banquet given in honor of the Chicago shooters was, as the boys would say, "simply immense." The race between Kansas City and Chicago was exciting from start to finish, especially the match between Col. C. E. Felton, of Chicago, and J. E. Riley, of Kansas City; Col. Felton shoots a wonderful race for a man of his years. When the scorer announced the score a tie, 46 out of 50, the spectators went wild with excitement. We have hopes of getting up a Kansas team some day and to give the Missouri boys a whirl. Here are scores of our last shoots. Match at 20 single bluerocks: Allen 16, Dodds 16, Little 16, Currens 15, Young 12, Rupel 9, Shears 6.

Team match, 10 live pigeons per man:

Young's Team.		Allen's Team.	
Young	0121121211—9	Allen	1102112011—8
Dodds	1021221121—9	George	1121211021—9
Little	2021011201—7	Currens	1021201120—7
Rupel	1210121011—8—33	Shears	1002010121—6—30

At 15 bluerocks: Currens 14, Allen 11, Young 10, Shears 6. At 10 bluerocks: Young 9, Allen 7, Downs 7, Rupel 4.

Nov. 7.—Team match, at 5 live birds each:

Young	11112—5	Allen	11111—5
Rupel	11121—5—10	Webb	01111—4— 9

Same conditions:

Young	10121—4	Allen	11012—4
Rupel	21011—4— 8	Webb	00000—0— 4

Same conditions:

Young	11110—4	Allen	12112—5
Bartlett	02101 -3— 7	Webb	10c01—2— 7

Tie won by Allen and Webb.

Nov. 17.—Medal match, at 15 singles and 5 pair bluerocks:

Little	111111100110111	11 11 10 11 11—21
Currens	111111101110111	11 10 10 01 11—20

	34 4		34 4

RED BANK, N. J., Dec. 14.—I herewith inclose scores of the Riverside Gun Club shoot of Dec. 12, also scores of the match shoot at 25 bluerocks between L. B. Campbell, of Little Silver, and E. W. Throckmorton, of this place. The conditions were 25 bluerocks, 5 traps, unknown angles, A. S. A. rules, $10 a side. Throckmorton shot in his usual fine form and won easily. The weather was intensely cold, with a gale of wind blowing directly in the shooters' face:

J Cooper	0011101101—6	Throckmorton	1011111101—8
Hesse	0111011010—6	Cornwell	0111010111—7
Ed Cooper	1031101000—4		

Event No. 4 at 10 bluerocks, entrance 50 cents, two moneys:

Throckmorton	1111110100—7	J Cooper	1010100100—4
Cornwell	1011011011—7	Ed Cooper	1011011010—6
Hesse	1010000100—4		

Match at 25 live birds, $10 a side, unknown angles:

Campbell	1001111011101100010011110—16
Throckmorton	1111110011111111010101 —18

YOUNG SPORTSMAN.

ST. LOUIS, Mo., Dec. 13.—A match for $100 a side was shot today between J. E. Hagerty and Peter Kling. Bluerock targets were used and the rules of the A. S. A. governed the affair. Both gentlemen shot L. C. Smith 12-gauge guns. The weather was quite favorable for the affair, and a large crowd of enthusiasts witnessed the struggle for the supremacy, which was won by Mr. Hagerty. Following is the score:

Hagerty	1111011111111011111111111111

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.	NORTHERN DIVISION.
Officers:	*Officers:*
VICE-COM.: C.V.Winne, Albany, N.Y.	VICE-COM.: W. H. Cotton, Kingston.
REAR-COM.: T. P. Gaddis, Dayton, O.	REAR COM.: J. C. Edwards, Lindsay.
PURSER: Howard Brown, Albany, NY	PURSER:
EX. COM.: J. K. Bakewell and H. M. Stewart.	EX. COM.: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION.	ATLANTIC DIVISION.
Officers:	*Officers:*
VICE-COM.: J. W. Cartwright, Jr.	VICE-COM.: I. V. Dorland, Arlington.
REAR-COM.: G. L. Parmele, Hartford.	REAR-COM.: E. D. Anderson, Trenton.
PURSER: R. Appollonio, Winchester.	PURSER: R. Hobart, Newark, N. J.
EX. COM.: Paul Butler, E. S. Towne and Sidney Bishop.	EX. COM.: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division purcers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 180 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

A PERMANENT CAMP.

THE following suggestions were contained in the letter from the retiring commodore, Mr. Henry Stanton, to his successor, read at the meeting of the executive committee:

"The experience I gained as chairman of the regatta committee in 1887 and as commodore during the past year leads me to the conclusion that the time has arrived when the executive committee should take into serious consideration the question of establishing a permanent camp at which to hold the meets of the Association. The waste of money under the present migratory camp system is very great. At each camp large sums of money are necessarily expended in ice-houses, docks, landings, improvements on the grounds, tent-floors, out-houses, wells, restaurant buildings, servants' quarters and the like, all of which is lost to us at the end of the meet. This expense not only falls upon the A. C. A., but also directly upon the individual members. If a permanent camp was established these expenses would have to be incurred but once. At a permanent camp we could have a substantial restaurant building, with kitchen and servants' quarters built of wood, which during the winter could be used as a storeroom for the property of members, thereby saving to each member large annual freight expenses.

"It has been suggested that a permanent camp might lead to a cottage association, but this could easily be avoided by the adoption of a by-law that no buildings shall be erected on the grounds except the buildings of the Association proper, and that the members must live in tents as heretofore. No one will know what the labor and expense of one of our meets are until he attempts to conduct one, and I think he will then be surprised, as I have been, at the great amount of labor and money that is necessarily wasted because of our inability to benefit by this labor and expense for more than a single camp. I do not think I exaggerate the fact when I say that, of the money expended by the Association and the members for transportation during the last meet, $1,000 could have been saved if the Association had a permanent camp. The expense at the last meet attending the restaurant aggregated more than $2,000. At least one-third of this sum could have been saved under a permanent camp system, and our inability under our migratory camp system to have good restaurant facilities, including kitchen and comfortable servants' quarters, occasions discontent among our employes, which results in a poor restaurant no matter how much money may be expended."

SUMMER AND WINTER.

"HOW is that for a bow, old man?" said I to Jud. "Fine," was the answer. "Should think it was fine," said I. The above conversation took place between Jud and I as we walked down the south pier of Lewis's Wharf, in Boston. This was in July and the bow alluded to was that of the Hesper, Pilot Boat No. 5, Boston, one of the largest and finest schooners in the country. She is the largest pilot boat in the world, being 114ft. over all, a regular cutter, with 14ft. draft and 23ft. beam.

The tide was low, and it was necessary to go down a ladder to the Hesper's deck. Bags, banjos, camera and a few other belongings were passed down and were soon all snugly stowed in some of the lockers. Soon two other young men came down, armed with bags and bundles, giving us a surprise party, as we had expected to be the only guests. We introduced ourselves and found that they were sons of a minister. "A sure Jonah," whispered Bill, the boat keeper, in my ear.

Genial Captain Lawler came aboard and welcomed us to his floating home. The provisions were taken on board, and the boat worked out of the dock. The slip was soon cleared and the sails hoisted to place. The day was calm and the "shanty" of the men raising the sails, the bells from the clock striking twelve and the steam whistles from factories sounding noon, made a *toute ensemble* not easily forgotten. "Belay," shouts Bill. "Mainsheet," and a couple of hands tail on to the sheet, and the big mainsail is soon trimmed in place. With a steadily increasing breeze the Hesper slipped quickly by vessel after vessel until she was well out of the harbor. There was quite a roll on outside but we did not notice it.

Says Jud to one of the ministers: "Ever been on the water much?" "Well, I should think so," is the respone; "been across twice, always been in yachts." "Ever sick?" "No" (scornfully).

"Maintops'l!" shouts Bill, and quick as a monkey a man is aloft and has that sail cast loose and it is soon flattened out in place.

"Jibtops'l" is the order. "Jibtops'l, sir," echoes one of the men on his way to remove the gaskets. Soon she is dashing along at a rattling pace, and we all seek comfortable places.

Suddenly the noisy clanging of the dinner bell brings us to our senses, and a peculiar activity enters our feet as we make for the mess room. I was on the bowsprit end when the bell sounded and was in consequence a trifle late. As I was descending the companion ladder into the cabin a pale-faced youth shot by me and rushed to the rail. I followed out of curiosity, and there beheld the younger minister paying tribute to Father Neptune over the weather rail.

"Fried cod for supper," remarked Capt. Lawler, as he boxed it. "Cod, cod, by fish—cod, cod, fish—fish cod fish—fish, fish cod—fish by cod, fish." After supper a cigar on deck is enjoyed and then a game of whist. The watch is called and topsails taken in. We soon turn in all standing, except shoes, ready to see all there is to be seen.

About 1 o'clock in the morning a sudden call for "all hands" brings every one to the deck. What a change from a few hours before, from a good sailing breeze from the southwest to a howling wind from the northwest. The captain stands by the port rigging shouting his commands, "Main halliards!" "Slack away!" "Belay!" "Reef pennant!" and the men "shanty" the huge, wet and stiff sail out till a couple of reefs are down; then all hands turn to and knot in the reef. The jib is in and stowed, the foresail snugged down, the staysail hauled to windward, and the big boat is hove to on the starboard tack. The water is thrown over her bow in sheets, wetting everybody and everything.

Just as things are all straightened out, the masthead lookout reports a light five miles on the leeward bow. The rocket stand is put up in the cockpit, a rocket placed in it and lighted. With a rush and stream of golden fire the rocket speeds upward and breaks, throwing a dozen silver stars. The head sheets are eased off and the boat is bounding toward the steamer, which is burning bluelights. "Burn a light, boys," says the captain, and in answer to the steamer we burn a bluelight. Now we approach the steamer, her green and red side lights are shining, the dim black outlines of her huge black hull are visible. "Get out the canoe!" "Turn her!" "Let go!" and the yawl is alongside, two men are in her at the oars, the captain bids us good-bye, and by the lights on the steamer we can see him go up the steamer's side. The canoe is again taken aboard, and with spinaker set No. 5 runs home one hour and a half behind the Buffalo in a seventy-five mile run.

This is a pretty picture, you feel the warm winds, the water is warm, the sails are all set and the moon shines brightly over the heaving sea.

Now let us look through the other barrel of this marine glass and see another picture.

As I called for Jud on Jan. 3 I said, "I'm afraid we can not make the boat." "Why?" he asked. "Because the harbor is nearly frozen over and the boat won't be able to make her berth in this breeze." Down at the Pilot Office, however, we found Capt. Lawler, and learned that he was going to provision a tug and we would all go down to the boat in the Elsie. We were not long in getting aboard and up into the pilot house, where it was warm, for out of doors it was bitterly cold. With her iron-shod bow the Elsie cut her way out through the ice and we soon found ourselves aboard of No. 5. Her mainsail was double-reefed, the bonnet was off the staysail, her foresail was hanging loose. As soon as the grub was aboard the foresail was hoisted, the boat swung off and dashed out of Boston harbor before a strong nor'west breeze. Night came on, she was kept off, and throwing the spray from her bow she reeled off her ten knots handsomely. The air was full of sleet, the thermometer registering 10° below zero. Jud and I sought the cabin, which was as hot as one could stand, and turned in. Strong wind all night long had kept the water flying, so that a foothold was difficult on deck.

A steamer is sighted and wants a pilot, so the canoe is launched; the men, clad in heavy flannels and oilskins, man the oars, the pilot is put aboard the steamer and the men with difficulty get the canoe alongside and on board. They are drenched and badly frostbitten. The boat is run in and picks up her mooring near Boston Light, her crew more dead than alive. Her deck, so nicely cleaned in summer, is now hidden by a thick coat of ice, the rails are frozen up, there is a covering of ice 3ft. thick on the forward deck, the bobstay and all ropes under the bowsprit are as large as barrels and the boat is hung with huge icicles, making a fearful though beautiful sight. Such, then, are the two sides of piloting, yet through all phases, be it summer calm or winter gale, No. 5 is always at her post, and blow high or blow low, it is immaterial to her.

JAMES WELD CARTWRIGHT, JR.

A PRETTY TALL YARN.

Editor Forest and Stream:

Passing over the bridge to the ferry boat, a jovial, talkative old fellow at my elbow remarked: "Did you notice anything peculiar in the face of the man that just passed us?" "Yes, but I can't define it." "Come in the cabin and I will tell you. That man and a younger one, evidently an athlete, were talking canoe. They sat nearly opposite to where we now sit. The young man was telling the other about his cruise in a canoe, which was about like this: 'Yes, I sailed 4,800 miles in an 81o. canoe, making the run in 28 days, 8 hours. I got away in a snow storm that lasted 8 days, then it blew a gale 8 more, and ended with 8 days rain, then a dense fog set in lasting 8 days, then,' 'Hold on!' said the other nervously, 'that makes 32 days already.' 'All right,' was the ready reply, 'you see I was heading longitudinally.' Consult the nautical almanac and you will find I am not more than 8 seconds out of the way. Well, one dark night I unexpectedly ran into a rapid with a fall of 8ft. in 8yds. I felt the canoe shooting through the air and when she dropped in the water I was 8 miles down stream, and I made the distance in just 8 seconds by a stop watch.

The next morning I discovered the canoe had jumped a rock 8ft. high. This was ascertained by carefully manipulating my nautical instruments. But you should have seen the little thing trot when I got out on the ocean. When 80 miles off shore on the 8th encountered heavy seas, and at 8 bells sighted a huge steamer wallowing about like an old sow in the "coffee grounds," an 8-masted schooner close-reefed lay to and rolled worse than the old sow in a latter patch. Say, I didn't I? Why, it cleaned my face of hair as completely as a barber could do it with a razor. The canoe just lit for a second as she jumped from one sea to another, but the little thing carried all her cotton like a daisy. Nothing like a canoe in that kind of weather. When 888 miles from the terminus of the ocean cable, ran into a cyclone, took in the jig and reefed the lat; and my, oh my, how she flew. Ran in a circle for eight days and nights, when I was thrown off at a tangent like a pear from a flywheel and with such velocity that—But here the story ended. The tension on his listener's nerves was so great that he became unconscious. One eye had sunk deep in the head, from which fire flashed, while the other lay languidly and peacefully on the cheek, the brows stood up like bristles and the mouth was so contorted that it seemed out the wrong way. It was horrible, but he came to, but his face never resumed its normal condition, as you noticed. Then in a solemn voice he addressed me (the young man had suddenly disappeared): "Canoeist?" "No." "You can thank Heaven, when that youngster tells them kind of lies as often as I have he'll be dead or wish he was." Just then the bell on the Camden Ferry Slip that seemed to be tolling a funeral dirge told us the boat was in, and with a "good-bye, old man," he made for Joe Lippincott's and a tumblerful of his best Jersey apple.

POINTER.

PHILADELPHIA, Pa.

[Our correspondent has evidently encountered the *Mail and Express* canoeist on his triumphal return from his 7,000-mile cruise from the Atlantic to the Pacific by rail and canal boat. As proof that canoeists are not the only sailors given to long yarns, we quote a little incident that came under our notice about a year since. We chanced to sit beside two men on the Central R. R. ferryboat; one an innocent and mild gentleman of advanced years; the other younger and more active, a sailor man of some sort, even without the corroborative evidence of a gilt wheel or tiller that he wore as a scarf pin. He was holding forth on the subject of a small skiff owned and sailed by himself, telling how she accompanied the canoe fleet of the Atlantic Division on its run from Amboy to Chesequake Creek in 1888, sailing around the racing canoes, and distancing them on all points of sailing. The account he gave of the canoes was as absurd as the yarn of our correspondent, and entirely without foundation. As to his identity or wonderful performances that day, we have never been able to learn anything.]

WESTERN CANOE ASSOCIATION.

Editor Forest and Stream:

Pursuant to the call of Com. D. H. Crane, the annual meeting of the executive committee of the W. C. A. will be held at the Hotel Richelieu, Chicago, on Jan. 10, 1891.

The business meeting is announced for the afternoon of that date, and will be open to all visiting canoeists, as the executive committee is always glad to get a general expression of opinion regarding any topics that may be brought up for discussion.

In the evening a complimentary banquet will be tendered the visiting canoeists by the Chicago C. C., at the Richelieu. Invitations have already been issued and good delegations are expected from Cincinnati, Cleveland, Dayton, and Jackson, Mich.

J. H. WARE, Sec'y-Treas. W. C. A.

Our Chicago correspondent writes as follows:

The elegant cards of invitation are out for the fifth annual meeting and banquet of the W. C. A., which will take place at the Hotel Richelieu, this city, on Jan. 10, and will be an elegant affair in every way. The attendance at previous meetings, at Cleveland, Dayton and Cincinnati, has been from 20 to 35 members, but it is thought 40 or 50 will be seated at the Chicago board, and the resident members do not wish the bigger city to suffer by comparison. There will be an elaborate *menu* and a very cheerful time. Among the speakers of the evening will be Hon. Geo. W. Gardner, of Cincinnati, O.; Judge J. R. Bartlett, of Fremont, O.; Mr. T. G. Kirkpatrick, of Springfield, O., and Messrs. M. G. Nixon, P. F. Munger and J. B. Keogh, of this city. If it is to Purser C. W. Lee that the credit for the get-up of the invitation card is due, he certainly deserves congratulation, for neater and more tasty ones would be hard to find, including the French in the corner. There is a very neat lithograph on the upper page, showing a tent with the Chicago faithful grouped in front, in all sorts of *negligé* attitudes, and all very comfortable and natural. The lower page bears the following inscription: "To all members of the W. C. A. and fellow campers a hearty greeting. The Chicago tent will be pitched at the Hotel Richelieu January tenth, eighteen hundred and ninety-one, and you are cordially invited to the 'feed.' All hands to mess at seven bells. R. S. V. P. D. Q. to the purser."

ROCHESTER C. C.—Officers, 1891: Captain, W. Stuart Smith, Jr.; Mate, H. S. Moody; Purser, Geo. H. Harris; Meas., Wm. H. Marten. Executive Committee: A. B. Dodge, chairman; S. B. Perkins, Geo. J. French. Regatta Committee: Wm. C. Seward, chairman, H. D. McVean, H. M. Stewart.

RAILROAD CANOEING.

ANOTHER has been added to the long list of useless and impossible cruises attempted from a love of notoriety or as an advertisement, and like the cruise of the Dark Secret, the *Outing* cruise "around the world," a recent rowing cruise from New York to Boston, and several canoe cruises, the present one has proved a complete failure. The venturous cruiser, who was not a canoeist but wished to become one, was equipped by the New York *Mail and Express* last spring, and sent off with a flourish to make a canoe voyage from the Atlantic to the Pacific, a distance, as stated in the first reports, of 7,000 miles. After starting from New York and paddling a few miles up the Hudson, the canoe was placed on a canal boat and continued her journey across the continent, at times afloat on her own bottom, but oftener by rail, wagon, canal boat or any other means of transit which was available. In time he arrived at the Pacific coast; not a very difficult task considering the facilties for comfortable travel which the railways of to-day afford. If the "*Mail and Express* canoeist" did any serious amount of canoeing he has carefully refrained from mentioning it in his voluminous letters, which deal with such a wide range of facts, historical and ethnological, as to lead to the suspicion that he carried a cheap encyclopedia in his canoe.

In view of his expected arrival in New York this week, the New York canoe clubs have been approached in regard to a reception and dinner, which would be an indorsement on their part of the cruise. To their credit be it said that there was no dissenting voice in their reply, "Rather a thousand times pipes and beer with canoeists about the club house fire than a Delmonico dinner to meet the hero of this trans-continental cruise."

The cruise, as advertised, was as impossible as useless, no boat can pass by any direct water route from the Atlantic to the Pacific; and even though this could be done by the waste of much time and energy, no good would result from it. Had the "*Mail and Express* canoeist" made the cruise from the Atlantic to the Eastern watershed of the Rocky Mountains, unassisted by cars and canal boats, and then launched on the highest waters of the Western slope, he would have accomplished something useless but notable; but after starting in April he would be eating his Christmas dinner near the Rocky Mountains, and not in New York. What he has actually accomplished, making a trip across the continent by more or less conventional modes of travel, and taking a canoe with him, must place him on no higher level as a cruiser than the renowned Capt. Glazier occupies as an explorer and discoverer.

AN EXPERT'S OPINION.—A canoeist lately applied to Mr. N. G. Herreshoff for a design for a fast canoe, but Mr. Herreshoff declined to undertake the task, being too busy with larger craft. At the same time he said: "The model of a canoe is the smallest factor in her performance, the rig the next, and the skill and weight of the man the most important by all odds. The canoeist should practice sailing, cultivate his agility, and keep up his weight; and if it were not for the danger, it would be wise for him to wear trousers of sheet lead, and particularly to have the seat double-lined with that material." There is a great deal of truth in the above statement, and it bears out what we have always taught, that perfection of detail and personal skill and dexterity are of far more importance than excellence of model in so small a boat as a canoe; consequently men will do better by working up a boat in her second or third season than by discarding her at the end of the first in favor of the latest fashion in models. At the same time the lead pants are not to be overlooked; with these and a boat well balanced in hull and sails the mere fineness of the lines is a very small matter.

GENERAL PURPOSE CANOES.—*Editor Forest and Stream:* In answer to "Pecowsic's" remarks concerning the all-round canoe in your issue of Nov. 27, may we call your attention to the canoe Bat, designed by W. P. Stephens and built by ourselves for Lincoln B. Palmer as a "general purpose" canoe. She is fitted as a most complete cruiser. Is 16ft.×30in. During the 1890 season she carried off 12 first and 3 second prizes. Senior sailing, cruising, hurry scurry and upset, maneuvering and club-tour paddling races, also the A. C. A. gymnastic competition. Our canoe Passaic, owned by Geo. P. Douglas, also a 16ft.×30in. "general purpose" canoe, this year captured 11 first and 10 second prizes, as well as the A. C. A. record prize. The records of both canoes are well known and surely speak well for the all-round canoe. We shall be pleased to be allowed to subscribe toward a cruising trophy.—THE ST. LAWRENCE RIVER S., C. AND S. L. CO

COMMENTS ON THE MEET.—The *Model Yachtsman and Canoeist* alludes to our comments on the late meet, but has evidently read them rather hastily. The quagmires we mentioned were filled up entirely before camp opened; the blowing down of tents was due to fine breezes, which made such good racing, and partly to the dry, loose soil which, though not made to hold small tent pegs, was never wet or muddy and was always smooth and pleasant to walk on. The two weak points of the camp were the transportation and the mess; the grounds, the water and the winds were as nearly perfect as can be had. In one point the Jessup's Neck camp was ahead of all others, the sanitary arrangements were of the best and gave no trouble.

MASSASOIT C. C.—The Massasoits, of Boston, have held their annual meeting and have elected the following officers for the ensuing year: Com., Allen Hurd; Vice-Com., V. F. Perry; Sec'y, James J. Brooks; Treas., Emile Johnson; Meas., J. F. Ball, and a Board of Directors. The annual supper will take place at the club house on Jan. 12.—JAMES J. BROOKS, Sec'y Massasoit C. C.

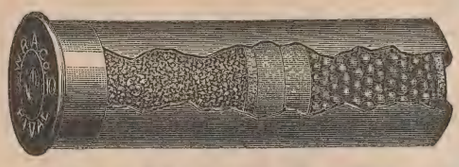
GLIMPSES OF THE A. C. A.—For a permanent souvenir of the meet of 1890 there is nothing better than the handsome book of photo-gravure views just issued by Mr. Stoddart and advertised in another column. The selection was made from one hundred exposures made at the meet, twenty of the best pictures being used to make up the volume.

Yachting.

Yachtsmen who do not see what they want under this heading will please lookunder the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

SINGLE-STICK RACING IN 1890.

90FT. TO 46FT. CLASSES.



THE accompanying table shows at a glance what was done, or more properly what was not done, in the single-stick classes above 40ft. in the past season. Its meagre figures call for little comment and afford no basis for comparisons in any class. Beginning with the largest class, the sole survivors, Puritan and Volunteer, were both in commission; the former under her old skipper, Captain Haff, after a year's rest in Lawley's basin. Neither did any racing to speak of, Volunteer starting three times and Puritan twice, Volunteer won the Gorlay cup very easily, beating Puritan by 28min. on the run to Vineyard Haven, three days later, the unofficial timing, no official times being taken, made a difference of 16 minutes between them; and on the first racing run of the cruise, on the following day, Volunteer reached New Bedford half an hour in the lead. This ended the racing for the year in the class.

One of the remarkable incidents of the year was the presence of a yacht in Class 2 of the New York Y. C., a class that came into nominal existence a few years ago simply to fill the interval between two existing classes, the 70ft. and the largest class, from Puritan of 81ft. upward. The limits of Class 2 are over 70 and not over 80ft. l.w.l., and no yachts have ever been built to it nor were there any existing racing craft. The sloop Florida was grown after the accepted rule o' thumb fashion for years ago and happened to be a foot or so over the 70ft. class, a little too much for even the very elastic exemption clause of the New York Y. C. so she has the honor of being the sole representative of Class 2. Her first essay as a racer was in the New York Y. C. regatta of 1890, in which she started but withdrew.

The 70ft. class offered a fair promise of sport at the opening of the season, but, sad to say, it was not realized; not one decisive race was sailed. To begin with, Titania and Bedouin were not raced, the former being in commission all the season, but under her small rig; while Bedouin lay ashore in her berth at Newburg, Captain Pittuck confining his ministrations to the 30ft. Tomboy. The other three boats in the class were all more or less altered during the winter, so that a new interest was infused into the racing. Katrina had her mast shifted and a small piece added to her forefoot to correct the faults in her steering; Shamrock was rebuilt under Mr. Winfringham's supervision, being lengthened about 2ft. forward to bring her up to the full limit of her class, while Gracie had a general overhauling and refitting, with the intention of racing through the season.

The first race, the Atlantic Y. C. regatta, found only Katrina and Shamrock at the line. The race was fluky and uninteresting,

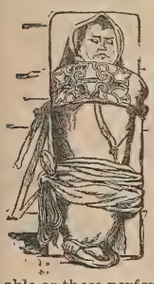
WILD INDIAN LIFE.



PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

Old Colony Trout Ponds

ESTABLISHED 1869.

Three million brook trout eggs for sale. Can be transported with safety to any part of the world. Ready for delivery December and January. Also young trout in the spring.

Unsurpassed fly-fishing in its season.

DENVER, Col., Oct. 21, 1890.

W. L. Gilbert, Esq., Plymouth, Mass.:

MY DEAR SIR—In regard to the trout eggs received from the "Old Colony Trout Ponds" I can say that the best possible results have been had from them at all of the points to which they have been shipped in Colorado. I know of no better packing than that employed by you. After a journey of nearly two thousand miles by rail and stage I have had a loss of less than 1 per cent. in a lot of 250,000. I do not want any better. Very truly, GORDON LAND, Col. State Fish Commissioner.

W. L. GILBERT, Proprietor,

Plymouth, Mass.

Breeder, Shipper and Dealer in Chester White, Berkshire and Poland China Pigs, Fine Setter Dogs, Collies, Fox Hounds and Beagles, Sheep & Poultry. GEO. B. HICKMAN, West Chester, Pa. Send stamp for Circular.

FERRETS VS. RATS!

First-class ferrets, Sure Pop breed, specially broken for hunting rats. Also young ferrets, not broken. For sale by ADOLPH ISAACSEN, "Sure Pop," 92 Fulton street, New York City. My celebrated handbook, "All About Ferrets and Rats," second edition, revised and illustrated, mailed to any address on receipt of 25 cents.

LIVE QUAIL FOR SALE. LIVE and dead game a specialty. Consignments solicited. Established 1838. E. B. WOODWARD, Commission Merchant, 174 Chambers street, New York.

LIVE WHITE HARES (*Lepus Americanus*), captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at $3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner. J. G. RICH, Bethel, Me. dec18.tf

Notice to Fishermen. Cut Prices for 1890.

Here I am again as usual cutting the prices of Fishing Tackle. Low prices and good quality of goods increases my business. It will pay you to buy your tackle in Brooklyn.

No. 1, 3 joint, 6 strip, Split Bamboo Trout or Black Bass Fly Rods, solid reel seat below hand, nickel mountings, silk whippings, extra tip, all complete in wood form, length 9½, 10, 10½ft., weight 7, 8, 9oz. ..... Price $2 72

No. 1, G, same as above but is German Silver Mounted ..... " 3 32

No. 4, 3 joint, 6 strip Split Bamboo Black Bass Bait Rod, Raised Tie Guides, solid reel seat above the hand, extra tip, silk whippings, nickel mountings, complete in wood form, length 8½, 9, 9½, 10ft., weight 9, 10½, 12, 13oz. ..... Price 2 72

No. 4, G, same as above but is German Silver Mounted ..... " 3 32

Send 2c. stamp for Illustrated Catalogue for 1890. OPEN EVENINGS.

would be taken in crossing the bows of any vessel at anchor. The fact that she was following the course safely taken, at a reasonable distance from the markboat, by competing yachts which had preceded her, would be evidence in favor of a boat.

In regard to the liability of the committee, in the third question, it must be bound by the acts of its agents, even though it has acted in good faith and to the best of its judgment, and has used the best means available to secure the correct mooring of the marks. It seems perfectly plain that a yacht should not be penalized in any way through the error of a boatman which has caused her to commit a foul.

In answer to the fifth question we should say that with a light chain, or even a rope cable, it should be possible to moor the boat in question with a shorter scope so as to avoid any special danger of fouling, and certainly to give the same opportunities to every competing boat.

From the statement of the case the mooring line was a very light straw rope, that swung much nearer the surface than a manilla cable, and was the prime cause of the trouble; the weakness of the rope probably necessitating a long scope in addition. The blame for this probably rests with the boatman, but he does not appear in the case at all, the only interested parties are the regatta committee on the one hand and the fouling yacht on the other; and between these two, if it be admitted that the foul was caused by improper mooring, there can be no question that the responsibility rests with the committee. From the facts as stated, and from the diagram accompanying them, it appears to us that the yacht was not to blame, she came from under the stern of the mark boat, at a reasonable distance from it, and in the course safely taken by preceding vessels, and she was justified in assuming that the course was clear for her, as it had been for them.

We recall no question of the kind which has arisen here, but there are few records of decisions in this country. In Great Britain all important questions go on appeal to the Yacht Racing Association, and the records of that body for the past 15 years contain a number of decisions. Fortunately protests are not very plentiful here, but a body of this kind, which could decide all such questions as might arise is already needed.

A very similar question to this is likely to arise at some time in the Larchmont Y. C. In the frequent races of this club four or five oyster sloops are used as mark boats, answering the purpose very well; the men are regularly employed and know what is expected of them, and thus far, out of a great many races sailed, we know of no trouble on this account. At the same time it is highly probable that sooner or later, through the presence of a stranger or the carelessness of a regular man, a markboat may be misplaced or improperly moored. In such a case no blame would attach to the committee, as they employed the regular means of marking the course, but at the same time the result of the race would probably be open to question.

One point in this connection that is likely to make trouble is the practice of the sloop men mooring two or three small boats in a string astern. A racing yacht, perhaps in a crowd, as often happens at the first mark, rounds the markboat with room to clear her, but finds at the last moment a string of two or three small boats in the course. Under such circumstances we believe that the yacht could not be disqualified for fouling a boat attached to a markboat, but it would be well to have an understanding in advance as to the rights of a yacht in such a case.

Another question of rounding marks has lately agitated the sailor men of the Seawanhaka Corinthian Y. C., and for a number of nights the discussion as to who fouled who was warmly waged at the club house. The facts were as follows, the positions being shown in Figure 2: Two prominent racing men of the club, one representing the 40ft., and the other the 30ft. class, repaired to Tuxedo late in the season, their yachts being laid up, and sought the danger and excitement of yacht racing in the chromatic vagaries which float on the bosom of Tuxedo Lake. These beautiful craft are all of one model, nearly one beam to length, and cat rigged, being distinguished solely by their varied hues, one being the red boat, one the blue, etc.

Mr. Thirty-footer, who may be called A, sailed one boat alone, and Mr. Forty-footer, B, sailed another. The two were close on the wind for a mark, A to windward, but B having an unquestioned overlap. A was fetching the mark easily, but B was to leeward as they neared it, and could not clear it as he was heading. He claims, however, and it was conceded by the other side for the sake of argument, that he could have made a "pilot's luff" following the course *b*, *b*, *b*, and gone to windward of the mark, had not A been close on his weather. Rule XXXIV. of the Seawanhaka C. Y. C., Sec. 13, reads as follows: "If an overlap exists between two yachts when both of them without tacking are about to pass a mark on the required side, then the outside yacht must give the inside yacht room to pass clear of the mark." With this in mind B hailed A for room to make his "pilot's luff," but was met with a very pointed refusal, following which B luffed and struck A. Of course a protest resulted, giving rise to the question who fouled who.

The points involved seem so clear as to leave no grounds for B.'s view. This was, as we understand it, that in the first place the terms rounding and passing apply only when the mark is bearing abeam, and that until this position is reached the operation of the rule does not begin. As it is conceded that, though quite close to the mark, neither was as yet abreast of it, the claim is made that the rule quoted does not apply to the case, and that a yacht must have an overlap *on the mark* before she is entitled to the rights secured to her by Sec. 13. Further than this, it is contended that, as a matter of equity, A has a good berth and B a correspondingly poor one, and that no rule would be made to reverse these positions, giving all the advantage to B at the expense of A.

The first claim we consider a very poor one, the only support it has is the title, "Passing and Rounding," which is construed, as above stated, to apply only to the actual turning of a mark. This subject is treated at some length in Kemp's "Yacht and Boat Sailing" under the title "Approaching a mark for rounding," which is obviously the correct wording, and one that if adopted would prevent any such discussion. The object of the section is to secure certain rights to boat which is as yet close to a mark, but not actually passing it, as by the time the mark bears abeam from her it will be too late for the rule to have any effect; she will have been forced inside of the mark or be in actual collision with the other vessel.

Applied to the case at point, it is claimed by A that the mark had not been reached, that as it did not bear abeam from either vessel neither was "about to round," and that practically they were sailing in the open and A was not forced to consider the mark as yet. This being the case there is no rule which permits the leeward boat to hail for room and perhaps force the other about. Looking at the common sense of the rule, which is a very old one and used by all clubs, if it is to have any effect at all it must come into operation shortly before the mark is reached, at some distance which cannot be laid down in feet or furlongs, but which is clearly understood by racing men. For instance, B on nearing the mark sees that while he has an overlap, and is entitled to a clear passage from A, he will be shut off from the mark and forced inside it in a very short time. He hails A in season to be heard and for A to luff and give him room before he, B, is in actual danger of fouling the buoy.

Just when this time is, and how far away B must be when he hails, is a matter for his judgment, as in most other points of sailing. If he calls for room some time before the mark is neared, A will refuse to give it, as B has no right to it merely to work to windward in; but if, on the other hand, B waits until he is close on the mark, it will be then too late for A to luff and for him to follow, and he goes against or inside the mark. If B hails in proper season, A must give him room to pass clear so long as B can do this without filling away on the other tack. The facts that A is compelled, as he considers very unjustly, to give up an advantage he may have gained by better sailing; that he may be compelled to lose time by tacking in order to give room, while his opponent does not tack; or that B cannot go clear with a good full or even by nipping close, but must shoot in stays in making his "pilot's luff," do not affect the case in the least. B's rights are limited only on the one hand by the buoy, which he must not touch, and on the other hand by his filling away on the other tack, which is forbidden by the rule quoted. As long as he does neither, he can pass the buoy in any way he pleases. If, however, B calls for room and A gives it, and then in making his luff B fills away on the other tack, he can be protested by A for wrongfully compelling the latter to alter his course.

It may make the case clearer to consider B's position alone, A being at some distance away. With clear water about the mark B comes for and makes his "pilot's luff" on the course *b*, *b*, *b*, going by without fouling and immediately filling away on his original tack. This he has a perfect right to do, and if while doing it A comes up to windward of him, and a foul ensues, A will be at fault. If neither boat can weather the mark, or if A can weather and B cannot, then B has no redress, but must tack under A's stern or be forced inside the mark.

The main point is that the rule comes into operation some time before the boats are actually abreast of the mark, long enough to allow time for B to hail for room and A to give it in season to prevent B fouling the mark. In making this point clearer the rule or section should properly be entitled "*Approaching* a mark for passing or rounding," which would give no grounds for such claims as have been made in this case. If the rule can in any way be interpreted by sailor men as giving A a right to hold his course until he is squarely abreast of the mark, then its usefulness has departed, and had better be dropped overboard.

NAPHTHA LAUNCHES.

THE Gas Engine and Power Co. are busy at their extensive works at Morris Dock, N. Y., and in addition to their regular open launches have lately turned out several novel craft. One of these is a 40ft. l.w.l. cruising cabin launch, for Charleston, S. C. The boat is of handsome model, with a long cabin house containing a large cabin, pilot house, toilet room, w. c. in separate compartments, pantry and galley, and refrigerator and ice chest. The whole house is lighted by large windows along each side. The after end of house, for a length of about 7ft., is given up to four compartments, with a central passage from cabin to engine space. To starboard on the forward side is the w. c., abaft it being the compact little pantry and galley with oil stove. To port is a toilet room, with dressing case, across the passage from the w. c., while abaft it and opposite the galley is the ice box. The joiner work is most elaborate, the finish being quartered oak, which with handsome curtains and hangings makes a very luxurious interior. The motive power is a 10 H. P. engine placed in the stern. The boat makes a perfect cruiser of the type under discussion in our columns some time since.

Another cruiser of a different type is now in frame, a 35ft. auxiliary, similar to the Etcetera, but of improved model. She will be fitted for a long cruise, being built for parties on the Great Lakes, who will cruise west from New York next season. The engine will be 10 H.P., and she will in addition have a yawl rig. A keel with a small lead steadier has been added for sailing. The cabin is rather small and well forward, leaving a large cockpit in which the party of four intend to spend much of their time in summer, using an awning. Another new craft is intended for pilot service about Wilmington, N. C., and is 25ft. over all, 6ft. beam, and with a 3 H. P. engine will make 7½ miles per hour. She is decked over for 12ft. from stem, with an open cockpit aft. Sleeping accommodation for two men is found below.

The first paddle boat built for a naphtha engine has just been tried at the works, a stern wheeler 27ft. long and 6ft. 6in. beam, for the U. S. Government, to be used in the improvements of Mobile Harbor. The regular naphtha engine is located aft, with a second short shaft parallel to and about 2ft. above it. The two are geared by means of sprocket wheels and chain, the regular bicycle gearing. The upper shaft carries a bevel gear which engages with a similar gear on a main shaft extending across the stern of the boat on projecting arms, and carrying two ordinary paddle wheels of 4ft. drain, side by side. The boat will draw only 20 inches, and promises to give a fair rate of speed. The new 10 H. P. engine has proved a most useful size, and several are being fitted to oyster boats along the Long Island shore. The boats have proved very useful, as they carry a load forward, and at the same time can be used for towing a fleet of sailing sloops in a calm. The steam yachts Tillie and Oneida are laid up at the company's docks, where both are being overhauled.

PROGNOSTICATIONS.

SOME twenty years since, Yale College issued a famous "Naugh-tical Almanac," not under the direction of Prof. Loomis, but containing a good deal of student wit, partly in the form of prognostications after the manner of the ancient almanacs. Without pretending to the gift of prophesy, but relying only on experience in the past, we venture a few similar forecasts that may interest yachtsmen.

Dec. 20-31.—About this time look out for numerous challenges.

Jan. 1-10.—Several English, Irish, Scotch and Australian millionaires order 90ft. centerboard yachts from Watson, Fife, Reeks, etc.

Jan. 15-30.—Messrs. Gardner, Burgess and Smith receive many orders for 90ft. sloops.

Feb. 1-15.—Lookout for alleged "lines" of challenger.

Feb. 15-28.—Exposure of deep-laid plot of Watson or Fife to capture America's Cup.

And after all, there will be no Cup race this year.

ICE YACHTING.—The promise of a cold winter, for the first in several years in the latitude of New York, has awakened the ever hopeful ice yachtsman, and he is again alert and ready for a race. The Scud is on hand, as usual, to represent the Shrewsbury yachtsmen, the Orange Lake Club has a new flyer, the Lady of the Lake, owned by Thos. Higginson, 51ft. long and 760ft. of canvas, while the Hudson River, Newburg and Lake Champlain clubs are making preparations for early races. On Dec. 9 the Orange Lake I. Y. C. elected the following officers: Com., H. C. Higginson; Vice-Com., Dr. Willett Kidd; Sec'y, Capt. W. H. Smith; Treas., Gardiner Van Nostrand; Meas., Charles A. Dixon. The secretary stated that the challenges of the Carthage Landing and the Shrewsbury Yacht clubs, to compete for the Gardiner Van Nostrand challenge cup of America, would stand over from last year, the races not having been sailed.

BERNARD WEYMOUTH.—On Nov. 25 Mr. Bernard Weymouth, secretary to Lloyd's Register, known to yachtsmen through the handsome and complete Yacht Register which has grown up under his able management, died very suddenly while addressing the committee. Mr. Weymouth had been connected with Lloyds since 1854. He was a naval architect and had designed several yachts, and in his capacity as chief surveyor and afterward as secretary he has done much to promote the interests of yachting, taking an active part in the establishment of the Yacht Register, and framing the rules for wood and iron yachts.

DOUGLASTON Y. C.—An organization which will be known as the Douglaston Y. C., with club house and headquarters at Douglaston, L. I., on the famous Little Neck Bay, was formed on Dec. 8, with a membership of 35 and fleet of 20 yacht and naphtha launches. The club will go into commission about May 10, and intends giving several cup races during the season, to which the principal yacht clubs will be invited. The following gentlemen were elected to office: Com., W. C. Newman, sloop Ada; Vice-Com., G. A. Corry, sloop Mai; Rear-Com., Fred A. Parsons, steam yacht Gipsy; Sec'y, A. Ducret; Treas., R. Sperry; Meas., H. Ely; Board of Directors, Howland Leavitt, Jabez Harris, William Corry, John Harway, William Benz.

FIXTURES FOR 1891.—It is none too soon now for the selection of dates for next year, a calendar and tide table are easily had, and the first in the field have the choice of dates. As soon as they are decided on they should be made public, as a guide to other clubs, and we shall be glad to have early notice of all fixtures. The racing season will be opened by the Biscayne Bay Y. C. with its annual regatta on Feb. 22, at its station, Biscayne Bay, Florida. The only other dates yet announced are those of the Lake Yacht Racing Association: Hamilton July 14, Toronto, Royal Canadian July 16, Queen City Y. C. July 17, Rochester July 20, Oswego July 23.

THE SCHOONER RECORD.—We were in error in regard to the winners in the schooner class in the Larchmont annual regatta. We are informed that the protest lodged by Azalea against Gevalia on the ground that her helmsman was a professional, was allowed by the committee, as was a counter protest by Gevalia against Azalea for carrying a professional in her crew. This gives Lotus first prize instead of third place, and alters the totals somewhat, making Lotus's record 1 start and 1 first prize; Azalea's 4 starts and 3 firsts, and Gevalia's 3 starts and 1 first.

SEAWANHAKA CORINTHIAN Y. C.—The lecture committee have announced the following entertainments for the winter, the first of which was given last night: Dec. 17.—Music, etc. Jan. 27.—The use of electricity on vessels with a practical explanation of the principles involved, the application and the terms in common use. Feb. 3.—Annual club dinner. March 10.—What can be seen in the night sky from the deck of a yacht and how to see it.

BISCAYNE BAY Y. C.—We have received the year book of this club for 1891 from Secretary Munroe. The club has now 18 members and 19 yachts. The officers are: Com., R. M. Munroe; Vice-Com., P. F. Rose; Sec'y, C. K. Munroe; Treas., W. H. Browne; Meas., Jean de Hedouville. The annual regatta will be held on Feb. 22.

CORINTHIAN NAVY.—On Dec. 11 Com. Center, Seawanhaka Corinthian Y. C., entertained the members of the Corinthian Navy with a very interesting talk on the care of yachts, laying up and fitting out, his remarks being practical and very much to the point.

TIGRESS.—Owen Fergusson has sold his new 35-footer to James Weir, owner of Hypatia.

WINDWARD, schr., has been sold by George Duryea to A. W. Sewell for $6,000.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. P., Boston, Mass.—Take the .40-60.

S. T., Philadelphia.—The Pennsylvania deer season closed last Monday, Dec. 15.

F. M. H.—We have not the dimensions you ask for. The plans are not quite accurate, but were made as nearly as possible to scale.

D. B., Toronto.—The sneakbox was described in issue of Jan. 7, 1885, but you will find a number of designs in "Canoe and Boat Building for Amateurs."

H. D. W., Andover, Mass.—Will you please tell me, through your next issue if you can, where I can get some good hare shooting near New York city? Ans. Long Island is full of hares. Go to Central Islip or Smithtown or some station in that neighborhood. Much of the land is protected, but there is considerable free range.

G. B., New York.—Would you kindly inform me where I could get some quail shooting in the vicinity of the city—I mean down near Jamaica or some points on Long Island or near by? You can also let me know, please, where there can be had any shooting at present. Ans. There is practically no free shooting on Long Island now. It is nearly all preserved for clubs. You had better write to Joe Reynolds, Katonah, N. Y. He is said to have good quail and ruffed grouse shooting.

C. A., Hamilton, Ont.—I am recommended to you for information about fishculture. I have completed a pond—an acre—and as it is fed by springs in the bottom I think I can raise trout, but would like to do so under best possible conditions as to depth of water, shade, shelter, gravel in bottom, aquatic plants, etc. Can you recommend me an author or send me printed information? Ans. We have for sale several works on fishculture, two of which are especially devoted to the trout, "Trout Culture," by Slack, and "Domesticated Trout," by Stone. Both of these contain detailed information concerning the laying out of ponds and the rearing of trout.

W. H. P., Memphis, Mich.—Ans. 1. Eels are caught in great numbers in many places along the east coast. In Great South Bay, L. I., they are very common and grow large. The same is true in most of the shallow bays of the coast. The mouths of rivers falling into Chesapeake Bay are celebrated for the size and numbers of their eels. Address V. N. Edwards, Woods Holl, Mass., or Lewis B. Thurber, Patchogue, Long Island, N. Y., who can furnish the skins or information where to get them. Any of the fish dealers in Fulton Market, New York city, E. G. Blackford and Middleton, Carman & Co. could no doubt place your order in proper hands. 2. The firm that sells the thermometers are responsible people. There is no book on beagle training. 4. We can supply "The Trees of Northeastern America" and "Training for Strength, Speed and Agility." 5. It has been said that the Colts have acquired the right to the Giffard gun in this country.

ANSWERS TO CORRESPONDENTS.

MAINE FISH AND GAME.

JUST as we go to press we are in receipt of the report of the Maine Commissioners of Fisheries and Game for the years 1889–90. With respect to the fish supply the report makes a favorable showing; notwithstanding the large increase of anglers visiting the State, say Messrs. Stilwell and Stanley, the fish have generally held their own, and many localities show a decided increase both in size and numbers—a condition due not alone to the favorable stage of water during the past two seasons, but to a more general appreciation and observance of the protective statutes, and to the practice of returning fingerlings to the water. The Commissioners touch upon a very important phase of the subject when they point out that good fishing means increasing tourist patronage, better market for home produce, and many-sided revenue to Maine people.

That which is perhaps most worthy of note in connection with the fish and game interests of Maine is the growing tendency of individuals to unite in associations for organized systematic effort toward keeping up the supply at the great angling centers. We have already noted with warm appreciation the plan and work of the Franklin County Association with headquarters at Rangeley; the report makes record of this organization and its work, as well as of the one formed at Lewiston and Auburn, which has raised a fund of $1,000 to build a hatchery for stocking Auburn Lake. Those who are familiar with the conditions at the Rangeley outlet, will applaud the public-spirited enterprise of two gentlemen from other States who have rescued the famous spawning grounds at that point.

Fred S. Dickson, Esq., a gentleman from Philadelphia, who owns and spends his summers with his family, on a beautiful island in Rangeley lake, and Capt. R. A. Tuttle of Boston, an owner in Lake Point cottage, have at their own expense, leased the dam of the Union Water Power Company at Rangeley outlet for the purpose of controlling the old hatching ground at that place and to so govern the water that it will be favorable for the fish to spawn as they did before the dam was built. Also to arrange a series of dams that the fish can have a free passage from, or to the lakes below. This was formerly one of the best breeding grounds for large trout in that vicinity, which was ruined when the dam was built.

With this brief notice, we must defer, to be given next week in our fishculture columns, a more detailed notice of the work of the Commission.

In that part of the report devoted to game interests, there is substantial confirmation of the report given in the FOREST AND STREAM the other day of the lawlessness prevailing in certain sections of Maine with respect to the killing of deer. This game, the Commissioners tell us, is far more abundant than ever before, and those who have been in the Maine woods this year will fully bear them out in the statement. Never, within the memory of residents and visitors, have the deer been so numerous. With this increase of the supply, there has grown up in certain localities absolute indifference to the law and defiance of it. All through last summer and into the autumn—we are not now drawing information from the report—hounding and jack-hunting were practiced, in most instances we have reason to believe for the benefit of visitors repairing to Maine for trout—and venison. The number of deer so killed, carcasses accidentally stumbled upon by a single fishing party would indicate, in the aggregate must have been large. Whether or not such destruction has had an appreciable effect on the supply may be a subject of debate; but there is not the slightest question that if hounding and jacking are to be carried on in the future as they have been in the year 1890 the effect must be disastrous.

The reason for such unrestrained license is set forth by the Commissioners to be the want of an appropriation for the wardens. Without means to enlist the services of trustworthy and efficient officers, in short without any funds at all to employ officers, the Commission was powerless to enforce the statute when public opinion failed. The responsibility for the present state of affairs, then, rests with the Legislature. We trust that the representatives of the people at Augusta do not fairly express the public sentiment of the State. Maine can never expect to conserve her fish and game resources without a competent warden system. There is sound sense in the recommendation of the Commissioners. Our laws are good, say they, but if they can be improved change them; then give us the means to see that they are carried out.

Skin hunting, which is destined to destroy the finest game animals of Maine, can be readily put to an end, if our Legislature will only give us the means. It is not the restoration of the moiety of the money penalties for infractions of the game laws to the wardens that we ask for. But it is that they will give us the means to hire good and faithful men as wardens; to pay them fair per diem wages when ordered on duty, and a bounty for all convictions. Twenty such men sent into the forests in certain sections of our State in March and April would effectually suppress skin and crust hunting. The skins and property seized should be forfeited to the State. Let the pay be generous, and fair, and proportioned to the duty, and the bounty for convictions equally so, and deserving of the State that pays it to honest and deserving citizens. A few such men could patrol the State the whole year, and cost less than an army of men who fear to offend when assigned to duty near their own homes. These men would be unknown to sight where stationed, and could not be followed or watched. No one interest has our State that pours into her lap so large an income, and one that is shared by all, as our fish and game; not accumulated into the pockets of one to be spent in other States or climes, but dividing its portion to every home. Give us the means to enforce the laws and protect it.

The Commissioners urge that September be made an open month for moose, caribou and deer; that the principle involved in the fish law limiting the amount of fish—transported by one who has caught them—be extended to apply to every species of game; that the law against spoons for catching fish be repealed; that the law respecting posting notices on streams and ponds protected by special laws be changed to apply only to private waters; that a bounty be paid on seals; that a law be passed to protect young salmon, thousands of which are now destroyed on the boarded floors of weirs that are left dry at high tide.

As was to be expected, Mr. Trumbull's paper on the woodcock and its ways has been read with decided interest. Further notes on the bird are given in our Natural History columns to-day, the most notable contribution being from the pen of Mr. William Brewster, who is unconvinced by Mr. Trumbull's records respecting the bird's whistle.

PROTECTION OF PICKEREL.

A MOVEMENT is now reported to be in progress in northwestern Pennsylvania to accomplish the repeal of the Act of May 22, 1889, so far as relates to the catching of pickerel from Dec. 1 to June 1. The portion of Sec. 4 of this Act directly involved in the controversy reads as follows: "And no person shall by any means or device whatsoever catch or kill, in any of the waters of this State, any pike or pickerel between the first day of December and the first day of June in any year. Any violation of this section shall subject the offender to a penalty of ten dollars for each and every fish caught." (*Book of the Game Laws*, 148.)

The law is obnoxious to some residents of the region mentioned because they are deprived of the opportunity of enjoying fresh pickerel during the winter, when they most enjoy fish food and have leisure for fishing, and because they believe the legislation to be wholly in the interest of the summer visitors. It is admitted that the law was enacted "ostensibly" to protect the fish; but the complainants are positive that pickerel need no such protection, and, to use the outspoken language of a Montrose newspaper, "the man or boy who catches a half-dozen two-pound pickerel from a lake this winter does more toward stocking that lake than does the man who next spring dumps into it a can of 5,000 young fry furnished by the State."

Has it occurred to these opponents of the pickerel legislation that this period of protection is intended to cover the spawning season of this common fish, so highly prized by the farmers and their boys and so little thought of by the summer visitors to northeastern Pennsylvania? Are the objectors to this close time not aware that several really valuable food fishes, such as black bass, wall-eyed pike, brook trout, lake trout, and other members of the salmon family, are liable to capture in winter under pretense of fishing for pickerel? We can see the application of most commendable common sense in any measure looking toward the protection of fishes during their reproduction, and, unless some better reason is advanced for repealing the section than the one mentioned above, we hope the law will remain in force.

SNAP SHOTS.

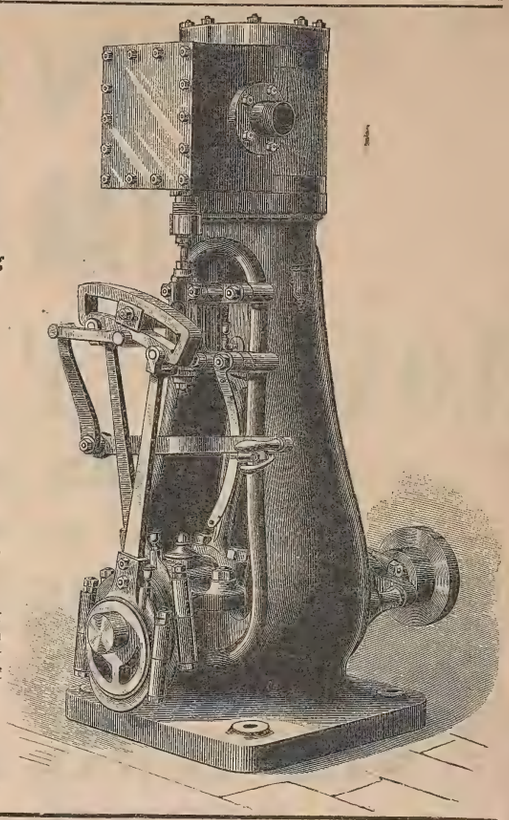
UNIFORM game seasons are excellent in theory, but it sometimes happens that uniformity is secured at the expense of reasonable protection. The Massachusetts sportsmen had a notion last winter that an uniform season for all upland shooting would work advantageously; but it proved impracticable to open the season later than Sept. 15. As this applied to quail the result was that the birds were shot long before they were in fit condition, and in consequence everybody was disgusted. Now, the proposition is to change the opening day to Oct. 1. That is better for the quail by fifteen days; but another fifteen days would not bring the opening at all too late. A movement is under consideration for making uniform game seasons for New England. The plan is an excellent one; there is no reason why Massachusett, Rhode Island and Connecticut at least should not be governed by similar game laws. We have always believed in and urged the uniformity of game laws for contiguous States which are in practically the same latitude.

It is not always the man who spends the most money and goes furthest away from home who finds the most fun with a gun. We have repeatedly urged the common sense methods of stocking home covers and enforcing laws for the conservation of home game and fish. Such efforts may cost money, but there is often more profit in them than in expensive journeys to distant game grounds, which some people seem to think are more rich in game the more distant they are.

There will probably be a creditable display of America's fish resources at the World's Fair in Chicago, The New York Commission has been in conference with other Commissioners, and there is every promise that an excellent showing will be made.

Secretary John W. Titcomb, of the Vermont Fish and Game League, reports that the new society is meeting decided approval, and gives promise of a decided influence in the future.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal the name of that friend.



Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

Theory of the Steam Engine. Extracts from Lloyd's Rules.
Boiler Efficiency. Racing Steam Yachts.
Boiler Mountings. Management and Care of Machinery.
The Engine and its Parts. Principal Types of Yacht Machinery.
The Screw. The Design of Hulls.
Laws Applicable to Steam Yachts. Addenda: Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

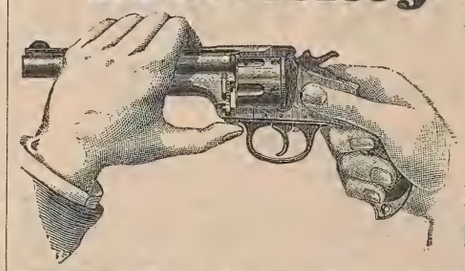
FOREST & STREAM PUB. CO, 40 Park Row, New York.

STEVENS SPECIAL FIRE ARMS.

Wherever shooting is done, in all parts of the world, the **Stevens Rifles and Pistols** are being introduced, and on account of their superior accuracy are preferred.

STEVENS PISTOLS have made more brilliant records and have done finer work than any other pistol ever made.

STEVENS RIFLES have made records which were considered impossible.



STEVENS POCKET RIFLES are carried by ladies, anglers, tourists and hunters. They are marvels of accuracy, compactness and beauty.

STEVENS LADIES' RIFLE is the proper rifle for ladies. It is wonderfully accurate and has no recoil.

The .22 long rifle and the .25 rim-fire cartridges, the most accurate small-bore cartridges made, were originated by this company. These celebrated rifles and pistols are manufactured by

TENTS AND CAMPING

Is the subject of a new book called

Gypsy Tents and How to Use Them.

It gives a vast amount of information about how to live out of doors. Besides tents, how to make and put them up, it tells of camp fires, camps, pack saddles, cooking utensils, bedding and clothing, and the joys and sorrows of camping. All outers need it. Fully illustrated. Price $1.25.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work Cloth, 98 pages. Price $1.00.

NEW YORK: Forest and Stream Publishing Co., 318 Broadway.
LONDON: Davies & Co., 1 Finch Lane, Cornhill.

SPORTSMEN! DON'T THROW AWAY your ducking boots because the uppers are cut. They can easily be made good as new at a trifling cost. If you value your health, keep your feet dry while hunting. For *one dollar* we will send a receipt for a preparation for mending Rubber Boots and Overshoes; and a receipt for a dressing for your leather Shooting Boots that will *preserve* them and render them *absolutely impervious to water.* These preparations are beyond compare. We challenge the world to produce anything approaching them. They will be worth to you hundreds of dollars. We have used them for twenty-five years. Every sportsman should avail himself of this opportunity to procure them. Address

Glimpses of Animal Life

BY

WILLIAM JONES, F.S.A.

A delightful book giving most entertaining accounts of the intelligence of animals, and of many curious habits of certain little known species. Every one who is interested in nature or in animal life will find entertainment in this volume.

Cloth, pp. 229. Price $1.50.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, N. Y

He introduced them as "Ole Blackbird squaw and he gal; pooty young squaw—great medicine."

The elder of the two was about as tough, leathery-looking a specimen of aboriginal ugliness as I have ever fallen in with, and making due allowance for difference in age the daughter was the perfect moral of her. They both cast their loads unceremoniously aside and the elder proceeded at once to business. Watching me closely as she did so she rolled a large handful of leaves in her hand until they were partially pulverized, then passed them over to the younger squaw who soon made a pint of very bitter tea from them which I was told to drink. I managed to gulp it down, hot and bitter as it was, and the old squaw then seized me without ceremony, packed me snugly in bearskin and blankets, after which she and her daughter, wrapping their own blankets about them, lay down on either side of me, crowding me in a manner more close than pleasant.

'Tis written in the Hebrew chronicle:

> "How the physicians, leaving pill and potion,
> Prescribed, by way of blister, a young belle,
> When old King David's blood grew dull in motion,
> And that the medicine answered very well."

I trust King David's medicine, which answered the purpose so well, was not a squaw—or, if she were, that she was young and good looking.

My leathery belles, however, answered to help get up a copious perspiration, which was just what they intended, and when I awoke from the first sound refreshing sleep I had enjoyed for weeks it was with a cool, clear head and limbs free from pain.

With the rise of the sun the confounded ague began to threaten me, and Mrs. Blackbird, with the help of her interesting daughter proceeded to take measures for expelling it in a manner quite as novel and original as her treatment of fever. First, she undid a bundle of dirty blue cloth, and took therefrom several bundles of neatly bound, minute twigs. I had heard some hard stories of "whippin' out the ager," and smelt a pretty extensive mice immediately; but on the whole concluded to go through, so I suffered them to divest me of my clothing and seize me firmly by the wrists, and made no objection even when Mrs. Blackbird began to apply the switches gently to the bare skin. Gradually the blows increased in rapidity and severity; old Peter, who had stood by as spectator at first, stepped forward and seized a wrist firmly in each hand, so suddenly that I had no time to object; and the whipping immediately became energetic and general. Each of the squaws with a switch in each hand vied with the other in rapidity of hitting, and, as the sluggish, torpid blood strove to dash with answering speed through the tingling veins the pain became unendurable. I had resolved to bear all that was asked of me in hope of a radical cure, but the torture was too severe; and I ordered them to desist, trying at the same time to wrench myself loose from Peter. They only laughed and laid on the harder. I became mad with pain and went in on my muscle, biting and butting furiously at old Peter and giving the leathery females ungallant kicks about the ribs and abdomen—a proceeding that made them laugh all the more, and brought down the switches with increased vigor. I entreated and cursed by turns, tried bribery and flattery, begged for a resting spell, and threatened death to the party of conspirators immediately I got loose, but all in vain. They flogged me for a time that seemed an age, and only let me off when I was too exhausted to stand alone. Then I was again enveloped in skins and blankets, when, strange as it may seem, I almost immediately fell into a deep slumber from which I did not awake until evening. When I did awake it was with a general sense of soreness all over the outer man; but where was the ague? Gone. Completely cured, as well as the fever, although I had some slight returns of the latter occasionally, which always yielded to Indian treatment, however.

COWBOY REMINISCENCES.

RAYMOND BROOKS, my cowboy "pardner," and I were just back from a long trail drive that had led us by weary stages hundreds of miles from the home ranch. We had crossed the plains of Texas, been through Kansas and, pressing our way still further north, had reached the grand land of Montana, where our herd of 2,500 jaded cattle were delivered to the buyers and the outfit disbanded, some to remain where chance had led them and others, among whom were Ray and I, to return by way of the railroad home.

We had seen the usual number of vicissitudes, had had a stampede and lost some cattle while crossing the waterless tract of the plain, but all in all ours had been a fairly successful drive; and thoroughly satisfied with the work and with an unusual number of dollars jingling in the pockets of our leather leggings we were now going to enjoy ourselves in the manner that seemed best to us and after the fashion most in accordance with cowboy tastes. So after the trip by rail had been suffered in silence, and endured by Ray with far more apprehension and fear than he would have experienced amid the wildest herd of untamed cattle, we finally reached the station nearest our range, and mounting the horses that were awaiting us rode another 50 miles to the little frontier town that was the last settlement in going to the ranch. It was a real cowboy town, possessing all the requisites and conditions necessary to the full and perfect happiness of a socially inclined puncher; here he could enjoy the variety of the half-barbaric orgy that is known in local parlance as a "tear" and, provided he did not extend his recklessness too far, he had very little to fear from the too strict enforcing of the rather dormant law.

Here Raymond and I stopped to have one royal time before settling down to the monotony of the winter's drift line-riding. So we ate quantities of canned oysters, the cowboy's idea of luxury, slept every night, or rather a part of every night, on clean sheets and on soft mattresses, played pool and billiards, dallied a little with the "tiger," and drank, I am very sorry to say, very little water; in fact, save for occasional washing purposes, water was not at all included in our calculations for amusement. For one solid week we were virtually the owners of the town; barkeepers were glad to hob-nob with us, gamblers sought our society, and men picked up the stray crumbs in the way of chips that fell from our table; and even the sheriff, who was usually not on good terms with members of our crowd on account of their frequent proclivities for shooting out his street lamps, thawed out under the influence of our liberal treatings, and diplomatically began to feel our political pulse in regard to the approaching county election.

But one day it got whispered about the little frontier town that "them there two cowboys just home from Montany had about blowed in their pile," and our reign, based on the influence of the mighty dollar, began to wane. The barkeeper, seeing in us probable solicitors of credit, ceased to be the genial soul of the past week; the blacklegs having no time to waste on well picked chickens, turned their attention to fresher game; while that ever cautious sheriff, scenting a possible repetition of the usual antics of our boys when leaving town, swore in a couple of deputies, and let it be generally known that he had said that 'if them two trail cowboys tried to shoot up his town like some of the others of the same outfit had done, there would sure be trouble." These threats, however, had not much effect on our spirits, and we continued to enjoy ourselves as long as there was a dollar in our pockets. But there must come an end to all things, even to affairs of such unlimited possibilities as tears, and late one night, urged rather by necessity than choice, we saddled up our bronchos and prepared to begin the twenty-mile ride to the ranch.

I do not know whether it was owing to a slight influence of vegetable over animal spirits, or if it was merely recklessness born of a passing tinge of remorse over the hundred and fifty good American dollars that it had taken us half a year to earn, but just as we rode away from the horse track, Ray with a yell of defiance, began emptying his six-shooter into the air and gave other evidences of his intention of taking the town. We were fast pardners in those days, pardners in peril and privation, and pardners in any reckless pleasure that either of us chose to inaugurate, so I followed his example, and together we enjoyed that classic amusement of "shooting up the town." Down the one long street of the village we rode, yelling like Comanches, and fusilade after fusilade from our smoking pistols. It was no unusual incident in that lawless little frontier town, where the law was regarded more as an experiment than as a settled institution, but on this particular night the sheriff had been rather on the look out; and just as the open prairie was gained and we were preparing to rein our furious steeds, a hail followed by a shot in the air, warned us that we were being pursued, and looking behind the forms of three mounted men could be discerned through the gloom, while the sounds of galloping hoofs came to our ears over the hundred or so yards of level prairie. Raymond calmly began reloading his Colts.

"Hold on, old man," I said, as we urged our bronchos to redoubled efforts, "don't let us have any trouble, it's all fun you know; our horses are fresh and let's try a run for it, and leave all that kind of thing to the last."

So giving our mustangs spur and quirt, we rode through the night. At first we had hoped that after a mile or so the posse, on seeing that there was no surrender, would turn back; but as mile after mile was passed over at a killing pace, we began to realize that the race would be a long one. Twice our pursuers hailed and several times they opened fire, but we had had a fair start to begin with, and steadily gained on the gang until the sound of their horses hoofs gradually died away in the distance and their shouts grew inaudible. We did not stop, however, but kept steadily and silently on, only slacking up occasionally to give our panting horses a breathing spell; and just as dawn began to break the long hill was gained, on the summit of which stood the ranch house. We had made the twenty miles in something like three hours. Up the slope we rode while a volley of pistol shots brought out our comrades to welcome us home, after an absence of six months. From the elevation on which the ranch stood we could see, four or five miles away, our pursuers; but whether it was owing to the proximity of county elections, or to the fact that we were at home and surrounded by a dozen or more comrades, the posse came no further, but after a short rest retraced their steps to town, leaving us victors of a well won race.

So ended one of the many incidents in which Raymond and I were pardners. Disreputable? I grant you that; but you who know no greater sensations than those furnished by a tame Eastern life, surrounded by orderly crowds and ruled by a series of laws that work like some piece of well fitting machinery, can form no idea of what the life of a cowboy is, and cannot appreciate the devil-may-care spirit of mischief that takes possession of him when he again comes into contact with something that approaches civilization after months of danger and privation. The doings such as I have just related are the result more of a love of mischief than any desire to do real harm. And so they are regarded by the generality of Westerners, who look on the freaks of a lot of cowboys as they would on the doings of a set of overgrown school boys, and notice is very seldom taken of them by the officers.

On the particular occasion of which I have written, however, the sheriff, piqued perhaps by the distancing that he received in that twenty-mile race, "laid for" us, and one night a few weeks after the affair he had his revenge.

I had been obliged to come into town to receive a registered letter; and knowing that the officers were on the lookout for either Ray or myself I waited on the outskirts of the town until after dusk, and then staking my pony, walked to the building that served as post-office and general rendezvous for the socially-inclined gossips at the place. My enemy was not there; so stepping to the window I received my packet of mail and was about to go, when, as luck would have it, in came the wretched sheriff, who covered me immediately with his six-shooter and gave the order "hands up," with which command I lost no time in complying. There was nothing else to do, for a man does not think much about resistance when looking into the muzzle of a Colts revolver held only a few feet from his head. So I had tamely to allow myself to be disarmed, and then we went in search of bail, which fortunately I soon procured and again became a free man. After this my captor and I got on the best of terms, he expressing his regret over the necessity that had compelled him, etc., etc., in all of which condolence I rather the more feelingly of the two, I fancy, quite agreed with him. The next morning, after going through the usual formula of State vs. cowboy, I was obliged to pay out $35 as a solace to the wounded feelings of the law. Revenge is sweet, however, and when a few weeks later, and just before election, a small keg of excellent spirits and a couple of boxes of fair cigars were sent to the ranch by this same sheriff with the hope that he would see us all at the polls, we complied with his request by drinking and smoking up the offering, and then riding to the town in a body we defeated the donor by casting a solid fifteen votes for the other man.

Take them as a class, however, the sheriffs of the West are a wonderful well qualified set of men. The position is no sinecure, and requires no ordinary combination of qualities. The popular sheriff must be a man of not only a nerve and determination, but above all must have the requisite caution and discretion in the handling of the rough, devil-may-care classes that compose the bulk of the population of frontier counties. He must never let a real crime go unpunished, and must be ready to follow at all hazards the trail of the criminal; but he must also have the discretion not to draw the restricting bands of law too tightly down over men who have been a law unto themselves. The sheriff who is ever ready to exact the observance of the letter of the law in regard to trifles, and who is most sure in restraining the antics of cowboys, is not always the one that is most successful in bringing criminals really guilty of grave offenses to justice.

ALEX. M. REYNOLDS.

[TO BE CONTINUED.]

A FISHING TRIP TO THE ISLAND.

THE past summer was in more ways than one queer. We had an abundance of rain, but a scarcity of wind, and threatened storms without number; in fact the west coast, which beats the world in the way of threats, has the past season beaten its own record.

Scarcely a day has passed but we have had all the indications of a tornado. Wind banks and thunder heads would pile up in one quarter or another. The thunder would rumble and grumble away, getting nearer and nearer. The black blanket of clouds would be torn and ripped by vicious and almost incessant flashes of lightning. But it was all threats. Just as we would think the crisis at hand, and that something terrible must happen, the sun would boom through the black sky, the ominous-looking clouds would break up into littly fleecy white patches and scatter away only to bank up somewhere else and repeat the farce over again. Boat sailing was out of the question. If there was wind enough to get clear of the land it was sure to die out before we could get back, and no one cared to risk the almost certain result—pulling home.

But we all know what one will do to go fishing, particularly when he knows the bay is alive with grouper and redfish.

And so it came about that we organized an expedition to the island—object, fish. An early start was imperative. So after a hurried breakfast we let go the wharf, and with good cypress poles started down river. It was getting gray in the east, but the cloud bank was so thick that old Sol had a hard struggle to get above the trees. He accomplished it at last and burst out with a fierce blinding glare that was, to say the least, uncomfortable. But a breeze came with the sun, and when, after a due amount of work and perspiration, we reached the river the fair wind was duly appreciated. With everything set, ropes coiled away and skipper at the stick we stand out by the pier head.

Off to the no'rd were some half dozen spongers working up to their anchorage inside the keys; just dotting the horzion were several more, all bound in, for the water was thick and it was no use to work. "Yes," said the skipper, "yes, this is the best harbor on this part of the coast, and greatest resort for spongers. They have been coming here now regularly since the war. Some of the vessels which come here now as spongers were here in the sixties for a far different purpose. There's the old C——; now, I've seen her lying in under the keys here more than once, masts down and her deck load of cotton covered with bushes, while not far outside was a Yankee gunboat."

"Did they catch them often?"

"Bless you, no! Guess they didn't want to. We used to unstep our masts and pole down along the coast, inside where we could, making easy reaches through the night, and lying well hid through the day. Oh, yes, it paid well. I know one man that made $4,000 in one trip to Nassau. Do him any good, did you say? I reckon so. He's got the money now all stowed away—good bright Confederate notes every one of them.

"That's called the South Key—the one with the lighthouse, I mean; quite a settlement there once, fellows that couldn't stand conscription.

"The next one is Hog Island; been settlers there once too; didn't stay there long, I reckon. A man started a ranch there once. What hogs the fishermen and spongers didn't steal the 'gators gobbled, so I guess he didn't make much. No! the South Key is where the money is buried. How do I know it is there? How do I know anything? Didn't a sailor, dying in the hospital in New Orleans, tell all about it, and didn't the boat come ashore here right north of the river, and in a few days the wreck drifted in by the mouth of the Coolie. Of course I know it's there, $85,000; somebody'll get it yet, see if they don't.

"Why don't I get it? So I would only it was so long ago that the land marks are all gone. The sailor who died in New Orleans said there was a crow foot on a cabbage palmetto right over it; but the thing is to find that cabbage palmetto. I believe it's there though, if I can't find it.

"But here we are at the No. 2 buoy. Now, gentlemen, you might risk a line astern; perhaps we'll get a kingfish 'tween here and the island. We'll run the beach down, and it will be strange if we don't hook something. I think we'll run down to Big Pass, then we'll slip in and land on a sand beach there is just inside. Some of you fellows will want to go over to the Indian mound; and the rest can fish while they are waiting. Yes, there are lots of these Indian mounds on this coast. Most of them have been overhauled though. I made a big find once myself. It got me into the worst scrape I was ever in, too. You see, I was down on Tampa Bay. I had had poor luck and was getting mighty hard up. I landed near the mouth of Bull Frog River, and close by was a large mound that, as far as I could see, had never been molested. I got there about two o'clock in the afternoon, and after looking the mound over, made up my mind to see what I could find. Well, I stripped and went at it, and I hadn't worked ten minutes when—Great Scott! look at that squall over the land!"

We all looked and the skipper and his story were for the time forgotten. On our lee beam and nearly the whole length of the eastern horizon, was the blackest

The Sportsman Tourist.

THE WINTER CAMP-FIRE.

ABOVE the mountain, bleak and bare,
Below the noisy stream,
The few soft snowflakes in the air
Are diamonds in the ruddy gleam
That flashes from my fire.
And, from the blaze, bright, silvery lines
Flit in and out among the pines.
Sorrow and pain are put to flight,
And all the cares and fears of night
Are laid upon the pyre.

But at the charmed circle's bound
Grim Winter stands, with icy hands;
And from the barren, frozen ground,
Their lair, leap darkness and despair.
Threatening now, and now deciding,
Never stops their ghostly gliding;
Never ends their awful moaning,
Triple curses oft intoning.
While, anon, their goblin shrieks
Are re-echoed by the peaks.
Thus, with eyes foreboding danger,
Keep their watch upon the stranger.

Up to heaven leaps the flame,
And the spectres, put to shame,
Backward fly. From the sky
Softly steal, with many a blessing,
Shades of dreamland. They, caressing,
Bring lotus and Falernian wine,
Olympian nectar, all divine.
And, while I sleep, they vigils keep,
Till, from the valley, rosy day
Has chased the sprites of night away.

SHOSHONE.

STILL-HUNTING.

A WINTER IN MICHIGAN.—III.

BY NESSMUK.

IT was, if I mistake not, the first day in December on which I got a most beautiful shot at a large buck elk, and it proved my last shot for that season.

Nearly a mile above the camp there was a most notable crossing place for deer, and half a mile further up was another one nearly as good. These two runways were merged in one at the distance of a mile or so from the northwest bank of the river, the point of convergence being a gap between two high knolls, where there was a well worn path some 10in. wide and several inches deep, cut into the soil entirely by the hoofs of deer. After passing the gap the path branched again and again, until at the distance of two or three miles it was lost in the multitude of trails which crossed the openings in all directions. The practiced hunter will see at a glance that the gap aforesaid must have been rather a promising runway to watch when deer were stirring about the openings—as they always are during the acorn season.

The few last days of November had been cold enough partially to close the river, but had moderated considerably on the first of the succeeding month. I had been keeping camp for a few days through feeling agueish, but on the day above mentioned I took the rifle and sauntered out to the gap for a shot. How vividly I remember every little incident of that day's hunt—because, I suppose, it was my last in that region. First I went to the runway, took a seat on the log by the thick clump of hazel bushes, where I had already killed some ten or twelve deer, and had a meditative smoke; then a flashing glimpse of something white bobbed along the trail at the distance of 100yds. or more, and along came a fawn, large and in good condition. I did not want him and he went on his way scatheless. Then an hour or two of patient watching and waiting, at the end of which a plump, short-legged buck came trotting unsuspiciously along up the trail, still wet from his swim over the river. He was what we call in the backwoods a "swamp buck," and had a symmetrical, well-branched pair of antlers. I wanted him for something besides the meat; so a short, sharp cry stopped him, the pea ball whistled through his lights, high up and well back, that he might have life to give the trail a wide berth in his dying struggles, and he ran out into the opening a few rods, where he turned over and I shortly cut his throat *secundem artem*.

An hour, two, three hours passed with nothing save the numerous black, gray and fox squirrels to vary the monotony of a dull, cloudy December day, when, far down the trail I caught sight of an enormous pair of antlers above the bushes, and wagging toward me at a rate which would have speedily left the little bay mare nowhere. I am not subject to panic, or buck fever, but my heart did give an extra jump as he broke from the hazel thicket into the open, and I saw before me the finest buck elk I had ever seen. He had most likely been frightened by wolves or Indians and was laying his course at a rate that promised to take him far enough out of harm's way in an hour, but the sharp yell that every hunter knows how to give brought him up standing, and he stood staring at me, the wildest, gamest looking animal imaginable. All varieties of the genus *Cervus* have a peculiarly game look, but none more so than the elk. The two sunken dead-eyes below the real eyes give him a strange, wild appearance, and his odd-looking movements as he trots off with the speed of a locomotive, his nose sticking straight out and his antlers lying along either side of him—the trick he has, too, of staring at you like a statue for two or three seconds, then, just as you were beginning to touch the trigger, wheeling like lightning, and at a few tremendous steps placing himself beyond your reach; all lend such a fascination and gaminess to elk hunting that I have seldom known a hunter who did not prefer a shot at a buck elk to any animal which runs the American woods.

I did not give him time to dodge. As he came to a full stop the bead filled handsomely on his breast and I pulled, sending a small, sharp cone of lead directly into "the sticking place," which must have ranged nearly the whole length of him. Away he went over the opposite knoll, and I loaded quickly, whistling meanwhile to convince myself that I wasn't a bit excited. He bled most profusely from the start, and I would not have given a man one shilling to have insured the saving of him; but "there's many a slip." An elk with a small, sharp, conical ball in his breast may keep his feet strongly for half an hour, or even more; likewise, he can do his little mile in two minutes over rough ground and fallen logs; "hinference is hobvious."

Mile after mile I followed the trail, finding plenty of blood all the way, but seeing nothing of the elk, and at last the sun (which went down at a preposterously early hour on that day) gave indications of sudden leave-taking—it began to grow dark. I still hurried on as best I could, feeling hot and anxious, until, at the edge of an immense swamp, night overtook me and I could keep the trail no further. Here I decided to let the dog go; he had been showing unwonted eagerness all the way, and I was sure he could find the elk in a few minutes—also having found it he was sure to notify by howling long and loud; so I sent him in. For some five minutes after he started all was silent; then came the howl I was waiting and wishing for. Good! the elk was safe and within half a mile of me.

There was no use attempting to penetrate such a swamp after dark—a man would be a fool to try it—so I commenced collecting wood for a fire, and making other little arrangements for passing the night endurably. Hardly had I begun to fix a rough camp, however, when from the swamp arose such a series of yells and howls as few nervous persons would care to hear in close proximity on a dark night; and in a marvelously short time Pete, the dog, was cowering and growling at my feet in an agony of terror.

The swamp seemed literally alive with wolves. They collected about the carcass of the elk, and in the stillness of the night I fancied I could hear the bones crack under their powerful jaws, as they fought, snarled, gormandized and howled by turns. It was in vain that I went as far into the swamp as I could get, shouting myself hoarse and firing toward them repeatedly. The rascals seemed to know I was impotent to do them any harm, and only howled the louder.

The opportunity which this incident afforded for observing the traits and peculiarities of the sanguinary cowards would have been worth the sacrifice under other circumstances, but I was very anxious to possess the head and skin of a buck elk entire, and I knew the brutes too well to expect anything more than the bare antlers after they were done with it; so I gave up trying to scare them and listened to their beastly snarling and wrangling as they gobbled and tore at my elk, inwardly swearing that while I lived I never would let slip an opportunity for taking a wolf scalp. They soon finished the elk, and after that kept up a hullabaloo at intervals all night, to the extreme terror of Pete, who shivered and watched incessantly.

Some time after midnight it commenced raining most furiously, the wind blowing almost a hurricane at the same time, and it was with the greatest difficulty that I could keep the fire alive. To make matters worse, the weather grew rapidly colder, and before morning I was shaking to the point of dissolution with the ague. I had nothing to eat, had left my half-pint flask at the shanty, and had neither blanket nor axe. On the whole, it was one of the nights to be remembered, and more or less of them are chronicled in the memory of every genuine still-hunter. But for the confounded ague I could have managed to extort some fun from it, too.

After the fire got low and gave out but very little light, the wolves grew very bold, coming within a few rods and howling as if for a wager; at every fresh yell Pete would shiver with redoubled vigor, pressing his ribs against the log and whining piteously; at last, in the very extreme of cowardice and fear he jammed himself as far under the log as possible, where he lay whining and shivering until daylight. Few hunting dogs will face a wolf singly—very few indeed but will cower when near a pack of them. In justice to Pete, and as I may not have occasion to mention him again, I will say that he turned out, all things considered, the best still-hunt dog I have ever owned or trained.

Morning dawned at length, and, sick as I certainly was, I determined to have a look at the scene of the previous night's carnival. Taking a large pine for a guide I found the spot without difficulty, but there was nothing left of my elk save the antlers—gnawed and broken apart—a few fragments of bone and part of a jaw. The antlers were very long and heavy, but badly mutilated; still, as they might "adorn a tale," I lugged them with much labor to the openings and deposited him in the branches of an oak for safety, intending to call for them some time when I felt more like packing. I never saw them afterward, nor the buck which I had left in the morning.

Late at night, and in a blinding snowstorm, I managed to stagger into camp with reeling senses and the delirium of fever in my veins; I was sick. All day I had been trying to reach the shanty through the driving snow, setting the compass every half hour and finding myself on the wrong course nearly as often, wandering in a kind of absent stupor hither and thither, conscious that to miss the shanty in such a state and in such weather was little better than death, yet unable to keep on the right tack for an hour without the aid of a compass. Weak from sickness and the loss of food, and half delirious as I was, it was a mercy that I found the camp at all. To say truth, the dark little den did not look over cheerful as I crawled in, but a roaring fire and dry clothes, with a hot dish of tea and a nip, improved matters a little, and if I could have shaken that fiend of the West from my vitals, the prospect was not at all a bad one; but I could not.

Late in the evening the fever left me and was succeeded by a dull, spiritless stupor, which was not so much a positive distress as an effectual bar to all enjoyment; this lasted for hours, and was followed in its turn by that "quotidian tertian," shaking me until my backbone seemed a huge string of loose beads and my neck threatened to dislocate itself with the violence of the exercise. This in turn again was followed by delirium and fever, during which the little den of a shanty would dilate and expand before my very eyes like a living, breathing thing, until it grew to palatial dimensions, then, taking a sudden turn, would contract and shrink, shrink toward the ground, until I would spring toward the door to avoid the fate of the man in the Iron Shroud. Strange, weird shapes flitted about the fire at night, grinning and mewing at me; owls, with immense wings like a bat's, peered at me from the rude fireplace, and even poor Pete seemed changing to a wolf and to be waiting a chance for throttling me. In vain I took double and treble doses of quinine through very desperation; the disease would not be balked nor checked, but worked me up with a systematic regularity that would have done credit to an eight-day clock. Every day from early morning until near midday the detestable shakes racked me to the verge of human endurance; then came on the fever accompanied with delirium, which reached its height during the early part of the evening, and was followed by great weakness and languor, during which I dozed and slept until the never-failing chills warned me to make a rousing fire, roll up in blankets and bearskin, and get to shaking.

Of all the twenty-four hours, the hour or two in the evening when the fever was at its height was the most horrible. I knew that the weird sights and sounds which I saw and heard were but illusions for the most part, yet I did see and hear them to all intents and purposes, and how long would I be able to distinguish them from reality? Suppose I should become so far delirious as to rush out in the bitter winter air and wander off into the wilds, to perish alone miserably when the fever left me, or worse, have strength sufficient to reach the shanty by backtracking, to die by inches with frozen feet and hands? Not a pleasant reflection, but one that was ever tormenting me, and I think the dread I had of such a fate tended to keep me from leaving the shanty when I was really unconscious of my acts.

I cannot say how long this state of things lasted—all through the month of December certainly, and, I think, through the first half of January. The weather got intensely cold, the days were short, chilly visitations of ghastly sunlight, and each night seemed at least a week long.

I was so feeble and nerveless as to be under the necessity of taking advantage of the strength afforded by high fever to back wood enough for daily use, and daily getting weaker. I knew there must be a lumbering establishment at no great distance below, but how was I to reach it? I, who could not go a mile from the shanty with the certainty of having strength to return? So I shook and burned by turns, toted wood when I had strength to do it, and wrapped myself in the bear skin in a spiritless stupor when exhausted. I was becoming a moral Micawber—waiting and hoping for something to turn up.

Something did turn up—in the shape of old Peter the Indian guide, who stuck his copper-colored mug through the rat-hole of a doorway one cold January evening, saying as he did so, "Ugh! you Nessmuk—you 'live, eh?"

I jumped from the bear skin and seized his hand with a heartfelt joy and thankfulness that I cannot describe. I was dying for human sympathy and companionship, and, had he been an own brother, I could hardly have been more rejoiced to see him. It would not do, however, to show it by acting childishly pleased, so, after the first greeting was over, I brought out the blackstrap, hard tack and bear meat, after which we filled a couple of pipes and smoked in taciturn mood, although I was burning to talk. The pipes finished, Peter, quite as a matter of course and in true Indian fashion, gave a terse account of his doings, and incidentally the doings of his band, since he had left Ned and I in October. They had killed much deer, some elk, a great many bear, and had caught mink and otter enough to buy plenty of blankets and powder for two years; the squaws had much corn and berries laid up on which to feast in the sugar season. He was a great hunter—had killed his fingers ten times over with deer, besides six full-grown bear and three elk. He could keep two smart squaws skinning and packing all the time, but he was tired hunting so much, and had come to visit his white brother and hear of his success. Had Nessmuk (Pine Marten) been lucky in the fall hunt? Had his traps fastened on the otter with a sure grip?

I have taken the liberty of mending his broken English, but the above is the substance of his speech, and in answer to his queries I replied that Nessmuk had killed as many deer as he wished, but, having no one to share the meat with, had killed only bucks for the most part, letting the does and fawns go free—the one to grow up, the other to breed. As to the traps, some evil spirit had taken them away with the otter in them, and the Pine Marten had been very sick—too sick for hunting—for a long time. It was doubtful if the Pine Marten ever saw his wigwam beyond the lake again.

He looked me steadily in the face for some moments, with glittering but expressionless eyes, such eyes as none but an Indian head ever carries by any possibility, and then said, "Umph! me know—know all 'bout it. Know when you hunt; how much deer, how much bear; kill one buck elk, let wolf steal 'um—dam fool! Know when you sick; come mos' every day; come to stay now. Take care you—hunt with you rifle. How you like that? Bimeby ole Blackbird squaw come—he great squaw doctor, make you well in leetle while. You say yes?"

I said yes most gladly. Not that I had much faith in Indian honesty; I thought it quite likely to be a plan for stealing my gun and whatever else could be handily got at, but, as I was likely enough to die anyway and felt that I could not hold out long as I was, it seemed to offer a chance worth taking, and I took it. I did the Indian wrong. He kept faith with me nobly.

From early dawn until dark, when the weather was favorable, he hunted and tended traps, for his own benefit as it turned out (though he offered to divide fairly), but he never left me at the shanty without a fair supply of wood, which he hacked up with infinite labor—for he was no axeman—and he made it a point of conscience to be present when the fever was on me. This, I have little doubt, saved my life. For several days succeeding Peter's arrival I was much worse, raving about the shanty insanely at night, rushing out into the frosty air half naked, with the snow waist deep, cutting up wild in various ways, and trying insanely to pummel him when he found it necessary to restrain me by force or to lug me back into the shanty after a crazy attempt to start down the river barefoot, with the thermometer at zero.

After a week or ten days the fever somewhat abated and Peter, taking my double-barreled rifle by way of armament and half a dozen hard biscuit by way of grub, gave notice of 'two days' absence, and buckling his blanket about him went off up the trail.

Late in the evening of the second day, while I was lying on the bear skin with swimming brain and a fevered brow, he came back, but not alone. Two strong, athletic squaws, each toting a large pack, were his companions.

brush, under and over fallen logs and out into an open field, where his statuesque attitude announced the game at bay.

[*En passant*: A shooter, not to say sportsman, from Jackson was recently telling a friend that down his way they paid little attention to the prohibitory clause in the game law concerning quail, and that he and a game warden had been out shooting them. There is another warden who does the honors for the State in a massive mansion in that city, with whom they should be made acquainted. The brown beauties are fairly plenty, and it would be exceedingly gratifying now and then to spend a day in the fields after them, especially because a severe winter plays greater havoc than many guns, but since our chosen representatives have said "Thou shalt not," gentlemen will respect the fiat; others should be compelled to. If the open season were made the same as for grouse or woodcock, two years would suffice to replace the prohibitory clause, for many half-fledged broods would fall easy victims in September and October to the farmer and the hunter "for revenue only;" while the same besom of destruction would sweep the huddled bevy when tracked in the snows of December. Therefore, if sportsmen would preserve for themselves a reasonable amount of quail shooting yearly in this State, let the "open" be after the birds are strong of wing and before the treacherous snow renders it possible for anything with a gun to exterminate a bevy at a single shot. The month of November would seem to answer the requirements, and it is believed that an amendment to the law now in force, making that month open for quail, would meet the approbation of free-trader and protectionist. The law is very generally respected in this section, and the mild winters have conspired to enable Bob White to multiply very rapidly, so that one rarely spends a day with dog and gun without being sorely tempted by the rush and whirr of half a dozen large bevies. If the winters continue propitious we shall one day have quail shooting galore, and the vials of ridicule will be uncorked on him who fails to bag his twenty couple from sun to sun.]

As we approach the western limit of this little preserve the alder growth disappears and before us lies a meadow of small extent, through which meanders the little stream along which we have been shooting.

Hark! What's that? *Scaipe, scaipe*, and a fickle wing disappers through the alders; *scaipe, scaipe*, and another erratic shadow disappears in the same direction. Can it be our old friends *Scolopax wilsonii*, on which we had our first field experience on the flats out Union avenue, between Saratoga and the lake, as the full-fed Fancy bowled along to game dinners at Moon's or Crum's? Yes, the same. How they twist and dive and swerve to puzzle the marksman and elude the shot! And how well they succeed is attested by the number of empty shells after four of the six flushed have joined their ox-eyed cousins in the bag.

Take a well-conditioned woodcock, pluck, sever head and tarsi and lay breast up on the palm of your hand, and what have you? A miniature turkey. Take a fat snipe, treat it the same way, and what have you? A miniature goose. Now take four of each so prepared and minus the trail, and have your good wife bake them in a pie, having an aperture in the upper crust for the occasional introduction of such a sauce as she knows how to concoct with a slight dash of *eau de vie*, and when you see it brown and smoking hot and pass your plate the second time, your gustatory nerves will tingle and you will acknowledge it a fitting finale to a good day afield.

Do I hear some one exclaim, "Avaunt, barbarian! Would you so treat a woodcock?" Aye, aye, sir; and so would you, had you once a finger in the pie. No need to invoke Epicurus; his shade will beam benignantly upon your board.

Have brother sportsmen noted that cock migrate earlier in the autumn than formerly?

Ten years ago when with Raymond, Rich and Hodgman, the Adirondacks, a few miles from the terminus of the railroad of that name, used to be our favorite shooting ground for grouse and woodcock, we always counted on the "flight" coming on during the last week or ten days of October; two years ago, what time in sadness we buried "Peter the Hermit" on the banks of the Hudson, H. and I fagged early and late over the same ground at the same time of the month, but the cock were not there. Last year they left central Michigan unusually early, and this year we have not moved one since the day herein chronicled.

From cover where in September one could guarantee to put up from ten to fifteen couple in a day, by the middle of the following month not a bird remained. Since the birds bred there they must have migrated during or before the first quarter of the October moon.

The rich find of the 18th is accounted for on the theory that the birds moving from their breeding grounds in the neighborhood and along the river, dropped into this ideal shelter, and finding a warm, sweet soil containing an abundant supply of their favorite food, were loath to leave and so tarried to our delectation.

After thoroughly beating the open pasture for more snipe, an empty stomach, a few pattering rain drops and the rumble of distant thunder warn us to seek lunch and shelter in the hayloft of the barn where our conveyance was left five hours before. Faster falls the rain as we cut across lots, and entering a piece of woods a small covey of ruffed grouse flushed with a roar of wings from a brush pile, and each man dropped his bird. If it had rained Greek-fire we would have followed the fugitives; and it was worth the effort, as the lightning lit up the now darkening forest before each crash of thunder, and the rain was swept by the driving wind in drenching sheets about our shivering frames, to see Stephens make a clean kill at long range on a grouse going like a rocket before the gale.

Ah, what a day! The fun was fast and furious!

"Yes," remarks the perpetrator of that pie, as by the light of the library lamp she fastens a button on my shooting coat, "but you were a thoroughly saturated and dejected trio as you drove home through the storm; now confess that you were utterly miserable!" I answered, "You know we always refer to it with a smile."

And further deponent sayeth not. L. A. S.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Natural History.

THE WOODCOCK'S WHISTLE.

NOTHING that I have read for a long time has interested me so much as Mr. Trumbull's account of his captive woodcock. It certainly deserves the encomium which you bestow on it editorially, for it is a fascinating story as well as an important piece of evidence. Nevertheless, I cannot think you justified in saying that it "would seem to finally dispose of the vexed question as to how the woodcock whistles," or in assuming that those "who have taken the ground that the sound is made by the wings" are now proved to be wholly in the wrong. Mr. Trumbull, it is true, appears to entertain the same opinion, but he is less positive, and his article affords internal evidence either that his conclusions are not wholly sustained by the observations on which they rest or that he has failed to express these conclusions with entire clearness and precision.

For example, he says in one place that the vocal notes of his bird were so like the whistling of ducks' wings as actually to deceive his companion, Mr. Marchant, into the belief that wild ducks were passing over at the time; yet in the closing paragraph of his article he affirms that "when a woodcock 'twitters' he squeals, pipes, squeaks, rather than whistles," and adds, "The sound made in swift flight by the wings of this and other species—many of our ducks, for example—is perhaps more appropriately termed a whistle." Again, while asserting quite positively in two different connections that he, as well as several friends who were fortunate enough to participate in the observations, were convinced that some of the vocal notes were identical with those made by free birds during ordinary flight, he admits that they "were seldom so loud or energetic as those of the flushed bird, nor were most of them like those heard in the cover. Yet at almost every trial there was at least one squeaky enough to be regarded as very nearly the sound we were listening for, certainly enough like it to convince any doubter who happened to be present that a flushed cock 'talks with his mouth.'"

I do not call attention to these passages in any spirit of idle controversy, nor with the least intention of discrediting the observations to which they relate, but simply because they appear to me to furnish some grounds for suspecting that Mr. Trumbull's observations have not proved quite all that he, as well as you, Mr. Editor, seem disposed to claim.

In a letter that appeared in the issue of FOREST AND STREAM for Aug. 22, 1889, I called attention to the marked variation of the woodcock's whistle, and, in concluding, said: "That while I believe most firmly that all the various modifications of whistling and twittering which the woodcock makes while flying are produced by the narrow, stiffened primary quills, I do not wish to be understood as denying that at least some of these sounds may be vocal." I confess that these words were added at the close of my letter more with some vague idea of guarding against possible error than from any real expectation that they might come true; but during the two shooting seasons that have passed since they were written I have been struck repeatedly by the apparent vocal quality of some of the sounds accompanying a woodcock's flight, and more than once have felt strong suspicions that my original position in the matter might be partly wrong. Mr. Trumbull has now shown conclusively that it *was* partly wrong, for I no longer doubt that some at least of the sounds which I believe to be made by the wings are really vocal. But has he proved that *all* are vocal? What becomes of the testimony of those of us who have held slightly wounded birds by the bill and heard the ringing sounds of the flushed cock coming directly and unmistakably (as we have thought) from the beating pinions; at first, as the wings moved rapidly and vigorously, in a continous silvery trill, then, as the bird became tired and relaxed its efforts, more faintly and disconnectedly, each note exactly accompanying a downward stroke of the wing. Were our birds also "talking with their mouths" and deluding us the while by idle pantomime? What, moreover, can be the function of the attenuated primaries (I suppose we may no longer call them whistling quills)? How does Mr. Trumbull explain the fact (attested by several good observers) that moulting woodcock who lack these quills *never* whistle, and the still more significant fact (which I have noted repeatedly, especially during the last two seasons) that birds which have nearly finished the moult and have the stiffened primaries nearly but not quite fully grown whistle *more faintly* than do birds in perfect plumage? Is the woodcock dumb when moulting and does he afterward graduate his vocal twitter in nice accord with the different *stages* of growth of his curious primary quills?

These and similar questions have occurred to me in thinking over Mr. Trumbull's testimony. I do not see how they can be answered if we must conclude that Mr. Trumbull is wholly right and we of the other side wholly wrong. It is as if some high authority on dogs were to assert that pointers and setters depend wholly on their sense of hearing in searching for game, and in proof of such assertion were to narrate a series of the most convincing experiments. A dog was first hunted with his eyes and nose bandaged in such a way that it was impossible for him to see or smell anything. He made a number of staunch points and was observed to pause and listen attentively while drawing on his birds. When pointing there was a slight but significant raising and lowering of the ears. Then his nose and eyes were freed and his ears stuffed tightly. While in this condition he ran over bird after bird and evinced unmistakable surprise and disgust at flushing them. None of the motions of the nose or lips which have been mentioned by writers as accompanying the act of drawing on game were detected, although they were carefully looked for. It was ascertained, however, that the nose was of some use in finding a piece of meat. These experiments were made in the presence of a number of well-known sportsmen, all of whom expressed astonishment at the result, but acknowledged it no longer possible to deny that a dog discovers the presence of game solely by his sense of hearing.

Such a comparison may seem absurd on first thought, but is it really so after serious consideration? In the two cases there is of course this difference; the dog has been so long and closely associated with man that the precise nature of the functions performed by his eyes, nose and ears may be assumed to be very perfectly understood; whereas, the woodcock, despite the fact that it is so generally hunted, is certainly known intimately but to few, if indeed to any one. Nevertheless I confess I am almost as ready to believe that my pointer's nose is a mere ornamental appendage and that I have to thank his keenness of hearing for the many birds that he has enabled me to bag, as I am to credit the assumption that the woodcock's attenuated primaries are used merely to produce sounds similar to those "made by many kinds of birds," and that a flushed cock talks *only* "with his mouth." I admit that dogs are occasionally guided in the direction of a bird by some noise that it makes and that at times they point game which they see but do not smell; but I have abundant proofs that scent is the faculty on which they chiefly depend.

So with the woodcock I have had experiences which have convinced me that the sound ordinarily made by the rising bird is produced by the wings. Mr. Trumbull, on the other hand, has heard this sound or something very like it given by a captive woodcock which, at the time, was standing on the ground with its wings tightly closed and which accompanied the notes by a slight but evident movement of its throat or breast. Sure of the correctness of his own impressions he not unnaturally concludes that the senses of other observers must have deceived them, and accordingly passes over their testimony in silence in drawing his final conclusions. If it must be admitted that the sounds which he has shown to be vocal are *identical* with those which some of us believe we have traced to the wings, the question is indeed settled, for, however good our proofs, Mr. Trumbull's are obviously better, and it is idle to claim that the same sounds are produced in radically different ways. But may there not be two sounds *seemingly* much alike but really of different character and origin?

It becomes evident on close reading of Mr. Trumbull's article that he is not quite sure of his identification of these vocal notes; in other words he hesitates to assert that they were positively the same as those of the flushed bird. They "were seldom so loud or energetic * * * nor were most of them like those heard in the cover," but were sufficiently similar "to be regarded as very nearly the sound we were listening for," while others "seemed absolute reproductions of those of the flushed bird as we remember them; it is, of course, impossible to recall them literally enough for nice comparison, no matter how often they have thrilled us." In any ordinary case the very frankness of these admissions would prevent the critic from using them against a writer who shows such evident determination to be entirely fair and accurate at possible expense to his argument, and it would be manifestly unwarrantable to claim that the mere opinions of an ornithologist and sportsman of Mr. Trumbull's standing and experience are not entitled to much weight.

But the case is not an ordinary one, and the entire confidence which otherwise might be reposed in Mr. Trumbull's convictions must be more or less affected by the fact that other sportsmen have recorded directly opposite convictions based on evidence which cannot be lightly disregarded. In this connection it also seems fair to insist that if the importance of a direct comparison of sounds be conceded, the advantage lies with the supporters—perhaps I should now say the defenders—of the wing theory, for their experiments have been made in the covers and immediately after listening to the sound of the flushed bird. As far as my personal experiences of this kind are concerned, I will say that I have no doubts whatever that the sound made by the wounded bird as I held it in my hand was identical with that which it had given on rising only a minute or two before. It may be objected that I was deceived as to the origin of this sound, even although I held the bird within a few inches of my face. I admit that this is possible, but it is not to my mind more probable than that Mr. Trumbull was also deceived, and that his captive really made its various twitters, squeaks and murmurs by an undetected rubbing together or "stridulation" of its stiffened primary quills—a theory which I am not, of course, disposed to maintain.

What I do maintain is simply this, that some of Mr. Trumbull's conclusions relating to the flight sounds of the woodcock are not satisfactorily proven by his own observations, while they are directly negatived by the experience of certain other sportsmen, whose testimony should not be arbitrarily dismissed. If, however, it can be shown that some of these conclusions have been a trifle too broadly drawn and that Mr. Trumbull, in common with others who have written on the subject, has fallen into error in supposing that all the characteristic flights of the woodcock are produced in the same way, most of the difficulties of the case will at once disappear. In other words, why may it not be that the "twitter" ascertained by Mr. Trumbull to be vocal has in some of its variations so strong a resemblance to a *twitter-like whistle* made by the wings that the two have been generally, if not universally, confused by ornithologists and sportsmen?

At first thought this suggestion may not seem to differ materially from that advanced in the closing paragraph of Mr. Trumbull's article; but Mr. Trumbull apparently indorses the idea expressed in his quotation from Frank Forrester that the "twitter" and "whistle" are habitually given simultaneously by birds of perfect plumage, and in this and other connections he distinctly implies that the "whistle" is at best a slight and in no way characteristic sound, and that it is usually drowned by the vocal note, the latter being the sound ordinarily heard from a rising woodcock.

Now what I have found to be the characteristic sound of a full-feathered woodcock on rising and afterward during vigorous, protracted flight is a clear, continuous, pulsating whistle closely similar to that made by the wings of certain ducks, but louder (perhaps because the woodcock is usually nearer than ducks are apt to be) and rather more silvery and musical in tone. It is not subject, so far as I have observed, to marked modifications of tone, but the pulsations vary in distinctness with the speed at which the bird is moving. In very rapid flight they are often so run together as to be inappreciable. This whistle I believe to be made by the wings, or rather by the well known specialized outer primaries. I have never heard it from a bird which lacked these quills, nor on the other hand have I known a bird in which they proved to be fully developed rise in the ordinary manner without whistling, although a crafty old cock will not infrequently steal off close to the ground, moving its wings in a peculiar quiv-

cloud I ever saw, the upper part barely above the tree-tops, tumbling over and over toward us, like the surf on the beach, but without the noise. Every few seconds we could see the glare of lightning behind the cloud which was moving toward us with frightful velocity.

Soon our wind was gone, and we lay rocking on the long swells in perfect silence, save for the slatting of the sail as the boat rolled. The oppressive silence was broken by the skipper, "Down with jib! Let go throat and peak and down with that mainsail! There's wind there, and lots of it."

The jib was soon stowed, the mainsail tied up, and with an oar the boat was hove around for the squall, which by this time was close aboard. Now comes a low rumble of thunder, the clouds bend toward us, the lightning is almost incessant, big scattering drops of rain patter on the water. The clouds bend lower and lower, between the flashes of lightning the darkness is intense, then for an instant a hush like death, and then the very firmament seems torn asunder. A blinding flash that seems to tear the eyeballs, a rending, rattling crash of thunder, and the squall was on us. Lucky for us that our sail was down and that we had headed the boat for the squall, for had it struck us abeam we would have been blown out of the water or under it.

Right on the heels of the wind came the rain. And such a rain. Nothing could withstand it. We had rubber coats, but they were as useless as cobwebs. We were drenched in an instant and for perhaps five minutes were nearly smothered. One could not tell spray from rain, the air was full of both.

But though intense the squall was soon over, the wind dropped almost as soon as it came, the rain grew less, pattered feebly here and there, then ceased altogether. The sun, brighter and hotter than before, shone with a new beauty, and the face of nature, wet, but smiling, was once more ours.

But what a drenched crowd we were, we were not only wet, we were soaked. Everything in the lunch basket was soaked to a pulp, except some hard boiled eggs, and they were beginning to be soft.

"Boys," says one, "do you want to go to the island with that mess of water-logged grub, I don't." And the rest of us thought so too.

Sadly we took our poles and slowly headed back toward the river. It was ebb tide and low water, but hard work took us wearily up the river. Time wi ll accomplish any thing, and an hour or so later we reached the dock, and wet, hungry and discouraged we plodded our several ways home.

"No, we didn't get any fish." TARPON.

TARPON SPRINGS, Florida.

OVER THE OLD "SQUIRREL ROUTE."

THE late Frank Forester, in one of his breezy delineations of the glories of autumn shooting, rather went out of his way to attack Bryant for inaccuracy in his beautiful little poem on "The Death of the Flowers."

He quite forgot that Bryant wrote of a later season, of "wailing winds and naked woods, and meadows brown and sere," and of "the cold November rain," and not of the bright October with its clear, crisp mornings and balmy days, and its woodlands yet gorgeous with the many colored livery of the ripening foliage. Had Herbert lived to this year of grace, 1890, and passed it in New England, the slur on Bryant would hardly have been written, for of all the Octobers I remember, and they are many, I had hardly recall one so generally wet and cheerless. There were two or three bright days in the first week of the month, and one or two more sandwiched in about the middle, but I was busy during the first ones, and the latter ones came in so unexpectedly that I did not take advantage of them, and my gun has never left its case in the closet this year.

I did take a tramp, however, on the 18th, when a bright afternoon broke out of a dark, foggy morning, over a favorite old "squirrel route" among the hills, which many long years ago I was wont to follow with my brother when we were both young, and which, twenty years later, I often traversed with my sons.

Leaving the village about 3 P. M. with no weapon but an Alpen stock I struck out on a long disused road at the base of the hills, said to have been used in the early days of the settlement, when the roads through the meadows were impassable from mud in the spring, and climbing a steep, stony pitch soon reached one of the few bits of "old woods" left near the town. Half a dozen tall pines, as many big butternuts, a score of chestnuts and a hundred oaks, with a few small hemlocks and minor trees, have been spared to cover six or seven acres and to afford a pleasant and convenient woodland retreat for visitors in the summer days. Beyond them a "pair of bars" and the remnants of an old farm gate, open to a long stretch of pasture land, which separates the steep wood-covered ridge on my left from the level meadows 200ft. below.

Down through this pasture the old road makes its way, slowly climbing the hillside, until two miles away it turns a branch sharply to the left and crosses the ridge to some farms behind, or rather it did once, for it has not been used for years, and is now obstructed by rail fences and stone walls. I leave the road, however, after passing the bars, and bear sharply to the left up a rough ravine or gully, which comes down from the northerly crest of the ridge, and down which trickles a little brook, lost in the summer among the broken stones which form its bed, but full enough now to make it necessary to keep up on the slope, stepping among the wet leaves, over the broken stones, which are half-covered with soft vegetable mould and moss. I soon reach a point where the major part of the little brook comes pitching down 60 or 70ft. over a precipice to the right, first with a clear leap of some dozen feet and then shattered into spray, tumbling over the broken stones in foam till it meets its companion and partner coming from the left at the bottom of the gully. Climbing the steep walls of the ravine I come to an old wood road, which once followed up the little brook to its source behind the ridge, but it is so grown up with witch hazel and swamp maple I can hardly follow it, and now I meet the brook coming down the roadway. A broken pine branch, thick with its clusters of leaves, has fallen across the channel at a narrow gorge between two big stones, and other twigs and leaves have been stopped by it until it has made a complete dam and turned the waters into the path.

The hook of my staff soon removed the obstruction, and the waters return to their course, while I go on mine. Here at the foot of the ridge is a well-remembered spot. A great white stone at the foot of a huge pine recalls the mornings when I have sat on it and listened to the bark of the gray squirrel, or the "swish" which marked his spring among the branches of the surrounding beeches and chestnuts, or the nestle and patter of the grouse among the dry leaves. But I cannot stop here now, I have a long walk laid out and must keep on. My way leads me right along the foot of the cliff, where here and there I see the last decaying rails of an old rail fence, once a favorite "runway" for game, but it is almost gone, and I have often to diverge from the old path, where the branches of some old chestnut on the ridge, shattered by storm or lightning, has come crashing down across the way.

Now I reach another old landmark. An old chestnut "stub," 4ft. in diameter and 40ft. high, long stood here, a favorite hiding place for the gray squirrels when disturbed among the surrounding beeches. How many years ago its top went I can't remember, but now the whole trunk lies across my path, split open by the fall. The axe marks at the butt show that it has been cut down, and the deep hollow disclosed tells the story, "coons or honey," I do not know which, for wild bees are occasionally found in New Hampshire and tracked by the local "Sam Lovels" in the same way as so well described by Mr. Robinson.

I mount the fallen trunk, light my pipe, and look around me. There, on that huge beech, are four sets of initials, somewhat grown out of shape; for they were cut twenty years ago by my sons and their comrades. Thank heaven, the boys are all well yet; but how they are scattered! One is at the head of a large machine shop on the shore of Lake Erie, and another in a like position in New Jersey; one is superintending the U. S. Fish Hatching House in Oregon; and the other is exploring in Alaska!

"The world do move," and so must I, for I have loitered along till the dark clouds are coming up in the west, and as I emerge from the woods into a long stretch of open pasture sloping to the south, the distant hills are losing their color.

I hasten on, still keeping the ridge to my right, under the lee of the last really big oaks and chestnuts left in town, till I reach the other end of the old road on which I started out, and climbing the wall follow it into the woods. But the woods do not last long, for soon after I cross the summit I come to a great clearing, cut in from the river side last spring apparently. The big oak logs lay around in huge piles, ready to be "sledded" down to the village and worked up into furniture and baskets as soon as the snow comes, and the piles of firewood made from the tops and branches are thickly studded between them.

Some of the trees are old enough to cut, and I do not care if the owner will only let the land grow up again to wood, and not burn it over for unnecessary pasturage.

The Vermont hills opposite are in deep shadow now; the river bank, full from the autumn rains, sparkles in the fading light, which shows its sinuous course through the meadows, up all the swales and low places, of which it sends long "setbacks" of quiet water, and the village shows two miles away in the distance. It is all down hill work now, and I strike a racing gait down the old road, splashing through the little rivulets which trickle from every spring on the hillside, trusting to my hob-nailed shooting boots to keep my feet dry, and coming out where I went in at the "Old Gate," and reach the village just as the lights are beginning to sparkle in the windows, with my legs well stretched and my lungs well filled with the mountain air, just in time to put on dry shoes, pick the cockle burrs out of the legs of my trousers, and be ready for a hot cup of tea and a hearty supper.

VON W.

OCTOBER 18.

Woodcock in the valley,
Grouse upon the hill,
O, take your trusty dog and gun
And your game pockets fill. —*Pennyson.*

HEADQUARTERS, Alma Association Knights of the Trigger, Oct. 17, 1890.—*Comrade Sir Knight:* Information has just been received at this office that a detachment from the main army of Philohela Minor, in its annual migration, has swooped down upon the lowlands to the west of the town and is boring the ground full of holes and otherwise affecting the property of the honest yeomen. You are therefore required to present yourself armed and equipped for duty to-morrow morning at 7 o'clock. (Signed) HISRAL, High Muck-a-Muck.

THE members of the association are all officers, numbering three; and besides the official signing the above order, there are Stephens, Muck-a-Muck; and the writer hereof, just plain Muck.

We had been anxiously awaiting the order for some time, knowing that our superior "kept tab" on several likely pieces of cover; and bright and early the following morning we repaired to the rendezvous—the Wolf's Den—and from the lookout discerned Hisral far down by the river advancing stealthily, gun in hand, toward an old stump for a shot at what appeared to be an otter sitting motionless behind it. Now he is in short range, and raising the gun to his shoulder, stands erect to sight the quarry. No booming gun salutes the rising sun; no otter dangles at his belt. It was the cat.

Sparing his blushes as he joins us in the wagon, and with old Dan, a pointer of shady pedigree but good field record, under the seat, we bowl along in the crisp autumn air, each moment adding to the feelings of relief from business cares and anticipations of a rare day in the woods. Only when an outing is the fruition of days of hope does one experience the full witchery of such a morning ride. Each wayside clump of alders invites, and every rushy, willowy margin of meadow brook pleads to be explored; but we tarry not, knowing that a short half-hour will find us on ground which last year yielded ample satisfaction to dog and gun.

Stabling the horse with a farmer friend we are soon three abreast and Dan quartering before, beating up the margin of a woodland stream. Up jumps a woodcock and twists away on whistling wing, as Stephens opens the ball with both barrels; and the rest of the line continues the volley as he again flushes wildly, but as he tops the alders a shot directed more by faith than sight drops him in the bosom of the brook, whence Dan retrieves to our satisfaction but not to his own, for he hopes to mouth it outrageously as soon as he is out of the water, but we anticipate that little "aside" and relieve him of his burden at the brink. How like some people—commendable when deprived of the opportunity to be otherwise. Then we did just what you would have done—took the bird by the bill, shook the glistening drops from drooping wings, watched for an instant the bright eye lose its lustre, smoothed the ruffled plumage and admiring his unusual size, consigned him to the deep recesses of the shooting coat. A "ground keeper" sure, and full eight ounces. Finding no more birds for a few rods, we traverse the chord of an arc made by a big bend in the stream, and strike it again in a neighboring meadow. What a striking contrast is presented by the woodlands in June and October! Then each blade and branch was clothed with living green and fragrant flower, and every bough melodious with the song of birds. Now, gone the floral train and forest choir, and the silence in nature's great cathedrals would be oppressive were not the eye, and through it something within, satisfied with a glory of sunshine and varied foliage. See that maple robed in yellow plush, that sumach in crimson hue, and there by the river bank a lang syne king among forest kings has lost his crown, his stalwart trunk and broken arms entwined by a vine of rainbow tints, whose tendrils swinging gracefully soften the outlines of the picture mirrored at his feet. What a rich possession is a taste for that sport which makes a man a lover of forest and field and all that is in it.

Having reached the meadow brook almost concealed by rank weeds and graceful willows, Stephens and I take the outer edges of the cover, while Hisral takes old Dan to beat close to the brookside. Soon a cock flushes and as I pull the trigger the report of his gun assures me that I might have saved my ammunition, for the bird falls ere the recoil in felt. Then a wily fellow tried to sneak off through the bushes, but a charge of No. 10s through a patch of briers sent him to grass. Passing on the dog stood staunchly by an old log some distance from the margin of the stream and we all drew up in company front about 10yds. apart, every nerve strained in momentary expectation of a flush and each counting on getting in a shot instanter. That bird might just as well walk out and say, "Don't shoot, but put me in your little bag and reserve your ammunition for my sisters and my cousins and my aunts."

What a picture! Three men and a dog motionless, breathless, fingers on triggers, intently regarding an old root at the end of a decayed log! There we stand, and stand and stand, till the suspense is painful and a blue-jay laughs discordantly as he flits overhead; he must have been sounding the key note for the symphony in Q that followed. Hisral can stand it no longer, and as he steps in front of the dog the cock springs from his very feet and straight as Tell's arrow comes directly for my head. Shades of Herbert defend us! If I move not that long bill will bisect my right eye. My companions dare not shoot, as the bird is directly between us, and as a wing brushes my face I dodge and strike with the gun which discharges at an angle of 45° with the horizon, and whirling, the other charge is thrown away as he disappears in the brush.

Something funny must have happened, as my friends gave free rein to explosive merriment, offering as a reason therefor that in the scene above described, facial expression, attitude, action and result were too much for human nature to view unmoved. And when it was intimated that the grand old forest aisles, fit temples for druid or fairy, should not be profaned by such boisterous mirth, they danced in fiendish glee, waking the echoes with a perfect rage of laughter. "*Et tu, Brute?*"

"Chickens will come home to roost" was thought deeply but breathed softly, as following the sinuosities of the little stream soon brought us to the edge of the woods and into an old swine pasture of possibly two acres grown up to patches and clumbs of alders, with cow paths winding in and out, making a perfect picnic ground for woodcock; and there they were in numbers exceeding anything we had ever seen before in grounds of like extent.

Frank Forrester says in his "Field Sports" that he never found a flock of them but once; and happy is the man who thus finds them once in his lifetime!

After two or three had been properly perforated and my companions were by themselves in a little cripple, the cock began springing about them, one, two, three, six, ten, a dozen on the wing at once, and what were these erstwhile hilarious hunters doing? There they stood like animated weather vanes, each succeeding instant pointing their guns at different points of the compass as the birds jumped from their feet in front, at the right, left and behind them, and never firing a shot.

What's the matter with Stephens? him of the unbridled merriment and "light fantastic toe" on the greensward, rattled? Yea, verily, shattered.

And was Hisral rattled too? He of the explosive laughter, who in bygone days in these self-same glades wooed the wild turkey to his doom with a leaf of evergreen brier, and from yonder knoll dropped a buck of seven points as he cleared this stream at a mighty bound; Hisral, who flinched not when old bruin turned on him at ten paces; was he unnerved by the whistle of a dozen woodcock? "Tell it not in Gath." Yes, Hisral was rattled too.

Under such circumstances was it not pardonable to retire behind a huge tree and quietly chuckle? And a little red squirrel on a branch overhead jerked his tail toward those marvelous marksmen and chuckled too. Honors are easy.

A council of war was now held, and one was stationed at a pass formed by a wood road between the alder swale and timber, and one proceeded to systematically hunt the swarm by keeping them moving back and forth; and as old Dan drew gingerly and stood staunchly on bird after bird, the currency of the realm—No. 10's—was put where it would do the most good; and bird after bird came to bag until only one out of sixteen escaped to carry the tidings to his fellows in the sunny South. Woodcock rarely take wing after a death shot, but as we were going quietly along about 50yds. apart, Stephens called out "There goes a woodcock, and he dropped in near that large beach tree just in front of you." Hisral stepped to the spot and there lay a plump bird in the last gasp, a drop of blood at the base of the bill indicating that he had bellows to mend.

Just before us was a fallen treetop, and as a bird flushed he was quickly cut down not 6ft. above the ground. Stephens saw him fall and ejaculated, "By the powers at Lansing, it's a short-billed woodcock! Who would have expected to find one here!" A strange diffidence seemed to have seized us all; no one claimed it, but Dan did a very pretty piece of work, trailing with the relentless persistence of a life insurance agent, through

and paddled up to camp, leaving the coon. Probably he was dead and resting on the bottom somewhere.

By Monday night L. and I began to cogitate. The little water gauge which we had notched off into inches and carefully put out on our arrival at Gum Ridge, showed the water to have risen just one inch every day. An inch in that flat country, almost already entirely overflowed, meant a great deal. In two or three days more every foot of land except the mounds would be under. Then we would not care to continue the hunt. And again, we already had just twelve turkeys, certainly a good bag and enough to satisfy all reasonable desires. It was L. who first suggested that we should not stay our appointed time. As for myself I have never been known to take the initiative in conversation leading up to a subject of this kind.

"Mr. Telescope, don't you think we have got about enough game, and hadn't we better go home shortly?"

"What put that idea into your head? Don't you know that on our way up the launch consumed about nine boxes of coal—over 1,000lbs.—and that she can carry all the game we can kill up here in a month yet?"

"How will you keep the game? The refrigerator is full, and I haven't great faith in keeping game long lying on the bare ground and covered with dry leaves. I think we are running some risk even now."

"Look here, L., what's the matter with you? Didn't you come up here to stay ten or twelve days at the shortest? We have abundant provisions, we still have some land to hunt on, and we are just having a royal time and you want to break it up. You surprise me. You have always been able to be away from your mother longer than than this. Maybe it's the girls that are bothering you?"

"It's not the girls, either."

"Need not color up, my boy. If that's it, of course you are a little in bad shape for a protracted hunt; but they won't get away, be plenty of them when you get back to Vicksburg. By the way, L., I notice you passing under our electric light pretty often now. Am keeping my oggles on you closely. Rather nice young lady that. But I would think you would need some beard before proceeding to serious matters."

"Oh, I can stay up here as long as you can, but there is no use in it. As to girls, it is Lent now, and there are no parties, anyway."

"I'll tell you, L., if we have luck to-morrow we will go home Wednesday. You know we want more gobblers. We have almost too many hens. You won't help me get gobblers. If you'll promise not to shoot another hen, I won't."

"There is no law against shooting hens, is there?"

"No, but gobblers are larger and finer for the table, and it is more sportsmanlike to kill them."

"Well, what have you been tumbling over so many hens for then? You have not paralyzed yourself killing gobblers."

"Now, L., can't you help me a little—please kill a gobbler to morrow."

He promised and we shook hands on it. In the morning before it was yet light L. and I were on the way back to the mounds, that charmed spot where we had found so much game, and felt so sure of finding it again. On the way a large gobbler was flushed from a tree overhead. He had gone in there the evening before, after having been shot at with the rifle. It was yet quite dark and we gave him no further attention. Arriving in the vicinity of the mounds we fastened the Amateur 200yds. away, and began to wade toward the bluff side.

"Take your choice, L., I think we had better separate this time."

"Either will do me."

"There are turkeys on both, I'll wager; take your choice. To the right or left?"

"Choose yourself."

"Well, then, you go to the right. I know there are turkeys there. Now take your time, and if necessary spend an hour in wading in, and don't flush the turkeys whatever you do until you have a sure shot."

"I'll try."

"Oh, that face."

"Wish you'd let up on that face."

"It'll ruin you sure. Wrap it up in moss—cover everything except your eyes."

"I'll do it."

"L., a gobbler this time."

"A gobbler yourself."

"When this telescope draws a bead, a gobbler it is."

"And when this shotgun throws its seed, a gobbler it is."

The mound I was approaching was bluffer and better covered with undergrowth than the other and consequently easier to approach; but L.'s was the more prolific in game as a rule. My anxiety as to how he would approach it was relieved, when on reaching my mound I looked back and away off through the timber and saw that he had not made more than half my progress I felt then that something good awaited him.

On circling my mound to the right I saw turkeys beyond range, and watched them for a long time. Finally they fed to the other side, and I moved around under cover; then very cautiously with some large trees between us I moved, stooping very low with my face to the ground to one of these trees. Here I rested to steady myself for a shot, expecting to get one in a minute. On peering around I failed to see the game. This was repeated several times without seeing or hearing anything. Then I moved around to one side of the tree and sat down on a lot of dry bark, which I had silently broken up and placed in a fork of the roots, with my feet in the water. A tree near and behind gave me a splendid location. A bunch of moss had been put on my head and my cap pulled over it. The moss was then pulled down in a string on either side and tied around my neck. In this way, aided by a heavy growth of beard, my face was concealed and protected from the mosquitoes, which on this day were annoying—except my nose and eyes. With a small piece of bark, with my elbow resting on my knee, I fought the insects from there.

And all the time the woods down from the mound were watched for a motion of the turkeys. After a while L. shoots—and shoots again, in quick succession. I feared that my turkeys would fly, but there was not a stir in that part of the woods. I began to wonder whether they had not fed away, but dismissed the thought promptly on reflecting that land did not extend very far away and they were not likely to wade the rather deep water over to L. What could L. have shot at? ran through my mind. Had he another hen, or had he made a clean miss, or had he got in his work properly, with a gobbler with each barrel? Hardly.

Just then two hens stepped into an opening not over 40yds. away. I moved to raise my rifle but suddenly recollected that L. had instructed me to get a gobbler, so the rifle remained on my lap, but I quit fighting mosquitoes and bathing my eyes. Presently more hens worked into view, but not a male could be seen. I determined to have a gobbler unless the hens made me out, when I would take what I could. I watched them closely, the mosquitoes in the meantime enjoying an unmolested meal. Several times a hen would straighten up and take a survey of the surrounding woods, but I was ready, if the alarm was suddenly given, for the emergency and believed I could get a hen even at that late stage of the proceedings. But nothing of the kind took place, though the hens finally worked within 25yds. of me and I felt sure my presence would be detected.

At last a gobbler exposed himself. He was not so large nor so fine as I had desired, but he would do. It would not be quite safe to delay on him. I could not trust him to go behind a tree. Too many already had done that to me. He looked innocent and unsuspicious enough, it is true, but such appearance goes for naught with a gobbler at such times. Just as he was about to walk behind a tree I made a rather hasty shot.

There was a great flight. Turkeys took wing, it seemed, all around me. They seemed to get up everywhere. I had not the least idea that there were so many. I would not like to hazard a guess as to their number, lest I be laughed at. One turkey made me feel sick, as he took wing from behind the tree I was sitting against, not over 10yds. away. He was the one I wanted. He looked every inch as big as a barrel, with a beard swinging from his breast a yard long. I watched his flight eagerly; but he went, and went, and went, until he was a long way beyond the depth of my rubber boots in the deep overflow. I did not even know that the little one had been killed. Indeed I feared for the worst and felt not the best.

I did not move from my bark seat, but sat there for three-quarters of an hour, and saw nothing except some hens away off in the timber.

When at last I ventured to call, they only answered by flying further away. After a while I abandoned all hope of calling them back. They had seen too much of us about these mounds. I then slipped off down there and got two shots. This settled the business—the turkeys, so far as could be seen, flew to Europe.

On wading back, I again became interested as to whether I had killed that gobbler. After firing I had not seen nor heard a thing of him. Did he beat the ball to the tree and save himself? Certainly he was close enough to me—but those were the ones I generally missed. I wished I had waited longer for the big one.

Presently I found him, not where I had expected, but a little further on, with a ball through just behind the butt of the wing: he had forgotten to stop behind the tree. An 18-pounder—not so bad after all.

Having covered my game carefully, I then waded across to L.'s ridge and gave a low whistle, and, receiving no answer, repeated it a little louder. His peculiar note came back. I would know that whistle in the wilds of Africa.

"Well, L., what have you done; did you tumble 'em?"

"I got only two."

"Only two? Thunder, how many did you expect to get? You shot but twice."

"I shot but twice, but you ought to have seen the flock."

"But you don't expect to get more than one with each barrel?"

"Why, man, I killed two with the first barrel and missed with the second."

"Two with one barrel? Both hens?"

"Both gobblers."

"Both gobblers? Ain't you joking?"

"Look for yourself, here they are," lifting his coat and exposing to view a couple of magnificent gobblers.

"L., shake! Get up, and let's look at you. Bless me, how you've grown. Two inches taller. You're all right now. You are in for gobblers after this. And your beard will put out. You are a man. We go home to-morrow and you can see your girl and—"

"Well, say, let up on that, will you? What have you done? You shot three times."

"Well, I didn't get two at one shot."

"I hardly expected that with a rifle."

"I did do it the other day."

"But you left one in the woods—that don't count. We want the game in camp. Say, how many did you kill?"

"Three, two hens, one gobbler."

On our way back to camp, three hen turkeys were seen in trees on the right. Before getting into the canoe we had voted unanimously not to kill another turkey, especially a hen. But here they were. It was rather an early test of our resolution, and we were not quite prepared for it. Did L. want to try one with his shotgun? He would not mind doing so. But the birds were wrong for a shot from the right shoulder.

"Don't appear to notice them," in a whisper. "We will paddle up out of sight and turn round. I'll steer the canoe while you shoot." Thus I spoke to L.

The turkeys were back a little from the river, so after turning I kept the boat under cover on that side until we came in full view opposite them. Then L. fired, once, twice, quick.

"Why did you shoot the second time? Your turkey was falling then?"

"Could not help it; wanted to make sure."

The others flew of course, but to our surprise one lit but a short distance away.

"L., I believe I'll try that with my rifle. Paddle down a little further and she will be in easy range."

"Thunder, the cross-hair goes all over and around her; sit still, I can't shoot; couldn't hit a meeting house."

Directly the sight starts to cross the body and I pull.

"Good; that was a splendid shot."

"An accident, my boy, a pure accident."

"I like to see accidents like that from a tottery boat. It was good."

"L., we'll go home to-morrow."

"Agreed."

"And you shall see your girl."

By 11 o'clock we were in camp with our seven turkeys, which we had killed in eight shots, one shot having been made at an already mortally wounded one. It was rather a clean day's work. I do not think we could have done it except for the overflow. Their range being limited rendered the birds easier to find. It also seemed to disturb them and make them less wild. We would rather have called the big puffy old gobblers and shot them as formerly. Still we found every day that they had legs, eyes, ears and wings. They also had an unlimited woods to fly through. The big flock on our camp ridge proved rather too smart for us, and I believe we got but one out of it. My first day of grand fizzles among them educated them away out of our reach.

In the afternoon William was given ten cartridges and the shotgun and told to bring in ten rabbits, and left on his mission. L. also went after them with a .32-caliber Winchester. He had been anxious to get some game with that, and as I had persuaded him not to risk it after turkeys, why, he would try it on rabbits. At the target he could make some very good shots. Shortly there was sufficient noise to frighten everything wild out of the woods. The rifle and shotgun both opened up lively, and I knew that a new element of destruction was among the persecuted long-ears. L. was first back in fifteen minutes with one rabbit with a great hole in his back.

"Gracious! Did you shoot all your balls through him?"

"I didn't shoot him but once, thank you, sir."

"Where are the others?"

"Out in the woods."

"How many times did you shoot?"

"Something the matter with the gun."

"How many times, L.?"

"O, seven. But the barrel's got something in it."

"Take a club. You can get 'em with a club. Or take a bag—there's an ice sack—set it and chase them into it. You can get it full."

Presently William came in with five. He was given more ammunition and told to get himself five more, which he did in about ten additional shots. He did not show much marksmanship, but seemed greatly to enjoy it, as he was too near camp to be afraid.

We drew our seven turkeys and hung them up on the outside of the launch. There were five in the refrigerator—the first killed—and seven on the bare ground, covered with dry leaves and then with the Boss, which had been turned upside down over them.

We then set to work to prepare for an early start in the morning. The boiler was filled, furnace cleaned of ashes and cinders, and kindling and coal put in. Sundry other things were done to facilitate getting away for home by daybreak. It was almost as much of a delight to us as the preparations for starting on the trip. We were feeling good over our success.

Toward night a fearful rain and wind storm set in. Everything was fairly protected, and this did not disturb us very much. Before dark the storm ceased. About 9 o'clock it commenced again, and, so far as we knew, raged with unabated fury all night. Many times on awaking it could be heard roaring through the tall and thick timber. Trees could be heard crying as they chafed each other, and the heavy winds appeared to come and go in great waves, chasing each other over the vast forests, the one rushing in with great fury ere the old one had ceased to sigh in the distance. Immediately over us the canopy of the Greenwing kept up a great clatter by the heavy rain fall. It was, indeed, a fearful night. The more so upon reflecting that the vast delta, already flooded, was being more deeply inundated by this tremendous downpour.

In the morning we were up an hour before day for the early start. It was still raining, though not heavily. Everything about camp was under water and our rubber boots had to be used.

The turkeys under the Boss and the rabbits were all in water. It was more than we had expected, even for so heavy a rain. The gauge indicated a 4in. rainfall.

Our journey home was one of no particular interest, except that the water was about one foot higher and the country in just so much more distress. On one ridge, three miles below our camp, we saw several head of cattle standing knee deep in water. It was the highest ground in that locality, and, on that day, there was no land out on the upper Little Sunflower except the mounds. Unless rescued those cattle would perish along with hundreds more in other places. We could do nothing for them, could only pass on leaving them there to their fate.

The day was cool and dark, with an occasional spattering of rain, a not unpleasant day for the run home.

The last killed turkeys were left hanging around the forward part of the canopy. It was with pardonable pride, we hope, they were left there, to be seen by many persons as we steamed down to Vicksburg.

In about ten hours we reached the Greenwing's buoy in Lake Centennial and blew the whistle for Douglas, the watchman, to help us ashore with our traps.

The little launch had behaved herself very nicely all the way up and back, not cutting up a single caper as she is wont to do. A nice little boat indeed, and may she bob and splash in Lake Centennial until we go again, when we fully contemplate having another grand time in the woods, Lawrence and I. Even as we write we learn that the turkeys have passed through the overflow without great disaster, and that large broods of the young are being reared to replenish the ranks thinned out by their numerous and destructive enemies, including the great overflow, which, even after our return to Vicksburg, rose several feet higher over their favorite range and feeding grounds. Long may they flourish to thrill the heart of the sportsman as he listens to their notes and endeavors to cope with them in their native wilds. W. L. Polk.

Pennsylvania Trespassers.—At the meeting of the State Grange, held at Harrisburg, the committee on resolutions passed the following: "Resolved, That this State Grange recommend to the Legislature that a bill be enacted that hunting or fishing without permission from the owner of the grounds be made a criminal offense." It looks very much as if those who framed this movement were sadly deficient in their knowledge of law, for had they referred to the trespass laws of Pennsylvania they would find that they have now the same redress as they would have in the passage of this bill. Col. R. H. Thomas, secretary of the State Grange, being interviewed by your correspondent, said: "We will put forth every effort to have the bill passed, as it is high time for the farmers to have better protection against the useless idlers who shoot their domestic fowl, break down their fences and trample their crops."—Minnie Mingo.

ering way, very like that of a rail, or mount straight upward with slow, lazy flapping, much in the manner of an owl and quite as silently.

The sound to which I should restrict the term twitter is so difficult to describe that I find myself unable to characterize it briefly and aptly. It is shriller and more metallic or steel-like than the whistle, and very much more varied, the key rising or falling sharply. Unlike the whistle it is rarely uniform and never, I think, continuous, the notes being given in an explosive volley or succession of volley, with abrupt pauses between. This sound has been compared to the twitter of the kingbird, to which, at times, it certainly bears some resemblance. It has also reminded me of the outcry of a chipmunk squirrel. According to my experience woodcock twitter oftenest when circling over a cover preparatory to alighting or when in the act of alighting they flap their wings a few times to check the speed of their descent. I have also frequently heard the twitter from a bird which had been only slightly startled and which, at that time, was flitting irresolutely a few yards before dropping to the ground again. I have heard it oftenest at night or in the evening twilight, when birds were coming into a cover or moving from place to place on leisurely wing in search of feeding ground. I have never heard it, so far as I can remember, from a startled woodcock in swift vigorous flight. Despite the differences just noted the twitter resembles the whistle so closely in general tone and character that until very recently I have believed it to be merely a variation of the same sound. But since reading Mr. Trumbull's article I am convinced that whatever the origin of the whistle the twitter is certainly vocal.

I trust that no one will misconstrue either the spirit or the letter of what I have just written. It would have been much easier and pleasanter to accept Mr. Trumbull's conclusions *in toto* than to try to pick flaws in them. But as I cannot believe them to be wholly sound, I have felt constrained to point out wherein they seemed to me incompatible with known or assured facts. It will be observed, however, that even if my objections and counter-conclusions are sustained, the general accuracy of Mr. Trumbull's observations and deductions will be but slightly affected. To those of us who have supported the other side, the alternative is less flattering, for with respect to our position the question is now simply whether we have been wholly or only partly in the wrong. Nevertheless, I am sure that we cannot but feel grateful to Mr. Trumbull for the flood of light which he has cast on a hitherto obscure subject. WILLIAM BREWSTER.

Editor Forest and Stream:

In your editorial comments on Mr. Gurdon Trumbull's article on the woodcock, in your edition of the 11th inst., you say that no one had remarked on the curving of the upper mandible of the bill. I have had but little opportunity for studying the woodcock, never having lived in a section where the bird is more than a casual visitor, but I have had the good luck to see the bird curve the mandible while I held him, entirely uninjured, in my hand.

Back in the early 80s (I cannot say which), while stationed at the Boston Navy Yard, some men of my department saw a woodcock light on the ground and run into a pile of lumber; they secured him without starting a feather, and brought him to me. I put him in a wire house in which my children had had some rabbits and kept him four days. I did not have the time to give to a close study of his habits, but one thing I did have my attention called to and that was the curving of the bill. I had the bird in my hand before putting him in the inclosure and while examining the head and eyes I took hold of the tip of the bill and immediately on my letting go he curved the bill exactly as shown in Mr. Trumbull's sketch. I was uneasy at first, thinking I had injured the bill, but in a short time the bill was in its proper shape. I repeated the thing three or four times and always with the same result.

I did not see the bird feed, although I have no doubt that he did so, for after four days' confinement he was as plump as any bird I ever saw, there were plenty of worms in the earth in the inclosure and I kept a place very wet, but did not examine for borings.

At first the bird was quite wild, and when I would go into the inclosure would start to fly, but would bring up against the screen and fall back. I thought at first he would kill himself, but the hard knocks did not seem to hurt him in the least. In all of his quick short flights I did not hear the peculiar noise the woodcock makes in flight; I did hear the noise noted by Mr. Trumbull when I approached the bird.

He got very tame, and on the fourth day when I took him out of the cage to set him at liberty I had no trouble in catching him, he allowed me to pick him up without trying to get away from me, and when I reached the open fields and let him out of the basket he walked around, with my wife and me just standing within 10ft. of him, for at least a minute before he took flight.

The bird was very interesting, and I was sorry I did not have the time to observe him more thoroughly.

As to the sound made by the woodcock when in flight, I do not believe in the "wing theory" any more than I believe that the *skeep* of the snipe is made by the wings. U. S. G. WHITE.

NORFOLK, Va., Dec. 16.

Editor Forest and Stream:

Mr. Gurdon Trumbull's article on the "American Woodcock" that recently appeared in the FOREST AND STREAM is one of the most vivacious, concise and beautiful monographs that ever graced a sportsman's journal. This is saying considerable, but it is a fact nevertheless. Mr. Trumbull is a practical ornithologist—by this I mean one who does not deal in any guesswork or hearsay evidence, but one who studiously finds out all the "whys and wherefors" himself. He knows how to express his views as a naturalist so that one need not be a graduate from some university or college to understand what subject is being treated. Mr. Trumbull being a sportsman and knowing the needs of sportsmen, has done more in an ornithological way for them than all other writers combined. Mr. Trumbull's book, "Names and Portraits of Game Birds," possesses more real merit, intrinsic value and common sense to the square inch than any other work on these birds ever published. With that work you have no use for nine dead languages, keys, charts and other entanglements usually dealt in by those who have attempted to write about birds. What Mr. Trumbull writes about birds is written while in close contact with his subject, he having traveled thousands of miles to study some of his subjects. Nothing goes forth from his pen but what can be relied on to the fullest extent. Mr. Trumbull is a close student of bird life, and his opportune article on the American woodcock deserves more than a passing notice—it is a diamond of the first water. A. C. COLLINS.

HARTFORD, Conn.

SNOWY OWLS.

Editor Forest and Stream:

We have been having a regular epidemic of Arctic owls in this portion of the State lately. They have been seen in large numbers everywhere within a radius of at least thirty miles. They are wary birds, and seem able to see in the day time as well as anybody. However, some twelve or fifteen have been killed in this section, your correspondent getting two. Those killed averaged about 4lbs. in weight, and a spread of wing of about 5ft. Some were nearly all white, with a few gray or blackish markings on head and back. Others have considerable dark color above. Most of them were sold at prices from $1 to $3.50, the whitest birds bringing most money. Dealers say these birds in former years were worth $15 to $20, but this year the market is bearish, owing to their great plenty. They are the toughest birds I ever saw, because of the great mass of feathers upon them, it being nearly impossible to kill them outright. E. W. L.

PINE POINT, Me.

Editor Forest and Stream:

Two of the largest owls seen in this locality of late years were killed yesterday by a vessel captain at Little Creek. They were choice specimens of the Polar owl, a rare bird on these shores. The larger bird measured 54in. from tip to tip; had talons 2in. in length, and weighed 5lbs. The plumage was mostly pure white; the hackle and wing and tail feathers, with a few on the breast, having delicate brown bars. The legs and feet were heavily booted, the feathers being more hair-like than fluffy. The birds are supposed to have come ashore from some iceberg floating near the Atlantic coast.

I inclose you some feathers taken from the breast of one of these owls. DEL. A. WARE.

DOVER, Del.

[These are feathers of the Arctic owl (*Nyctea nyctea*).]

THE GROUSE IN THE WATER.—*Editor Forest and Stream:* In your issue of Dec. 4 Mr. Bishop, of Kentville, N. S., gives an account of finding a ruffed grouse submerged to the head in water, whither it had dived to escape its cruel pursuer, the goshawk. That was a very interesting and rare occurrence we may believe, and whatever others may think of the possession by animals and birds of anything higher than what is termed instinct, I am firmly of the opinion that the action of the bird in question was the result of intelligent reasoning. It did not dash itself on to the hard earth, but into a medium that it knew would receive and cover it, and there it remained, though in a situation totally foreign to its natural habits. We can easily understand why a duck should take to water to escape the eagle, for there it is at home, but a grouse in water is all abroad. Whether grouse bathe as birds do, I know not. They seek the streams and pools to drink, and in so doing this grouse may have received in some way the impression that this medium would prove a refuge in time of danger. Why didn't the hawk plunge in after the grouse? It is as reasonable to claim that it is as natural for one to understand the harmlessness of the water as for the other to believe in its protective power. We are just going to believe that this individual grouse put reason into his action. It's better that way. If we were more accustomed to look at such matters in this light, it might lead us to temper love of slaughter with mercy. And the cruelty which is inseparable from field sports struck me with much force when I read that Mr. Bishop, after shooting the hawk, took that trembling, terrified bird, which had in such a trusting and admirable way escaped the wicked beak and talons of its cruel enemy, and now with pleading eyes just above the surface of the water besought its other enemy to spare its life; Mr. Bishop, I say, took the bird from its refuge and coolly wrung its neck.—O. O. S.

Camp-Fire Flickerings.

"That reminds me."

APROPOS of the "Free Lunch Man" in your last week's edition, I may tell you a story applied to our posting laws here.

Two neighbors, whose farms adjoined, and through whose farms a fine trout brook ran, each posted their section of the brook at the fence which separated their properties. One poster read, "No fishing on these premises." The other poster read, "Fish and be dashed! Worms behind the barn." WHEELOCK.

RUTLAND, Vermont.

There were five of us seated in Ely C. Taylor's confectionery establishment on Pike street, one evening, discussing the merits and demerits of our present game laws. While thus engaged a young man entered the store, and presenting Taylor with his card, stated that he represented a certain city daily, and that if anything of interest had happened during our recent hunting trip in the Olympics, he would be glad to record it.

"Well," said Taylor, (with a knowing wink at his companions) "nothing occurred worthy of special mention, but one incident did happen that I have always thought unusually strange. I will tell you about it. One day I had wandered into a dense forest, about three miles from camp, and was keeping a sharp lookout for deer. Suddenly a monstrous elk burst from cover at my right, and started to cross in front of me. Hastily throwing my Winchester to my shoulder, I sent a .45-70 speeding in his direction, and had the satisfaction of seeing him drop apparently dead. I then set my gun against a tree and started toward him. Judge of my surprise and alarm, when near him, to have the elk bound to his feet now thoroughly infuriated and bent on mischief. The only thing I could do was to fly for a tree, and around the butt of a big fir tree we circled. My coat tails barely cleared the mad beast's horns, and had I ever slipped—well. After several minutes of this hide and seek game, like a good old political party I began to 'want a change' and determined to have it. Recollecting that I had about me a long buckskin thong, with a running noose at one end, which I used in pulling dead deer into a tree out of reach of wild animals, a scheme flashed through my mind. Quickly securing one end to the tree, I made a lasso of the other, and after several ineffectual casts succeeded in lodging it over his horns. Then a row. As a matter of course the elk followed until the rope drew taut, when down he went, accomplishing a series of evolutions that was truly remarkable. When matters had quited down some, I could scarcely believe my senses to find that elk standing on his head. Yes sir! actually standing on his head, and the worst part of it was that he could'nt get down again. His branching antlers, you know, formed such a broad base that to recover his equilibrium was utterly impossible. After viewing the curious sight for a while and concluding I would know where to find his elkship when wanted, I departed for camp. Early the next morning we took a sled and went to bring in the game."

"Did you find the elk still in this upright position?" queried the now suspicious reporter.

"Yes," responded Taylor, "that is what remained of him, for during the night something had eaten every scrap of flesh from the bones. The bones however were still standing, and for that matter stand there to-day—a monument marking the spot where I shot my first elk. If you"—but here an explosion of laughter took place that shook the house, and amid the confusion that ensued the reporter escaped. It is needless to say that a report of the interview did not appear in the next morning's papers.

Mr. Taylor subsequently informed us that he knew beforehand of his questioner's coming and had loaded himself accordingly. H. M. V.

WILD TURKEYS IN THE OVERFLOW—IV.

[*Concluded from Page 432.*]

ON Tuesday, down below camp, L. found a turkey hen among the buzzards, sitting with them in a tree as though among boon companions. We were in the canoe and about to pass this hen at close range without noticing her, so closely did she assimilate with her disgusting associates. L. "let drive," and her henship flew on down the river as though untouched. L. tried to find he had fired the 000 barrel at her head but failed, his No. 5 barrel being empty. We paddled on down and quarreled about the place the turkey was supposed to have stopped. It is easy to pick a quarrel with a fellow just after he has made a bad shot. We had gotten out of the canoe and were standing on a narrow strip of land.

"I say she came in here."

"I say she didn't. She flew further down."

"You are mistaken, young man. Recollect you are a shade addled after such a shot as that—about as bad as my miss at the gobbler, worse with your splatter gun."

"If I were you, I would certainly sing low as to that gobbler shot; no one ever did worse than that. It was the most abominable shot—"

Flop-flop-flop, and away went the hen from a tree almost overhead.

"Now what do you say—gone down further, eh?"

"Yes, further—that's another turkey."

And just then the turkey was heard to fall in the water. L. waded out and found her dead. On coming back he had two feelings; one glad that he had killed the turkey after all, the other mad that she was not down further, as he had claimed.

The next day, on a narrow strip of land two miles below camp, L. found himself in the midst of a flock of turkeys and killed one. On going up to him, I was shown one in a tree at considerable distance away over the overflow. I got in line of as much rubbish as possible and waded stealthily forward. When half way, and, while watching the tree closely, I noticed a peculiar looking object in a prominent fork high up. Could that round, fuzzy lump be a knot, or was it a bunch of gray moss which had fallen there? The latter most likely. On reaching better cover, I determined to examine it more carefully. By looking through the sight it proved to be neither a knot nor moss. There was a pair of small, snappy eyes rolled up in a snug clump of hair, and a jet black sharp nose projected from between the eyes and the whole was well pressed down in the crotch.

"Ah, ha! Hid, are you old fellow? I'll see you later."

The turkey was sitting on a limb over to the right, at this time in a spot quite open, and it was only by the greatest care that I got within 75yds. of it. I could get no rest without shooting through a mass of vines that I was now in, so I had to step cautiously to one side and take the shot off-hand. That is the correct way to shoot, but then I am not—but I needn't explain after recording some former shots. Nevertheless, at the report of the rifle the turkey fell into the water with a splash, dead.

On turning to the fork the animal was still there, and watching me intently, though not making the slightest stir. It was a coon. All darkies are fond of coons, and I would try this one for William to take home. It was a thin mark to shoot at, and when I pulled the trigger the animal got out and went hurriedly up the right limb for 15ft. He then stopped short and turned around and meditated, but not long. He was feeling uncomfortable. He went back to his fork and turned out on the body of the tree, and started down. Here I fired at him again. He moved down about 10ft. further, hung to the bark for a moment, and fell. He could be heard, but not seen, splashing in the water at the root of the tree. Going up, I failed to find him. L. came up, and together we waded about the spot in water up to our knees in search. Presently there was a big splash near us, and for a moment we thought it was occasioned by the coon. No, it was a rabbit, which had leaped from a log and swam vigorously away.

We shouldered our two turkeys, returned to the canoe

all, but thought I would as soon as I got the hang of the thing. One day when shooting at some ducks skimming the surface of the water, I noted the furrows the shot cut in the water away ahead of the game. Then I went back to my old way, and in the open have used it ever since. In cover shooting I generally shoot straight at some spot ahead of the game where I think I will make connection. I remember making a double on bluebills once, killing one by each method. I swung the gun on the head one and pulled, then raising it a little snapped one that was about 6ft. behind.

I noted the communication of "Sinkboat" in your paper some two years ago. It was good sound sense and a plain statement of the wing-shooting question. Then followed that of "Ancient" in reply, which I cannot compliment quite so highly. Next came one from "W.," dealing with the mathematics of the question. I am not an expert on Book VI. of Euclid, but venture the opinion that few "loose links" will be found in "W.'s" demonstration. It did, however, I think, ignore the air resistance to the lateral swing of shot.

After all this, it was peculiarly refreshing to read the testimony of a man like Mr. Kleinman, who is beyond dispute a good shot, "that he holds dead on or nearly so;" that "he scarcely knows that he doesn't kill the bird by crooking his finger."

It ought to convince any unprejudiced person that, as "Sinkboat" very properly stated, the same end may be attained in two different ways, or as the Irishman put it, "There's more ways of killin' a dog forninst hangin' him."

While gossiping about shooting, I would like to say that I was much pleased with the points on the drop of a gun stock in the recently-printed conversation between Mr. Hough and Billy the gunsmith. I have seen guns with a drop of 3¼in. that were none too crooked for me, yet I have found tolerably good fits (notably among Colts and Spencer repeaters) in guns with a drop of only 3in. The wherefore of this, which I never could fathom, appeared in the communication mentioned above, and the writer has my thanks. L. I. FLOWER.

THE ALL-AROUND GUN.

THE all-around gun is again to the fore in your columns. It is about as hard to find as the all-around fishing rod. It seems to me, however, that this impossible arm is more nearly approximated in the three-barrel gun than in any other. With one charge of bird shot, one of buck shot and one rifle cartridge, all ready to be fired, one ought to be well enough armed for any emergency. Or substitute birdshot for the buck shot in a bird country and still there is something left for large game. I have a gun, two 12-bore shot barrels and a .38 rifle barrel, the whole weighing less than nine pounds. It is a splendid arm. I have used the gun in a deer and turkey country and found it all that could be desired. The rifle is as accurate as the repeaters which I have tried, up to a hundred yards. May be beyond that, but I have not tried it. In a duck and goose country the rifle cartridge is a good thing to have ready for use. It is a very comfortable thing when a flock of geese come honking over just out of reach of shot to be able to drop one of them with a bullet from the ever ready third barrel. I know this to be true from personal experience, and would never dream any more of taking anything but my three-barrel on a duck hunt where brant and geese are likely to appear occasionally. RICHARD GEAR HOBBS.

LOADING SHOTGUNS.

I HAD thought the recent tendencies to be toward lighter rather than heavier loading. I suppose all agree in the thing to be desired, *i. e.*, that the gun shall only kill at one end. So far as my experience goes, recoil seems to be effected chiefly by three things—the weight and boring of the gun, the proportion of shot and powder, and the fineness of the grains of powder, supposing other qualities to be equal.

As to weight of gun, I am not an invalid by any means, but 7½lbs. of gun is as much as I am willing to carry. With a gun of this weight more than 3½drs. of powder makes a disagreeable recoil. If the gun is properly bored and then well handled 1oz. of shot will give satisfactory results. With this charge of shot as little as 3drs. of powder may be used. This with No. 8 shot makes a pleasant and effective load for anything smaller than ducks. For ducks, use 3½drs. and 1¼oz. of No. 6 shot. More shot than this seems to be an outrage both on the shoulder and the game. This is for FFG powder. I have wished to experiment with coaser grained powder, but in this part of the world we take what we can get, not what we want. I believe coarser powder would give equally good and more comfortable shooting. To load as some do, with 3 or 3½drs. of powder and over an ounce of shot, gives an unpleasant kick, the load being badly proportioned. In the matter of recoil, however, tastes differ. Some want to "feel" their gun. They had rather pad their clothing, have their arms beat blue and their brains addled, than allow any risk to be run by decreasing the load. But the fact is, the lighter load is often more effective. Both the padding and the dread of recoil prevent confident handling of the gun. And if anybody thinks game can't be killed with the loads recommended above, let him try it once, or come over and go hunting with

AZTEC.

Editor Forest and Stream:

I am something of a gun crank and am always greatly interested in opinions of practical shooters concerning loading, etc. I observed in your issue of Nov. 27, a correspondent signing himself "H. L." recommends heavy charges and says he shoots 4 to 4½drs. powder in a 12 bore gun. He does not state what kind of game such charges are intended for, but I presume it is used in duck or goose shooting. But even for game so difficult to kill as ducks or geese such charges seem all out of proportion to the bore and usual weight of a 12-gauge, and unless a very poor quality of powder is used, or a very coarse and slow-burning kind, such charges are not only extremely unpleasant to use, but useless and dangerous. Useless because no 12-bore gun I ever saw with barrels of the usual length, 28 or 30in., would burn so much powder; and dangerous, because while good guns will stand as heavy a load as can be put into a shell, yet there are many guns which will not stand such loading when new, and many other old guns weakened by rust and pits that would certainly explode under such heavy charges.

I use a 12-bore gun and Schultze powder, and when loading for quail never put in more than 2¾ drams. This seems like a very light load, but from two year's experience in the field, and from careful experiments made to test pattern and penetration, I am convinced that it is amply sufficient. I do not change the powder charge for late quail, but I do change the size of shot, for early shooting I use 1⅛oz. No. 9 chilled shot, and later in the season the same quantity of No. 8.

I believe in using all the powder necessary but no more, and fully believe that if the shooters who are now so much in favor of very heavy charges, would experiment a little with a view of getting at the facts concerning the amount of powder actually needed in a 12-bore gun we would find more sportsmen using Schultze powder about 2¾ drams for quail, 3 drams for prairie chicken, and 3½ drams for ducks, with perhaps ¼ dram more of good black powder, firing all day with perfect comfort to head and shoulder, and without padded jackets or recoil pads. JASON.

MASSACHUSETTS GAME AND LAW.

BOSTON, Mass., Dec. 19.—The Massachusetts Fish and Game Protective Association met at the Thorndike last evening. Secretary Harding read a letter from C. B. Cory, curator of the department of ornithology in the Boston Society of Natural History, in which the writer spoke of the introduction of some and the probable success of introducing certain species. He said that quail and ruffed grouse would both do well in Massachusetts, but the latter especially are difficult to purchase, and it would be still more difficult to breed them in confinement. The English pheasant could be introduced with success here, but they require to be bred in coops and the chicks are delicate and somewhat hard to raise. English partridges are not a success. Prairie chickens will perhaps do well, or, better still, the sharp-tailed grouse.

The prairie chicken was once found in Massachusetts, but the few which are now left on the island of Martha's Vineyard have become differentiated by environment so that they are now a different species and not found elsewhere. Wild turkeys, if procured in the mountains of North Carolina, would probably do well here. California quail might be introduced with success, but as a game bird they do not compare with some species, but they are hardy and prolific. If once successfully introduced they would make a valuable addition to our game birds.

Regarding the shooting of water fowl and the attempt of certain people to repeal the present laws, Mr. Cory said that the laws should remain as they are, or they should be made stronger, to encourage men who are willing to stock private grounds with game so that the overflow from these places will restock the surrounding country, and it may be that in time the State can be induced to establish breeding stations in different parts of the State.

President Samuels suggested that as the Legislature would convene before the next meeting of the Association, it would be well to then and there instruct the committee on legislation as to their work and decide upon the changes to be asked for. The open season at present begins on the 15th of September. At that time many of the young quail, he said, are not half grown and are wholly unfit to be killed. Something should certainly be done to prevent the shooting of the young birds. Mr. Samuels referred to a proposition from an official of the Rhode Island Fish and Game Protective Association to arrange for a conference of the Rhode Island and Massachusetts associations to see if uniform laws for the protection of game birds could not be secured in the sister States. He thought it would be advisable to ask for a general conference of the associations in all of the New England States, and mentioned Boston as a good place for holding such a meeting.

Mr. Thayer said that it seemed to him that the law on quail shooting should be changed, and the sooner the better, for a law that will allow the shooting of such birds as early as Sept. 15 is an abominable one. He favored the holding of a conference.

Mr. Fottler, of the legislative committee, stated that the recommendation of the committee before the Legislature last year—that Oct. 1 be settled upon as the beginning of the open season on all game birds—was met with opposition by the Fish and Game Commissioners and the committee was forced to yield to their views on the matter. The Commissioners favored Sept. 15 as the opening of the season, and such is the law. Mr. Fottler strongly urged the appointment of a committee to represent the Association in the conference referred to, that should favor a uniform law in the several States conforming to that of Connecticut, where the open season on game birds is from Oct. 1 to Jan. 1.

Dr. Stetson moved the appointment of a committee of three "to confer with an equal number of men from other State associations and endeavor to obtain, if possible, by their united efforts, uniform game laws."

The president named Dr. Morris and Messrs. Roberts and Mixter as that committee.

E. E. Hardy urged that something be done to help the committee which has the power to prosecute the offenders of the law, but which has found it impossible to convict a man for breaking the law in the open season because of the strange rulings of the courts. He said the courts required that it should be proven that a man who had snared partridges set the trap with the deliberate intention of ensnaring the birds caught. He thought that legislation to cover such cases should be secured.

CARIBOU IN NEWFOUNDLAND.—New York, Dec. 19.—I have received a letter from a friend in Newfoundland whom I left in camp when I returned to Pilley's Island to take the steamer home. He says that the snow lasted three days after I left, and during that time the caribou were continually traveling south, and that they remained five days longer on the marsh, during which time they killed six more caribou, making eighteen for the trip of two weeks (I was only there eight days); a good score for four of us. We killed only two cows, all the rest bulls with good heads. None of the meat was wasted excepting one old bull that I killed and which was too strong. It was all put on scaffolds, each guide having six of them. These are enough for their winter supply, and they take it out on dogs sleds as soon as snow comes to stay. My friend saw six big gray wolves in one band, an unusual sight, as it was supposed they were nearly extinct. I would also add that we did not lose a single wounded caribou on the trip. We could have killed certainly a dozen more, but had no use for them.—W. HOLBERTON.

LA GRANGE, Ky., Dec. 12.—The fishing rod has been laid aside till spring and the interest of sportsmen is all centered in the gun and game bag. Beside a few pheasants, the game consists of quail and rabbits (hares). The latter are to be found anywhere in this county in great abundance, and the former have been more plentiful this season than for many years past. Local sportsmen and farmers are greatly annoyed by pot-hunters from Louisville, who go out on all the railroads for fifty miles and kill anything they see and in any way. I think this county, as it abounds in woods and cover, would be splendid territory for the Chinese pheasant, I shall make an effort to secure its introduction. We are having much sport with red foxes. One day this week P. S. Head took out our pack of hounds south of town, and to encourage the dogs concluded to kill a fox and let the dogs have it. He shot one and crippled it, and thinking the dogs were coming up let it limp away. It happened the dogs were running another trail and the wounded fox got into the ground. A singular coincidence is that Joe Clore, who was with Head, did exactly the same thing in another part of the field, and both foxes got away. Interest in dogs is increasing.—J. S. M.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

INDIANA BASS FISHING.

FROM Mr. C. L. Hanford, the famous fly-fisherman of Indianapolis, we have recent informatian concerning the scores of parties of which he was a member during the past season. One of the objective points in White River is Broad Ripple, and Catfish Pool is one of the noted fishing grounds on the route. The fishing is done by casting from a boat or the shore in suitable places. The species of bass is the small-mouth black bass (*Micropterus dolomieu*), and Mr. Hanford's party kept none weighing less than ¾lb. On account of excessive rain the past season was a rather bad one.

Following is the score in detail:

First	trip, 2 in boat, 12, ranging ½ to 1	lbs.
Second	trip, 3 in boat, 3, ranging ½ to 2½	lbs.
Third	trip, 2 in boat, 9, ranging ½ to 1	lb.
Fourth	trip, 3 in boat, 12, ranging ½ to 1½	lbs.
Fifth	trip, 3 in boat, 10, ranging ½ to 2	lbs.
Sixth	trip, 2 in boat, 9, ranging ½ to 3	lbs.

The fly locally known as the "bucktail" was one of the most successful, and Mr. Hanford found the Lord-Baltimore also a killing lure.

The large-mouth black bass also occurs in White River, and specimens were taken, but in the estimation of these parties they were far inferior to the small-mouth species in game qualities.

SUSQUEHANNA RIVER FISHING.

IN a recent letter Mr. H. C. Demuth, secretary of the Pennsylvania Fish Commission, writes me that the bass fishing in the Susquehanna has not been very good this year on account of the heavy rains, which have kept the water high and cloudy, especially during September and October. At Washington and Mud Island many wall-eyed pike have been caught on set-lines or out-lines. On a recent trip to Fite's Eddy Mr. Demuth says he caught a "large-mouth" black bass which weighed 4lbs. 9oz. He made a cast, with a chub about seven inches long, from a flat-boat anchored in the river, and the bait had just settled in the water when the line started to run off the reel in a manner which indicated that a good fish was hooked. Mr. Demuth landed him in about ten minutes, after some spirited fighting. Several days previous to this Mr. Wm. Axe, of Christiana, Pa., caught one at the same place which weighed 6lbs. 2oz. This was the largest fish taken at Fite's Eddy during the present season.

Members of the Red House Club, Harrisburg, Pa., have been faring well during the past fall, as will be seen by the following letter received from my friend "Stehman," who wrote up the Red House Club for FOREST AND STREAM last July. "Stehman" writes from Harrisburg under date of Nov. 28: "The weather is quite cold here now, the coldest of the season. The fishing is good at the Conewago Falls. From the 18th of the present month Messrs. Jerome Long, Harry Bach, John Bolsler and Dr. T. S. Hollinshead, all members of the Red House Gunning and Fishing Club, spent five days at the club house on the island above the falls. They caught 80lbs. of 'salmon' (pike-perch), one of which measured about 27in. in length and weighed 7½lbs., and eight which weighed 3lbs. each. Besides the fish caught, these gentlemen shot one large white swan, thirty-six ducks, two dozen quail and ten rabbits. This is not a small score, but only the bad state of the weather which followed prevented a larger record. This is a quartette of the best gunners and fishermen from this city.

"Nov. 24 Mr. Fred Edel, president of the club, in full view of the club house, caught a bass which weighed 6lbs. and a 'salmon' weighing 5lbs. The two were caught in the course of two or three hours' fishing, and the president was a very well satisfied man. The club is in a very flourishing condition, having at present thirty-six members. They are about to buy fifteen acres of the adjoining ground."

The success of the Red House Club is due to the fact that the members are among men what the little insect known to the small boy as "eye-bunger" is among humble bees—stickers. When they undertake a thing they do the work well. Success to them! BAB.

DEER IN NEW HAMPSHIRE.—Franklin Falls, N. H. Dec. 18, 1890.—Deer are getting quite plentiful in this State. Mr. Frank Buriel and Mr. Cilley, of Laconia, went up to Waterville, N. H., last week and killed three fine ones.—WALTER AIKEN.

LARGE CONGER EEL.—In November last, while cod-fishing, our correspondent, Willard Nye, Jr., of New Bedford, Mass., caught a conger eel weighing 14½lbs. This was a large fish of the kind for that locality.

CHICAGO AND THE WEST.

CHICAGO, Dec. 13.—At the meeting of the Grand Calumet Heights Club last night nothing definite was accomplished in the matter of the attempted eviction of the club by the landlord. The ground is held under indefinite leasehold, about the only thing the lessor binds himself to do being to purchase the buildings at one-third their cost upon closure of the lease. The land, by reason of the south district boom consequent upon the location of the World's Fair, has become more valuable, and the owner wants the club out of the way. It is not likely, however, that the club will be evicted so easily as all this. At present, at least, the matter is still in the air, and the boys are practically saying, "Come and take us."

Dec. 14.—The Possum Club of Chicago, the great and only Possum Club, held its second regular meeting Friday night at Billy Wörner's banqueting halls. The Possum Club was bigger this time, nearly twice as big, and it talked more and if possible ate more than it did the first time. It also showed a disposition to reach out and embrace a few more members from the *élite* of Chicago. Annexation is the watchword of Chicago and the Possum Club. The latter will probably annex the World's Fair in due time, and unquestionably it could run it better that it is being run now, for whatever the Possum Club touches goes, unless it is nailed down.

Promptly at the appointed hour of 7—the Possum ought really to make its dining hour a trifle later than that, if it would be really *chic*—the high contracting parties appeared and amid the peals of thrilling music began the march up the central aisle. At a signal all was still, until, as the waiters placed before each guest a plate of smoking, savory brown, adding a vast platter in the center of the board, a wild shout of exultation arose as there fell upon the air the stirring notes of the old Scotch air, "C'yarve dat possum, chillen!" They carved it some, and then they carved it some more; and then all the outside world was forgotten and not a wave of trouble rolled anywhere near Billy Wörner's place. The *menu* was baked possum, sweet potatoes and possum, possum and genuine Southern hoecake, cocktails, claret and possum, champagne and possum, coffee, cigars and possum. The *menu* was voted a success.

At the first meeting of the club it was decided that each member should bring a friend to the next meeting, thus doubling the membership. It was soon discovered, however, that the scope of the club would necessarily be curtailed in this way and the admission postponed of many men between whom there was no choice, but all of whom ought to belong to the organization. In other words, the Possum Club found itself a more important body of sportsmen than it had thought. The resolution was therefore stretched and members added to their lists of invitation somewhat. A few of the former members were unable to be present, but following are the names of those who actually sat at the table, all of whom, except as earlier qualified, were by an omnibus bill admitted to full and absolute membership in the one and only Possum Club:

W. N. Low, C. S. Burton, J. J. Gillespie, Abner Price, H. W. Loveday, L. W. Hamline, J. P. Hayde, F. A. Place, Geo. Holden, R. A. Turtle, C. E. Felton, A. H. Harryman, E. Hough, Wm. Wörner, N. F. Pfeffer, E. J. Grass, N. Rowe, R. S. Cox, Jr., O. F. Malcolm, W. S. Shepard, Geo. I. Maillet (of Crown Point, Ind.), C. E. Willard, G. W. Andrews, C. R. Babery, E. Copland, H. W. Jenney.

Mr. Low, chairman-elect for this meeting, took the head of the board. Mr. Low was seized with a violent attack of modesty, and said it was in a fit of absent-mindedness that he had violated the rules and accepted the chairmanship a second time. He was making his speech just when the first relay of possum was served, and was promptly told to sit down and wait till after supper before he resigned. Mr. Low then ate some possum, and forgot all about the previous question.

A little business was transacted in a leisurely way. Col. Felton was chosen chairman for the next meeting. Mr. Geo. I. Maillet, of Crown Point, Ind., was elected an honorary member. It was observed that some definite system of increasing and regulating the membership would finally need to be adopted, and a committee on membership was appointed, consisting of Messrs. C. E. Felton, Ab. Price, W. L. Shepard and W. P. Mussey. A collection was taken up *pro rata* for the purpose of procuring some appropriate stationery. It was decided that the next meeting should be held one week from the following Tuesday. Mr. Wörner announced that one week from that date he should do himself the honor of offering to the Possum a complimentary banquet, the same to be a game dinner of his best ability. This game dinner he proposed to make an annual fixture. His remarks were received with great enthusiasm and applause.

Chairman Low, in his usual felicitous way, succeeded in extracting a speech from nearly every member present, two or three or four or five from some of them. An interesting discussion arose between Abner Price and Col. Felton, both of whom objected to being called "old" sportsmen. Mr. Price declared that he used to read of Col. Felton's wonderful shooting when he himself was a boy in copper-toed boots. Col. Felton was equally certain that he had heard of Mr. Abner Price, the famous ground sweater of ducks, when land was worth $2.50 an acre in Chicago, and he himself had a rattle and a tin savings bank. Mr. John Gillespie, who in his ignorance before the supper had declared that he "would just as soon eat cat as possum," was called upon for an expression of opinion up to date, and publicly apologized to the club, saying he would rather eat one possum than two cats.

Through all the fun of the meeting, however, there was apparent the tone of a very steady purpose. Let no one think this club only a gathering of the boys for a "lark." It is already much more than that. It will soon be, if it is not so already, the centralization of the diverse branches of the sportsmen's craft in this city and vicinity. Chicago as a shooting city has long been in many ways ultra-conservative, and therefore behind the times. It may not be known to the outside world, but there have been cliques in the body general of Chicago shooters. The Possum Club, lucky accident, is ignorant of this fact, and it and all its members will remain forever ignorant of it, so that by and by everybody will forget that ever there was such a thing as a division of opinion, or will refer any small difference to the ultimate arbitrament of the wish-bone of a good fat possum.

Dec. 15.—Mention was made in these columns a short time ago of some shooting done by Mr. T. Benton Leiter and Mr. W. H. Haskell, on the Rice Pond near Chilicothe, Ill., and it was stated that these gentlemen had acquired title to a large tract of marsh there. The full facts in regard to the matter are interesting, and are as follows: The marsh about Chilicothe has always been a fine one, and Mr. Haskell was well acquainted with it in boyhood, when his father lived at Rome. The Rice Pond was great mallard ground, a fact entirely well appreciated by the crew of market shooters who hung about it. For years these market hunters, prominent among whom were Dick and Bill Beebee, Shinn, Wilkie, Jo Davis, Ed. Eaton and the two Carrolls, have run a close combine on this coveted bit of marsh, and have effectually shut out all competitors and all sportsmen. They were sometimes hired as pushers, but even then they were careful to take their men into a part of the marsh where no ducks were to be had, thus keeping the real resources of the marsh as much a secret as possible. Any one whom they could not thus fool away they tried to bluff out, under a claim that they had leased the marsh. The fact was that a man by the name of Lester, the dealer who shipped all their ducks to Philadelphia for them, and who made something on their trade, had a lease on a part of this duck farm, and what was not leased was claimed. This Lester asked Mr. Haskell down to shoot, and Mr. Haskell, on the invitation, or rather on the advice of his friend Jake Worth of that town, went over in the Rice Field and began to shoot. At once there was a great uproar among the market shooters. When Mr. Haskell got in at evening, Mr. Worth informed him that he had heard the complaints of the market shooters, had found that no valid lease really existed, and in short, had leased the Rice Field himself. At once Mr. Haskell re-leased the property from Mr. Worth. Mr. Leiter at once went in with him. Some of the land has been bought and more will be picked up quietly. It is probable that a little club of ten or a dozen Chicago men will own or control the old Rice Field, if all goes well. This will disgust the market hunters, whose special mallard preserve it has been so long. The market shooters would never kill anything but mallards in there, because they got more money for them. The territory is good.

I observe the following item of news in the daily press of a late date: "A Wickford (R. I.) man recently killed eleven out of thirteen quail at a single discharge of his fowling piece." I presume that in the eyes of the daily press this is a piece of news worth recording, perhaps as a feat of daring, or heroism, or of skill. Noble Rhode Island man! Noble daily press!

From accounts of the late Cincinnati elephant hunt, it seems that it takes twenty-four Springfield rifle bullets to kill a mad tame elephant. I hear they shot old Chief till it got dark, and then began again in the morning.

I was in at Jenney & Graham's the other day, and met there Jim Wheeler, of Freeport, Ill., an old-timer of the old-timest sort, who was picnicking around with his friend, Mr. G. W. Baltsley, of this city. Freeport, it is well known, is the home of Mr. C. E. Cahoon, who was one of the Western team in last winter's tour of the U. S. Cartridge Co., and who is better known through most of this Western country as "Cooney." Jim Wheeler and "Cooney" are great friends, and while we were talking he told a story of which "Cooney" was the hero, concluding the story with the injunction that it should never be published. The narrative runs as follows:

"Cooney," Jim Wheeler and a friend or two were duck hunting up in Dakota this fall. They struck a clear, mild sort of a day, and as usual the ducks banked up out in the middle of the pond and refused to "work." There was a big raft of birds out in the open water on the lake where the boys were camped, and do all they would, they could not get them started up to moving. They fired shot after shot out over the water, but the birds seemed well enough contented where they were and refused to go out. Finally "Cooney" came down from the wagon, carrying his big 10-gauge and a handful of goose shells. He walked down to the edge of the bank as close as he could, for it shelved off very sharply there, and putting a couple of shells into his big gun, remarked:

"Youse fellows' guns aint any good, that's what's the trouble with you. You want a gun that'll reach 'em. Now you just watch them ducks!" This last with a look out of the corner of his eye, which anybody who knows "Cooney" can imagine.

Doubtless everybody knows what a start it gives one, when, after bracing to meet the recoil of a heavily-loaded gun, the discharge does not take place at all. Well, "Cooney" had in a heavy load, and he knew it; and so put on a good deal of brace. There was a dull click, and no discharge. Consequently there was no kick, and therefore the brace was altogether unnecessary. As a result of all these things, "Cooney" took a convulsive step forward and walked right into the water, the shelving shore landing him clean up to the neck! It was cold water, too.

History does not say whether or not "Cooney" made splash enough in the water to scare the ducks, but at any rate he didn't do it with his goose shells, and of this fact I am inclined to think his friends sometimes remind him. "Don't say a word about this in the paper," said Mr. Wheeler, "for if you do, somebody will have to get licked in Freeport, and I don't want that to be me."

Mr. Jas. Bird, of the Grand Calumet Heights Club, while hunting on the grounds of that organization a few weeks ago, made two shots which for uniqueness deserve a chronicle. The truth of the story is vouched for by Mr. C. W. Lee, who gave it to me. Mr. Bird was out after ducks, and was fortunate to see a flock of redheads passing over, though so high that he had no thought of dropping one. He, however, fired, and much to his surprise knocked one out of the flock. The duck fell directly into the top of a tall dead tree, and was impaled by a dead limb which was sticking up. The weight of the bird broke off the limb, and Mr. Bird picked up his game neatly skewered, with the broken stick showing at back and breast, in which condition he put it in his game pocket and later showed it to his friends.

After this shot Mr. Bird had gone on only a short distance when he discovered a large owl sitting on the top of a tree. He fired at it, and it came to the ground apparently unhurt, excepting that one foot was bleeding. Mr. Bird attempted to gather his owl, but the result was that the owl nearly gathered him. His owlship was strictly on the fight, and Mr. Bird saw he would have to resort to strategy. His strategy consisted in throwing his rubber coat over the owl, and thus attempting to embarrass its movements. It didn't embarrass the owl in the least, for in about two swipes of his claws old Mr. Owl was wearing a sadly-split-up rubber coat for a necktie. Mr. Bird did not care to risk any more of his wardrobe with this belligerent fowl, and so undertook to complete the taking off by means of a pole. But at the first blow of the pole the owl caught it by the end and refused to let go. This gave Mr. Bird an idea, and shouldering the pole he marched off to the club house, and entered the room with the gritty owl hanging on to the end of the pole and the speared duck in his pocket, the hero of as singular a pair of shots as one often hears about.

Dec. 18.—Nobody has been duck shooting, and nobody knows anybody who has been, or who wants to go. The duck season is over. Hank Smith threatens to go rabbit shooting at McHenry. Charlie Burton threatens to go rabbit ferreting at some mysterious place or other, but he won't go. Charlie Gammon and Al Hofmann got 31 quails and a lot of rabbits one day last week, about 9 miles about Shelby, Ind., and Charlie and the writer are threatening to go down there again and try for the quails on the last day of the Indiana season, the 20th, which falls on next Saturday.

Mr. J. H. De Long, of New York, accompanied by his wife, is in the city this week, en route east after a long and delightful trip through Cuba, Yucatan, Mexico and the West. They started from New York by steamer for Cuba, and have made a leisurely journey of it. Mr. De Long put in a little time in Missouri hunting quails and rabbits. This may be the reason he declines to hunt some more quails and rabbits with us in Indiana, though he says he must get home.

Sporting matters here will soon settle down into an intense activity of talk. It is pretty cold for fun here after winter once gets its legs on. I believe the "winter club" in the South, which our Wisconsin friend has mentioned, could be put on its feet by proper handling in Chicago. We have great people here for clubs. E. HOUGH.

MORE ABOUT SIGHTS.

Editor Forest and Stream:

It is two months since I came into the woods for the forty-second consecutive season. Have not taken much fur, as infirmities incident to old age prevent my covering much ground; but I have two caribou hung up, all I need for the winter, besides a full stock of supplies, and, best of all, plenty of dry, hard wood under cover. Some three weeks ago a kind young friend made the long, hard trip to camp and sacked in my mail (not a light load), and of course there were several editions of FOREST AND STREAM. Now, I have been a constant reader of the paper since its initial number and note its constant improvement, and would rather miss my dinner every day than be without it; but it is never so fully appreciated as when I am alone in the woods.

In a paper by Mr. Orin Belknap I note his views on the Lyman combination sight, and although I have not experienced the like difficulty that he has, yet I find "outs" that are as objectionable. Here I digress to state that until two years ago my hunting rifles have always had the common rear open sight with some little improvement; for instance, I cut down the horns to a level with the top of the V, rounding off the outer corners; then with a flat, thin file with square edge file to the bottom so the slot represents three sides of a square. This hint I got from an article in "our paper," and is a great improvement for old eyes. For many years this enabled me to get a good sight, but at last even this caused a blur. I had tested the combination sight at a mark on rifles owned by friends, and found it all right as to clearness of vision, and the front head sight I have used for years and there are none I like so well.

Now I come to the "outs" as I find them by experience in timber shooting. One cannot carry the combination sight in position for shooting, as it is constantly catching on brush, so there is danger of wrenching it out of plumb if not breaking, and when turned back on the tang it is constantly filling with snow when the brush is loaded, and it is a constant care to free the disc by the breath. Sometimes in very cold weather it requires several puffs to dislodge the ice, and will even freeze down so a knife blade is resorted to to free it. Every one who is at all familiar with hunting big game in the timber knows there is constant liability in a good game region to have to make a quick shot to secure the game. Now, in such a condition, with the Lyman combination sight frozen down, or filled with ice or snow, the game would leave and the hunter "get left." With failing vision that will fail even more. I shall use this "sight" as a *dernier ressort* and allow all credit for this one merit (aid to old eyes), but were my sight normal no money would induce me to give up my old open sight for the new one for timber shooting in winter. HUNTER.

HOLDING ON GAME.

Editor Forest and Stream:

When any one is especially pleased with an article in a paper like FOREST AND STREAM, it is not a bad idea to speak out and say so. It is rather, therefore, with a desire to state my appreciation of a thoroughly good article than to open an old controversy, that at this late date I write a few words concerning "Hints and Points on Duck Shooting," by Mr. Henry Kleinman, published in your paper last June. The novice will find it replete with valuable information which will repay careful study, while those who, like myself, have shot ducks in a desultory way for the last fifteen years, will see some things that they knew long ago, with much more that they wish they had known a little earlier.

When I was a boy, fired by the stories the "old country" people used to tell about cutting down partridges on the wing in Old England, it was my chief wish to become a good shot on flying game. I adopted the plan of swinging the gun with the flight of the game and holding dead on, pulling the trigger while the gun was in motion. I killed, too, sometimes, but not often enough to convince me of the infallibility of my method. I grew to man's estate, and still as a wing shot was not a bright and shining success. I subscribed to FOREST AND STREAM, and there made the acquaintance of the hold-ahead theory. Now I thought I knew what was the matter. The killing I had done the other way was merely accidental. If I held ahead from 2 to 6ft. I would snap them—well, nearly every time. I tried it and did not kill at

best and free in running; go in for extra length if you have the choice, and a spare one or two won't be amiss; remember insular civilization has not yet produced a tackle shop in that region. Of course for this last reason you must carry with you reels, lines, gut, hooks (take those with eyes), swivels, leads, floats, and the little etceteras. With these you will be on the right side and ought to be comfortable and easy in mind. Tropical fish in their habits are much the same as their brethren up north; it is a fact that they take the bait in their mouths, and when hooked try their level best to sever the connection.

When moving about, or shifting position, nothing beats a spoon or other spinner, natural or artificial, trailing in your wake; you may spin deep or near the surface, you will find willing mouths at all depths. Tropical fish are like others, capricious, what suits to-day may be rejected to-morrow, so keep your eyes and wits about you. In deep water and in the strong current outside, off shore, a rod is useless for bottom fishing, and in this case you must have recourse to hand lining—be sure you have by you a strong thick pair of gloves, and no style surpasses what is known across the water as the Kentish rig, a crossbar of stiff wire, the lead in the center, the snoods at the ends. But after all, minute instructions as to tackle and method of fishing are not absolutely necessary.

Of course, when you have caught your fish you will wish to take them on shore in the best condition. Fish micro-organisms develop rapidly and wonderfully in tropical temperatures, and if you want the best results remember the following and act accordingly: Kill your fish quietly, quickly and effectually by a tap on the head (one tap is better than two); handle it gently as if you loved it; do not allow it to bruise itself by flapping and jumping; quiet the nervous system by destroying the brain—an easy matter; if large, disembowel, wipe clean and dry, apply an antiseptic—there is one that I use that shows best results—inside and out sparsely, and lay the body in a quiet place where it can drain and be out of reach of the sun's rays. You won't regret the trouble you have taken.

You will want to know where to go and how to get there; but there will be no difficulty. In Kingston harbor fish are plentiful and at times superabundant, but they are seldom angled for. Boats and canoes with men may be had for a consideration, with a native as captain, philosopher, friend and guide. You will find his philosophy and guiding power much on a par, and his friendship—well, it will last and intrude so long as there is anything to be made out of you. A thorough understanding at the off-go is advisable, and you will realize that upon the density of its thoroughness and reality so will be your enjoyments and results. Your best plan (and my advice) is, write to the secretary of the Exhibition, or call on arrival, for information to cover boatmen, boats and charges, etc.; doubtless some one will be tolled off to supply you.

Off-shore fishing, as may be expected, will be attended with a greater expenditure of time, energy and cash, but the equivalent will be forthcoming for splendid fishing is to be had around the cays and over the feeding banks. A writer in a recent number of *Scribner's Magazine* writing on "Tarpon Fishing in Florida," states that in his opinion tarpon fishing is the most magnificent fishing sport in the world, and in partial support of his conviction compares the relative weights of the silver king and *Salmo salar*. We are all peculiar to our idiosyncrasies and it is fortunate that it is so, but the experience of a lifetime annihilates, in my mind, the theory that great weight enhances sport. I have yet to experience the sensations consequent on the killing of a leviathan silver king in Florida waters; but if the heart-throbs produced by a tarpon can exceed or were equal those that have been mine with a *salar* on Loch Tay and the kingfish off Jamaica, then I must cry *peccavi* and be silent.

Years ago (alas!) on a February day on Loch Tay, amid a storm of snow, wind and waves I hooked a salmon in the forenoon. Long after dark, three miles distant from the point of connection a 28-pounder paid the penalty, after one of the most glorious and determined fights ever fish made, without one minute's sulk or rest. The *finale* was tragic, some will consider it amusing, the curious may be gratified by turning over the pages of the London *Field* of Dec. 29, 1889, for "A Long Fight on Loch Tay."

In the Carribbean Sea there is a fish that may lay claim to be classed in the same category with the salmon and tarpon as a sporting fish. The giants of his race—I have seen one of 102lbs.—are not far behind in weight those of *Megalops thrissoides*, and I have on record a Goliath that pulled the beam at 200. His every day individual weight, anything up to 60 and 70lbs., is, however, far below that of the silver king (of which, so far as I know, only the big ones are recorded), but I dare assert that the "dimmed total," as Mr. Mantilini expresses it, of a morning's fishing will place the Carib king long ahead of the silver monarch, and the sport? well, that is a matter of opinion. If the reader will follow me into the middle of next week we will meet again in FOREST AND STREAM and have a morning's sport with *Cybium solandri*.

Something must be said about baits. In a country where sea angling is almost unknown and hand-lining the rare exception instead of the rule, the bait question, so momentous in northern fisheries, has not yet been considered. As a rule the conch will be considered as entitled to premier rank, but there is a little crustacean to be found under the weed that grows on the rocks along shore and upon which the waves beat that surpasses all others. By lifting the weed or removing a loose piece of rock they may be seen and gathered and will keep well and happy—apparently. These little crabs are very delicate and consequently troublesome to keep on the hook, but when on and fast their attractive powers—due entirely to their bouquet—is unlimited. They have the misfortune of developing when dead putrefactive micro-organisms with wonderful rapidity; within three or four minutes after death they are useless. But if a number be procured and kept handy a single prisoner may be sacrificed as wanted. Prawns and shrimps in or out of their crust are also effective; sprats are common—to preserve them use the antiseptic already alluded to—and other impromptu lures are not difficult to obtain in a tropical climate and country. If I were asked to place in the sequence of their value the available baits I should write the first four thus: The little rock (not sand) crab, the conch, prawn, and sprat; of artificials the sand eel, the spoon and the phantom (Brown's) surpass all others I have had to do with, but a silvery-sprat on a baby-spinner will hold its own with anything. Of sea-flies, white, red, yellow, or a mixture, will satisfy the sea mullet and mackerel when they are in the mood and you in their way.

The rivers of Jamaica, and they are many and tempting, ought to afford excellent sport, but I cannot write that they do. In many instances their upper waters—and in some even down to the mysterious and ever lapping wavelets—must strike the expert's eye as the natural home of the Salmonidæ (it is thought temperature forbids, but that has yet to be proved. An Esquimaux can live on the equator, a Nubian at the poles, they might not be happy in their first generation it is true, but life is tenacious, *vide* Succi), with their pools and shallows, sandy, gravelly and rocky bottoms, and sparkling waters with the yet unborn love of sport in the native, the over-development of the illicit practices of the poacher, and utter disregard of past legislature, it is beyond a wonder that their waters hold fish at all. And yet they do, their productive and recuperative powers are wonderful and satisfying sport may be had at times and places with fly, spinner and with bait at bottom and in midwater. At a fly the mountain mullet, no longer adults, rises with the flash of a grayling but without the endurance of *S. fario*; and the hog-nose of that ilk will test the strength of the gossamer-cast and skill of the hand that wields the rod. Five snook, with an average of five pounds each, within the hour may not be considered as below the capabilities of a phantom—not long ago it was done and may occur again at a certain spot. The ripe berry of the sweet-wood tree, or a dice-sized piece of a not-over-ripe avocado pear has been the cause of the last struggle of many a black-snapper. The worm, the maggot, the cockroach have oft in the past, and will in the future, be the innocent cause of *rigor mortis* in a mudfish.

The lover of the trigger will not find many opportunities for using his shotgun during the early and middle months, for with the close time approaching and the ravages of that ubiquitous pest, the mungoose, there will be little to shoot. If the early months be wet—a rare occurrence—fair wildfowl shooting may be had over the Great Peco Ponds in the Parish of St. Elizabeth and a few other localities; but as the drought season will be on the outlook is not encouraging. There will be more play for a rifle, especially at alligators, which are to be found in numbers at a certain spot—a sure find—not far from Kingston, and in other districts; but alligator shooting is not to my mind sport or an enjoyable recreation in the tropics. Its surroundings are decidedly disagreeable, except when a boat may be used. There are a few large sheets of inland water and two or three rivers upon which an alligator slayer may paddle his own canoe and have an occasional shot at a saurian and pick up a few good fish by way of variety and *pour passer le temps*.

The Norman rifle range, about three miles from Kingston on the windward road, will afford target practice for those inclined to indulge or try conclusions with local marksmen of whom there are many that can give a good account of their prowess and skill in planting a bullseye.

[TO BE CONTINUED.]

ANGLING NOTES.

THE early cold weather has put a stop to all angling in this part of the country, for pickerel fishing through the ice, though excellent fun, can hardly be called angling. There is nothing left to do now but to look back and enjoy the recollections of last season's sport, or what is almost as great a pleasure, plan new trips for the coming year.

Outsiders are greatly mistaken when they think that angling means only catching fish. They little know what a stock of enjoyment for future use can be laid up on a two weeks' fishing trip into the woods and mountains.

Many an overworked business man finds rest and relaxation after a long day of worry, in recalling the events of some such trip. As he sits before the fire in the evening, with the fragrant smoke of the "weed" curling upward, he again sees the cool lake in the forest, or wades the rippling trout brook overhung with bright green foliage, and remembers the killing of that big trout with all its exciting incidents. Or perhaps his vacation was spent on the far away waters of Maine or Canada, and delightful visions of camp life, with its freedom from the irksome restraints of society, pass before him, and he glances at the calendar to count the weeks that must pass before he can again enjoy the delights of "going a-fishing."

The early advent of winter ought to make a good season for Florida; already many tourists and anglers have departed for the "sunny South," and many more are prepared to start. Nearly every one hopes to kill a tarpon, but unless they remain till spring they will most likely be disappointed—nothwithstanding Senator Quay's success in that direction with his handline fishing.

Very many people, particularly those who have had no experience in Florida, seem to think that any kind of tackle will answer for tarpon fishing. One season's experience generally convinces them that they are wrong; that is if they happen to strike one of those big herring. The tackle for these great fish must be of the very best quality and sufficiently strong, or they will smash it and leave you disconsolate after perhaps many hours or even days of patient waiting.

Therefore the most successful tarpon anglers use special rods, reels, lines and snells. Noibwood makes the best rod and so far they have stood the strain of the heaviest fish (Mr. Hecksher's 184lbs.). They should be made with a long tip and short butt, something like the Cuttyhunk style of rod, only stiffer. The next best material is the plain Calcutta cane, made up in the same shape.

Split-bamboo rods are more expensive and do not stand the climate of the Florida coast.

The line should be of the best hand-laid flax, 18 or 20 threads and 600ft. long. These lines require big reels and they must run on steel points. One good run of a big tarpon will tear an ordinary reel to pieces.

The best snells of the many kinds that have been tested are the flat braided linen, mounted on special hand-forged steel hooks. These snells are tough, will stand the grinding of the tarpon's jaws, yet a shark will cut it at once and you will be able to save the line. The gaff must be made very strong and of the best steel. It should have a spread of from 4 to 5in. Thumb stalls of knitted linen must be used, and it is even safer to have a small leather apron on the reel, to act as a drag. It is not unusual to have the boatman squeeze water from a sponge on the line to keep it from burning when being run off by a lively tarpon. Rigged in this manner, and well supplied with patience and a good boatman, the angler will, sooner or later, enjoy great sport. But he must remember that the great run of tarpon does not begin until April or May. In the mean time he can amuse himself with 25lb. cavalli and channel bass, or 60lb. drum or hordes of smaller fish, many of which will take a fly and afford the best of sport.

SCARLET-IBIS.

THOSE SUNAPEE TROUT AGAIN.

Editor Forest and Stream:

You certainly give *Salmo aureolus* or *alpinus*, whichever he may finally prove to be, a good space in your columns, but I must ask for a word or two more to correct misinformation, or misunderstandings. First, deep-water fishing in the Sunapee is no new discovery.

I have personally been informed of it at Sunapee Lake as far back as 1844, when I reached the lake in June, too late for shore fishing, and was told that I must use "live bait, long lines, and go out into deep water," and the only trout then known were the regular red spotted *Salmo fontinalis*.

With regard to hybridism, I can only say that the likeness to the landlocked salmon suggested the idea to me in 1883, and if the plant of '77 had not produced them, Dr. Fletcher's plant of '65 might have done so, should such a crop be possible.

There is yet another point, which no one has noted, should the fish prove to be *Salmo alpinus*.

The shipment to this country called for 60,000 eggs. 5,000 were said to have been lost on the voyage, and Mr. Powers reported a loss of 6,515 in the hatchery. This left 49,485, of which only 30,000 were reported to have been placed in Newfound Lake. This leaves 19,485 unaccounted for. Some were kept as breeders, but I always believed that Mr. Powers, from his well known affection for Sunapee, put part of them in there, and this impression was strengthened by his reticence and refusal to express any opinion on the subject, when it was discussed in his presence. Should he have done so in 1881, it would easily account for their appearance on the spawning beds in 1885. Of course this is only conjecture, but in such an investigation, all causes and chances should be considered and weighed.

This, however, would not account for their appearance in Dan Hole, and if they are the genuine saibling, the only way they could have got there, would have been by getting mixed in the hatching house, and it was always a mystery to me in my visits to the house, that the fry did not get so mixed, with the constant flow of water, through those shallow trays, in which they were always huddled at the lower edge.

Landlocked salmon were planted in Silver Lake, in Madison in '78, but if these fish can be found, as Mr. Aiken suggests, in the pond in Warren, it would be pretty positive proof that they are an aboriginal and hitherto unknown variety, which I hope for the sake of my friend Hodge may prove to be the case. VON W.

CHARLESTOWN, N. H., Dec. 20.

THE CALIFORNIA SARDINE.—San Francisco Bay is said to be fairly swarming with sardines at the present time. "On clear nights they come to the surface in such myriads as to set the water fairly ablaze with their silvery, phosphorescent light, and their leaping and playing produces a sound that resembles the patter of hailstones. All the quiet coves of the bay are infested with them." Most of the fish are as large as the herring and cannot, therefore, be utilized for sardines. This is the California sardine (*Clupea sagax*), and it resembles the well-known sardine (*Clupea pilchardus*), but grows larger. It abounds in winter on the California coast, especially southward. At San Diego Drs. Jordan and Gilbert reported its capture from the wharves with hook and line. As a food fish the sardine is preferred to the herring. It is believed that the species forms an important part of the food of the salmon.

ACCIDENT TO EDGAR SMITH.—Boston, Dec. 21.—Mr. Edgar Smith, proprietor of the Round Mountain Lake fishing camps in Maine, while in Boston, last week, buying some horses, met with a most unfortunate and painful accident. On Wednesday evening, Dec. 17, while crossing the city in the blinding storm, he was struck and thrown down by a horse car that turned a curve and came suddenly upon him, the wheels then passing over the toes of one foot and the other ankle and leg, inflicting injuries of such a nature that at the present time the result is doubtful. With good care it is hoped that amputation will be unnecessary. The many friends of Edgar and his father, who is so widely known among sportsmen as the pioneer of the Dead River country, will feel a deep sympathy and interest in his recovery.—M.

CUTTYHUNK BASS SCORE.—The score of the Cuttyhunk Club for the season of 1890 shows a total catch of 154 fish aggregating a weight of 216¼lbs., an average of about 1¼lbs. The largest fish pulled down 4¼lbs., and the smallest was a diminutive specimen of 4¼lbs. The year's record for 1889, it will be remembered, was practically *nil*.

Fisheculture.

HATCHING BLUEBACK SALMON.—Mr. W. A. Wilcox, of the U. S. Fish Commission, informs us that in the fall of 1889 Mr. G. W. Williams hatched 300,000 eggs of the blueback salmon (*Oncorhynchus nerka*) and kept them in a pond at the Cascades of the Columbia River. The young fry it is said were kept in the pond two months and were fed twice daily on oatmeal mush, with the addition of liver twice a week. The pond in which they were kept is only about one acre in extent and has an outlet into the Columbia River. Its temperature was from 40 to 45 degrees and its depth 30ft. At the age of two months the fry had reached a length of from 2 to 2½in. and were allowed to escape into the Columbia. Mr. Williams hatched, also, eggs of the red-throated trout (*Salmo purpuratus*) successfully.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $3.50. For sale by FOREST AND STREAM.

FISHING IN THE LOWER POTOMAC.

THE last thirty miles of the course of the Potomac are to the angler the most interesting portion of that noble stream. Below Blakiston's Island it averages five or six miles in width, gradually increasing in size until at its mouth it is over twelve miles from Point Lookout, on the Maryland shore, to Smith's Point, on the Virginia side. The river is quite deep and so saline that almost all the desirable marine fish which enter Chesapeake Bay find congenial haunts in the lower Potomac and its tributary creeks, coves and bays. There is scarcely an acre included within the 250 square miles of water just defined that does not at one season or another afford fine sport to those who take enjoyment in enticing with the baited hook the scaly denizens of the deep.

Among the more important species that abound suitable for capture with the rod and hand line may be mentioned the spotted sea trout, sheepshead, Spanish mackerel, bluefish and striped bass, and such minor fish as croakers and spots.

The region is visited annually by hundreds of persons from Washington, Baltimore and other places for a few days' or weeks' outing; but is not so well known or so highly appreciated as the case would seem to warrant. It is easy of access from the cities mentioned, and hotel accommodations can be had at various points, among them Blakiston's Island, Colton's, Kinsale, Piney Point, St. Georges Island, Cornfield Harbor and Coan River. Boatmen are numerous and can be secured at rates that are only nominal.

Hand-lining is the method most usually followed; but of late years the use of the rod has been growing in favor among the native boatmen, who are here, as elsewhere, averse to new forms of tackle, and a larger number of the adherents of Walton have annually been enabled to enjoy their wonted sport in a more sportsmanlike way. There are times and circumstances, however, in which the hand line will probably always yield better results, notably in deep-water fishing for sea trout.

The preëminent bait throughout this entire section is the blue crab, which, either as a peeler, softshell or hardshell, is a never-failing article. The crab in the two first-named conditions is preferable in that almost the entire animal can be employed; but it is much more difficult to obtain, and is, therefore, commonly supplemented with the hardshell variety, which can always be taken on the fishing grounds when required. For special fisheries other forms of bait may be employed, as fiddler crabs and manninoses for sheepshead; but for all-round fishing the blue crab is the standard bait.

One of the most highly esteemed and popular fish frequenting this region is the spotted weakfish, known universally among the native fishermen as "trout." It occurs throughout the summer in greater or less abundance. Early in the season most of the specimens captured are under ½lb. in weight; but toward the middle of August there appears to be an advent of much larger fish, ranging from 1 to 3lbs., and it frequently happens that after their arrival no smaller individuals are taken during the remainder of the season, except a straggler now and then. The larger fish are present in great numbers well into October.

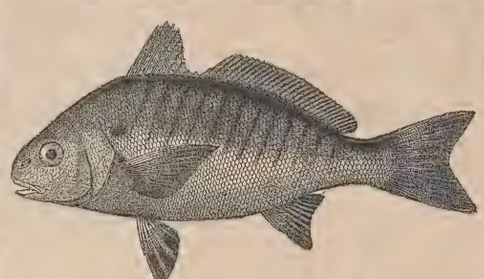
The "trout" go in scattered schools, and when they once appear in the vicinity of your boat and begin to take the hook they bite with great avidity. Every member of a large party will frequently be pulling in at the same time, and this may continue for hours, until weariness overtakes the angler or the school moves off.

Fishing is done with hand-lines in water from 10 to 30ft. in depth, on various kinds of bottom. A smooth sandy or gravelly bottom will often yield fish when a trial on an adjacent oyster bed or grassy area was barren of results. Whether this is anything more than accidental is not known; but it does appear that the idiosyncrasies of the fish at times cause it to frequent particular places to the exclusion of all others. The success of a boatman sometimes depends entirely on his knowledge of this point, and there is a strong incentive to him to keep well informed in fish lore, so far at least as "trout" are concerned.

The sea trout is not what I should consider a very hard biter; but it makes up in promptness and energy what it lacks in strength. Very often your hook is taken before it reaches the bottom, and you may find your line running off in a direction at right angles to that in which you dropped it, sometimes in front of you, as often under your boat.

The mouth of the trout is apparently quite tender, and a sudden jerk of the line by the interested individual at either end will sometimes cause the hook to tear out and the fish is lost. Your boatman will no doubt lay considerable stress on this point, and will tell you that the trout should be landed with the greatest deliberation. The novice at first will certainly lose many of his fish on this account.

Some very creditable and exciting work has been done on numerous occasions by parties of which the writer was a member. Catches of over 200lbs. of large trout, as the result of three or four hours' work of three persons, have not been infrequent, to say nothing of greater or less quantities of striped bass, bluefish, spots, etc.



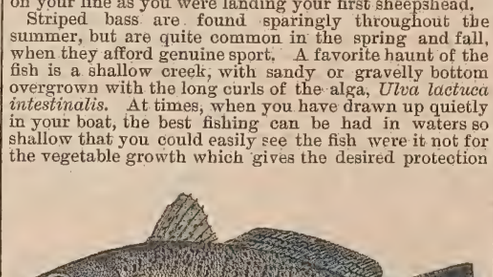
Under the name of tailor or salt-water tailor, the Potomac boatmen recognize that incarnation of gaminess, restless activity, and insatiable gluttony, the bluefish. Proverbially erratic in movements and abundance, of late the species appears to have had a special fondness for the broad expanse of water in the region under consideration, and during the past few years larger bodies of fish have been observed by the writer than were ever before known to appear. At times the entire river has been over-run with them, and there have been few days during the summer months when they could not be seen playing havoc with the luckless menhaden, or when their thunderings could not be heard as a school rushed into the shallow waters near the shore.

The near presence of large schools of bluefish, however, offers no encouragement to the angler, for the fish are difficult to approach and do not readily take the hook under such conditions. But the schools are continually breaking up and the fish are widely disseminated, and herein does the sportsmen have his opportunity. As often as not they are caught without previous intimation of their presence. Sometimes a small scattered school will be seen cutting the water near by and possibly approaching your boat, when the judicious use of scraps of crabs —"chumming" appears to be the proper word—will draw them around you and lead to lively work for a while; but usually such sport lasts only during a brief period, for the school moves off almost as rapidly as it came, and you have to content yourself with the less exciting, but more enduring, pastime of enticing the stragglers and the gleaners following in the wake of the main body.

The name "tailor" is not an inapt designation. An interesting habit of the fish will be repeatedly observed, which bears out the vernacular. You feel a prodigious tug at your line; you pull hard, and are disappointed to find no resistance, and you think you have lost your fish; but look! there he is, 30ft. away from your boat on the surface, head toward you, biting at your line in a thoroughly businesslike way, and if you do not soon put an end to his sartorial exploits you will lose him.

The bluefish which ascend the Potomac are similar in size to those which frequent the Chesapeake; that is, they normally range from 1 to 3lbs in weight. Sometimes a large body of six or eight-pounders will make their appearance (as they did in 1888); but fish of this size rarely fall to the lot of the sportsman.

Provided with a stout line, armed with a well-tempered hook and a supply of fiddler crabs, manninoses and crabs you are ready for a day with the sheepshead. Sheepshead are anything but scarce; but owing to the difficulties incident to finding their feeding grounds on any particular morning the fishery is more uncertain, than that for any



THE SPOT OR GOODY.

other species. Day after day may find you returning in the evening empty-handed, without even the reward of a bite; but when the latter does come he must have a stony heart who does not feel well rewarded for his patience, unless of course he mistakes the few characteristic preliminary nibbles for a bite and pulls too soon.

Your boatman may take you to his hurdles, around which the fish will often be very plentiful, provided a good growth of barnacles has formed on the stakes; but most likely he will lead you to a "sheepshead rock," which being interpreted is an isolated bank in deep water overgrown with oysters. Likely as not you will find the fish in goodly numbers, and you will return home with three or five 6-pound beauties as the result of half a day's work. If it is your initial experience with the fish, you will probably never be able to completely eradicate from your mind the idea which you formed of a thresher shark on your line as you were landing your first sheepshead.

Striped bass are found sparingly throughout the summer, but are quite common in the spring and fall, when they afford genuine sport. A favorite haunt of the fish is a shallow creek, with sandy or gravelly bottom overgrown with the long curls of the alga, *Ulva lactuca intestinalis*. At times, when you have drawn up quietly in your boat, the best fishing can be had in waters so shallow that you could easily see the fish were it not for the vegetable growth which gives the desired protection

THE CROAKER.

to the bass. Experience has demonstrated the greater efficacy of the rod under such circumstances. The striped bass is always gamy, and the excitement is intense when a lively three-pounder insists on making away with your hook at a rapid rate of speed, darting here and there among the algæ and taxing your rod and line and hook to the utmost.

Toward the end of August a run of large-sized spots and croakers appears in this region, and while the capture of these fish is not attended with any excitement, they make up in numbers what they lack in gaminess. They bite with promptness, and give more sport with the rod than with the more prosaic hand-line, to which your boatman will be strongly attached, and will not personally discard. There is scarcely any limit to the size of your string of spots and coakers under favorable conditions. Over 400 are known to have been taken by one man in a day. In the early summer, when other more desirable species are scarce, these fish add to one's enjoyment; at times, however, when larger game is sought, they become nuisances on account of their abundance.

Spanish mackerel are not rare, but are very seldom taken. Strangely enough trolling is never followed in this region for any species. It is thought that the method would be productive of satisfactory results, both in the capture of the Spanish mackerel, which is usually averse to taking the baited hook, and of the bluefish. The rapidly moving canoes, which are almost exclusively used in the fisheries, are admirably adapted to this method, and there seems no reason why, when the lower river is full of bluefish and Spanish mackerel, as it very commonly is, the very best of fishing could not thus be had. Magnificent examples of this species, that were taken in nets in this section, have been seen by the writer; some specimens weighing as much as 9lbs.

HUGH M. SMITH.

WASHINGTON, D. C.

ROD, LINE AND HOOK IN JAMAICA.

WITHIN a few weeks Jamaica, the island of woods and streams, will throw open the portals of her first exhibition to admit, with a right hearty welcome, the tread of the visitor who may travel to her beautiful shores. Of the many that will go to the Pearl of the Antilles—and may their name be legion—not a few will be disciples of old Izaak Walton, of revered memory to those who like him of old incline to the gentle craft with its agreeable associations and loving memories. For these, and the lovers of the trigger, I write that their sojourn may be pleasant and their homing thoughts a happy remembrance.

A trip to Jamaica must be productive of unbounded pleasure to a stranger, especially at this season of the year, when the cool zephyrs from sea and land carry with them a pleasant temperature and invigorating ozone. In no quarters of the round world is to be found a more beautiful and healthier country, and yet it would be difficult to name a spot—for after all it is but a spot—that has in the past been more traduced. With an exhilarating climate and beautiful conformation, with mountains and plains, rivers and ravines, Jamaica long since should have been recognized as one of the principal health resorts of northern America and Europe. But her time will come; it is even now nigh at hand.

In the first month of 1891 she holds a carnival—her first—to inaugurate a joyous future, and to wish peace and prosperity to her sister colonies and the peoples of the earth, a jubilant and fitting wish wherewith to induct her New Year's jubilee, and attract a few, perhaps a many, from lands afar off. Among these there will be some who love the rod, the hook, the line and the gun, and to these I say leave not your sporting impedimenta behind, or at least not all, for if you have the will you will be able to make some use of it and enjoy many a pleasant day.

To offer a few brief hints is the aim in view, in the hope that they may be of service to those of the sporting brotherhood who may steer to Jamaica during her festivities.

By all means take rod and reel, hook and line, and the *et ceteras* that go to make up a moderate fishing kit, for you will be unable to procure either or any of the articles on the spot for money—love may help you a little, but infinitesimally. It would not be advisable to take a quantity of any particular article, a superabundance would be unnecessary. A few artificials—spoons, phantoms, sand eels, *et hoc genus omne*, if you like—will be found useful and at times handy when the natural bait fails, an occurrence not altogether isolated in a fisherman's experience.

The sea around Jamaica abounds in fish life of every tropical and some northern varieties, and with hardly an exception they are not proof against a shiny tempting morsel even through adorned with tempered wire and holdfast barbs. They are as fond of taking as the fisher is of offering a bait, *au naturel*, or of the deft work of skillful hands, at bottom, midwater, and surface, according to their various varieties and habits. They may be had, too, from the size of a sprat almost to that of a whale—a small one—with mouths big and mouths little, great fins and small fins, tails convex and concave. Of course they are, like animals ashore, noble man included, predacious more or less, the more predominating; some are cannibals and cruel, others vegetarians with mild and even tempers—a natural result. Some are fast of movement, others slow, mental and physical; pugnacity and a dogged obstinacy to the gentle and insinuating attentions of hook and bait, must be looked for in the many, others, again, the few, give in with a gentle submission indicative of an assuring and lovable confidence in the society of man (irrespective of his color), that suggests indifference to the terrors of gaff and landing-net so long as they may escape their ever anxious and uncertain life in their native element. And as to their color? Well!

> There are fishes of every color known,
> Fishes of gold, blue, and brown;
> Fishes of red, gray and black
> With stripes of purple down their back.
> Fishes spotted, pink and green
> With various hues in between.
> Fishes blotched, blurred and barred
> As if the scales had just been tarred.
> There isn't a tint in the heavenly bow
> That can't be licked by a fish below.
> In that Carib sea the fish, for color,
> Just pass the cake from one to the other.

As edibles they will run the gauntlet with those of northern and other waters, and more than hold their own at an epicurean feast of ichthyologists.

The harbor of Kingston holds a great variety and number of fish, and there is room for thousands of fishers without interference with each other. At times the waters of the harbor are fairly alive with fin-life, at others there is somewhat of a scarcity, and the ebb and flow are caused by the outside conditions of wind and waves. Of the fish to be found the lover of variety may be satiated, except his love of change be unlimited. I have watched, basking in the sun's vertical rays, the devil—not he of Satanic fame, but the great sea monster—and seen gamboling and sporting in mirth and jollity the porpoise, the dolphin, the bonito, the baracouta, the king, the tarpon, the mackerel, the calipever, the mullet and a round or square dozen of others. There are sharks, too, in the water, but they are also found on land—as a rule the worst type—and it will be advisable to be cautious when either are in your vicinity. Occasionally, by way of variety, an alligator shows his hideous self; he is not a lovable sort of creature, an animal one likes to caress and play with for instance, but then opinions and tastes differ.

I am not going to recommend any particular kind of tackle; it would be invidious. The gear that will take fish in the American waters and around the coasts of Britain will be equally successful in the tropical brine, at least such is the result of my experience. Of rods—did ever any two men agree upon that point? Every man's particular angler or maker is the ideal—take what you have or can lay hands on, honestly of course, for bottom fishing and spinning. For king-fishing on the off-shore banks, of which more anon, the new typical tarpon (perhaps a trifle longer) will answer admirably. If you are going to indulge in the fly, suit your own ideas as to the length, weight and make, then you will be happy and your catch none the less. Let your lines be of the

best and free in running; go in for extra length if you have the choice, and a spare one or two won't be amiss; remember insular civilization has not yet produced a tackle shop in that region. Of course for this last reason you must carry with you reels, lines, gut, hooks (take those with eyes), swivels, leads, floats, and the little etceteras. With these you will be on the right side and ought to be comfortable and easy in mind. Tropical fish in their habits are much the same as their brethren up north; it is a fact that they take the bait in their mouths, and when hooked try their level best to sever the connection.

When moving about, or shifting position, nothing beats a spoon or other spinner, natural or artificial, trailing in your wake; you may spin deep or near the surface, you will find willing mouths at all depths. Tropical fish are like others, capricious, what suits to-day may be rejected to-morrow, so keep your eyes and wits about you. In deep water and in the strong current outside, off shore, a rod is useless for bottom fishing, and in this case you must have recourse to hand lining—be sure you have by you a strong thick pair of gloves, and no style surpasses what is known across the water as the Kentish rig, a crossbar of stiff wire, the lead in the center, the snoods at the ends. But after all, minute instructions as to tackle and method of fishing are not absoluely necessary.

Of course, when you have caught your fish you will wish to take them on shore in the best condition. Fish micro-organisms develop rapidly and wonderfully in tropical temperatures, and if you want the best results remember the following and act accordingly: Kill your fish quietly, quickly and effectually by a tap on the head (one tap is better than two); handle it gently as if you loved it; do not allow it to bruise itself by flapping and jumping; quiet the nervous system by destroying the brain—an easy matter; if large, disembowel, wipe clean and dry, apply an antiseptic—there is one that I use that shows best results—inside and out sparsely, and lay the body in a quiet place where it can drain and be out of reach of the sun's rays. You won't regret the trouble you have taken.

You will want to know where to go and how to get there; but there will be no difficulty. In Kingston harbor fish are plentiful and at times superabundant, but they are seldom angled for. Boats and canoes with men may be had for a consideration, with a native as captain, philosopher, friend and guide. You will find his philosophy and guiding power much on a par, and his friendship—well, it will last and intrude so long as there is anything to be made out of you. A thorough understanding at the off-go is advisable, and you will realize that upon the density of its thoroughness and reality so will be your enjoyments and results. Your best plan (and my advice) is, write to the secretary of the Exhibition, or call on arrival, for information to cover boatmen, boats and charges, etc.; doubtless some one will be tolled off to supply you.

Off-shore fishing, as may be expected, will be attended with a greater expenditure of time, energy and cash, but the equivalent will be forthcoming for splendid fishing is to be had around the cays and over the feeding banks. A writer in a recent number of *Scribner's Magazine* writing on "Tarpon Fishing in Florida," states that in his opinion tarpon fishing is the most magnificent fishing sport in the world, and in partial support of his conviction compares the relative weights of the silver king and *Salmo salar*. We are all peculiar to our idiosyncrasies and it is fortunate that it is so, but the experience of a lifetime annihilates, in my mind, the theory that great weight enhances sport. I have yet to experience the sensations consequent on the killing of a leviathan silver king in Florida waters; but if the heart-throbs produced by a tarpon can exceed or were equal those that have been mine with a *salar* on Loch Tay and the kingfish off Jamaica, then I must cry *peccavi* and be silent.

Years ago (alas!) on a February day on Loch Tay, amid a storm of snow, wind and waves I hooked a salmon in the forenoon. Long after dark, three miles distant from the point of connection a 28-pounder paid the penalty, after one of the most glorious and determined fights ever fish made, without one minute's sulk or rest. The *finale* was tragic, some will consider it amusing, the curious may be gratified by turning over the pages of the London *Field* of Dec. 29, 1889, for "A Long Fight on Loch Tay."

In the Carribbean Sea there is a fish that may lay claim to be classed in the same category with the salmon and tarpon as a sporting fish. The giants of his race—I have seen one of 102lbs.—are not far behind in weight those of *Megalops thrissoides*, and I have on record a Goliath that pulled the beam at 200. His every day individual weight, anything up to 60 and 70lbs., is, however, far below that of the silver king (of which, so far as I know, only the big ones are recorded), but I dare assert that the "dimmed total," as Mr. Mantilini expresses it, of a morning's fishing will place the Carib king long ahead of the silver monarch, and the sport? well, that is a matter of opinion. If the reader will follow me into the middle of next week we will meet again in FOREST AND STREAM and have a morning's sport with *Cybium solandri*.

Something must be said about baits. In a country where sea angling is almost unknown and hand-lining the rare exception instead of the rule, the bait question, so momentous in northern fisheries, has not yet been considered. As a rule the conch will be considered as entitled to premier rank, but there is a little crustacean to be found under the weed that grows on the rocks along shore and upon which the waves beat that surpasses all others. By lifting the weed or removing a loose piece of rock they may be seen and gathered and will keep well and happy—apparently. These little crabs are very delicate and consequently troublesome to keep on the hook, but when on and fast their attractive powers—due entirely to their bouquet—is unlimited. They have the misfortune of developing when dead putrefactive micro-organisms with wonderful rapidity; within three or four minutes after death they are useless. But if a number be procured and kept handy a single prisoner may be sacrificed as wanted. Prawns and shrimps in or out of their crust are also effective; sprats are common—to preserve them use the antiseptic already alluded to—and other impromptu lures are not difficult to obtain in a tropical climate and country. If I were asked to place in the sequence of their value the available baits I should write the first four thus: The little rock (not sand) crab, the conch, prawn, and sprat; of artificials the sand eel, the spoon and the phantom (Brown's) surpass all others I have had to do with, but a silvery-sprat on a baby-spinner will hold its own with anything. Of sea-flies, white, red, yellow, or a mixture, will satisfy the sea mullet and mackerel when they are in the mood and you in their way.

The rivers of Jamaica, and they are many and tempting, ought to afford excellent sport, but I cannot write that they do. In many instances their upper waters—and in some even down to the mysterious and ever lapping wavelets—must strike the expert's eye as the natural home of the Salmonidæ (it is thought temperature forbids, but that has yet to be proved. An Esquimaux can live on the equator, a Nubian at the poles, they might not be happy in their first generation it is true, but life is tenacious, *vide* Succi), with their pools and shallows, sandy, gravelly and rocky bottoms, and sparkling waters with the yet unborn love of sport in the native, the over-development of the illicit practices of the poacher, and utter disregard of past legislature, it is beyond a wonder that their waters hold fish at all. And yet they do, their productive and recuperative powers are wonderful and satisfying sport may be had at times and places with fly, spinner and with bait at bottom and in midwater. At a fly the mountain mullet, no longer adults, rises with the flash of a grayling but without the endurance of *S. fario*; and the hog-nose of that ilk will test the strength of the gossamer-cast and skill of the hand that wields the rod. Five snook, with an average of five pounds each, within the hour may not be considered as below the capabilities of a phantom—not long ago it was done and may occur again at a certain spot. The ripe berry of the sweet-wood tree, or a dice-sized piece of a not-over-ripe avocado pear has been the cause of the last struggle of many a black-snapper. The worm, the maggot, the cockroach have oft in the past, and will in the future, be the innocent cause of *rigor mortis* in a mudfish.

The lover of the trigger will not find many opportunities for using his shotgun during the early and middle months, for with the close time approaching and the ravages of that ubiquitous pest, the mungoose, there will be little to shoot. If the early months be wet—a rare occurrence—fair wildfowl shooting may be had over the Great Peco Ponds in the Parish of St. Elizabeth and a few other localities; but as the drought season will be on the outlook is not encouraging. There will be more play for a rifle, especially at alligators, which are to be found in numbers at a certain spot—a sure find—not far from Kingston, and in other districts; but alligator shooting is not to my mind sport or an enjoyable recreation in the tropics. Its surroundings are decidedly disagreeable, except when a boat may be used. There are a few large sheets of inland water and two or three rivers upon which an alligator slayer may paddle his own canoe and have an occasional shot at a saurian and pick up a few good fish by way of variety and *pour passer le temps*.

The Norman rifle range, about three miles from Kingston on the windward road, will afford target practice for those inclined to indulge or try conclusions with local marksmen of whom there are many that can give a good account of their prowess and skill in planting a bullseye.

[TO BE CONTINUED.]

ANGLING NOTES.

THE early cold weather has put a stop to all angling in this part of the country, for pickerel fishing through the ice, though excellent fun, can hardly be called angling. There is nothing left to do now but to look back and enjoy the recollections of last season's sport, or what is almost as great a pleasure, plan new trips for the coming year.

Outsiders are greatly mistaken when they think that angling means only catching fish. They little know what a stock of enjoyment for future use can be laid up on a two weeks' fishing trip into the woods and mountains.

Many an overworked business man finds rest and relaxation after a long day of worry, in recalling the events of some such trip. As he sits before the fire in the evening, with the fragrant smoke of the "weed" curling upward, he again sees the cool lake in the forest, or wades the rippling trout brook overhung with bright green foliage, and remembers the killing of that big trout with all its exciting incidents. Or perhaps his vacation was spent on the far away waters of Maine or Canada, and delightful visions of camp life, with its freedom from the irksome restraints of society, pass before him, and he glances at the calendar to count the weeks that must pass before he can again enjoy the delights of "going a-fishing."

The early advent of winter ought to make a good season for Florida; already many tourists and anglers have departed for the "sunny South," and many more are prepared to start. Nearly every one hopes to kill a tarpon, but unless they remain till spring they will most likely be disappointed—nothwithstanding Senator Quay's success in that direction with his handline fishing.

Very many people, particularly those who have had no experience in Florida, seem to think that any kind of tackle will answer for tarpon fishing. One season's experience generally convinces them that they are wrong; that is if they happen to strike one of those big herring. The tackle for these great fish must be of the very best quality and sufficiently strong, or they will smash it and leave you disconsolate after perhaps many hours or even days of patient waiting.

Therefore the most successful tarpon anglers use special rods, reels, lines and snells. Noibwood makes the best rod and so far they have stood the strain of the heaviest fish (Mr. Hecksher's 184lbs.). They should be made with a long tip and short butt, something like the Cuttyhunk style of rod, only stiffer. The next best material is the plain Calcutta cane, made up in the same shape.

Split-bamboo rods are more expensive and do not stand the climate of the Florida coast.

The line should be of the best hand-laid flax, 18 or 20 threads and 600ft. long. These lines require big reels and they must run on steel points. One good run of a big tarpon will tear an ordinary reel to pieces.

The best snells of the many kinds that have been tested are the flat braided linen, mounted on special hand-forged steel hooks. These snells are tough, will stand the grinding of the tarpon's jaws, yet a shark will cut it at once and you will be able to save the line. The gaff must be made very strong and of the best steel. It should have a spread of from 4 to 5in. Thumb stalls of knitted linen must be used, and it is even safer to have a small leather apron on the reel, to act as a drag. It is not unusual to have the boatman squeeze water from a sponge on the line to keep it from burning when being run off by a lively tarpon. Rigged in this manner, and well supplied with patience and a good boatman, the angler will, sooner or later, enjoy great sport. But he must remember that the great run of tarpon does not begin until April or May. In the mean time he can amuse himself with 25lb. cavalli and channel bass, or 60lb. drum or hordes of smaller fish, many of which will take a fly and afford the best of sport.

SCARLET-IBIS.

THOSE SUNAPEE TROUT AGAIN.

Editor Forest and Stream:

You certainly give *Salmo aureolus* or *alpinus*, whichever he may finally prove to be, a good space in your columns, but I must ask for a word or two more to correct misinformation, or misunderstandings. First, deep-water fishing in the Sunapee is no new discovery.

I have personally been informed of it at Sunapee Lake as far back as 1844, when I reached the lake in June, too late for shore fishing, and was told that I must use "live bait, long lines, and go out into deep water," and the only trout then known were the regular red spotted *Salmo fontinalis*.

With regard to hybridism, I can only say that the likeness to the landlocked salmon suggested the idea to me in 1883, and if the plant of '77 had not produced them, Dr. Fletcher's plant of '65 might have done so, should such a crop be possible.

There is yet another point, which no one has noted, should the fish prove to be *Salmo alpinus*.

The shipment to this country called for 60,000 eggs. 5,000 were said to have been lost on the voyage, and Mr. Powers reported a loss of 6,515 in the hatchery. This left 49,485, of which only 30,000 were reported to have been placed in Newfound Lake. This leaves 19,485 unaccounted for. Some were kept as breeders, but I always believed that Mr. Powers, from his well known affection for Sunapee, put part of them in there, and this impression was strengthened by his reticence and refusal to express any opinion on the subject, when it was discussed in his presence. Should he have done so in 1881, it would easily account for their appearance on the spawning beds in 1885. Of course this is only conjecture, but in such an investigation, all causes and chances should be considered and weighed.

This, however, would not account for their appearance in Dan Hole, and if they are the genuine saibling, the only way they could have got there, would have been by getting mixed in the hatching house, and it was always a mystery to me in my visits to the house, that the fry did not get so mixed, with the constant flow of water, through those shallow trays, in which they were always huddled at the lower edge.

Landlocked salmon were planted in Silver Lake, in Madison in '78, but if these fish can be found, as Mr. Aiken suggests, in the pond in Warren, it would be pretty positive proof that they are an aboriginal and hitherto unknown variety, which I hope for the sake of my friend Hodge may prove to be the case. VON W.

CHARLESTOWN, N. H., Dec. 20.

THE CALIFORNIA SARDINE.—San Francisco Bay is said to be fairly swarming with sardines at the present time. "On clear nights they come to the surface in such myriads as to set the water fairly ablaze with their silvery, phosphorescent light, and their leaping and playing produces a sound that resembles the patter of hailstones. All the quiet coves of the bay are infested with them." Most of the fish are as large as the herring and cannot, therefore, be utilized for sardines. This is the California sardine (*Clupea sagax*), and it resembles the well-known sardine (*Clupea pilchardus*), but grows larger. It abounds in winter on the California coast, especially southward. At San Diego Drs. Jordan and Gilbert reported its capture from the wharves with hook and line. As a food fish the sardine is preferred to the herring. It is believed that the species forms an important part of the food of the salmon.

ACCIDENT TO EDGAR SMITH.—Boston, Dec. 21.—Mr. Edgar Smith, proprietor of the Round Mountain Lake fishing camps in Maine, while in Boston, last week, buying some horses, met with a most unfortunate and painful accident. On Wednesday evening, Dec. 17, while crossing the city in the blinding storm, he was struck and thrown down by a horse car that turned a curve and came suddenly upon him, the wheels then passing over the toes of one foot and the other ankle and leg, inflicting injuries of such a nature that at the present time the result is doubtful. With good care it is hoped that amputation will be unnecessary. The many friends of Edgar and his father, who is so widely known among sportsmen as the pioneer of the Dead River country, will feel a deep sympathy and interest in his recovery.—M.

CUTTYHUNK BASS SCORE.—The score of the Cuttyhunk Club for the season of 1890 shows a total catch of 154 fish aggregating a weight of 216¼lbs., an average of about 1¼lbs. The largest fish pulled down 4¼lbs., and the smallest was a diminutive specimen of 4¾lbs. The year's record for 1889, it will be remembered, was practically *nil*.

Fishculture.

HATCHING BLUEBACK SALMON.—Mr. W. A. Wilcox, of the U. S. Fish Commission, informs us that in the fall of 1889 Mr. G. W. Williams hatched 300,000 eggs of the blueback salmon (*Oncorhynchus nerka*) and kept them in a pond at the Cascades of the Columbia River. The young fry it is said were kept in the pond two months and were fed twice daily on oatmeal mush, with the addition of liver twice a week. The pond in which they were kept is only about one acre in extent and has an outlet into the Columbia River. Its temperature was from 40 to 45 degrees and its depth 30ft. At the age of two months the fry had reached a length of from 2 to 2½in. and were allowed to escape into the Columbia. Mr. Williams hatched, also, eggs of the red-throated trout (*Salmo purpuratus*) successfully.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

CENTRAL FIELD TRIALS.

Tuesday, Dec. 16.

THE last stake to be run at the Central Field Trials began this morning, with the Free for All or Four-hour race. The drawing took place last night and resulted as follows:

ROWDY ROD (Geo. Ewing)—CHANCE (J. M. Avent).
NANNIE B. (J. A. McLeod)—DAISY HOPE (N. S. Titus).
PITTI SING (T. Johnson)—KING'S MARK (B. Ridgway).

The amount of money given for first, $1,000, is a great inducement to handlers, but well they know that it must be a sterling good dog and a stayer to be able to run consistently throught heats of 3 or 4 hours' duration, which he must do to win the money. The runner-up is consoled with $100. Rowdy Rod is the favorite, Daisy Hope and Chance coming next.

ROWDY ROD AND CHANCE,

the first brace down for the Four-hour race, were cast off at 8 A. M. in the large sedge grass field at edge of town. The morning opened bright and frosty, but the south wind brought rain about 11 o'clock, making it most uncomfortable work for both dogs and all concerned. S. C. Bradley handled Rowdy and J. M. Avent, Chance. Not long after

JUDGE WALLACE.

starting Chance pointed a bevy, which Avent flushing, shot and killed; Chance retrieving. Then Rowdy pointed a small bevy, secured a single on scattered birds, which Bradley flushed, shot at and missed. Moving on to pine woods, Rowdy pointed and Bradley flushed the bird out of a pine tree. Then Rowdy pointed, and drawing on failed to find anything. Chance pointed further on in sedge and small pines. Rowdy backed to order, when Chance moved on, roaded but failed to locate. Further up the hill he pointed false again. Then he pointed again, then drew on but in the wrong direction, and Rowdy being let go, at once drew to the left and found the birds within a few yards, dropping as the birds flushed wild. Chance making off to one side further up the hill, dropped to a point again, but Avent not finding, he drew on and ranged off. Rowdy, who had followed flushed birds in the bottom, failed to score, and coming up both pointed, but Rowdy drawing on pointed at foot of fir tree where a single bird had just flushed. Out of woods in sedge, dogs were held up and taken to another farm where they were put down in cornfield. A lot of varied country was hunted out, when Chance had a welcome rest, Rowdy having ranged off in woods where he was found on a point, Bradley flushing a bevy, shot and killed. Rowdy retrieving well. Then Chance was lost, and Rowdy had his turn, and after waiting about twenty minutes, dogs were brought together and shortly after Rowdy got a good point on a bevy, which Bradley flushed but did not shoot; both dogs steady. Then Rowdy pointed foot scent near by. In high sedge, further on, Rowdy dropped to a point, but Bradley failed to find anything. Then on in edge of woods Chance pointed false, Rowdy backing. In some dense pines Rowdy then made a good point on a bevy, which Bradley put up, shot and missed. It was now raining hard and rubber coats were in order. In ragweed field Chance pointed false, and Rowdy coming up did not care much about backing. Chance was then held up, as Rowdy had secured a bevy in woods. After ranging on some distance, at edge of woods, Chance got a good point on a bevy; Avent flushed, shot and missed. After the scattered birds, Rowdy pointed a single, which Bradley shot and wounded, Chance backing. Bird was hard to retrieve as Rowdy had to chase, eventually bringing it in. Then Chance pointed false. Further on in woods, in a patch of sedge grass, Rowdy pointed, and Chance passing him failed to back, when Bradley flushed a single, shot and missed. Shortly after Chance pointed stylishly in pines and a single flushed wild ahead, Rowdy backing nicely. Going on through the pines, Chance secured a single, and Avent flushing, the balance of birds got up. Dogs were then taken up at 12 o'clock, Rowdy winning the heat. Rowdy did the best work on birds, and both were going fast at the finish considering the wet and heavy nature of the ground, as it was still raining hard and showed no sign of stopping. After lunch, which was eaten before a welcome wood fire in the farmhouse kitchen amid steaming leggings, a halt was called for the day and a wet ride home ensued. Snow fell during the night, some three inches deep, and as the weather was still unfit for work on Wednesday, it was decided to lay up for the day.

Thursday.

NANNIE B. AND DAISY HOPE.

After the blustering snowy weather of yesterday this morning opened frosty and clear, the sun coming out toward the middle of the day, when it became quite warm. The above brace was put down at 8:05 in the sedge field near town. Daisy was the first to point, Titus putting up a bevy, shot and killed, Daisy retrieving. Following the scattered birds each pointed singles, and Nannie retrieved to Barker's kill. Then all the birds flushed wild. Daisy soon located a bevy in sedge field, making a good point; Nannie backed and Titus flushed. Following the scattered birds into woods Nannie pointed false, then roading on she pointed false again. Daisy having been brought up pointed as well, but nothing came of it. The dogs were then taken up and put

JUDGE DAVIDSON.

down at edge of woods about half a mile away. Working into woods Nannie pointed, moved on and stopped again, then roaded on, but could not locate. A good deal of varied ground was now hunted out, and it was upward of an hour before Daisy was lost again. She then redeemed herself by pointing in a strip of cover, but her handler not flushing she drew on and finally located the birds several yards further on, birds flushing wild; Titus shot and missed. Following the scattered birds Nannie picked up a single which Barker flushed, but did not shoot, Daisy meanwhile backing. Daisy then pointed a single and Titus flushing, Titus's gun missed fire. Both dogs then roaded on carefully and out into the open sedge. Then Daisy at the corner of woods began roading, stopped, moved on, when Titus flushed a single as the bitch was coming toward him from the left. Daisy dropped to wing. Then Daisy pointed foot scent, Nannie backing. Daisy secured another single which Titus shot at and missed, Nannie backing nicely. Daisy followed this up by a good point on a bevy at the edge of woods, but Titus failed to score. For some time Nannie had begun to show signs of giving up, and Barker asked permission to withdraw her, but the judges would not allow it. The bitch took it into her own hands, however, and laid down, handler and dog taking a rest. Her feet were sore and she seemed generally out of shape. It may be said that this bitch is very open footed, and this country if any where needs a dog with good sound limbs and good close feet, thick through the pads. Finally Barker took the bitch up at 11:05. Going back in woods Daisy pointed, and judge Davidson to vary the monotony thought he would take a shot. After due preparation a single was flushed, when the judge let fly, missed, and followed suit with the other barrel, but with a shake of the tail "Bob White" flew contemptuously away. At edge of woods Daisy pointed again but nothing found. Little else was done before 12:05, when Daisy was ordered up and the heat of course awarded to her. Daisy did nearly all the work on birds, besides ranging out well, and was at the same time under pretty good control. Lunch was eaten at the edge of some pines, and a crackling fire lent warmth and a charm to the scene. The next brace,

PITTI SING AND KING'S MARK

were put down at 12:48 in corn. Pitti Sing was handled by A. Cameron and King's Mark by W. S. Barker. Both started off at a good gait which on the part of Pitti Sing was kept up pretty well to the finish. At the edge of some pines King's Mark was the first to point, but nothing came of it; then further on Pitti pointed and Mark backing, Cameron flushed a bevy, shot and missed, both dogs steady. Working out into the open, Mark, in sedge, pointed and Pitti backed stylishly, but Barker could not find. Dog sent on, roaded round, pointing several times but failed to locate birds. Mark further on indulged in another false point. Then Pitti, at edge of pines, pointed and Mark backing, Cameron flushed a small bevy, dogs steady to wing. Mark then pointed false and followed it up soon after by stopping to a single, Pitti backing nicely. Then Pitti false pointed, backed by Mark; both dogs then roaded through pines, but failed to locate, handlers flushing a single. Out of woods Mark pointed fur, Pitti backing, Barker started a rabbit. In sedge Pitti pointed a large bevy which flushed before Cameron could get up to them, Mark backing nicely. Then by the side of some sedge Mark pointed and Barker flushing a single, shot and missed. Mark further on, where bevy had been marked down, pointed and Barker raised a single. Pitti meanwhile pointing, but nothing found. Mark pointed again and a single flushed ahead near the road. In grass and weeds Pitti pointed but nothing was found, and moving on to the left Cameron flushed two birds ahead of Pitti, who was pointing again, and just as Cameron came up several birds flushed, he shooting to no effect. Moving on, in sedge, Mark pointed, drew on, and pointing again Barker flushed a single, shot and missed. After half an hour's quest, Pitti secured a good point on a brace of birds at edge of sedge. Birds flushed wild and Cameron shot and missed. Then Mark pointed where birds had flushed. Afterward a single flushing, Cameron put his dog on, when she pointed and a single was flushed. To the right Mark then pointed false and moving on some distance pointed a bevy at the edge of ploughed field. Pitti backing Barker flushed, but somehow failed to shoot. On, over a swamp to some woods where birds were marked down, Mark pointed a single, then another and Pitti also secured one. Working on through sedge grass Mark pointed again and Pitti backing, Barker flushed a bevy, shot and killed, Mark retrieving bird nicely. Then Pitti pointed a bird in pines, then pointed again, roaded on but failed to locate. Here Mark showed signs of distress, the going was heavy and his weight began to tell, he seemed to collapse all at once and settling down to a walk would not leave his handler. Dogs were then, at 4 P.M., taken up to be put down about a quarter of a mile further down a road. Pitti started off gaily, but King's Mark refusing to budge. Barker was compelled to take him up for good and Pitti went on alone. Pitti galloping through a field pointed a big flock of doves. Then going on through stubble Pitti, catching scent, roaded prettily to a point on a bevy at edge of some briers, birds flushed just as Cameron came up, when he shot and missed. In pines she got on to the scattered birds but failed to hold them, one bird flushing after she had pointed and been sent on. She was ordered up at 4:48. She did not show much signs of distress, often, when she thought she had a likely bit of ground, starting off at as good a gait as ever. We finished the day's work several miles from town.

Friday—Second Series.

ROWDY ROD AND DAISY HOPE.

Much interest was centered in this race, as both were favorites, but Rowdy was not to be denied. The morning was bright and frosty, becoming uncomfortably warm toward the middle of the day, making it pretty hard on the dogs and handlers. Rowdy, as usual, was handled by Bradley, and Daisy by her owner, W. W. Titus. Cast off at 8:23, both started well, keeping together for some time. Daisy was the first to point in oaks, Rowdy backing, but nothing came of it. On entering woods Daisy found a bevy which Titus flushed, shot and killed, Daisy making a good retrieve. After going thirty-five minutes dogs were taken up, and about ten minutes after put down in cotton patch. Then in a clump of pines Rowdy pointed a bevy which Bradley flushed, Rowdy retrieving nicely to the kill. In dense pines Rowdy pointed and Daisy backed, but nothing found. Rowdy roaded on carefully and located birds which flushed wild; Bradley shot and missed. On, in pines, Rowdy pointed false; then Daisy pointed a single, Titus shot and missed. Working through the pines Rowdy secured a good point on a bevy, which Bradley put up, shot at but missed, Daisy backing. Leaving these birds, dogs were taken out into open sedge, where Bradley flushed a bevy, Rowdy dropping to wing. In sedge Daisy pointed then moved on, repeating in some pines, roading carefully but could not locate. Higher up on the hill birds were located by Rowdy, and pointing staunchly, Bradley flushed, Rowdy retrieved to his kill Lower down meanwhile, Daisy had come up with her bird and pointing, Titus put them up, shot and Daisy retrieved In pines further on Daisy pointed a single, which Titus flushed. Taken out of the woods Rowdy in some corn then pointed a bevy, Bradley flushing, shot and missed. On scattered birds up the hill, Daisy picked up a single, which Titus shot, others getting up in every direction. Then Rowdy pointed a couple of birds, Daisy pointing some others to one side. Roading on Rowdy picked up the birds and Bradley killed; dogs steady. At the foot of a pine Daisy pointed, but nothing found. In some sedge Rowdy was found on a staunch point, but not finding anything dog ordered on to locate, which he did after some careful roading, birds evidently on the move some distance ahead. A single flushed to Rowdy's point, and Bradley shot and

JUDGE TRACY.

killed, others flushing ahead. Rowdy retrieved in good style from the high sedge grass. In bottom, by a creek, just before the finish, Rowdy pointed, but nothing came of it, and as time was up the dogs were secured at 12:24, and after some consultation judges decided in favor of Rowdy Rod. Rowdy was going much the stronger at the finish, but the almost summer-like heat must have affected the dogs considerably. Meanwhile Pitti Sing ran a side heat with the guide, Cameron killing three birds.

Saturday.

ROWDY ROD AND PITTI SING.

The morning opened cloudy and a raw sort of frost prevailed, making it very cold, and the frost lying on the ground so long materially affected the scent for some three hours of the heat. Both dogs at 8:38, in stubble and cornfield about two miles from town, started off at a good speed. Soon after starting, in sedge and ragweed, Pitti came to a point and a bevy flushed wild. Then Rowdy pointed, moved on, pointed again and a single flushed. In high sedge Pitti, after some ranging, pointed false, moved up and pointed again, nothing found. Further on Pitti galloped into a bevy, birds flushing and Pitti dropping to wing. Sent on Pitti pointed and Cameron not finding anything, dog was ordered on and flushed a single, which Cameron shot at and missed. Rowdy then in sedge stopped, but roading on came up with the birds which flushed wild ahead, Rowdy dropping to wing. Across the track, Rowdy going down wind was said to have flushed a bevy and stopped to wing. In pines Pitti pointed and a single flushed ahead of her and being held on the point some time, another single flushed to one side. Sent on, she pointed again and Cameron flushed a single. Pitti then in ragweed flushed a bevy on the hill, Rowdy backing to the drop. Roading up the hill she pointed again but nothing found. Another point was made by this bitch and Rowdy backing to order, Cameron flushed a single, shot and missed. Calling his dog into stubble side of sedge patch, she pointed a bevy which Cameron flushed. Rowdy seemed off nose and was not hunting with his usual confidence, a single flushing quite near to him. Then he pointed a bevy at the edge of pines, which Bradley flushed, shot and

killed, Rowdy retrieving the bird nicely from the high sedge. Then Pitti false pointed. The weather getting warmer and the frost disappearing Rowdy seemed to come to himself and pointing a single at edge of plough, Bradley shot and killed, Rowdy retrieving in good style. Then Pitti pointed further on, moved up, pointed again, but Cameron could not find; Rowdy backing nicely. Pitti then moved on to order, but failed to locate. Rowdy then pointed stylishly in grass field, Pitti backing nicely, when Bradley coming up, birds flushed; Bradley shot and missed; dogs steady. Then at edge of woods Rowdy pointed, and Pitti coming up to one side pointed also, but nothing found. Dogs were then ordered up at edge of woods at 12:39. A dead bird was thrown for Pitti to retrieve, but she failed to do so, and judges consulting some minutes decided in favor of Rowdy Rod, much to the satisfaction of nearly every one present. Both dogs were going well considering the bad state of the ground. This ended the trials for 1890, after a very successful meeting, although every one was by this time pretty well tired out and in need of a rest.

SUMMARY.

First Series.

Rowdy Rod beat Chance.
Daisy Hope beat Nannie B.
Pitti Sing beat King's Mark.

Second Series.

Rowdy Rod beat Daisy Hope.
Pitti Sing a bye.

Final.

Rowdy Rod beat Pitti Sing and won first prize of $1,000.
Pitti Sing second, winning $100.

PHILADELPHIA KENNEL CLUB'S FIELD TRIALS

EVERY one who attended these trials are loud in their praise of the management, and Mr. Francis S. Brown showed conclusively that he was the right man in the right place. Though the trials were held at an out-of-the-way place, Dentonsville, Va., six miles from the railroad, the arrangements were so perfect that this inconvenience was scarcely felt. The meeting was held at Judge Farrar's residence, and everything was brought from Philadelphia that could conduce to the comfort of the guests. Among those present were Ezra Comfort, the president of the club, Francis S. Brown, the secretary, Dr. John A. Hartmann, Francis G. Taylor, Col. B. Ridgway, Lawrence Shuster, Jr., W. B. Smith, Jr., H. Winslow, C. E. Connell, B. F. Hall, N. B. Thomas, Aleck Wolstencroft, J. Shubrooke, Prof. Schuyler, Polk Miller, R. G. Southall, A. W. Miller, Rev. Mr. Downman, Dr. P. E. Anderson, Dr. Jas. Southall, W. Tallman, Jacob Pentz, V. Haldeman and Maj. J. M. Taylor, judges W. A. Coster and Herbert Merriam; Mr. Taylor-Rich, the other judge, being absent.

Messrs. Winslow and Connell kept the company in roars of laughter with their quips and jokes, and were the life and soul of as merry a party of field trial men as ever got together. The trials were run through in good time, everything being run off by noon on Friday last.

Monday, Dec. 15.

The first day was a perfect one for the club's field trials, weather clear and cool, with very little wind from the south. The arrangements made by the efficient secretary, Francis S. Brown, were perfection, so that an early start was made, the first brace being sent away at 8:02, near Judge Farrar's homestead. In this, the Members' Stake, the dogs were handled by their owners. The first brace down was

EZRA NOBLE AND ROCK II.

Lawrence Shuster, Jr., handled Ezra Noble and Mr. Connell handled Rock II. The ground was frozen and rocky, and Rock II., being lame, got off slowly; in fact, at no time in the heat was he able to show himself the dog he is, and no one seeing him here would have recognized him by his work when compared with that at the Central Trials last week. There is no doubt that his lameness caused him to show up as he did. Ezra Noble is a good field dog, a good worker, staying out at his work well, hunting his ground with good judgment, and he has good pace and range; he backs well, and was generally steady. Ezra soon dropped to a point on a bevy, Rock backing. Mr. Shuster killed and the bird was retrieved by Ezra. Bevy followed to pines, where each scored a flush. They were ordered up at 8:46. Ezra had the best of the heat.

PERSEVERANCE AND BEN HUR OF FRANKLIN.

Ezra Comfort handled Perseverance and Walter B. Smith handled Ben Hur of Franklin. They were cast off at 8:53 in open stubble. After a short run a rabbit, starting in front of Mr. Comfort, ran through bevy, flushing it. The scattered birds were not found. Perseverance pointed a bevy in good style and was backed well by Ben Hur. Mr. Comfort flushed and killed a bird. Perseverance broke shot, then retrieved in good style. Going to where birds settled, each dog quickly made points on singles, both dropping on their points. The bird pointed by Ben Hur was killed and he retrieved a few feet away. He then made another point and was steady to flush. Ben Hur was fastest at first, but at end of the heat Perseverance was his equal in pace and range, and hunted her ground with best judgment. Dogs up at 9:46.

FLASH AND FAN FAN.

The Gordon setter Flash was handled by his owner, B. F. Hall, and Fan Fan was handled by Chas. Connell. They started at 9:50. After a run on new ground while crossing where last scattered birds were left, Fan Fan made game and flushed a single bird she should have pointed. Flash next pointed a bevy, Fan refusing to back, and pointed in ahead; birds flushed around them. Fan afterward made a good point, following with a flush. Flash pointed and Fan put up the birds. Fan showed fair pace and range, but seemed off in nose, and would not back well, and only fairly obedient. Flash, the Gordon, has fair nose, pace and range, doing better work than any dog of his breed I have seen lately. The dogs were ordered up at 10:36.

KATIE NOBLE AND ROSA LEE.

Francis Noble handled his Katie Noble and Rosa Lee was handled by her owner, Dr. John A. Hartman. At 10:41 this brace started, and after a sharp run Katie pointed in heavy grass weeds, nothing found. Moving on she roaded some distance but failed to locate. No birds were found until a reporter flushed a bevy. Following to woods Katie pointed a single, steady to shot. Katie was best in pace, range and hunting qualities, working ground with good judgment. Dogs up at 11:42. Lunch was now ordered and eaten, pending the arrival of Tempest, expected at any moment from the Central trials.

TEMPEST AND EDGEMARK.

Tempest, to be handled by I. H. Winslow, F. S. Brown handling Edgemark. This was the last brace of first series, but Tempest had not arrived from Central Trials and Edgemark was put down to run 45 minutes. He was in good form and ran a fine trial, making one flush and pointing three bevies. He is stylish in work, was steady to wing and shot, and is a good retriever. His work was superior to that done at High Point or Central trials.

Second Series.

Five dogs were left in the second series to run as follows: Ezra Noble against Ben Hur and Flash against Katie Noble, Edgemont a bye.

FLASH AND KATIE NOBLE.

This brace were sent off at 2 P. M. Katie Noble best in speed, range and style and hunting ground with much better judgment. Flash went well, though in open stubble he flushed a single bird, but stopped to wing, when he pointed balance of bevy; Katie backed. Following the bevy, Flash flushed a single. Dogs ordered up at 2:27.

EZRA NOBLE AND BEN HUR OF FRANKLIN.

This heat lasted 2hrs. and 2min., and then not much work was done. Ben Hur pointed a rabbit. After a long run Ezra Noble made game, and after casting round put up a single, which settled a few feet away, dropping to wing he remained on point to balance of bevy; Shuster flushed, when Ezra broke in; he retrieved the bird well. Ben Hur backed in good style, following scattered birds he made two points; steady to wing. Dogs were then ordered up. There was little difference in speed and range, Ezra slightly the better.

BEN HUR AND EDGEMARK.

This was the final for first money. Running for some time both dogs were out of sight behind a hill. Mr. Brown called point, soon afterward bird rose; following them birds were not found. Edgemark afterward flushed a bevy, and in woods on scattered birds Ben made two points on singles, and after a short run Edgemark was declared the winner of first prize, Ben Hur of Franklin second prize, Ezra Noble third prize. This was a good decision.

DERBY STAKE—*Tuesday.*

Morning opened cloudy and cool with a westerly breeze blowing somewhat stiffly, making it uncomfortable for the horsemen. Ice had formed and the ground was well frozen. The Derby closed this morning with eight entries and the running created considerable interest. The running was not high-class, except that done by the winner, Dr. J. A. Hartman's black, white and tan bitch Albert's Duchess. This bitch running the series through without a mistake and doing good work—in fact very high-class work.

JEAN AND OLD SMED.

J. B. Ellison's Jean was handled by A. Wolstencroft and L. Shuster, Jr.'s, Old Smed handled by Geo. Green. A start was made near the house and the puppies had not run long before Old Smed scented birds and began roading, Jean joining in soon, when he pointed and put up a rabbit and chased a short distance, Old Smed roading to a flush. Working over the hill Jean made game and soon pointed but was unsteady, birds flushing. Following the birds, Old Smed made an uncertain point, stopping, but with stern moving about and head looking around. They were ordered up at 9:16, Old Smed had the best of range and pace, with better style, neither doing work good enough for future recognition.

CLEMENTINE AND ALBERT'S DUCHESS.

Lawrence Shuster, Jr.'s Clementine, handled by G. W. Greene, and Dr. J. A. Hartman's Albert's Duchess by J. C. Schuyler, were sent away at 9:21. Going at a good pace, it did not take long to convince all that Duchess was a superior puppy. She quickly made a staunch point on bevy. Clementine, called up, refused to back, and flushed the bevy. Schuyler put up the birds and killed, Duchess retrieved splendidly. The bevy was not followed. Dogs ordered on, Duchess soon found another bevy, which Clementine roaded up; Duchess steady. On the singles she pointed one in good style. After running till 10:06 they were ordered up. Duchess proved herself in this heat a first-class puppy, having good pace and range, hunting in a very independent manner and thoroughly staunch, and under perfect command. She is stylish in work, doing it in a very snappy way, and loses no time in pottering. Clementine under good command, but not broken sufficiently.

PEG WOFFINGTON AND BEVERLY.

Francis S. Brown's Peg Woffington, handled by owner, and Francis G. Taylor's Beverly, handled by N. B. Thomas. This brace was put down at 10:21, and were taken up at 11:07. Nothing was done on birds except a flush of a bevy down wind by Beverly. Both showed good pace and range, but Beverly was much the superior, showing much quality; he has a stylish way of going and is a hard worker, covers a great deal of ground, and hunts out his ground in good form; in fact all his natural qualities are of a superior kind. Peg Woffington is stylish in work but hasn't the speed of Beverly, but is a merry good worker all the same.

LUCY NOBLE AND BOB TOLAND.

W. B. Smith's Lucy Noble was handled by Mr. Sherbrooke, and John B. Ellison's Toland, handled by Alex. Wolstencroft, were the last brace of the first series. They started at 11:14. After a short run Lucy Noble flushed a bevy. At the edge of pine woods near by she made a false point. Bob backed indifferently. Bob was next to do some work, flushing an outlying bird of a bevy, stopping a moment, moved in to send off the balance. Lucy afterward made a false point. Ordered up at 11:59. Bob Toland had nothing of merit about him, slow and without style. Lucy had fair pace, but kept herself busy within limited range. This ended the first series and lunch was announced. The judges, after a short consultation, announced that four dogs would be kept for next series to run as follows:

Albert's Duchess against Beverly.
Peg Wolffington against Old Smed.

Second Series.

BEVERLY AND ALBERT'S DUCHESS.

This brace went away at a good pace, Duchess quickly finding bevy. Beverly called up, refused to back. Birds flushed by Schuyler, Duchess staunch. Birds not followed. A few minutes afterward Beverly flushed a bevy and dogs were ordered up. Down ten minutes.

PEG WOFFINGTON AND OLD SMED.

Peg was first to point, but no bird was flushed. She afterward flushed a bevy roading down wind in short cover. Following scattered birds in woods, she pointed a single. Mr. Brown coming up, she moved on and bird flushed. Peg afterward flushed.

BEVERLY AND OLD SMED.

This brace was put down at 2:24. After a short run Beverly pointed a bevy in good style, but was a little unsteady to flush. Dogs then ordered up.

PEG WOFFINGTON AND CLEMINTINE.

This brace had a short run, Peg getting a good point, Clementine pointing a moment after, flushed and was unsteady. Dogs ordered up and the Derby was decided as follows: Albert's Duchess first, Beverly second, Peg Woffington third.

Albert's Duchess is a black, white and tan bitch weighing about 45lbs., has a fine nose, with good movement and has a merry way of going. She was well handled, is very obedient and a thoroughly independent worker, hunting her ground with judgment and was thoroughly staunch throughout her race. She won easily here and would be a formidable opponent at any field trial. Her owner, Dr. John A. Hartman, of Latrobe, Pa., is to be congratulated on owning so good a bitch.

ALL-AGED STAKE.

This stake closed with twenty entries, which were drawn as follows:

White Fawn with Inspiration.
Perseverance with Countess Roxie.
Edgemark with Sue Noble.
Prince with Shot.
Silk with Fan Fan.
Ezra Noble with Hazel.
King Item with Flash.
Katie Noble with Sleepy Noble.
Rock II. with Victor the Blue Stocking.
Tempest with Rosa Lee.

Wednesday.—Rained hard all day and nothing was done.

Thursday.

The day was cloudy and cold, raining early in the morning. A late start was made about one mile south of Judge Farrar's house. A cold and strong breeze was blowing from the northwest, making it very uncomfortable for us all.

WHITE FAWN AND INSPIRATION.

J. H. Winslow's pointer bitch White Fawn was handled by J. Sherbrooke and F. G. Taylor's pointer dog Inspiration was handled by W. B. Thomas. They were cast off at 9:31. White Fawn was first to find and pointing bevy she was handsomely backed by Inspiration. Handler not flushing, White Fawn moved on and located birds. On scattered birds she pointed a single, Inspiration backing; Sherbrooke flushed and killed, both dogs broke, Inspiration got the bird and retrieved it. While neither dog showed more than fair pace and range Inspiration had the best of it, his style in backing and pointing being the best. Inspiration made a point, but White Fawn refused to back; ordered up at 10:16.

COUNTESS ROXIE AND PERSEVERANCE.

H. F. Smith's Gordon setter bitch Countess Roxie was handled by Fisher and Ezra Comfort's English setter bitch Perseverance was handled by J. Sherbrooke. They were sent away at 10:17 and but little work was done by them. Perseverance had the best of it in pace and range, but she was badly handled. Countess Roxie found and pointed a bevy, Perseverance breaking shot and retrieving bird. This was poor work.

EDGEMARK AND SUE NOBLE.

F. S. Brown's English setter Edgemark, handled by owner, and B. Ridgway's English setter bitch Sue Noble, handled by J. Sherbrooke, were cast off at 11:08. In stubble at edge of woods Edgemark pointed a bevy and was backed by Sue Noble. On, after scattered birds in woods Edgemark pointed a single, and then made a flush. Sue pointed; sent on, failed to locate. Going to open again, Edgemark after a short run pointed a bevy, after which dogs were ordered up at 11:53. Edgemark was best in pace, range and style. Sue Noble had the disadvantage of bad handling, as Mr. Sherbrooke has much to learn in the business. His dogs were allowed by him to rely on their own judgment and merit to pull them through.

PRINCE AND SHOT.

J. A. Stovell's setter dog Prince, handled by R. Voshall, and B. F. Hall's Gordon setter dog Shot, handled by Ed. Martin, were cast off at 11:55. Shot pointed a bevy, Prince not caring to back, birds flushed. Following them Shot pointed a single, which he flushed and chased. Going on Shot found another bevy, dropping to a point, Prince backing, but nothing found to the point. Afterwards each dog made point and moved on. Prince then made a point and flushed the birds. Going on a while, both dogs while roading through bushes flushed a large bevy wild.

SILK AND FAN FAN.

G. G. Davis's Irish setter bitch Silk, handled by N. B. Thomas, and Cornwell & Cullen's pointer bitch Fan Fan, handled by Wm. Tallman, were sent away at 1:30. After a short run, and while dogs were in thicket a large bevy flushed on to pines. Going on, each made a flush of birds. Silk followed with a flush of a single; after roading it she jumped in. Fan Fan was best in pace and range. Ordered up at 2:17.

EZRA NOBLE AND HAZEL.

Lawrence Shuster, Jr.'s English setter dog Ezra Noble, handled by Geo. Greene, and John B. Ellison's English setter bitch Hazel, handled by Alex Wolstencroft, were cast off at 2:23. No birds were found during the heat. Hazel did nothing to commend her to notice. Ezra started rather slowly, but soon got to good pace and range, hunting his ground well.

KING ITEM AND FLASH.

H. F. Smith's Gordon setter dog King Item was handled by Fisher, and B. F. Hall's Gordon setter dog Flash, handled by E. I. Martin, were started at 3:12, some time elapsed before finding. Flash making a point on bevy in a weed field, he was unsteady to shot; he was indifferently backed by King. The bevy settled in pine woods, where Flash made three points on singles in good style; to one flush he was unsteady, but retrieved a bird well killed by Martin. King had much better pace and range than he showed at the Central trials, but was not the equal of Flash in either.

KATIE NOBLE AND SLEEPY NOBLE.

Francis G. Taylor's English setter bitch Katie Noble; handled by N. B. Thomas, and Lawrence Shuster, Jr.'s English setter Sleepy Noble, handled by Geo. Greene, were cast off at 4 P. M. Katie was not long in finding a bevy in a stubble field, dropping to a point, Sleepy Noble backing to command. The scattered birds were not found. Passing through pines to stubble, Sleepy Noble was roading to point and had almost stopped when Katie, crossing several yards in front of him, dropped to a point near the birds; Sleepy Noble was entitled to the find. Following the bevy Sleepy pointed another bevy about 60yds. from last find. Afterward Katie pointed a single; crossing ravine to hillside. Katie pointed a bevy in stubble. The bevy was not followed. Near by she made a point on another bevy, and some distance further on pointed again. Dogs were then ordered up at 4:43. Katie had pace and range and was the more stylish in ranging. Sleepy the more stylish on point. Both were under good command.

ROCK II.—VICTOR THE BLUE STOCKING.

Connell and Cullen's pointer dog Rock II., handled by Wm. Tallman, and John B. Ellison's liver and white pointer dog Victor the Blue Stocking, was handled by Aleck Woolstencroft. This was the last brace of the day, and they had a spin in the open. Pace and range about equal. They first got on single birds. Victor first made a point and was well backed by Rock. Rock then made a flush and then pointed where birds had flown from. Going up a ravine Rock pointed, when Tallman flushed and winged a bird. Rock broke shot to retrieve, but failed to find. After a short run to woods, Victor pointed a single, which his handler flushed and killed, and bird was well retrieved by Victor. Rock pointed then, evidently on scent of running birds, but failed to locate. This ended the work for the day.

Friday.

This was a clear day with bracing air and light breeze from the northeast, a nice day for the close of the trials. At 9 o'clock the last brace of the first series was put down.

TEMPEST AND ROSA LEE.

J. H. Winslow's pointer dog Tempest, handled by J. Sherbrooke, and Dr. J. A. Hartman's English setter bitch Rosa Lee was handled by J. C. Schuyler. They started in open grass field; the pace was not fast. After a short run a bevy of birds was flushed by horsemen, and they settled in the open. Dogs ordered on, Tempest made a point first and was backed by Rosa Lee, both steady to flush. Following into pines, Tempest flushed a single bird, and then a fresh bevy down wind. Following on Rosa Lee pointed a single and was indifferently backed by Tempest. After running till 9:45 they were ordered up. This completed the first series, and the judges after short consultation announced the following to run in

Second Series.

Katie Noble with Edgemark; Flash with Sleepy Noble; Ezra Noble with Countess Roxie.

EDGEMARK AND KATIE NOBLE.

This brace was cast off at 10:02, both going well, Katie the faster and covering the ground in better form. After a short run at edge of pines, Katie was lost; when found she was on a point, her handler flushing, she was steady to wing. Moving on to scattered birds, each dog made a flush, Katie down wind and Edgemark cross wind, both in difficult places to get a point. Dogs were taken up and carried to open fields half a mile away and put down in stubble, Katie first false pointed, and Edgemark refused to back, but soon after found a bevy, pointing it staunchly, Edgemark backing in good style. During most of the heat Katie, being the best ranger, was working ground most of the time ahead of Edgemark, increasing her chances of finding before him, and this defeated him. The dogs were ordered up at 10:52.

FLASH AND SLEEPY NOBLE.

At 10:54 this brace was put down in the open and shortly afterward Flash pointed a bevy, getting well into them as they were flushed by handler on all sides of him. Following them to ravine, Sleepy Noble got two points. Several birds flushed from the last point and he was unsteady. This ended the heat at 11:22. Flash was the better dog in all except style, in which they were about equal.

EZRA NOBLE AND COUNTESS ROXIE.

At 12 M. this the last brace was put down, and they ran for 22 minutes. Just before they were taken up Countess pointed a small bevy, Ezra at first blinking on the back, but finally settled down to it. Following scattered birds, Countess flushed a single, which ended the heat.

After a short consultation the judges announced their decision. Katie Noble first prize, Edgemark second, Flash third. The judging throughout the week was most commendable and satisfactory.

SUMMARY—ALL-AGED STAKE.

White Fawn with Inspiration.
Perseverance with Countess Roxie.
Edgemark with Sue Noble.
Prince with Shot.
Silk with Fan Fan.
Ezra Noble with Hazel.
King Item with Flash.
Katie Noble with Sleepy Noble.
Rock II. with Victor the Blue Stocking.
Tempest with Rosa Lee.

Second Series.

Edgemark with Katie Noble.
Flash with Sleepy Noble.
Ezra Noble with Countess Roxie.

Final.

Katie Noble first money.
Edgemark second money.
Flash third money.

DOG CHAT.

THE Central Field Trials have finally dragged their weary length to a close. Judges, handlers and all connected concur in the opinion that something must be done to curtail the time which it takes to run these trials, and we were informed that some step will be taken in this direction by the Board of Governors before the next trials. A great many dogs are run a full hour, and are kept in the second series, when it is plain that they have little chance of getting into the money, from an exaggerated idea of giving every dog a fair chance. That is all right to a certain extent, but handlers and others grumble at the extra expense that this incurs for board and horse hire. The running at High Point was done in clean-cut, sharp style, and it was admitted that, though little time was wasted over the "duffers," there was no doubt whatever that the proper winners were picked, according to their style of trials. The half-hour amendment at Lexington was a good move, and a still further reduction of half an hour in the preliminary series would no doubt be welcomed by every one. The judges showed a commendable zeal and thoroughness in their work, and very few decisions were given hastily, nor until it was palpable to all which was the better dog. It has been a matter of remark that the pointers have, considering the hard country they have had to travel over, done remarkably well, and the English setter men must look to their laurels or they will be snatched from them. The work of Ightfield Deuce, the English pointer; Spotted Boy, winner of the Derby at Central Trials; Duke of Hessen, second in All-Aged at High Point; Zig Zag, Tapster, Tray of Montery, which was afterward purchased by Mr. E. Dexter; Shot, Rock II., was all of a high order and was quite on a plane with the setters. On Monday night, Dec. 15, Mr. Brailsford, having been able to get the heat for absolute winner of the All-Aged Stake off his mind, decided to go home in time for Christmas, and left on the evening train, to sail on the City of Berlin, Dec. 17. To show the estimation in which he was held by the handlers at these trials, they decided get up an address testifying to the esteem they felt for him, in the following words:

To Mr. W. Brailsford and A. Cameron:

The undersigned owners and handlers participating in the trials of the Central Field Trial Club, now in progress at Lexington, N. C., beg to express to you on your departure for your home across the ocean, our lasting esteem of yourself for your gentlemanly and endearing qualities and appreciation of your courteous bearing and fair handling in the competitions. We sincerely hope that this visit to America is but the first of many, and that we will have the pleasure of welcoming you again as a friend and competitor. May your journey be safe and pleasant, and prosperity and happiness attend you, is the fervent wish of Edward Dexter, D. E. Rose, W. W. Titus, J. B. Stoddard, Chas. W. Barker, Frank Richards, J. M. Aldrich, Geo. Gray, T. M. Aldrich, N. Tallman, S. C. Bradley, Chas. Tucker, N. B. Nesbitt and J. M. Tracy, N. Wallace, John Davidson, the judges.

We all went in a body to see him off at the train, where the address was read to him and Mr. Cameron by the flickering light of the lamp on the platform of the depot by Mr. J. M. Tracy. Mr. Brailsford made a neat speech in return, expressing his thanks for the courtesies and kind treatment he had received in this country, and trusted that this would not be his last visit; if it was, he would still have this kind testimonial to remind him of the friends he had made in America. Three cheers were then proposed by "Billy" Tallman and were given with a will that must have effectually roused this sleepy little town from its dormant state. Mr. Cameron will follow later, as he had to run Mr. Johnson's Pitti Sing in the four-hour race.

Several dogs were taken sick at the trials, notably Mr. Hitchcock's Tory Lieutenant, which after running in the Setter Derby at Lexington was taken down with pneumonia and was a very sick dog for some time, but through the careful nursing of John White, his handler, he showed signs of a rapid recovery when we left. One could see that he did not range with his usual snap at Lexington, nor could he be expected to, when doubtless he was then a sick dog. Mr. Dexter's Rip Rap had an attack of inflammation of the bowels and had to be declared out of the four-hour race, for which he stood a good chance. Maid of Kent had a touch of distemper at the same time, but both are now convalescent under the good care of Capt. McMurdo. We hear that Mr. F. R. Hitchcock purchased the English setter Roi d'Or, which dog won one of the Lorillard medals at High Point.

Our illustration this week is Gath's Mark, owned by the newly-formed Blue Ridge Kennels, owned by Messrs. O'Bannon and H. Hulman, Jr. Gath's Mark is by Gath out of Gem, and is a finely-formed animal, has great bone, and, in fact, has a look of great strength all round, which is completely carried out by his vigorous action in the field, as proved by his winning the Champion Stake this year at the Eastern Field Trials, beating several crack dogs, such as Rip Rap, Chance, Daisy Hope and others. This dog won the All-Aged Stake in 1885 and the Members' Stake in 1890, besides the championship at the Eastern Trials. He has never been shown on the bench, but will most likely be seen there now, when he will beat more than beat him. He is sire of such noted dogs as Lilly Burgess, Reveler, Reverdy, Jubilee, El Rio Rey and others. This dog will not run again in trials, but will now rest on his well-earned laurels.

BLUE RIDGE KENNELS' "GATH'S MARK."

We hear the price paid for the two champion Gordons, Beaumont and Belmont, was $1,050.

There was considerable friction over the decision which placed Fred Gates equal third with Antonio in the All-Aged Setter Stake at the Central Trials. It was maintained, and with justice, that a dog lost had no right to receive a prize, and should have been thrown out. The ground taken was that at the time the decision was made, Fred Gates was lost and no one knew anything of his whereabouts; he was to all intents and purposes a dead dog, and might have been in reality, for anything the judges knew to the contrary. Mr. Windholz felt that his bitch Princess Beatrice was thus hardly treated with due consideration under these circumstances, as she came next to Antonio, with Fred Gates out of the way. This was the only serious kick of the trials, and it is very pleasing to all to know that with this exception everything has passed off pleasantly.

We hear that the noted St. Bernard Prince Regent has arrived safely at Mr. Sydney Smith's kennel in England, having been repurchased by that gentleman. It is a pity this dog could not have stood nearer the center of St. Bernarddom in America, as he was considered one of the best stud dogs in England, and had already made a record as the sire of Princess Florence.

At Rockford show in Illinois, Mr. Geo. Bell's Obediah (late Kildare) won first in open class for cocker dogs. Amazement won in open bitches, his Madame Obo taking vhc.

Mr. Mercer writes us that Mr. Holmes, the noted Clumber man in England, has just had his streak of ill-luck, losing such noted bitches as Honesty, Hilda and Lady Gaunt, and now "Clumber" is trying his best to deprive him of Holmes's Hotspur, the very best young dog in England and a noted winner. *Canine World* in "They Say" says that "Mercer has gone mad over Clumbers." Tell us some news.

We have received a fine photo of Mr. Geo. Bush's cocker spaniel Idea, which we shall shortly illustrate.

The National Greyhound Club intend holding a show of greyhounds, deerhounds and Barzois at the American Horse Exchange, Jan. 17, for one day. Prizes will be ten dollars in each class. Particulars can be had from H. W. Huntington, 148 South 8th street, Brooklyn.

We received, just as we are going to press, an excellent photograph of friend Mercer with four of his champion Clumbers—Johnny, Drake, Bromine and Boss III., with the following greetings—"H. W. L, with Xmas greetings and many waggles of the hinder parts from 'five' Clumbers—'United we lie, unsundered we die.'" Byron, Shakespeare, Mercer (after dinner).

We regret to hear that, owing to a fight with Master Rich, Mr. Phister came very near losing his greyhound Norwegian. Norwegian on his way East from the recent coursing meetings out West, stayed, with his Nettlefield, at the Rookwood-Landseer Kennels, in Kentucky, and was kenneled with Master Rich. They seemed to be the best of friends until a neighbor threw a bone over the kennel fence and both dogs going for it, had an argument over its possession, which resulted in Norwegian being terribly mangled about the throat and flank. The best veterinary in the State is attending him and says that if his intestines are not cut there is hope for his recovery. His leg is badly crushed as well, but it is not known yet whether it is broken or not. Should the dog die it will be, if only the breeding of the dog is considered, a severe loss to Mr. Phister and greyhound men generally. Latest advices seem favorable, though inflammation may, if great care is not taken, make recovery extremely difficult.

From little causes come great effects sometimes. Mr. Wade writes us that the letter in *Stock-Keeper* about mastiffs, their early failings and the effect of arsenic, which we alluded to recently was part of a letter written to Mr. Wade by Henry Clay, of Liverpool, Eng., and which he forwarded to the above-named paper. It does not take much to start a ball nowadays, as witnessed by the cocker controversy now going on in our columns. Such discussions, when they are kept within courteous bounds, will surely tend to enlighten the novice and stir up the faculties of the older breeders. We are not so much in love with the "long and low," and would therefore like to see the subject so thoroughly discussed that good may arise from it and a more serviceable cocker rise Phœnix-like from the ashes of the discussion.

Owing to our protracted absence at the trials, kennel matter has accumulated to such an extent that it is impossible to publish everything this week or even next. We therefore claim the indulgence of our numerous correspondents and promise that they will receive due attention as soon as possible. Visits, breeding notices, English notes, etc., are crowded out by the trial reports this week.

Another Birmingham show is past and gone. This show, although there may be lots of grumbling at the management, their autocratic methods and poor accommodations, still seems to the bulk of English exhibitors what our New York show is to the American fancier, a place of rendezvous, and where dog men are sure to congregate. We are told that the show of setters has never been equalled and that the same may be said of pointers. Spaniel men showed their feelings in regard to a poor classification by keeping their best at home. Bull-terriers were not up to former years in point of quality or numbers. Black and tan terriers were poorly represented. Other breeds are about as usual. Two crack young St. Bernards came out; one is a son of Sir Bedivere and another is one of Lord Bute's offspring out of Baroness Cardiff. The Sir Bedivere pup Lord Dunlo won the special for best in show, although only fourth in his regular class, Mr. Halsey judging him on the what-he-promises-to-be principle.

A new kennel of greyhounds has been started out at Hutchinson, Kan., to be known as the Thistlewood Kennels. Mr. Geo. McClaim is the manager and trainer.

The National Beagle Club have placed Messrs. W. S. Diffenderffer, Joe Lewis, R. F. Mayhew and H. W. Lacy on their list of judges, and have notified leading show committees of the same. They intend offering substantial special prizes at shows when their judges are selected. It is the intention of the club to raise the subscription to $5 to enable them to carry out their plans to advance this handsome little hound, and such a move should receive no opposition, for it cannot be expected that two or three men are to go into their pockets every time, so we hope the beagle men will stand true to the colors even if they do fly a little high.

Mr. F. E. Lamb, who recently lost his St. Bernard bitch Lady Valentine, intends replacing her at once, and has purchased in England a prize-winning Pinlimmon bitch that he expects to hold her own in any company. She will be bred to a native dog on the other side before importing her. After being bred we should advise him to get her over as soon as possible, if he wishes to have luck with the expected litter.

Kash, the champion pug, has made a record as a stock getter, for Mr. Pitts writes us that, from December, 1889, to the present month, he has served 37 bitches, with a result of 96 dogs and 65 bitches, or in round numbers 161 puppies. That little tale about the goose and the golden egg occurs to one when reading this Kash account.

We hear that Baroness Cardiff, the noted St. Bernard, will soon find a home this side of the Atlantic.

Mr. E. B. Sears writes us in sending a list of the new additions to his already strong kennel that he has purchased a farm in Melrose, Mass., on which he intends erecting in the spring one of the finest kennels in America. When we visited this gentleman's kennels recently we thought that he would soon have to make an extension somewhere. The importation of such a bitch as champion Plevna is another important event in the lively series of St. Bernard bitch importations we have been startled with lately. Our assertion in a transatlantic journal that America would be sending stock to the Crystal Palace show of 1895, and winners too, would seem to be hardly so illusionary as a critic would have us all believe, if our breeders are only favored with as much "breeders luck" as they have pluck and enterprise.

A. K. C. SUGGESTIONS.—*Editor Forest and Stream:* Mr. Watson devotes considerable space in your last week's issue anent some remarks of mine which appeared in the *Fanciers' Journal* concerning the A. K. C adopting the system of registering prize winners "free" in the stud book. He (Mr. Watson) takes exception to my claiming to be one of the "motive powers" which brought about this action. He may be right, but in conversation with Mr. Vredenburgh prior to the publication of my paragraphs, the latter gentleman referred to what had appeared of mine in the *Fanciers' Journal*, and said he had adopted some of my suggestions, "the free registration business" being mentioned among other subjects. Therefore I considered I was not overstepping "my imagination" when I claimed to have had something to do with this new departure. I would also refer Mr. Watson to some notes of mine in the *Turf, Field and Farm* of over a year ago, in which I advocate what he claims the "stud book committee" adopted "three months ago." In this at least I have a priority over the "trio," of which Mr. Watson is one.—R. F. MAYHEW.

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

Dr. J. S. Niven has recently stated in these columns that "one decision of many judges I could never swallow, that was putting Jerry in the first flight; and the critics, even 'C. M.,' went wild over him." I wrote all reports signed "C. M.," and a large number that were not signed, but have no recollection of having gone "wild" over any spaniel I have ever seen in this country.

Dr. Niven, unlike several of our dog men, is an honorable man and a gentleman. He would not wilfully make a statement he could not verify. As I do not remember having said Jerry was typical or first-class I must ask Dr. Niven for proof in support of his statement.

I wish to keep Dr. Niven and Mr. Mercer as far apart as possible, because the former has been a lover of dogs for many years and ought to know something about spaniels and one or two other breeds. Mr. Mercer, on the other hand, is a beginner, and ought to know very little about dogs. What is more, he does know very little, and this statement is conclusively proved by Mr. Mercer himself.

In case your compositor "set up" Jerry instead of Jersey I will ask Dr. Niven to prove that I "went wild" over Jersey. CHAS. H. MASON.

NEW YORK, Dec. 20.

Editor Forest and Stream:

What we all want is a short-bodied dog, well stationed, with a good loin; the color is not so important, for by breeding, black and tans, livers, white and liver, solid ruby, liver and white and solid blacks can be obtained. I call to mind Frank Hollin's bitch, that I think won first at the Centennial show and was in the money at the early New York shows. This bitch was liver and white and a trifle "low on the leg," but looked more the proper sort than any of the long-bodied specimens that of late have been so popular. So far as short-faced or nosed specimens not being able to make useful workers, on the contrary I have a black and tan toy spaniel that will raise rabbits and run them as quick as any of the larger breeds. I have owned some handsome liver and white cockers and some solid ruby colors, but when I learned that the "low and long" were the prize takers I made up my mind to drop breeding. If the old style comes in fashion I intend to own a kennel of what I consider the most useful dog that ever licked man's hand.

A. W. LUCY.

NEW YORK CITY, Dec. 19.

Editor Forest and Stream:

In the publication of my letter on the above the change of a word somewhat alters the sentiment.

In the second paragraph you make me say of Red Jacket: "Short and somewhat thick in muzzle, he is best from his ears back to the tip of his tail, etc." Change the position of a comma and put "but" for "best" and you have what I wrote: "Short and somewhat thick in muzzle he is, but from his ears back to the tip of his tail, and to the pads of his feet, he is as near perfect as any dog in America."

CHARLES M. NELLES, Brant Cocker Kennels.

BRANTFORD, Ont., Dec. 19.

Editor Forest and Stream:

Your young critic Mr. Mercer says in his last attempt that "To give Mr. C. H. Mason his due he 'spotted' champion Doc for a good one several years ago, repeatedly saying that were he in condition the prize money was at his mercy." It is true that I gave Doc a first prize before Mr. Mercer became known as a dog man, but it is, I believe, untrue that I "repeatedly" said prize money would be at Doc's mercy if the dog were in good condition. Therefore I call on Mr. F. H. F. Mercer to produce evidence to show that I repeatedly said anything of the sort.

Mr. Mercer proposes to give me my "due" for having "spotted" Doc for a good one, but he says not a word about giving me my "due" for having downed those white and red monstrosities which he attempted to force on to the fancy as typical Clumber spaniels. It is here that credit is really "due" me, and I got it in the shape of an insulting letter written over a *nom de plume* to *Sports Afield* and in an equally insulting letter mailed to me and marked "personal." I judge from this that Mr. Mercer gives a man his "due" only when it is to Mr. Mercer's advantage to give it. Let me assure Mr. Mercer once and for all that I will accept my "due" only from a tribunal of experienced and fair-minded dog fanciers who are capable of rendering a just and intelligent decision, and whose opinions when expressed are worth having.

With your permission, Mr. Editor, I will attend to "Gothamite" next week. It's hard work to keep these two ("Gothamite" and Mercer) separate, because their methods, statements, style of writing, lack of knowledge of dogs, etc., etc., are identical.

"Gothamite" stated in these columns that Mr. Watson and myself "started the long and low craze" in cocker spaniels. I demanded evidence to support this outrageous falsehood and "Gothamite," instead of giving this proof or apologizing, says that it is a well-known fact that I have "borne a leading part in encouraging the long and low craze." This is a deuced sharp curve, but none too sharp for a man who can be in two places at the same time. Unfortunately for "Gothamite" Webster does not say that starting means encouraging or that encouraging means starting.

"Gothamite" vainly supposes that "we (is this "Gothamite," "Clumber" and "Dogwhip?") will probably hear no more" from the writer of this. Don't go too fast young man. You will hear more than you bargained for when you imposed upon FOREST AND STREAM by sending to them for publication a letter containing statements that you knew to be false, and which you have not had the manliness and good sense to withdraw. CHAS. H. MASON.

NEW YORK, Dec. 20.

NEW ST. BERNARDS.

MR. E. B. SEARS, not to be beaten in the race for good St. Bernard bitches, has recently imported and purchased the following noted ones:

Una.—Whelped 1887, by champion Grosvenor out of Minnie. Never shown, but said to be a good brood bitch.

Nanctbel.—Whelped September, 1889, by Alton out of Alice. Never shown, but has left a very promising litter of pups by Young Plinlimmon on the other side.

Kilmenny.—Whelped 1887, by champion Plinlimmon out of Effie. Won 2d at Snaith, 1890; the only time shown.

Ellen Terry (A.K.C.S.B. 18,105).—Whelped March 10, 1887, by champion Plinlimmon out of Yorke. Her wins are as follows: Ayr and Edinburgh, 1888; Cannock, 1889; Aberdeen, 1890.

La Pucelle (A.K.C.S.B. 18,422).—Whelped Oct. 14, 1886, by champion Save out of Faultless. She has won 2d and 3d, St. Bernard Club show, 1887; vhc., Kennel Club show, Barn Elms, 1888; vhc., Kennel Club show, Olympia; vhc., St. Bernard Club show, Windsor, 1889; reserve, beaten only by Lady Sneerwell and the new wonder Andromeda, Tunbridge Wells, 1890. She is the dam of Mr. Trague's Zenith and Mr. Ruthergien's Rienzi.

Jael (E.K.C.S.B. 20,821).—Whelped July 5, 1885, by champion Plinlimmon out of Deborah. Her wins include St. Bernard Club show, 1885; Brighton: Kennel Club show, Aquarium; St. Bernard Club show, Albert Palace, 1886; Barn Elms; Hull; St. Bernard Club show, Brompton, 1887; Warwick; Barn Elms, 1888. Her progeny include the well-known bitch Proselyte and Mr. Moore's new importation, Lady Sneerwell, and is also the grand dam of Argonaut, who made such a stir at Brighton and Crystal Palace.

Lady Adelaide II.—Whelped May 5, 1889, by champion Plinlimmon out of Lady Adelaide. She has won 1st, puppy class, Ayr; 3d, novice class, Edinburgh, 1889; 3d open and 2d novice classes, also gold medal, Glasgow, 1890.

Champion Plevna.—Whelped May 17, 1885, by champion Plinlimmon out of champion La Mascotte. Her wins conclusively show that she is quite at the top in St. Bernards, having beaten such dogs as Queen Jura, Pegotty, Princess Florence, Bellegarde and other cracks; but we have not space to give her full list of winnings, which among others embrace the 100 guineas challenge cup.

HAMILTON KENNEL CLUB.

THE following is a critical report of the cocker spaniels shown by the members of the Hamilton Club at their initial members' show, Dec. 15:

There were thirteen cocker spaniels, three dogs and ten bitches. The first to come before my notice were three black dogs, D. McPhie's Russel, W. McDonald's Bront, M. O'Neil's Sport. After a careful examination of the dogs I decided to withhold all diplomas for the reason that it would have been unjust to the owners of these dogs to have given them a diploma, for they would have left the exhibition with the idea that they possessed good dogs, and this would have been an unjust thing for the judge to have done. I fully explained to the owners of every dog my reason for doing so: for every dog was a bad specimen, and if there was more of this business done at most of our shows, the result would be that the owners would try to improve their stock. Every judge should explain to the exhibitors his reasons for withholding the prizes.

The next class contained ten bitches, nine black and one red. C. Searle's Topsy won first prize. She is a black bitch and a very good specimen; head a little inclined to the field spaniel type, neck and shoulders very good, legs perfectly straight, with grand bone and good feet, well sprung ribs, good flat coat, grand hindquarters and a well carried tail, and is a good mover.

W. McDonald's Queeney, second, is a red cocker. This is the best bitch of her color I have seen yet. Unfortunately she has lost some half dozen of her front teeth, which makes her look a little weak in muzzle. She has a good stop, nice skull, ears set on low and a very pleasant expression. Neck and shoulders good, good straight legs and feet, good average bone, well sprung ribs, deep chest, flat coat, good hindquarters, with a correct tail, and is a very fine mover. I should have placed this bitch first had it not been for the loss of her teeth.

F. Dominey's Sally, third. A black bitch very weak in muzzle, not too good in stop, good straight legs, very flat-sided and lightly made all through, very nervous and will not show herself. The balance of the class was only a very moderate lot.

The Hamilton Kennel Club have in Dr. Mole a man of whom every member ought to be proud, for he possesses great ability, both in diseases of dogs and how they should be cared for. This he has proved by several cases intrusted to him by the canine fanciers of Hamilton. I should strongly recommend some of our important kennels in Canada when they have a bad case of sickness or accident with any of their valuable specimens, to seek the advice of this gentleman. A doctor of his experience of the canine tribe has been very much wanted in this country. I put several questions to him myself referring to different diseases and the modes of treating dogs, and he answered me quickly and promptly, and to the point. I hope that fanciers of Canada will bear this in mind when they have a bad case in their kennel and place it in the hands of Dr. Mole.

Just a word in reference to A. D. Stewart. The worthy president of the Kennel Club is the right man in the right place. Too much cannot be said in favor of Mr. Stewart for his energy and perseverance in the Hamilton Kennel Club. This will be one of the strongest clubs in America in a very short time, if things go on as they are at present. All the members of this club are confined to the residents of Hamilton only. G. BELL.

TORONTO, Canada, Dec. 18.

RED COCKERS.

Editor Forest and Stream:

Some time ago "J. W." questioned the ability of red cocker spaniels breeding true to color. I beg to place on record at least one case which recently happened in my own kennel.

On Aug. 6 last my red bitch Pearl (C.K.C.R. 10) was served by my champion Brantford Red Jacket. Both are solid red in color, without a white hair. On Oct. 4 Pearl whelped three dogs and one bitch, all of a beautiful dark red—unusually dark for puppies—and not a white hair on the lot.

I consider this the more remarkable since all the grandparents are solid black. Jacket is a son of my champion Brant out of Woodstock Dinah, and Pearl is by the black dog Hector (A.K.C.S.B. 5866) out of Black Meg (5875).

A study of the ancestry may throw some light on the strains most likely to produce reds. Woodstock Dinah is by imported Tippo out of Toronto Jet, and I have never known her to be mated to an Obo dog without having one or more reds in the litter. Champion Little Red Rover was the first of these to attract attention in 1886, followed by Robin, Rory, and finally Brantford Red Jacket.

Pearl traces back through Hector to Woodstock Flirt, another Tippo—Toronto Jet, so that in this present litter we have an inbreeding of a cross of the Obo and Tippo—Toronto Jet stock. CHAS. M. NELLES.

BRANTFORD, Ont., Dec. 15.

A LITTLE DOG SHOW.

A BENCH show of sporting dogs at the Philadelphia Kennel Club trials was held Wednesday afternoon, and was judged by Maj. J. M. Taylor. The class of dogs was fine, and this will be made a feature of the meeting hereafter.

ENGLISH SETTERS.—*Dogs:* B. Ridgeway's Clipper W.; L. Shuster, Jr.'s, Ezra Noble; F. S. Brown's Edgemark; F. G. Taylor's Beverly; F. G. Taylor's Breeze Gladstone; W. B. Smith's Ben Hur (absent). Breeze Gladstone won and Edgemark second.

ENGLISH SETTERS.—*Bitches:* Dr. John A. Hartman's Albert's Duchess; F. S. Brown's Peg Woffington; F. G. Taylor's Katie Noble; W. B. Smith's Lucy Noble; Dr. Jno. A. Hartman's Rosa Lea; Ezra Comfort's Perseverance; E. E. Connell's Belle of Lexington. Albert's Duchess first, Katie Noble second.

ENGLISH SETTERS.—PUPPIES—*Dogs and Bitches:* F. G. Taylor's Katie Noble II.; F. S. Brown's Bert Winslow; H. Merriam's Cherrie, Lem, and Lucia; C. T. Thompson's Miss Lillie (absent). Katie Noble took first prize and Bert Winslow the second.

POINTERS.—*Dogs and Bitches:* C. E. Connell's Fan Fan and Rock II.; F. G. Taylor's Inspiration; J. H. Winslow's Tempest, White Fawn and Golden Rod. The winner was Fan Fan, and second Rock II.

GORDONS.—*Dogs and Bitches:* H. F. Smith's Countess Roxie and King Item; B. F. Hall's Shot and Flash. Countess Roxie beat King Item, he taking second prize.

DEATH OF LADY VALENTINE.—Baltimore, Dec. 9.—*Editor Forest and Stream:* It is with great regret that I inform you of the death of my rough St. Bernard bitch Lady Valentine, on the 6th inst. Cause, consumption, which was brought on by undergoing the great difference in climate between Baltimore, her home, and Menominee, Mich., where she had gone to receive the attention of Mr. R. J. Sawyer's Mascot Bernard, and to whom she was in whelp at the time of her death. She was bred by Mr. Thomas Hall, of Liverpool, England, and was whelped March 27, 1887. She was by champion Valentine out of Bessie II., the dam of Plinlimmon, and was a bitch 31in. at shoulders and weighed between 155 and 160lbs. Although shown but twice she won third at Baltimore, 1890, being beaten by Manon and Blodwin in the order named, and first at Buffalo, 1890, in good company. As a brood bitch she had few equals in this country. In her last litter were Mr. W. S. Diffenderffer's Lord Baltimore, winner of first in puppy class and St. Bernard Club medal for best American bred dog in Baltimore show, 1890, and Mr. Otto W. Volger's Mountain Queen, who won first in a puppy class of both dogs and bitches and St. Bernard Club medal for the best American bred bitch in Buffalo show, April, 1890. Both of these pups are doing finely and will be heard from before the winter is over. Lady's disposition was perfect, and she was never more happy than when my little girl, not yet two years, would pull or drive her about the yard in her play. I have owned a number of dogs but never had the attachment for any equal to that I had for Lady Valentine.—F. E. LAMB.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Beau Brummell and Concha Juanita. By Jas. W. Wood, Poughkeepsie, N. Y., for blue belton English setter dog and lemon belton bitch, whelped Sept. 23, 1890, by Count Howard (Sir Alister—Mena) out of Donna Juanita (Rockingham—Donna).

Prince Howard. By J. W. Hamer, Beverly, N. J., for blue belton English setter dog, whelped Sept. 23, 1890, by Count Howard (Sir Alister—Mena) out of Donna Juanita (Rockingham—Donna).

BRED.

☞ **Prepared Blanks sent free on application.**

Beauty Spot—David of Delphos. J. W. M. Cardeza's (Philadelphia, Pa.) pointer bitch Beauty Spot (Half and Half—Favette) to his David of Delphos (Dick of Delpnos—Westmoreland Bessie), Nov. 22.

Brunette—Bradford Harry. Chas. York's (Bangor, Me.) Yorkshire terrier bitch Brunette (Bob—Judy) to P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), Nov. 29.

SALES.

☞ **Prepared Blanks sent free on application.**

Snyder. Black, white and tan beagle dog, age not given, by Ringwood out of Gypsy Queen, by A. McDonald, Rockland, Me., to H. E. Burkmar, same place.

Dan V. Liver and white pointer dog, whelped February, 1888, by Glen Graphic out of Jeanette, by H. E. Burkmar, Rockland, Me., to A. M. Gerry, South Paris, Me.

Count Howard—Donna Juanita whelp. Blue belton English setter dog, whelped Sept. 23, 1890, by Jas. W. Wood, Poughkeepsie, N. Y., to W. P. Booth, Poughkeepsie, N. Y.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

E. T. S., New Rochelle, N. Y.—Have a fox-terrier 7mos. old, who seems very uneasy, cries in his sleep, and seems to be in pain. Will you kindly inform me what I can do to relieve his trouble? Ans. Your dog no doubt is troubled with worms. We have found G over's vermifuge an excellent specific. Address, 1,293 Broadway, N. Y.

CONSTANT READER, Cambridge, Mass.—What would be the effect of castration on a foxhound? I knew of one that this has been done to. He is now two years old and he seems to hunt well with other dogs. Ans. We do not see what harm it would do the dog, as far as his hunting is concerned, neither can we perceive what would be gained by such an operation.

F. W. P., Mebane, N. C.—I have repeatedly tried to relieve my setter dog, 18 months old, of tapeworm, by giving him castor oil and areca nut as directed in your columns, and he invariably vomits both. Please advise treatment Ans. See answer to E. G. S. in this issue. This vermifuge is much milder in its action but is nearly always a sure cure.

LANCEWOOD, New York City.—On a black and tan, 7 years old, three months ago a small lump appeared under the right eye; after a time it broke, and despite all my efforts it will not heal. She seems in good health, although her appetite is poorer and she has grown thin since the lump broke. Ans. Apply two or three times a day an equal mixture of Friar's balsam and tincture of mattico. If it is possible to keep a small bandage on, saturate one with the mixture, otherwise paint it with a soft brush.

Rifle and Trap Shooting.

RANGE AND GALLERY.

EMPIRES.—A shoot of the Empire Rifle Club took place at Zettler's rifle range, 12 St. Mark's Place, Dec. 16. The Massachusetts 12-ring target was used, possible 120 points, 1²/₁₆in. bullseye, 100ft. range. Following are the scores:

W Overbaugh	111	W Maisenholder	107
W Rosenbaum	111	C Zettler, Jr	106
A Stahl, Jr	108	W Miller	106
J Grimm	108	W Alborn	104
J Zettler	95	E Smith	93
E Hilmyer	85	F Diehl	75

The annual meeting and election will be held Jan. 6, at the hall of the German-American Shooting Society, in St. Mark's place. The Empire Club will meet, on the same evening, the team of the Hudson Rifle Club in a match.

.22CAL. WORK.—Mr. Lloyd, of Queens, L. I., has made the following offer for the purpose of deciding what results may be obtained with the .22cal. short cartridge at 115yds.: A gold medal to the shooter making the best and a bronze medal to the marksman with the next best score of 10 shots, 15-ring target, ¾in. rings, 6in. bullseye, each contestant to shoot not more than ten strings. The competition will open on Jan. 3, at Queens, and be continued each Saturday until Jan. 31, the participants to be allowed to make their entire number of strings on one date. Any .22cal. rifle may be used without restriction to weight, sight or trigger-pull, but the ammunition must be the .22cal. short cartridge.

INTER-STATE RIFLE LEAGUE.—At a meeting held in Jersey City last week four clubs entered and paid their necessary dues, and the Inter-State League of Riflemen took a new lease of life. One of the most important changes in the constitution was that any club joining the League inside of six months need not pay an initiation fee, but all organizations have to pay six months' dues in advance. Admission is open to any organized rifle club in the United States, and each club is entitled to three delegates, from which the officers of the League are to be elected. As the League stands now, D. Mahoney, of the Lakeside Rifle Club is the president, and C. H. Townsend, of the Our Own Rifle Club, secretary. The League adopted a target with a 1½in. bullseye and ¾in. rings, the center to count 15, as its standard. This will be known as the "Interstate 15-ring target." No schedule of matches has been arranged thus far, but this will probably be done at the next meeting, the first Wednesday in January. The clubs that are to be represented at this first business meeting are the two Newark organizations, the Hudsons of Marion, and the Zettler Rifle Club, of this city. If no more New York clubs join the League, the Zettler Rifle Club will be the only representative of this city. In case a series of home and home matches are arranged the Zettler team will visit Newark twice and Marion once, while the three Jersey organizations need to make the trip to Gotham but once

BOSTON, Dec. 20.—The Massachusetts Rifle Association held its regular weekly shoot to-day at its range, with a large attendance of riflemen. A perfect winter day greeted the shooters. The light wind from 7 to 11 o'clock made the conditions good and yet the scores didn't run as high as usual. Mr. P. S. Killman won the silver military medal. Next Wednesday the trap-shooters of this association hold their last prize and sweep shoot for 1890. On Christmas day there will be an all-day shoot for rifle and pistol, with prize and practice matches. Following are the best scores made to-day, distance 200yds, standard American target:

All-Comers' Off-Hand Match.

H L Lee	85	A Maynard	78
W Charles	82	T B Mason	76
H Cushing	81	D Martin	75
W Hawley	79	G B Warren	74
S C Sydney	78	W D Palmer	71
A S Hunt	70		
L B Thomas	69		
D Ames	68		
A B Strong	56		
F D Hart	65		

All-Comers' Rest Match.

J Francis	110	M T Day	96
T Warren	109	J W French	93
M R Barter	103	F W Chester	93
A H Ballard	101	J French	90
A B Loring	89		
D Martin	86		

ZETTLER PRIZES.—An interesting prize shoot at the gallery of the German-American Shooting Society, 12 St. Mark's place, ended Dec. 21 very successfully, with Mr. Hinz as winner of the first prize. The scores made were far above the average, and are proof of a sharp competition. The shoot was open to all comers, 3 shots, entries unlimited, twenty-five prizes and five premiums, given by C. G. and B. Zettler. The scores were as follows: Hinz 75, Janzer 75, Flach 74, Rosenbaum 44, F. Falk 74, Ahlborn 74, Lloyd 73, Dorrler 73, Meier 73, Walther 73, Dorrler 73, Kalin 73, P. Zimmermann 73, Coppersmith 73, Steinbach 72, Grimm 72, Wm. Weber 72, Kishel 72, Engel 72, Stuart 72, W. Zimmermann 72, Vogel 72, Klein 71, Lant 71, Sassenberg 71. The first premium for the first shot in the half-inch center was won on Saturday by M. Tropp, and the last premium by B. Walther. Mr. Falk captured the first premium to-day, and Knochenhauer the premium for the last center shot to-night. The premium for the most center shots, presented by Mr. Berrins, was awarded to Mr. Lloyd of Queens. The consolation prize, a silver match case, was taken by President Uehlein of the German-American Shooting Society.

GALLERY MATCH.—The return match between M. Dreher, of the Zettler Rifle Club, and W. Rosenbaum, of the Empire Club, took place at the latte r organization's headquarter in St. Mark's place, on Friday evening, Dec. 19, each man firing five strings on the Zettler target and three on the Massachusetts 12-ring target. Drehr won in both contests. Scores on the 25-ring target:

W Rosenbaum	235	228	225	235	230—1,153	92.24 per cent.
M Dreher	237	240	234	233	236—1,192	95.28 per cent.

Scores on the 12-ring target:

M Dreher	114	111	109	—334 92.78 per cent.
W Rosenbaum	109	108	107	—324 90.00 per cent.

Rosenbaum scored in the first fifty shots nine 25s, sixteen 24, ten 23s, seven 22s, all in the 2in. bullseye, and five 21s, one 20, two 19s and one 17 outside the black. On the 12-ring target he made six 12s, fourteen 11s, ten 8s, two 9s, the 12 and 11 rings constituting the 1¾in. bullseye. In Dreher's first score were fifteen 25s, eighteen 24s, eleven 23s, five 22s, and only one shot off the black, a 21. In the 30-shot score he had twelve 12s and thirteen 11s in the bullseye, and two 10s and three 9s outside.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Jan. 1.—Germantown Gun Club, New Year's Day Tournament, at Germantown, Pa. Address Harry Thurman.

Jan. 1,—All-Day Tournament, at Auburn, N.Y. J. Henry Kerr, Secretary.

KANSAS CITY TRAP EVENTS.

[From our Special Correspondent.]

KANSAS CITY, Dec. 18.—Since the Chicago-Kansas City contest the trap shooters of Kansas City have been confining themselves to the regular club shoots, the only individual contest having been a 200 bird race between J. A. R. Elliott and J. E. Riley, and a 50 bird race between W. G. Eads and D. S. Gordon.

Elliott defeated Riley by a score of 184 to 168. The latter's work was a disappointment, as he was expected to be good for 180 at least. Mr. Riley used some shells loaded by local people, and they seemed very defective, as he lost some 10 birds dead out of bounds that were hard hit. Eight of Elliott's lost birds fell dead out of bounds. The match was for the price of the birds, and was shot under American Shooting Association rules. The birds were a good average lot, Elliott drawing a shade the easiest birds.

The race shot by Eads and Gordon was about an average performance for them, each shooting about his expected score. It resulted in a victory for Eads by a score of 45 to 40. Eads lost one dead out of bounds and Gordon three. The score:

W G Eads ..... 11212022111211222121211111111111101122112221o1—45
D S Gordon .. 22221122221222202120112021322121c212600x21c211—40

The club shoots of the past month resulted as follows:

Kansas City Club—November Shoot.

G W Youmans	1212211221—10	Geo Dugan	2222220020— 7
D W Williams	1020220220— 6	B H Nephler	2201001222— 7
A B Cross	0203002100— 4	J A R Elliott	2202101002— 6

G J Schmelzer	110010100010— 6	00	10 10— 8

The Metropolitan Shoot.

The Metropolitan Club, which uses only Peorias, held their shoot Dec. 6, A. F. Rickmers winning on a score of 28 out of 30 as follows:

J K Keene	1111111001111110111	10 10 10 11 01—23
W Crosby	1111111101111011111	11 11 10 11 00—25
W Kelly	1101110111111010101	00 10 01 10 00—18
W Moore	1111101011011031101	10 11 00 00 00—18
A F Rickmers	1111111111111111111	11 10 10 11 11—28
E Cadman	1111111011111011111	10 10 10 11 10—23

The Independent Club held a double shoot Nov. 25, and F. C. Maegley won both events, killing 10 straight in the first shoot and 9 in the second.

J. B. Porter, Con. F. Holmes and J. K. Guinnotte shot a three-cornered 50 bird race last week. Holmes's score was 47, Porter 44 and Guinnotte 43. K. C.

CHICAGO TRAP.

CHICAGO, Ill., Dec. 17.—This is turning out to be a great week at trap shooting, there having been live-bird sweeps and matches of considerable importance about every day of the week, with a prospect of a continuance of hostilities throughout the week. Most of the shooting is in honor of Mr. Elliott, who is tarrying here a while prior to his return to Kansas City. There were good sweeps on Monday, and on Tuesday a very interesting team race, 50 birds, $50 a corner, in which Mr. Elliott and Capt. A. C. Anson ("Old Anse") shot Mr. R. B. Wadsworth and Mr. Geo. Kleinman. The score was a tie, Messrs. Elliott and Organ getting each 49 out of 50, and Messrs. Anson and Kleinman 46 each. To-morrow, Friday, Capt. Anson shoots a 100-bird, $100 race with Geo. Hofmann, and Mr. Elliott will shoot 100 birds, $100, with Mr. Geo. Kleinman. If he beats George, he may have to tackle Abe on Saturday. All in all, it makes some shooting, adding the Ft. Dearborne Club shoot, and such private matches as may yet arise. Percy Stone is on the warpath some now, and he and Billy Mussey are holding a sort of ghost dance. The management of Watson's Park has kindly promised detailed scores of all these events.

Occasional mention is heard of the Washington Park Club, but their scores are never seen in print, and it is their boast that no paper ever got hold of any match that was ever shot on the grounds, the seclusive aristocracy of the club quite necessitating, of course, that everything should be kept very private. They are all high parties, so to speak, but a mighty good lot of men, barring their constant fear that a newspaper man, disguised as a gentleman, may some day break into their fold and carry off a score or so. Well, on Tuesday last a little live bird race was shot down on the Washington Park Club grounds between Mr. Lester, Mr. Seaverns and young Walter Dupee, 50 live birds a corner. Score: Mr. Lester 36, Mr. Seaverns 38, Walter Dupee 42. A pretty good showing for the boy, especially as he shot a 16-gauge gun. Young Dupee is one of the best shots in the club. He is past 16 years of age, but looks not over 13, being very slight and small. He wears glasses, looks and acts like a diffident school boy, and appears about the reverse of what one would expect a shooter to look like, though he is a shooter and a good one. An amusing incident happened when Edgar Murphy was out at Washington Park last week. Mr. Murphy is about 6ft. 8in. in height and Walter is about 3ft. 6in. Roll Organ led Walter close up to Mr. Murphy when he was not looking, and as the boy stood down under Mr. Murphy's overcoat, said to the tall guest, "Mr. Murphy, I want to introduce Mr. Walter Dupee." Mr. Murphy looked in front of him, to both sides and all around him, but couldn't see anybody. Then he looked down, found Walter and shook hands with him from above.

It is not believed here that the Brewer—Elliott match will be arranged. Talk of all sorts of matches. Now certainly is the season for a heap ghost dance among the trap-shooters.

E. HOUGH.

Tie was not shot off. RAVELRIGG.

CHICAGO, Dec. 19.—*Editor Forest and Stream:* Trap shooting circles in Chicago have been all excited during the past week over the visit to the city of Capt. J. A. R. Elliott, the celebrated champion wing-shot of America. Capt. Elliott arrived in Chicago on Monday morning, after an unsuccessful trip to the East in search of matches for large money; and for his benefit, or rather in his honor, a shoot was arranged for that afternoon at Watson's Park. On Tuesday Elliott and Capt. Anson, the famous ball-tosser, shot a 50-bird race against R. B. Organ and George Kleinman, the scores being: Elliott 49, Anson 46, Organ 49, Kleinman 46. Totals 95 for each side. The tie will probably not be shot off at present. On Wednesday Elliott was entertained by the Washington Park Club and shot four matches with various members, winning all. On Thursday he attended the meet of the Fort Dearborn Club, and shot in excellent form. However, he had been unable to arrange a match for money, and the Chicago boys not wishing him to leave here, as he did New York, without a race, pitted against the redoubtable champion their old favorite, George Kleinman. George has not been shooting much lately, but he said he might catch on, and as he had about a hundred that he didn't need, he imagined that he might be able to show Elliott how the boys of the Kleinman family used to shoot on the Calumet in years gone by. And as Jim Elliott had quite a lot of wealth around his person, he acquiesced in George's proposition, and the match was made. It was shot to-day in the presence of a large crowd of spectators, and, as somebody said, "crack shots." Among the notables present were F. A. Ruble, H. W. Jenney, W. L. Shepard, C. D. Gammon, H. W. Loveday, A. C. Anson, W. P. Mussey, George, Al and Val Hofmann, R. S. Cox, Jr., Frank Place, George Andrews.

The first event of the day's programme was a race between Capt. A. C. Anson and Geo. Hoffman at 50 birds, for a little consideration of $50 a side. This race was close and exciting, resulting finally in a victory for Anson by the following score:

A C Anson	00212212222122122201202022212022212121101020221l—42
G Hoffman	20111200202021200222221212012121111222102102001111—39

Directly at the conclusion of this match Capt. Elliott, clad in his old familiar yellow shirt and trimmings, stepped to the score to shoot his first bird in the match with Geo. Kleinman. This race was a most noteworthy one. In the first place it was Elliott's first defeat since he became famous as a shot, and in the next place it proved that Chicago possesses in the Kleinman family a lot of shooters very hard to equal. We have many good shots here, but at present and for years past we have not been able to bring forward men that can defeat any of the three brothers, George, Abe and Henry Kleinman. There are more of the Kleinmans, notably John (who is at present sick in bed) and we pin our faith on anybody that bears that name, and it will always take a shooter to beat them. Henry, Abe and John were good shots before many of the latter day cracks were born, and they have always been good shots, while stars of lesser magnitude have flashed in the firmament and then disappeared. Geo. Kleinman is the youngest of the brothers, and he shoots a gun that might fairly be called a freak, but then George knows where that gun shoots, and George himself is a daisy (at least that's what all the boys are saying to-night). Well anyhow, here goes for the score in detail. I'd like to say, though, that Elliott shot a 7½lbs. Greener gun and used some E. C. powder and some No. 8 and No. 7 shot, while Kleinman pinned his faith and all Chicago's gall to a 7½lbs. "Prize Machine" gun and used some Schultze powder in the first barrel, a handful of Dead Shot in the second and No. 8 shot in both. The referee as selected was Mr. R. B. Organ, the scorer W. P. Mussey; gatherer for Elliott M. J. Eich, and gatherer for Kleinman his brother Abe.

The birds were an exceptionally good lot even for John Watson to furnish, and it is to be doubted if either man ever pulled a trigger at as good a lot of flyers as he got to-day. But one bird was refused, and that was by Elliott when he had already lost the race and was impatient for the finish. In the first half Kleinman clearly had the easiest birds, but he got many good ones toward the end and killed them clean and well, scoring 48 out of his last 50. Elliott shot in poor form throughout, hitting all his birds, but failing to stop many of them. The detailed score below indicates the flight of the birds. In the second column, R indicates a right quartering bird; L, a left quarterer; R D, a right quartering driver; L D, a left quartering driver; R I, a right quartering incomer; L I, a left quartering incomer; I, a direct incomer; D, a straightaway driver; T, a towerer, or bird killed at the trap. o indicates a bird lost, dead just out of bounds:

J. A. R. Elliott.

At the conclusion of the match Elliott expressed himself as desirous of a chance for revenge, and a match was promptly arranged to be shot to-day under the same conditions except that Abe Kleinman will take the place of George. This match will be of exceptional interest and should attract a large crowd. It will commence at 1 o'clock this afternoon, and an especially hard lot of birds is promised. Considerable money will change hands on the result. M.

CHICAGO, Dec. 20.—I send you detailed scores of match between Abe Kleinman and J. A. R. Elliott, shot at Watson's Park, Burnside. A large crowd witnessed the race. The birds were a good lot, but not quite so quick flushing as in the match with Geo. Kleinman on Friday. Abe Kleinman shot a 12-gauge Premier Scott and Elliott a 12-gauge Greener. As on Friday, Elliott was clearly outshot from the beginning, and was at no time in the lead. Elliott leaves for Kansas City Sunday night, but will return next month and will probably arrange a series of matches with the Kleinman boys. American Association rules governed, 12-gauge guns, 100 birds, for $100 a side. Referee, R. B. Organ; scorer, Geo. W. Andrews; gatherer, P. F. Story:

Abe Kleinman.

COMING MATCHES.—Excise Commissioner J. Schliemann, of Brooklyn, and P. Leibinger will shoot a return match at Dexter Park in the near future. On the same day and place a team match will take place between E. Helgans, of the Parkway Gun Club, and P. Leibinger on one side, H. McLaughlin, the president of the Coney Island Rod and Gun Club, and Mr. Schliemann on the other.

A friendly match will take place on Christmas Day, at Belleville, N. J., between the teams from the South Side and Woodside gun clubs. The return match will take place on New Year's Day at the South Side's grounds.

A handicap live-bird match has been arranged between W. J. Elliott, of Pelham Bridge, and H. Kuhnast, of New York, to be shot at Guttenburg under the following conditions: 100 birds each, trap and handle match, for $500 a side, Elliott to allow his opponent 20 birds in the hundred, otherwise old Long Island rules to govern. A forfeit of $50 was put up by each man.

Louis Davenport, the well-known member of the Fountain Gun Club, will meet J. Riggott, of the Newark Gun Club, in two matches, one to be shot in New Jersey and the other on Long Island. The conditions are 100 birds each man, for $100 a side on each contest, Hurlingham rules, 30yds. rise, 12-bore guns to weigh less than 8lbs.

WELLINGTON, Mass., Dec. 20.—The attendance at the grounds of the Wellington Gun Club to-day was larger than usual and the conditions were favorable for good scores. Cady won in the cup match, breaking 23 out of 25 bluerocks. The other scores were: Melcher, Bradbury, Perry and Wkeeler 21, Stone, Cowee, Stanton and Dill 20, Gore 19, Bond 18, Moore 17. A dozen sweepstake matches followed.

PHILADEDPHIA, Dec. 15.—This afternoon a party of five sportsmen and crack shots had plenty of fun at a crow shoot, Hurlingham rules, 5 ground traps, 28yds. rise, 50yds. boundary. The weather was fine and the shooters were in good form, as only a few crows were lett to tell their tale of woe. Wm. Hooper 18, W. Wilson 17, J. Rothacker 17, Ed. Ennis 18, Wm. Wolstencroft 20.

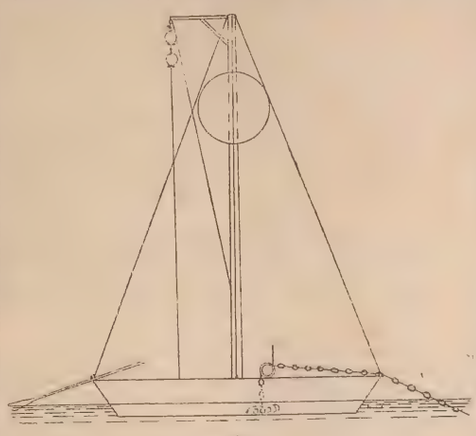
POWDER COMPARISONS.—A recent trial at the FOREST AND STREAM testing screen brought into direct comparisons from the same gun a series of cartridges loaded with black, Schultze, E C, wood and the new Lyman compressed powders. The results speak well for the newer makes of explosives. The detailed report, with target cuts, will probably appear in our next issue.

RED BANK, N. J., Dec. 18.—The monthly live bird shoot of the Riverside Gun Club took place to-day, there being a large attendance of members. The wind blew a gale from the northwest and the air was keen and biting. Five ground traps were used and the American Association rules governed: First event, at 7 birds, $3 entrance: White, Ivins and Cornwell first, second and third respectively. Second event, at 5 birds, $3 entrance: Ivins first, White second. Third event, miss and out, $1 entrance: Won by White.

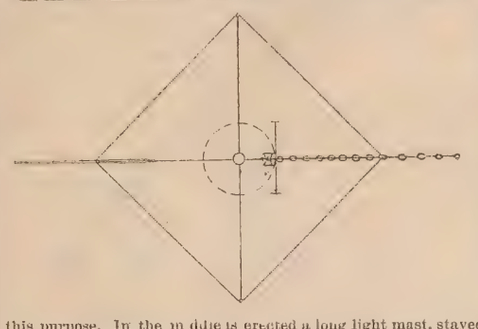
DOVER, N. J. Dec. 20.—A match for $200 a side, at 100 live birds, under Hurlingham rules, was shot yesterday at Danville, between John Riggott, of Rockaway, N. J., and L. Duryea, of the Fountain Gun Club, of Brooklyn. Although the day was unfavorable Riggott missed but one bird out of the first 80 that rose before him. When each had shot at 91 birds Duryea retired from the contest. Riggott killed 88 birds, and of the three he lost two fell dead out of bounds. Duryea killed 78 and missed 13.

Yachting.

Yachtsmen who do not see what they want under this heading will please lookunder the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.



HARLEM Y. C.—At the annual election of officers of the Harlem Y. C. for the ensuing year the following gentlemen were elected: Com., T. H. McDonald; Vice-Com., A. W. Warner; Rear-Com., F. G. Pauley; Fleet Captain, F. I. Fitch; Meas., J. A. Lalor; Fleet Surgeon, H. M. Cox, M.D.; Treas., S. J. Cauley; Fin. Sec'y, A. G. Austin; Cor. Sec'y, J. J. Roeth; Steward, G. Waas.



YACHT RACING CALENDAR AND REVIEW.—We have received the third volume of this useful reference book, containing a reprint of all the yachting news in the *Field* during the past year. It is published by Horace Cox, *Field* office.

A PLAN FOR A MARKBOAT.

Editor Forest and Stream:

The accident at Yokohama has suggested to me the following craft for a markboat that offers many advantages over the ordinary oyster sloop, with her long head booms, poor ground tackle, uncertain visibility, etc. The craft is a scow, 18 to 20ft. long and the same width, and 2½ or 3ft. deep, according to the waters in which she is to be used. The four sides should be flared at an angle of 45 degrees. The boat should be made of spruce or hemlock, either of which is a very good timber for

this purpose. In the middle is erected a long light mast, stayed to the four corners, and around this mast is built a large globe of raffan, or other suitable material, covered with canvas painted, to be hoisted as far as possible with a light halliard. On the masthead is secured a crane with signal halliards attached, so that lanterns or flags can be hoisted clear of the ball. Have on one of the corners a good heavy iron chock for chain to run over and in corner diagonally opposite a rowlock. Put close to mast a good single wildcat windlass. Provide scow with heavy chain and anchor, chain going through hawsepipe in deck to make ballast in the bottom. A small shelter house may be provided aft the mast in case a man is left in charge. Such a vessel would live out any thing, could be towed to place by committee boat, etc., and would be visible much before a small oyster boat. The chain if heavy would lay up and down, as the vessel would not have an unusual windage. The cost should not be great, as nothing but straight cheap stuff need be used. R. CENTER.

THE TWO DEEDS OF GIFT.

AS might be expected, American papers are criticising the conditions attached to the Royal Victoria International Challenge Cup with a free hand; but at least it should be required that the critics should show they had formed an intelligent conception of the meaning and scope of the conditions. This, however, they have, with a few exceptions, entirely failed to do, the main object seemingly being to discredit the cup and the conditions attached thereto in the eyes of the Americans, or to make it appear to be an exact copy of the "new deed of gift" attached to the America Cup. As might be expected, Boston (which is mainly responsible for the objectionable clauses in this deed) leads the way with the adverse criticisms; and the New York *Spirit of the Times* indorses them as follows:

* * * * *

In the "new deed of gift" attached to the America Cup it is enjoined that the following dimensions must be given: Length on loadline, breadth on loadline, and extreme breadth, draft of water and Custom House registered tonnage; and it is further enjoined that the dimensions stated in the challenge must not be exceeded. All the Royal Victoria conditions ask for is the length on the loadline and the rating, and enjoins that the length must not vary more than 5 per cent. from that stated in the challenge, nor the rating by more than 10 per cent. This, we presume, is what is ignorantly referred to as a "small margin;" but as a matter of fact the margin is so great that by no reasonable possibility could a yacht designer want to exceed it; in fact, a challenger could comply with the conditions and practically give no information at all. For instance, supposing a challenger stated his yacht would be 84ft. on the loadline, with a rating of 140, the sail area of which would be 10,000sq. ft.; he could increase that length to 88.2, the sail are to 10,476sq. ft., and the rating to 154; and no objection whatever could be taken to it. And if he chose to keep the length of load waterline to that stated in the challenge—84ft.—he could add 1,000sq. ft. to the sail area. In fact, there is practically no limit as to the variations admissible under the "small margins" of 5 per cent. on the length and 10 on the rating; in short, as we have already observed, a challenger has practically to give no particulars at all of his yacht which would be of service to the parties challenged. The *Spirit of the Times* states that under the America Cup deed a challenger is required to give up the cardinal dimensions of his yacht, but he can alter his spars and sails as he wishes. It will now be seen that, under the Royal Victoria conditions, not only is a challenger relieved from giving up the cardinal dimensions of his yacht, but also that he can alter his spars and sails as he pleases.

The Royal Victoria conditions enjoin that the rating of the defending yacht must not exceed the rating of the challenging yacht, as stated in her challenge, by more than 20 per cent., and this is construed into giving "the holding club a very strong advantage!" Apart from the fact that in the America Cup deed there is no restriction at all on the size of the defending yacht, it is grotesquely absurd to construe this guarantee of fair play to the challenger into a strong advantage to the club holding the cup. As a matter of fact, the holding club will not be able to exceed the rating of the challenging yacht by more than 9 per cent. It can be taken for granted that the challenging yacht will take full advantage of the 10 per cent, allowance for variation; that is to say, if the rating is put at 140, in her challenge it will be found to be 154 on measurement—a challenger is practically bound to take the full advantage of the allowance. Then the defending yacht could be made to exceed the stated rating (140) of the challenger by 20 per cent.; or, in other words, the rating of the defending yacht must not be more than 168, which exceeds a rating of 154 by 9 per cent. and a time allowance would have to be conceded for the difference.

Limiting the size of the defending yacht was, however, really imported into the conditions for the protection of yachts of small rating. With yachts of 88ft. waterline and 140-rating their size protects them, as they cannot be exceeded to any unfair extent. The case, however, is very different with a yacht of about Valkyrie's size. Her length is 69.2ft., her sail area 6,708sq.ft. and her rating 78; of course she would bo overwhelmed by a yacht of 90ft. waterline with a rating of 170, as would be allowed to meet her under the America Cup deed, but under the Royal Victoria conditions the rating of the defending yacht could only be 85, and the difference between a yacht of 78-rating and 85-rating is so small that a race between such boats would be a perfectly fair and level contest, with the Y. R. A. time allowance. Of course if any one owning a Valkyrie of 78-rating challenged under the Royal Victoria deed, he would give the rating in the challenge as 70, and avail himself of the privilege of raising the rating to 78, so as to secure himself against being met by a yacht of 20 per cent. larger rating.

We are in a position to say that these matters were well calculated and thought out by the committee appointed by the Royal Victoria Y. C. to draw up the conditions, and the main object in view was to insure that the challenging yacht should not be placed at a disadvantage through having to disclose cardinal elements in her design or through being met by a defending yacht of overwhelming size.—*Field*.

The *Field* should make some allowance for the position in which the Boston *Herald* is placed by the Royal Victoria Y. C. deed; it would not be possible for the *Herald* to criticise this document fairly and truthfully, as this would at once show how widely different it is from the lawyers' deed of the America's Cup, and thus would bring to confusion not only the *Herald*, but all the Boston commodores whom it has called on to bear testimony to the fairness and generosity of the pretty abused deed. The two deeds have been widely published and are within reach of all, and we believe that American yachtsmen are fair-minded and intelligent enough to form an independent opinion of their own, uninfluenced by the *Herald* or other partisan journals. In comparing the two documents it must be considered that in the case of the Royal Victoria Y. C. the club had purchased from its own funds a certain cup, and was at liberty to attach to it any terms. In the case of the New York Y. C. the club was in possession of a cup intrusted to it on certain conditions, which conditions it has deliberately violated by setting up others of a very different nature.

PAID TIME-KEEPERS IN THE LAKE Y. R. A.

THE recent report of the discussion and action of the executive committee of the Lake Y. R. A. in the matter of a paid officer who should have charge of the regattas of the circuit is criticised by the *Field* of Dec. 6, which quotes, apparently with approval, some adverse comments in an American journal, adding some remarks as to the functions of club delegates in the L. Y. R. A. Like the journal in question, the *Field* does not understand the facts of the case, and consequently has fallen into error.

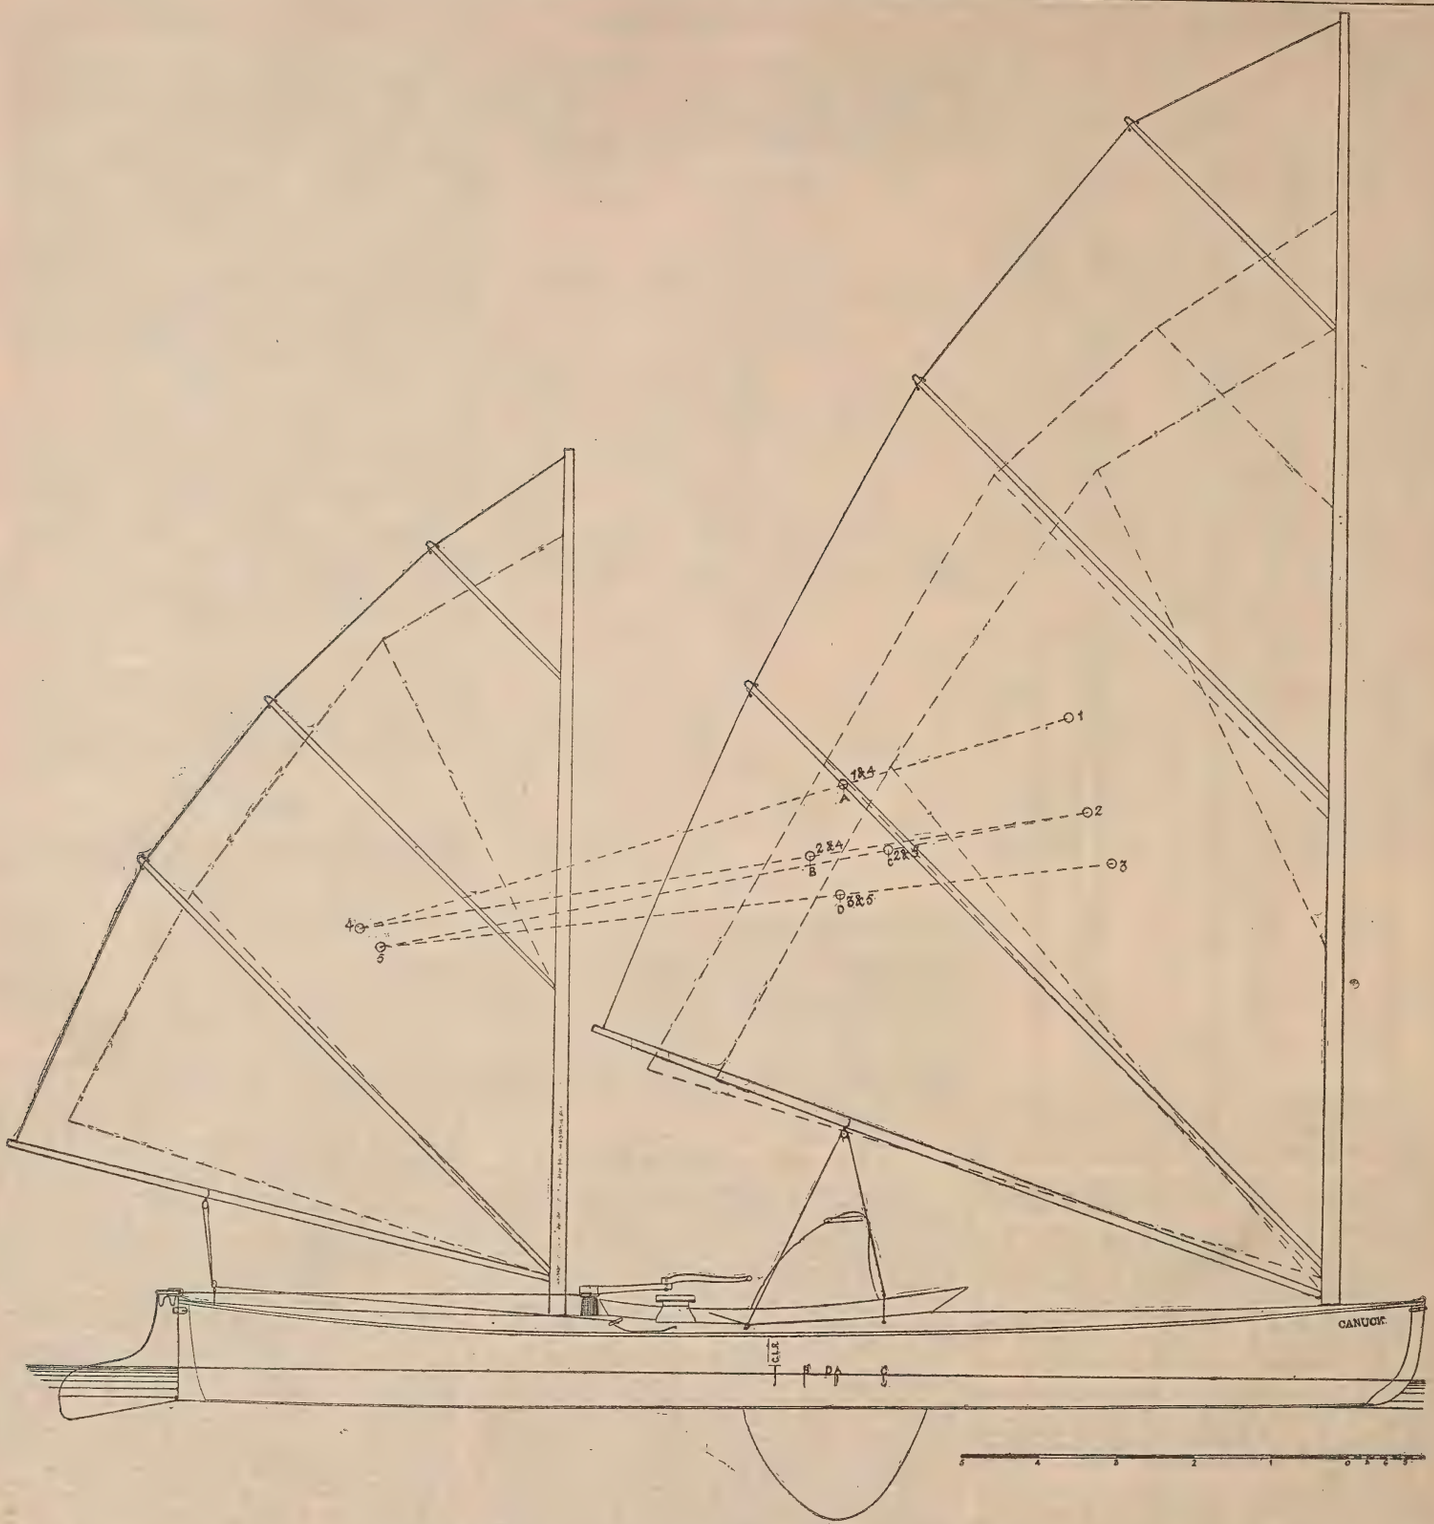
The conditions and surroundings of yachting on Lake Ontario are totally different from those of yacht clubs about the Thames, the Solent, the Clyde, or even Boston, Newport and New York. The racing is limited mainly to the two weeks' cruise in midsummer, and of the seven clubs composing the L. Y. R. A. only two or three hold sufficient races during the year to justify the more than nominal existence of a standing regatta committee. In some of the clubs, though there is cruising in plenty, but one race a year is sailed, and when the time comes for it the sailormen proper are probably all afloat, as every boat in the fleet is out and most of them entered.

The labor and responsibility of managing the regatta is apt to devolve on some one whose chief qualification is good nature rather than any experience of regatta work, and the chances are nine to one in favor of some serious blunder through either ignorance or neglect. Beside this, the sun is very hot on the lake in summer, the watcher on the pier head from early morn until the late finish of a drifting match is generally wiser by far than that other ancient mariner, and has probably taken precautions that in addition to "water, water all around," he has a "drop" both large and strong to drink; and instances have been known where, when the last yacht finished, some of the most important functionaries could not tell the Oriole from a fishing smack, or a split second chronograph from a Waterbury watch, in fact were as royally drunk as the judges in one noted race on the coast last year. It is seldom that matters are quite as bad as this, but the racing on the lake is often close and exciting, yachtsmen take a deep interest in the results of the series, and it is due to all who enter that the starting and timing shall be accurately done, which is only possible in experienced hands. We have heard of a case quite recently, though we cannot vouch for it personally, where a race was started between two pier heads on the lake, in half a gale and a heavy sea, with a five minute preparatory interval and a one gun start. One yacht in a class came flying for the line on time, but the others were scattered and in very bad shape. The starter was evidently familiar with the turf rather than with the usages of yacht racing, and as he saw that the start would be a very uneven one, a single yacht going over and the rest far astern, he very considerately held the gun, the leading yacht being compelled to jibe and come again for the line, and when he saw the fleet fairly in line he gave the signal.

Any one familiar with regatta committee work will realize that it is by no means easy, but requires a great deal of judgment and experience; a thorough familiarity with sailing rules, a knowledge of the courses in order that the buoys may be properly placed, and above all a certain amount of training in timing the fleet. As competent men are no more available on the lake than in places where yacht racing is conducted on a larger scale, the question of placing all of the details in the hands of one man, who shall manage each race of the circuit, has been under discussion for some time, and was only introduced formally at the late general meeting. It is probable that a salary would be necessary, as a good deal of labor is entailed, and there would be little of a vacation for the officer; but beyond the expense we know of no objection, and the advantages are obvious to all familiar with the present state of affairs. The objections urged by the American journal are purely sentimental, that it "savors of the counting house," would "reduce the glorious sport to a mere mechanical business," etc., all of which applies as much to the official measurer who is paid in all clubs as to the proposed time-keeper or whatever the title may be. Moreover, the nearer the details of starting and timing are reduced to a mere mechanical business the better satisfied the racing men will be.

This matter of conducting races is one that is badly managed in clubs far off from Lake Ontario; a crowd of judges, starters, time keepers and committee men are appointed, one of them being chosen because he happens to own a yacht which can be used for the excursion, the capacity of the bar of said yacht considered before her speed or sea-going powers. The judges and other chief functionaries are too often chosen from their eminence in local politics rather than from any technical knowledge of yachting. With such a staff as this it is no wonder that mistakes are frequent, bringing disrepute on the club which countenances such proceedings. We have seen, in the vicinity of New York, a judge's steamer making circles inside the harbor while the regatta committee mixed a big pail of punch in the pilot house, the fleet meanwhile standing out miles away with a good breeze. All that is needed in any club is a regatta committee of three or five, the smaller number being preferable, who shall have entire charge of the races. This committee should be chosen solely for its qualifications, and should be kept in office as long as it will serve. In cases where the work must be done partly from a steamer and partly on shore, one of the committee, with a reliable man to help him, will be at each place. All the complimentary lumber of judges, etc., can well be dispensed with.

On the Lake the sailor men who are best fitted to run the races are apt to be afloat, leaving the most important work of the day to the civilian contingent of the club, who are, with no disrespect to them, not fitted to manage it. The appointment of the proposed officer would take this part of the work from the hands of a very busy committee, who have a thousand other things to do in connection with the reception and entertainment of the fleet, and place it under the direction of one competent man. His previous experience would enable him to lay out a course that would be acceptable to the contestants, his measurements of the fleet would make the calculation of corrected times a simple and speedy matter, and in his hands the timing would be carried out methodically and accurately. The need for such an officer is perfectly plain, whether he should give his services freely, or like club measures should be paid a certain sum, is a question that must be better understood by the members of the L. Y. R. A. than by critics at a distance from the lake.



In regard to the comments on the powers of the delegates, as mentioned by the *Field*, they are no more limited than is usual in similar bodies, each being at liberty to vote as he desires, but it usually happens that matters of this kind are dismissed more or less informally by the members of a club proir to the meeting, the delegate being in accord with the general feeling in the club. At the same time he is at perfect liberty to vote as he pleases; there is no rule to prevent him from so doing.

NYDIA, steam yacht, Dr. R. V. Pierce, after sailing from New York on a Southern cruise, was run into on Dec. 19 while at anchor in Newbern (N. C.) harbor by the schooner J. R. P. Moore. The yacht lost her masts and bowsprit, in addition to injuries to bulwarks and upper part of hull.

CINDERELLA.—Through the misplacing of a figure in our table of last week Cinderella is given a second prize in place of a first.

IROQUOIS, schr., Rear-Com. Ellis, S. C. Y. C., is fitting out at Wintringham's for a cruise to the Windward Islands.

"SOME POINTS ABOUT MARKBOATS."—A letter on this subject has been received too late for publication this week.

SAIL PLAN OF CANOE "CANUCK."—Owned by Mr. Ford Jones.

THE WRECK OF THE URANIA.

LORD CANTELUPE'S body was washed ashore by Tuesday night's storm within a few feet of the spot where the crew of the Urania had been landed by the rocket apparatus. The body has therefore been in the water for nearly a month, and the features were not recognizable.

An inquest was held on Dec. 3 by Dr. Parke. The first witness examined was William Blizzard, the master of the Urania.

You say you can identify that body as the body of Lord Cantelupe? Yes: I can identify it by the clothing and the boot.

The Coroner: When did you leave Gareloch? On Nov. 5. We ran down the Irish coast, with the wind changing from north to south-south-west, as far as the South Light. The weather then became heavy in the Channel, then we turned and ran for Bangor Bay. This was on the morning of Nov. 6. The wind was then blowing from the south. We put into Bangor Bay about midday. It was still blowing hard and raining, and we anchored a mile off the shore. About midnight the wind shifted to the north-north-west. When the wind changed I gave the yacht more chain, and got the other anchor out and let it go. We gave her more chain when she began to drag at 12:45.

Did she continue to drag? Yes, and none of the chains gave way. The vessel went ashore about half-past two o'clock on the morning of the 7th, and struck several times. We took to the rigging. Lord Cantelupe and his valet were first on the rigging, and some of the crew were on one side of the vessel, and some on the other. We were in the rigging about a quarter of an hour, when deceased was washed off, and several very heavy seas washed over us. We had a job holding ourselves on. One of the men who was alongside the deceased sang out, "His Lordship's gone." There was a man below his lordship.

Had any of you lashed yourselves to the rigging? We hadn't time to do anything of the kind. It was two or three hours before we were rescued.

Did it never strike you, when the wind was blowing so strong from the north-west, to let go your anchor and run? The change of wind came on too suddenly.

Could you not have slipped your chain and run? The wind changed, as I have said, too suddenly, and there was a great sea running at the time. It was also very dark.

You were not aware there was no holding ground there? No.

The Coroner: I am asking you these questions only with the view to elicit the fact why you did not make an effort "to run" when the wind veered round to north-north-west.

Witness: The reason why I could not do that was because the change in the wind was so quick, and also it was very dark at the time.

Do you think you would have been rescued sooner if the apparatus had been on the spot? Yes; there was the whole length of the vessel to fire over. We had a barometer and I noticed it falling in the afternoon. In the evening it began to rise, and it kept rising all the time until the wind flew round.

The Foreman: Well, I think a master of a vessel should take notice of a circumstance like that, especially when he is lying in an open roadstead like Bangor Bay. A master of any steamer, or coaster, or yacht when he comes into an open roadstead, with wind blowing from south-south-east, should know that the first change after that will be a gale from the north-east. As an old seamen myself I think that the proper place for you to have run into would have been either Carrickfergus or Whitehouse Roads. Bangor is far too open a roadstead to enter with a wind blowing from the south-east, as the first time such a wind veers round it is sure to turn to the north-west unless the vessel carries sufficient sail to enable her to slip out. I don't blame the captain, because of his ignorance of the place. The only thing to be deplored is the loss of a valuable life all from the fact of the captain not knowing where he placed his vessel.

The Mate: You must remember other persons ran the risk of their lives as well as Lord Cantelupe; and would we have run the risk we did if we could have helped it?

The Coroner: I don't blame anyone.

The Mate: By the way you are expressing yourself you are blaming this man (the captain).

The Coroner: I don't want any argument in my court.

The Mate: Very well, sir.

Witness: After she struck the last time she went down directly, and that was the time his lordship was washed off. I was in the rigging when she sank.

Did you throw anything to Lord Cantelupe? No; it was such a heavy sea.

The foreman of the jury (Mr. W. McCormick, master mariner) commented on the danger of yachts seeking shelter in Bangor Bay during the winter months.

The jury, after considerable deliberation, came to the following verdict: "That the said Lionel Charles Sackville, called Lord Cantelupe, was accidentally drowned at Bangor by his yacht the Urania coming ashore on the morning of Nov. 7; that the body was found on the morning of Dec. 3 at Seacliffe; and we, as a jury, say that if a rocket apparatus had been in Bangor deceased's life would have been saved."—*Field, Dec. 6.*

FLEUR DE LYS, schr., Mr. Geo. Trotter, has gone to Piepgrass's yard, where she will be hauled out for the winter.

Canoeing.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

CANUCK.

THE accompanying drawing shows the sail plan of the canoe Canuck, whose lines have appeared in two previous issues of the Forest and Stream, Sept. 18 and Oct. 16. Though not so large in area as some other rigs, these sails are noted for the longest and probably heaviest masts carried by a 30in. canoe, the mainmast of the largest rig being 17ft. 9in. from heel to truck, 2¾in. diameter at deck, and 1½in. at truck, a grown spruce stick. The rig has a double interest as being the largest and most objectionable example of the standing rig, and at the same time the best and most successful sailing representative of Canada and the Northern Division. While derived directly from the Pecowsic rig, Canuck's sail plan differs in many details which are original with Messrs. Jones and Sauvé, her owner and builder.

The lower batten joins the boom at its fore end, but the others are parallel to this batten, while the cotton of which the sails are made has its bights parallel to the battens, and not to the leach of the sail; there being one seam or bight between each pair of battens. The battens are of spruce or pine, about ¾×⅜in., oblong in section, and of necessity slip very easily into the pockets. Owing to their position it is impossible to fold the boom and battens close against the mast, and in order to stow the sail it is necessary to remove or loosen the battens. In setting sail each batten, which has been rolled up with the sail, is slipped into its pocket, the sail is hauled out and made fast to the end of the bolter. In order to do this quickly and securely a saw cut about ⅛in. deep is made in from the end of the batten, while in the sail is a loop of cord about 4in. long, rove through two grommets, one on each side of the pocket. One side of this loop is slipped over the end of the batten into the slot, then the other end is hauled on, making a purchase to draw the sail taut, and also slipped into the slot.

The full outfit includes five sails, as follows:

	Mast.	Boom.
No. 1, mainsail..... 92sq. ft.	17.9	10.6
No. 2, mainsail..... 70sq. ft.	15.2	9.6
No. 3, mainsail..... 50sq. ft.	13.9	8.6
No. 4, mizen..... 43sq. ft.	12.2	5.3
No. 5, mizen..... 38sq. ft.	11.2	4.9

The various combinations of these sails are as follows, being shown in the drawing:

	Area.	C. E.		Area.	C. E.
A.	Nos. 1 and 4.....	135	7.56	C. Nos. 2 and 5.....	105	7.00
B.	Nos. 2 and 4.....	113	8.00	D. Nos. 3 and 5.....	94	7.58

The sails not all interchangeable, as Pecowsic's were, the mainmasts being 2¾ and the mizens but 2⅜in. at deck. The mast tubes are square at bottom and nearly up to deck, but circular in the deck plate.

The loadline was carefully measured with the big rig, A, the one used in the final race for the New York C. C. cup, was found to be 4¼ and 5⅜in. above the base line, making the C.L.R. 8.40ft. from stem, with full board. With rigs C and D the draft forward would be less, owing to the lighter masts, and the C. L. R. would be a little further aft. A calculation of the displacement to a 5in. level line and to the draft above given shows the displacement to be practically the same, 327 and 324lbs., but in the latter case, which is the correct sailing trim as nearly as this can be determined, the forebody becomes longer and finer, the midship section being 9ft. from stem instead of 8ft., while the after body becomes proportionately fuller. The large rig, A, is used only in very light winds, most of the sailing being done, we believe, with B and D. The weights as given by Mr. Jones are: Hull, seat, rudder, floor boards and paddles 112lbs., board 20lbs., crew 155 to 160, or say 292lbs., leaving 32lbs. for weight of the A rig.

The board, before described, is made from a circular saw blade ⅛in. thick, of dipper shape as distinguished from the ordinary triangular board. The rudder is a single steel blade not fitted to drop, with a 9in. brass yoke on head, connected by lines of $\frac{3}{16}$in. braided cord and turnbuckles, with a similar yoke on deck. The rudder yoke is not concentric with the rudder irons, and consequently there is considerable lost motion when the helm is hard over, but at all ordinary angles the runner lines are strained very tight. The tiller is of very light construction with a jointed part.

The deck seat is an addition this year, Mr. Jones never using one before, either in Canuck or Ramona; in fact his usual position in sailing has been with body over the side of boat, but as low as possible, in order that its windage may not offset the mizen.

SLIDING SEAT—"CANUCK."

The sliding seat, shown in the drawing (Oct. 16) is very strongly constructed of hard wood, with steel slides, being fastened down by two bolts through a crossbar under the coaming. The following drawings and description of an improved construction of the same seat were sent us by Mr. George C. Forrest, canoe Dimple, who measured Canuck's seat this summer and afterward worked out the construction shown. Mr. Forrest writes as follows:

Before considering the construction of the seat let us look at the merits of this appliance, which probably never would have been disputed if the standing sail question had not arisen at the same time. While the standing sail may have some forcible arguments against it, the sliding seat is a totally different affair, and the objection raised to it seems to be mainly due to prejudice owing to its use by the racing men.

Taking first the *cons:* In the majority of seats as they were made last season, the slide did not always work, and frequently failed when most needed in rough water, due to swelling; and further, the extra weight is a disadvantage.

Now for the *pros:* The difficulty of the seats sticking can be overcome by Mr. Ford Jones's principle, which works to perfection, as will be seen by referring to the half size cross section, but with the weaker parts strengthened.

It is a great comfort to have one's weight held up by a springy seat instead of by the legs and tired muscles of the body, also the canoeist is kept dryer than without a seat.

Now as a fact with a very few exceptions, a sailor hiking without a seat can carry as great an amount of sail for a short time as with; and it also stands to reason that in racing without seats the contestants are going to carry the maximum driving sail, therefore the sliding seat does not admit of overcrowding.

Secondly, the extra weight of the seat is not to be compared with the severe and exhaustive labor saved.

Now, why should those who have never used what is now called a properly constructed sliding seat, even at this imperfected state of the invention, legislate against what will soon become one of the greatest factors of canoeing, thanks to Mr. Paul Butler.

The following are the materials and dimensions of the improved seat.

Fig. I. Stationary part *a* is of some hard wood, perhaps best of oak, is 5in.×⅝in. The slide *b* say of hickory, is 6^{15}_{16}in.×$^{5}_{16}$in. The clamp *c*, also of hickory, is at ends 4in.×⅝in. under coaming, but across cockpit 2in.×⅝in., *d* is a $^{5}_{16}$in. bolt with a special head of size in cut; *e* and *e* are ⅛in. bolts, *f g* and *h* are ¼in. bolts with special heads and nuts the size of drawings; *i* and *i* are of brass $^{1}_{16}$in.; *j* is a washer, *k* drumb screw, *l* and *l* rubber packing attached to *c* (by copper tacks or otherwise) to aid in clamping seat securely.

Fig. II. B is a top view of part of slide; *f* and *f* centers of bolts *f* and *f* in Fig. I. This seat is 40in. between the center of end bolt at this shown end, and center of corresponding bolt at the other end.

Since the strain decreases on the bolts from the end to the center of the seat, taking the distance between the centers of the bolt nearest the end of the seat as shown, and the next bolt toward the center as ¾in., then $^{1}_{32}$in. should be added to each succeeding distance over its predecessor. A bolt can be omitted at the center, thus about evening up the maximum distance between bolts at the center, which would be about 1^{10}_{16}in.

For example of the way in which to add $^{1}_{32}$" m=¾", n ¾"+$^{1}_{32}$"=$^{25}_{32}$", o=$^{25}_{32}$+$^{1}_{32}$=$^{26}_{32}$, etc.; p is the distance from the center of the bolt nearest to the end of the seat, as is shown, to the end of the seat, this distance together with the corresponding distance at the other end, is exclusive of the 40in. of seat between the extreme centers of the bolts, as before mentioned. By putting the bolts in the sliding part only where they are needed, considerable weight is saved. Now take the distance between the centers of the bolt in the stationary part nearest the end and the next bolt toward the center, as 1^{3}_{16}in., then decrease each succeeding distance toward the center over its predecessor by $^{1}_{32}$in. until at the center the minimum distance between centers of bolts will be just about ¾in.

This will make a very strong seat that will slide with sufficient freedom and will never jam, the bearing surfaces being all of metal, and so arranged as not to be affected by the swelling of the wood. The crossbar is made wide at each end to give a good bearing under the coaming and to preserve the strength where the bolts pass through, but inside of the bolt holes the size is reduced about one-half.

REMINISCENT—A. C. A., 1890.

FAIR JESSUP'S NECK! Born of some rock-burdened iceberg from the distant north, waxing lusty with myriad sands swept in on ancient tides and ever shifting with the vagrant winds; sharp-pointed like an Indian arrow-head, broad at the base and edged with gleaming shells—the memory comes back a dream of wholesome rest. Few were the days and stormy many, but the dripping skies were but as a dun background to thy sunny hours. Dimly, and as things of no account do we remember what seemed unpleasant then. The friendly greeting, the hearty handshake and the benison of good fellowship united all. From the morning plunge until the last drowsy good-night there is little that we could wish effaced.

I give you pictures here, but only faintly do they suggest the legion that comes trooping over memory's canvas. I see again the land sloping from the high sand dunes of the south to where like a thin wedge it enters under the cobalt waves away beyond the Vesper camp. Along its backbone stretches the village of white tents, and over all, like gay butterflies fluttering on the air, float the colors of all nations. Again I see "Squawland" with its circle of picturesque white wigwams under the sturdy red cedars, the tribal totem, and the amphitheater with its pile of faggots ready for the fire; again the sunny Sabbath midday, with its little knot of worshippers gathered beneath the trees, is before me, and I hear the earnest words and reverent songs; again the homelike tents on the bluff and the courteous master of the land, our guest, made welcome on his own domain; and there, low down in the hollow—the one uniovely object of the place, allowable because of its need—the supply store, where thrifty natives make good point of our necessities. Higher up is the great tent o'ertopping all, and further, the line along the eastern slope looking out across the water, each with its slender staff where at "colors" bright flags shoot up, and floating outward show many curious forms and odd devices; and—focal point of color—"Headquarters," with its signal gun, its talking flags and its great waving signal of authority. There, also, the busy steamboat landing, where fresh-water sailors grow very salt indeed; the little steamer coming with veterans and friends; the circling beach with its innumerable shells and queer relics of wrecked aquatic life; the windy bluff with its boundless views of stretching shore, of changing sea and sky; the quiet depths of cedar forests where silence reigns supreme, where peace—well, come to think of it, now there were mosquitoes there.

Of scenes and incidents how many, how indescribable! The gathering of the white-winged fleet around the starting buoy, the excitement of the races, the bounding canoes, the gallant sailors in good-natured rivalry, while cheering partisans on the shore urge on their favorites; the grand march to be photographed, where in stately splendor with lock-step and hand on shoulder the variegated throng winds over the hill in triple file, headed by "Little Mac" and "Puss in Boots" and "Ko-Ko," briefest canoeist of them all. Then with mixed feelings comes memory of the gatherings in the mess-tent, where stately Bave struggled with his wild-eyed Bedouins, where Perennial Hope thrice daily warmed to life and froze again; of "visitor's day," with its fleet of friendly sail that came up out of the unknown from all quarters; of its crowd of rustic sightseers; of the queer scenes on rainy days; of the dog, "Brooklyn," arrayed in rubber coat, trousers and gum boots to keep him dry, indicative of the protective care of his youthful masters; of the arrival of the "Ko-Ko-Ko-Ho" from distant Sag Harbor, with the captive Coon band, of the clarion voices that could be satisfied with nothing less than "De wattah melin' growin' on de vine," and the triumphal march of the augmented crew through camp, headed by Seavey, of the fertile imagination; of the brilliant ball that night, the alarm, the marshalling of the guard, the valiant Night Patrol and its search through the darkness for pirates and the final capture of the notorious disturber of the peace (of which fact, however, but few have knowledge unto this day); of the amateur minstrel show, where the audience united in rendering familiar songs while waiting for the duly authorized performers, and guyed them good-naturedly when they finally appeared; of the various camps in close communion joined—the Vespers, the Brooklyns, the Knickerbockers, the Yonkers, the Mohicans, the New Yorks condensed, the Springfields, the Hartfords, and the Ianthes, with the Canadian contingent in the rear, modest and retiring as to camp, but with sail and paddle triumphantly at the front.

In silent procession come noted figures of the meet—the grim commodore, filled with cares of state and sustenance, unsounded of pocket and content, for whoso leads the dance must pay the fiddler; the purser, busy with many things; Winné, master of the games; Burchard, prince of good fellows and father to the meet; Bennett, the wholesome "ghost," most restful of men, pondering problems of transportation, seated at his tent door all day long and making welcome all who would; "Vauxie" and "Stephie," once sleepless o' nights, now model benedicts, and others, a long line and glorious fellows all.

With night comes healthful rest and social pleasantry, when kindred spirits form in little coteries or unite in the larger gatherings around the camp-fires, where with song and story—not always new but welcome—the evenings pass, then comes the final sorrowful day when the white tents melt away as dew in the morning sunshine, when the last good-bye is said and we hear for the last time the whimsical, dear familiar cry, "All Over."—*S. R. Stoddard, in "Glimpses of the A. C. A."*

NEW YORK C. C.—In the heavy storm of last week the new floating house of the New York C. C. was driven from its moorings and washed up on the adjoining bulkhead in the old Seawanhaka Basin, at Stapleton, where it lodged with several large piles through the planking of the bottom. The canoes were removed without injury, but as the house partly filled with water some injury was done to articles stored in the lockers. After some hard work on the part of several of the members and the janitor, with other help, the piles were cut off and the house set afloat. The damage will necessitate docking, but is not in itself very serious. On Friday evening about twenty canoeists sat down to dinner at the fencing rooms, 19 W. 24th street, and after dinner others dropped in. The evening was passed in an informal talk over canoeing matters, enlivened by several exciting bouts with the gloves and foils. Members of the Yonkers, Brooklyn, Knickerbocker, Ianthe and Cleveland clubs were present.

A MID-WINTER MEET.—At the camp-fire of the New York C. C. on Friday Com. Seavey, K. C. C., proposed that an entertainment should be arranged by the various local canoe clubs to be held in New York next month, which should serve as a reunion of those who had met in camp last summer. As all present approved of the scheme it was decided to begin work immediately and an informal meeting was held, the result being that a committee was appointed, consisting of the commodores of local clubs, with Com. Seavey as chairman. The plan is to give a reception in the latter part of January, with a programme made up of camp songs, tableaux, lantern views of the meet, etc.

NEW CANOES.—We learn that Mr. Butler has lately launched his new canoe and tried her in a trial sail against the Vesper fleet, with the result that she promises to be very fast when in proper trim. The first new boat announced for next season will be built for Mr. C. J. Stevens, owner of Tramp and Vagabond, and will be a most decided novelty. With the idea of carrying the larger sail aft, this canoe has been designed with a draft of but 2in. forward and 10in. aft, making her unlike any existing boats. She will be built for racing solely, with a very light hull and a small bathtub cockpit, and in addition to her deep keel will have a 4ft. centerboard; the sails will be about 45 and 55ft., the latter being the mizen.

A. C. A. MEMBERSHIP.—Eastern Division—Louis H. Fitch, Herbert N. Colby, Geo. C. Ketchum, E. F. Coburn, Andrew C. Stone, James B. Robinson, Frank P. Hart, Harry R. Dow, Fred G. Dyer, Robert P. Webber, James E. Simpson and L. Saunders, Lawrence, Mass.; J. T. Ball, 32 Pembleton Square, Boston, Mass.

TEASER.—This canoe, the lightest and one of the handsomest that Capt. Ruggles has turned out, has been sold by Mr. Anderson to Mr. C. V. Schuyler, of the Arlington C. C., who will race her next year.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

READER, Denver, Col.—I wish to breed for size and head properties. Which of the two described dogs would be the better sire, No. 1 or No. 2? Ans. Better breed to sire No. 1. Disposition means a good deal in a St. Bernard and it is no use running any risks.

J. M R., Duncannon, Pa.—Will you please let me know in the next issue of your paper where I can get a thoroughbred coach dog. Ans. We do not know of any for sale. You had better advertise for one. In choosing a Dalmatian remember that the spots should be clear and distinct, and not larger than a quarter.

OLD SUBSCRIBER, Emerson, Mich.—Have seen advertised by English gun makers wildfowl guns guaranteed at 100yds. of 8 and 10-gauge. Is it possible to obtain from such guns good shooting at the above distances? Can American gun makers make as good shooting guns as those of the best English makers? Ans. Heavy guns, similar to above, may be bought here. They are the pot-hunter's gun and carry heavy charges long distances. Many of the English arms are choked for ball as well. Our gun test shows that American guns do quite as good and rather better work than the English arms.

READER, New York City.—Could you inform me what the feeling is in regard to judging a mastiff dog with chocolate-colored points in the same class with those having black point? I have a grand puppy with chocolate-colored points, out of Salva (A. K. C. S. B. 6,853), by Sears' Monarch (A. K. C. S. B. 8,827). Judges of this breed tell me that he very much resembles Crown Prince, both in markings, build and in being undershot, but also add that if brought into the ring would be unceremoniously hustled out. I would like very much to enter him in the coming New York show, but cannot see any sense in doing so upon being told that he will not be judged. Ans. If the judge knows his business, the fact of your dog having chocolate points should make no difference in his judgment, though, of course, the black points are generally preferred.

CONSTANT READER.—Kindly oblige me by replying in the next issue of your paper to the following question: Is a dog entitled to registration where ancestors have never been registered, but who has a lawfully kept pedigree extending eight generations in mother's and seven on father's side? I have some puppies, but never having had to register am somewhat at a loss to know how to proceed in the matter. Ans. Yes. The following are the conditions under which dogs can be registered in the A. K. C. stud book: 1. Where sire and dam are already registered, or are directly descended from the dogs already registered in said book. 2. Where dogs possess an authenticated pedigree extending back three generations. 3. Where dogs (not eligible under the provisions as above required) have won not less than two first prizes in the regular classes at any show, or have been placed at any field trial recognized by the American Kennel Club. Novice, miscellaneous and selling classes not included. 4. After Jan. 1, 1890, all dogs winning a prize at any American Kennel Club show or field trial, may be registered in the stud book without charge, provided they are eligible under above conditions. Write A. P. Vredenburgh, 44 Broadway, New York city.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

ANSWERS TO CORRESPONDENTS.

FISH DEALER AND FISH COMMISSIONER.

WE print to-day a card from Mr. Eugene G. Blackford, the President of the New York Fish Commission. It is short, concise and explicit; and sufficiently definite in its statements to be plainly comprehended by Mr. John D. Collins, of Utica, to whose recent charges against Mr. Blackford's integrity and honesty of official actions it is an answer. One of these charges was that Mr. Blackford had secured the repeal of the six-inch trout law, because that law interfered with the sale of fingerling trout in Fulton Market, where Mr. Blackford does business. A more serious charge was that Chief Fish and Game Protector Drew had been removed at Mr. Blackford's instigation because the chief's vigilance had interfered with the shipment of illegally caught fish to Fulton Market.

As we pointed out at the time, these accusations were of altogether too grave a nature to be made by an irresponsible accuser or without due proof to make them good. Several weeks have now elapsed and the proofs have not been forthcoming. Meanwhile the person accused has been ill. The first act of Mr. Blackford on his recovery from a sick bed is to send us his reply. That reply is that the charges are absolutely false, and that Mr. Collins knew them to be false when he wrote them. This makes it incumbent upon Mr. John D. Collins to do one of two things, either to bring forward the proofs which he has alleged he has in his possession to establish the truth of the charges, or failing this, to acknowledge his mistake and make due apology. No third course of action is open to a man who wishes to enjoy the respect of his fellows.

While he meets thus without reserve or mincing matters, as every self-respecting and honest man must meet, the direct accusations of dishonorable conduct preferred against him, Mr. Blackford has apparently thought it not worth while to consider at length the inuendoes and insinuations made by Mr. Collins, which are in effect that a fish dealer is by reason of his business an unfit person to be a commissioner of fisheries.

This is a point of which good taste forbids extended discussion by the President of the New York Commission. It is, however, a perfectly legitimate subject for expression of opinions, and diverse opinions have been expressed respecting it. One opinion is this one of Mr. John D. Collins. Another opinion is that which was expressed by the late Spencer F. Baird, as contained in the following note, only this year sent to Mr. Blackford by Mr. Churchill H. Cutting. The two notes explain themselves:

NEW YORK, April 9, 1890.—Mr. Eugene G. Blackford, Brooklyn, N. Y.—*My Dear Mr. Blackford:* I now have the honor to hand you Prof. Baird's letter of April 23, 1886, which I promised some time ago to give you, but until a day or two have been quite unable to find. I had put it away so carefully that it was out of my own reach. Yet at this late day it will be enriched to you by the fact that it is one among the last of his testimonials to his cherished friends and scientific co-laborers. Permit me to congratulate you for the place that you occupied in the esteem of this gentleman. I beg to remain, cordially yours, CHURCHILL H. CUTTING.

WASHINGTON, D. C., April 23, 1886.—*Dear Churchill:* We consider Mr. Blackford to be the model fish dealer of the world, certainly of the United States, by his scientific acquirements and methods, his intelligence, and his energy. As Fish Commissioner of New York, he has a thorough appreciation of all the problems of fishculture, and the best methods of restoring the supply in depleted waters. He is a most invaluable coadjutor of the U. S. Fish Commission, always ready to help to the utmost of his ability, and to sacrifice time and money in doing what he can to advance science in every way. We cannot speak too highly of him either in his personal relationship as a man, or in connection with business matters. He is known all over the world by naturalists and persons interested in fishculture; and is really the medium of communication in this connection between America, France, Belgium, Holland, Great Britain, Germany, etc. Sincerely yours, S. F. BAIRD.

Of these two opinions—that of John D. Collins and that of Spencer F. Baird—each must be taken for what it is worth. The former we have reason to believe is shared by a large class, whose lack of information is more than made up by its prejudice, while the latter embodies the deliberate verdict of those who are most familiar with the record and services of Mr. Blackford in the work of fishculture.

Holding by reëlection the office of President of the American Fisheries Society (one of the oldest and most effective national organizations for the promotion of fishculture and fish protection), the recipient of gold, silver and bronze medals from the French, Holland and German governments for his services in the cause of fishculture, honored by the Commissioners sent to this country by Japan, France, Sweden, Norway, Germany, Holland, Ireland and Scotland, who have sought his counsel, advice and practical assistance, and have made ample acknowledgment of the same, by the present United States Commission held in a like esteem as by Prof. Baird, respected by his associates in the State Board of Commissioners of Fisheries, Mr. Blackford, it may quite readily be understood, does not deem it needful to discuss with ignorant and prejudice-blinded carpers the question of his fitness for office and of his discharge of official duties.

There remains one thing more to be said. Many well meaning and honest people appear to believe that a fish dealer is of necessity a rogue; that he cannot do business without buying unlawfully captured fish—equivalent to receiving stolen goods—and that he is therefore inimical to the enforcement of the fish protective statutes and to the punishment of those who violate the laws. This belief found expression in an article sent us by a correspondent the other day when he wrote: "Now, with a marketman at the head of a commission charged with a vigorous enforcement of protective fish and game laws, must not demoralization in the service follow? Is it so?"

As a general proposition, discussed theoretically, such a question admits of argument on both sides. In this case, however, the reference was directly to Mr. Blackford, who is a fish dealer, and as a Commissioner of Fisheries is also charged with directing the enforcement of the fish protective laws. Assuming that "Saint Lawrence," who put this inquiry, is sincere, and we believe him to be, we will reply to his question, Yankee-like, by asking another.

Mr. Blackford is a fish dealer; he is also President of the Bedford Bank, of Brooklyn; Chairman of the Finance Committee of the City Savings Bank of Brooklyn; Chairman of the Executive Committee of the People's Trust Company, of Brooklyn; president or director in numerous other organizations. The presumption is that a person holding such positions of trust is regarded by his fellows as a man of integrity and honorable business character. Now does "Saint Lawrence" believe, as his question implies, that a man of such standing in the community is likely to forfeit his reputation by an abuse of his official position as Fish Commissioner to encourage the illicit trade in fish? Is the brand of honesty required in a Fish Commissioner so refined and rare in its nature that we cannot safely trust our bank presidents to fill the office? And if the business of a fish dealer is of necessity a rogue's calling, is it not high time that the fact were made known in commercial circles, that fish dealers may no longer be permitted to fill offices of trust?

THE STATUS OF FISHCULTURE.

FROM time to time we have published in our columns communications from Mr. Peirce upon the failure of trout culture and fishcultural methods in general. We have given place to these articles, not because they represent our own opinions on the subject, but because we have long known of the existence of opposition to public fishculture under the present organizations. As Mr. Peirce represents the extreme of this adverse element, and has always expressed himself without reservation in opposition to generally accepted methods, we have given him an opportunity to present his views in the fullest and clearest possible manner, believing that the untenability of his position will be made evident by such free discussion of the subject as might arise from his sweeping criticisms. We have a very extensive acquaintance with fishculturists and know something about the results of fishcultural work. We have read the published statements concerning the successful restocking of trout streams and have believed them, because of our confidence in the gentlemen who have given the facts to the public. We have supposed it to be capable of ocular demonstration that landlocked salmon have been successfully introduced into Sunapee Lake and other lakes in New Hampshire, and that the fish caught in Sunapee in 1890 were equal in value to one-sixth of the entire fishcultural appropriation for the year; we will throw in the fine brook trout and golden trout taken during the same season for good measure, although we know that some parties caught from 100 to 150 small golden trout in a single day. We know that Mr. Robert D. Hume, of Ellensburg, Oregon, now of San Francisco, Cal., has supported a private salmon breeding station on Rogue River, Oregon, by means of which he has kept this river in a profitable condition for many years while adjacent salmon streams, which are not artificially stocked, have long ago been fished out. We believe that Eastern brook trout have been successfully introduced into the little Laramie River, Wyoming, where they have been known to reach a weight of 3lbs. in four years.

Our correspondent, Mr. Byers, in a communication on the results of fishculture, furnishes a long list of Colorado streams in which various exotic species of the salmon family are now flourishing, even more than in their native habitat. Other localities not mentioned by Mr. Byers are: Chalk Creek, in Chaffee county, Colorado, stocked five years ago with brook and brown trout, both of which are doing well; Morraine's Lake, on Pike's Peak, which was said to contain no fish of any kind till trout were introduced last year and in which they increased from 2½in. to a weight of 1¼lbs. up to August of the present year; Echo Lake, near Idaho Springs, stocked in 1889, and this season fish of 1½lbs. have been taken. In Nebraska, Long Pine Creek and Shadron Creek were stocked several years ago with brook and rainbow trout; many of each were caught in 1889, including a brook trout of 17in., which weighed over 2lbs., and has been personally examined by us. Rainbow trout sent to Verona, in southwest Missouri, have grown wonderfully and increased rapidly, furnishing some of the finest specimens of their kind. Mr. William Montgomery, of Verona, can give full details of the experiment.

We could multiply instances indefinitely if it were necessary. It is well known to anglers that the trout streams of the Pocono range in northern Pennsylvania and the headwaters of the Delaware River, as well as those of the western slope of the Alleghanies, have been completely restored by the excellent work of the Pennsylvania hatcheries at Allentown and Corry. The Bushkill and the Tobyhanna are among the streams which have been so improved.

As for raising trout for market we know at least a few

people who have done this successfully. We have previously referred to Dr. John Law, of Leadville, Colorado, whose establishment is well known and reasonably profitable, so much so that he is constantly increasing his facilities. He does not sell eggs and fry, but only marketable trout. Mr. P. P. B. Hyerson narrates, in the Transactions of the American Fisheries Society for 1890, his successful experiment with trout in Arkansas. Mr. Geo. A. Starkey, of Troy, and Mr. Charles Dickerman, of New Hampton, N. H., sell adult trout, and the former believes the business can be made profitable if conducted on a large scale. We know of one man who has a thriving business of small proportions in the sale of brook trout in this city; but he does not seek to compare notes with experts in trout culture. We have no expectation that the evidence brought forward by Mr. Byers or the testimonials to the adequacy of fishculture methods conveyed to the ends of the earth by an independent press will suffice to soften the asperity of critics who will deny the unequivocal success with shad and whitefish, and disparage the grand achievements with trout and salmon. But intelligent people everywhere will distinguish sharply and clearly between the men who have labored by scientific and practical methods to establish a system of fishculture which has won the praise of the world and those who dispute the universal verdict while advertising some occult processes peculiar to themselves.

THE interest in the habits of that game little bird, the woodcock, increases and notes printed to-day bring out a new suggestion. Is it not possible that, in talking about the "whistle" of this bird, the advocates of what may be called the wing and the vocal theories are referring to different sounds? We know a number of men, who, when they talk about the woodcock's whistle, refer to the twittering sound which it makes when flushed, and which, as Mr. Brewster says, has been compared to the note of the kingbird. That the bird makes, or can make, a whistling noise with its wings, as do some of the ducks, is we presume beyond question, but to get at the truth, it would be well for the debaters first to settle as clearly as possible what they themselves mean when they speak of the woodcock's whistle.

The Sportsman Tourist.

STILL-HUNTING.

A WINTER IN MICHIGAN.—IV.

BY NESSMUK.

I got on much better for the rest of the winter, although still very weak and utterly unfit for anything requiring exertion or likely to subject me to exposure. I had a fancy to try for the clearings as I got better, but old Peter declared it so decidedly imprudent, and refused so emphatically to go with me or furnish ponies until the sugar season was over that I concluded to wait.

The sugar season came at last, and a part of the band moved down to an extensive tract of sugar maples within six or seven miles of my shanty and commenced operations. They had a merry time of it; the season was an unusually favorable one, and big kettles, little kettles, tin pots, pails and pans, were in great demand for collecting sap, boiling down, and sugaring off.

One pleasant afternoon a pony was sent to me with an invitation to ride over to their camp for a visit—an invitation which I gladly accepted, and the visit proved an interesting one. They were very busy, and had ten or a dozen kettles, large and small, seething and bubbling over hard wood fires. Their mode of reducing the sap to sugar did not differ in the least from that practiced by the white settlers, save in the utter disregard of cleanliness exhibited by them. The young Indians were continually scouting the woods with their little half-starved curs, and any unlucky coon, hare, squirrel, or even a muskrat, which fell into their hands, was sure to be skinned and thrown into the boiling sap for cooking, without further dressing or cleaning. This rather cooled my appetite for warm sugar, and tended also to prejudice me slightly against Indian cookery—a prejudice which much after observation has only confirmed. They are, almost without an exception, most disgustingly filthy in all their personal habits.

I hung about the bright cheerful fires until late at night, going from fire to fire, chatting with such of them as spoke English and refusing liberal offers of sugar; but at last Peter, who acted as cicerone, said it was time to sleep and led the way to old Blackbird's tent, where we went to spend the night. The tent was a large one with a dull, simmering fire in the center, a big smoke-hole at top, and a loose, ragged blanket by way of a door. The fire gave out much smoke and very little heat, the ragged blanket ventilated the structure most efficiently, and what with young Indians, dogs, young and old, smoke and filth, the whole affair was well calculated to knock the romance out of Indian life effectually. My own little den of a shanty was bad enough considered in the light of a domestic institution, but it was warmth and comfort compared to this.

For an hour or two I tried to delude myself into sleep, but the tent grew smokier and colder as night waned, until I was fain to take my blanket and seek the nearest fire, where, seated on a piece of dry bark, I nodded and dozed the night away. The Indians treated me kindly. Such as they had, and the best they had, was offered freely; at parting they pressed me to accept of divers small fawn-skin sacks filled with dried berries, corn, beans and nuts, which, to an invalid who had passed through a long spell of sickness with no vegetable food other than "hard tack," were most grateful.

Just as I was on the start for a return, a pretty little squaw, whom I had spoken to the day before without eliciting any answer save the unmeaning Indian stare, came up and presented me a small, tastily worked doe-skin pouch filled with cranberries, saying in very good English: "Here, you take these and stew them with sugar; they are good in fever—birch is best for ager." And she dodged into a tent, laughing loudly, as did all the squaws, who seemed to think whipping out the ague a capital joke. Perhaps it is.

A few days after my visit to the sugar camp a warm south wind stopped the flow of sap, and the Indians to the number of twenty returned my visit, making themselves at home jovially, ransacking the shanty, examining my hunting kit with eager curiosity, and stuffing themselves with dry ship biscuit until I dared not treat them to warm toddy for fear they might burst. The nymph who gave me the cranberries was of the party, and had lost all her reserve—showed a desire in fact to be rather communicative. "Her father was no Indian," she said, "not he. He was a British officer in Canada, and her mother was Peter's sister. She could live with white folks if she chose, but she did not choose. Her father was not ashamed of her; he had taken her at one time to Detroit and sent her to school for a year where she learned to read, but she did not like it. What did she want to read or write for? What good was it? She did not like the white girls, or their mothers. They had made her wear a dress like themselves, with corsets, and belt so tight that it hurt her to breathe, and shoes which pinched her feet. What did she care for such things, or for the pale, sickly girls at school who laughed at her, and who were too feeble to carry a bucketful of water or an armful of wood? She was not going to be pinched up or kept indoors by them, and so when the band came down to trade at Pontiac, and she heard of their whereabouts, she ran away and joined them, to be free again and go where she pleased. Afterward, her father came all the way from Malden to Port Sarnia for the purpose of finding her and taking her back again; the band had left Port Sarnia before he arrived, and he followed them to River au Sable, where he found them, but she had utterly refused to go with him, although he promised to take her to England and give her any quantity of nice clothes. She did not want the clothes, nor to go to England; she chose to be free—to go and come when she pleased; to gather berries and dress skins; to go in a canoe and catch bass and mascalonge. It would kill her to live as white women lived." This and much more she told me, with flashing eyes and a voluble earnestness that carried conviction of its truthfulness. As I watched her expressive face and native beauty, I could not help a misty speculation which crossed my mind as to how such a spicy piece of calico—I beg her pardon; blanket—would perform as mistress of my hunting establishment. Beautifully, no doubt, so long as one might be content to lead the nomadic life of a strolling band of Chippewas, but that sort of thing would hardly answer for the clearings.

One would hardly like to introduce an Indian beauty to a respectable white mother and sisters as a newly acquired relative, or to receive a visit from a dozen or two of breech-clouted, blanketed vagabonds, each with a backload of baskets and moccasins for sale—not in a civilized town, at least. Nevertheless, the pretty Ta-wis-na-gatch-ee would have been worth half a dozen white beauties to a man willing to forswear all civilized clearings for the term of his natural life—but I digress.

It was in April when, the sugar season being over, the remainder of the band came down from Muskrat Lake, and all prepared for a journey down the river. They had been rather successful in the winter hunt, the squaws had improved their time in making moccasins, fancy baskets, pouches, etc., and the whole tribe were jubilant at the prospect of much trade. The trip down the river was a merry one for the Indians, but to me it was a cheerless succession of chilly days and chillier nights. I was free from ague or fever, but very weak, and coughed almost incessantly, and I rather thought old Peter right when he told me, "Bimeby fall come agin, then you die."

It was on a cold, raw afternoon that we landed at the bay, and I sought food and shelter in the little tavern from whence I had started the previous October for a grand hunt. The hunt had fizzled down, down to the small end of nothing, and I, with just the breath of life in my body, was trying to reach home once more—probably to make a die of it. He who has been forced to play the "give up game" among strangers, and has sought his home with little hope of anything better than finally closing his eyes among friends, can easily imagine my feelings when, having given my Indian friends everything save what clothes I needed for present use, I turned my face feebly homeward.

At Grand Haven I looked for letters and papers from home, but they had been forwarded by order to Muskegon, and I did not care to go back for them. I had not heard from home since the previous October, some six months back, and like the matrimonial experience of Mr. Bumble, "it seemed an age."

From Grand Haven to Grand Rapids, thence to Kalamazoo, and I was once more behind the iron horse, speeding homeward at the rate of thirty miles an hour. Two days of puffing, whistling, plashing confusion, during which the little pallid, and not over-well-or-cleanly-dressed hunter got unceremoniously jostled by flunkeys, waiters and baggage smashers, a quiet ride of 25 miles on a side-cut, and I left the cars to get on board the rickety stage which was to put me down at my mother's door.

All through the spring and early summer I crawled feebly about, racked with a distressing cough, and unable to gain tone or strength; but the man who has been toughened by years of exposure in the open air, whose lungs and muscles have been braced and hardened by exercise in the mountains, and who has a strong constitution, does not die so easily. In July I began to mend, and in company with two or three friends, ventured on a visit to a favorite camp on the headwaters of Pine Creek.

Blessed be the pine-crowned mountains with their balsamic breezes and crystal trout streams. If there be anywhere on earth a Gilead wherein the worn invalid may find a balm and a physician it is there. The trip which had been projected for a few days extended to as many weeks, and I returned home almost a well man; bought a light double-barreled rifle, overhauled my neglected hunting kit, replaced what was missing, got my off-hand shooting up to a respectable pitch, and just a year from the time Ned and I camped at the rock shanty, I again unslung my knapsack and wakened the echoes with cheery blows as I cut wood for a camp-fire at this very spot.

And Ned Miller? Married the blushing Hannah of course. I saw him a few hours after my return home, and knew he was a benedict at a glance, for he was smoking a penny clay, and the inevitable dinginess encompassed him as a halo—a dinginess that may escape masculine observation; but ask any shrewd spinster in a mixed assemblage to single out the benedicts from the eligible; she can do it as by intuition.

Ned and I did not meet very cordially; I had good reason to think his desertion the cause of much suffering to myself, and something hard would rise in my throat when I tried to feel friendly and forgiving in spite of me. However, as Ned came often to see me and we talked matters over I came not only to forgive but to sympathize with him. He had led his inamorata to the altar on Christmas Eve, starting on a bridal tour immediately thereafter. On his return he found to his consternation that another wedding had come off during his absence, and one that he little dreamed of.

Mr. Enoch Daniels, the man of many patents, had gone and done it! Married the elder Hannah, relict of Deacon Needham, deceased, and was in fact a sort of father-in-law to Ned—a relationship that I fancy did not inspire Ned with any great amount of respect. However, the widow had a perfect right to marry whom she pleased, so Ned took his pretty young wife home to his mother's snug fifty-acre farm, and Mr. Daniels took charge of the Needham estate, including the buxom relict, all of which he managed and still manages, as a temperate, thrifty Vermonter should do. As for Ned, he got a present of a fine young horse from the widow and his wife a nice "setting out" in furniture, besides the two best cows on the farm, which is all they are likely to get at present, as the widow—I beg her pardon—Mrs. Daniels, has already presented her husband with three healthy boys and is herself more buxom and healthy than ever.

Something more than a year after Ned's marriage, as he and I were celebrating the advent of his first boy in my little snuggery over some old Glenlivet, Ned asked, "Do you happen to know how confoundedly old Sam Hoover fooled us at the Rock Shanty more than a year ago?"

"I didn't really; as how?" I answered.

"Why," said Ned, "he had a snug cabin built and his traps set about the head of Bear Run, at the very time he told us a cock and bull story about there being no game in the woods. He leave the woods because he couldn't find deer! Why he was just going out to the clearings after provisions, and we were just green enough to save him the trouble by emptying our knapsacks for his benefit. He killed over fifty deer in that range before the season was over, besides taking I don't know how many bear. If I ever —." But here a red-headed urchin broke in upon us, to notify Ned that "Miss Miller wanted him right away; suthin the matter with the baby." And, seizing his hat, the bran new father broke for home like a quarter horse; another melancholy instance of a promising young hunter spoiled by matrimony.

But I have talked you into drowsiness, and it is past 9 o'clock. Let us mend the fire and draw our blankets about us; on the morrow we will hunt the ridge from here to the head of Bear Run, where, if we but hunt carefully and patiently, we may chance to eat venison with our bread at supper.

COWBOY REMINISCENCES.

[*Concluded from Page 451.*]

FOUR of us were on a camp-hunt near the headwaters of the Brazos River in Texas. There were "English Jack," the "Captain," Raymond and I—all cowboys from the same ranch. We had taken advantage of that period of inactivity that extends between the fall round-ups and drift line riding, and were engaged in putting up our winter's supply of meat. The country swarmed with deer, antelope and turkey, and in addition to these there were a few bears, but though we potted the former inoffensive beasts to our hearts' content bruin always managed to give us the slip, and had it not been for the abundance of tracks we might have supposed his species extinct among the mighty cañons that sheltered somehow his shaggy hide. One morning a day or two before the time set for our return home Raymond shouldered his rifle, and whistling to his hound Bose, strode out of camp, remarking that he would "try one more whack at them bears," and that "if they were in them cañons they sure had to come out that day."

That night my pardner did not return to camp, and the next morning all of us set out in different directions to look for the missing member, feeling sure that he had met with some accident. Nor were we wrong. After six hours of fruitless search I was returning to camp to exchange my nearly exhausted steed for a fresh one, when I heard a faint hail from a hillside, and spurring my pony to the spot rode upon my missing comrade. He presented a ghastly sight, being literally covered from head to foot with congealed blood, while his neck and face were scarred and scratched to such an extent as to be almost unrecognizable. It was not necessary to ask many questions—he had evidently found the bear. At the bottom of a sink near by lay a large she bear, her head battered almost to a jelly and still clasping in her fatal hug the dead body of the hound Bose. I did not waste any time talking, indeed my pardner was too much exhausted from loss of blood and exposure; and aiding him to mount my horse I walked by his side, supporting him as he rode into camp. It was fully three days before the wounded man was able to talk, and quite a fortnight ere he was convalescent. The long claws of the bear had cut deep furrows on his back and sides and one stroke had made a gash on the cheek that Raymond will carry to his dying day as a reminder of his adventure, one of the most gallant of all combats between unarmed man and beast.

It seems that after leaving camp he proceeded at once to a valley, in which we had often noticed bear sign in great abundance, but where, owing to the rocky nature of the ground it had been impossible, even with the aid of the hound, to follow any of the numerous trails. That morning, however, was peculiarly favorable, owing to a slight rain on the night previous, and Bose successfully trailed a most promising lead into a high rocky cañon. Keeping the hound that always ran silently close to him, Ray moved cautiously through the maizes of jungle and rocks, and after some time of stealthy advance, on round-

ing an angle in the cañon he came face to face with the object of his search, standing not 30yds. away.

A quick shot broke the under jaw of the beast and with a growl of pain away went the bear, closely pursued by the dog up the trail that led to the plain above. Raymond followed as quickly as possible, and on emerging from the cañon, found that dog and bear had disappeared in one of the caves that are quite common in that section. This particular one was nothing more than a sink in the ground perhaps sixty feet deep, having a very steep slant and terminating in a kind of tunnel. Down in this hole Ray could hear the dog and bear having what may best be described as a monkey and parrot time, but owing to the branching off at the bottom, he was unable to see what was going on. Not wishing to have the dog killed, for he valued it highly, down he slid to the bottom of the slope and entered the cavity. What followed I had best let him describe in his own language. "As soon as I got to the bottom of the slope I cocked my gun and carefully peeped around the rock, intending to fire from where I stood, but the cave turned off at an angle and there was nothing to do but go right in. So in I went and was greeted by a terrific rush from the bear, which turned me heels over head, knocking the rifle out of my hands and breaking the stock against the rocks. I managed to regain my feet and then the ball opened, and Bose and the bear had a right lively time of it for a little while. I saw that he could not bite on account of his broken jaw, and when he rushed on me I grabbed him and we tussled together like man and man; then Bose came in on the rear and drew his attention while I tried to climb back up the slope, but it was very steep and the sand slipped from under my feet so that I could not make much headway; and before I was half out the bear was on me and down we rolled together to the bottom of the pit.

"Seeing that it would be of no use trying to get out, I faced about and put up the best fight I knew how. We had a regular boxing match; he would slug me and over I would go, then I'd hit him and in his turn down he would roll, but the beast was so confoundedly quick on the recover that I never had a chance to reach the gun barrel before he was again on me. Every time he would strike me his claws would cut through my clothing and into my flesh, and I was soon blood from head to foot. At last he caught me across the face, and I was so blinded with blood that he got the advantage, and grabbing me around the body began what came pretty near being a death hug. I was too played out to offer much resistance, and guess the jig would have been up if it hadn't been for old Bose coming up in the rear and nipping the bear in the flank. This made him drop me, and he got the dog in a corner and grabbing him squeezed the life out of the poor beast, but it gave me time to reach the barrel of my broken gun, and as he came at me the last time I brought the steel down with all my remaining strength upon his head. That settled him, but I continued to rain blows as long as there was the least sign of life. Poor old Bose was stone dead, with his teeth clenched in the cold meat of his enemy, and I, dripping with sweat and blood, had just time to crawl out of the hole when I fainted. When I came to it was night and the fight I had to keep from freezing to death was almost as bad as the circus with the bear. I can tell you I was mighty glad to see you riding by, but it took every last living bit of strength that was left in me to hail loud enough to get you to look my way."

Several years have passed since that event, Raymond has at last joined the majority—no, not died, but married—and is, or rather was, living in a one-roomed rock cabin, every stone of which was hewn and set by his own hands, and which stands on the cliffs of one of the remote headwaters of the Brazos. It is not very far from the spot where his famous fight occurred, and is in the region where, in the wild days of the frontier, we, so to speak, "fit, bled and died together." I visited him a year or so ago. There are two or three young Brooks now, sturdy young fellows that give promise of emulating their father's mighty deeds, and in the evenings we would all sit around the big fireplace, crouched on the skin of that very bear that came so near making an end of the chapter before it was well started.

What a man Raymond was! I have passed my life among college athletes and frontiersmen, but I can remember no one who ever approached him in point of strength. He was six feet four inches in height and weighed two hundred and tweny-five pounds, every ounce of which was solid muscle. To this strength and his brave heart, aided by the devotion of the hound Bose, must be attributed his victory over the bear. No unarmed man is a match for an uninjured bear, and it is very probable that had the first shot, which broke the beast's jaw, been less fortunately placed, the tragedy of Bear vs. Ray would have had another termination.

ALEX. M. REYNOLDS.

SEATTLE, Wash., June 5, 1890.

AN ADIRONDACK OUTING.

ON Aug. 25, with my wife and two boys, aged two and four years, we boarded the 8 A. M. train at Canton, N. Y. A change at Philadelphia, another at Carthage, and at 12:20 we were at "the Crossing," or Oswegatchie. A stage ride of three miles brought us to Star Lake. Here are two hotels and quite a number of cottages of more or less pretention. I owned one of them, but when they erected a hotel within 100ft. of my house I thought it was too thickly settled and sold out.

Star Lake is quite a summer resort, the lake being a very fine body of water and very irregular in shape, as its name indicates. It is about two miles in its longest line and has some six miles of shore line. Its general depth is 20 to 25ft., but it has its shallow bays with sand and stony bottom and in one place the bottom is found at a depth of over 75ft. It is fed mostly by springs and has a hardly visible outlet.

The afternoon of our arrival was spent in getting rested and looking after a team to take us on to the "Inlet." The next morning at 8 o'clock we left the lake, one team took our boat (a 15×30 Canadian model) and baggage, the other ourselves. The latter rig was a buckboard, though to stand the rough road it had to be very heavy and the spring was not enough to speak of. One mile of good road and we turned into an old clearing, thence into the forest. For two miles the road was so that we could keep our seats by a vigorous use of both hands and feet. Then Madame said "Let me walk," and 4-year-old Harry said "Me too." I had to keep to the wagon and hold the 2-year-old. I've toted a 50lbs. pack over this road, and it was fun compared with this ride. Everything has an end, and at 10:30 we arrived at Sternburg's on the Inlet. Sternburg's is a quiet little hotel. Nearly new, and though unpainted, is clean and neat. The house will accommodate about thirty people, and is a halting place for those bound further into the woods. From half a dozen to twenty were about the number of guests during our stay; and each day saw its arrivals and departures. The house is well kept and guests are made as comfortable as possible.

On the afternoon of our arrival it rained, and the five succeeding days were more or less off the same piece. Madame and the children kept pretty close to the house, but I went fishing more or less. The water was high and there was no hunting on the river. However, the house was well supplied, as Mr. S. and his stalwart son and son-in-law are all good hunters. The Monday following our arrival was bright and warm, and I took a tramp up the Albany road some three miles, hunting ruffed grouse—or partridge as we call them. At this place on the road a brook crosses and there is a little beaver meadow, alders and an old camp ground, grown up to a thicket of birch, spruce and briers. I found no birds and pushed on up the brook to another little patch of grass some thirty rods above. Coming out from behind the trunk and roots of an upturned tree I stopped within three or four rods of a small oblong piece of tall grass nearly surrounded by alders. Something red, with white spots on it, below the tops of the grass, attracted my attention. The first thought what is it? The next it is a fawn. Just then it raised its head. For the next ten seconds there was pantomime on both sides. I broke open my gun, pulled out the fine shot shells and went for my pocket for a shell loaded with buckshot. Out in the grass another fawn put up its head, the old doe stuck hers up out of the alders at one side and all three bounded away.

Well, I came hunting for partridge—not for deer, besides it is against the law to shoot a spotted fawn, and it would be too bad to have killed the mother doe and broken up such a happy family. So after the first moment of regret I am glad that my gun was loaded with fine shot.

Patiently I hunted every foot of ground, but only saw two birds, and they flushed wild. As one parted the thick undergrowth of the camp ground I followed it with a charge of shot. Not knowing whether I had hit it or not I followed. It was on a side hill, the ground plentifully strewn with old half-decayed logs, and I had to look sharp to my footing to avoid an ugly tumble. I reached the place where I last saw the bird and looked for bird or feathers. Seeing neither I raised my head, and on a dry limb not fifteen feet from my face sat the bird; but as my eyes touched her she was off like a rocket. So long as I was not looking toward her she let me approach almost near enough to touch her. An hour more of hard hunting gave me but one bird, and I returned to the hotel more tired from my tramp than I cared to own.

Several fine days followed, and on one of them madame, children and myself followed up the river some five miles, and ate our dinner on a large rock overlooking the alder meadow. Near this rock thirty to forty years ago one Charles Marsh had a trapping shanty. Wolves and panthers were quite plenty in those days and Marsh used to trap them. One day he landed at the foot of the rock and leaving the carcasses of a deer and a fox in his boat he went back a few rods to set a trap. Stooping down at his work he heard a little move near his boat, but saying to himself, "Steve has come up the river and is trying to scare me," he went on with his work without looking up. Presently, however, a fierce yell brought him to his feet, and he saw standing on the rock looking down at his boat and gun a full-grown panther. At a startled cry from Marsh the animal vanished in the bushes.

This meadow is a mixture of alder beds and tall grass, and may be three miles long by nearly a mile wide. The river is very crooked and its course through the meadow would probably measure five or six miles. This is the best hunting ground on the river, and fishing for small trout is very good. During our run down I held the boat and madame fished, catching about forty, the largest being a better one than I caught on the whole trip. I thought so at the time, and have heard it so stated since my return. Well, madame took kindly to the sport and only falling darkness could induce her to lay aside the rod. And "the kids" enjoyed it too. The other guests were duly informed, "My mamma caught a whole lot of trout."

The wet weather interfered sadly with the sport, though I got in several good days' fishing and hunted two nights without seeing or hearing anything. In a day or two our outing would be over; and I had not killed a deer. So one fine morning, with George Nunn in the stern, we paddled up the river some twelve miles and fished down. Under a floodwood I got a glimpse of a broad red side and a strong tug at the hook. Too eager, I struck; and though I pricked I did not hold my fish. Then I spent a full hour trying to tempt the prize to take a variety of tempting baits. No use; so we left him. How long was he? I don't know, but the week previous a party caught three at this place weighing respectively 1¾, 2½ and 3½lbs. When we had caught enough fish we landed, built a fire, and cooked and ate until we were satisfied. Then we took to the boat again, and dusk found us with a goodly number of fish at Government Camp. Here we landed, got supper and waited for dark. It was a splendid night, dark, still and warm.

Taking off my boots, I wrapped my feet and legs in a heavy blanket and settled down to business. Up the river we went some two miles. Then after waiting half an hour we started down stream. Mile after mile was passed over with no sound of game. About 1 o'clock, and just above the rock referred to, Nunn turned the bow of the boat into a shallow cove. Back at the further end I see a white bunch in the grass. It has no particular shape, and may be only a bunch of grass; but I am suspicious, and watch it. Directly two bright spots appear near the water and are raised as the deer raises its head. It is too far away for a sure shot, and as I whisper to Nunn, who has not seen it, to push the boat ahead, there is a splash and a crash and the game is away.

Again we drift on by the mile and hour. We are now but little over a mile from home and but a quarter of a mile above a large camp. Just here is a chance, however, for there is a small cove on the right, a large one on the left, and just below the latter, with a narrow tongue of land between, is the outlet of Otter Pond, here spreading out two or three rods wide; the bank covered with thick alders near the mouth, but a little further back spreading out in grass marsh.

Nunn hears a deer on the left, and the boat glides slowly and silently down the stream. Directly we can see the upper cove, but no deer. Now we are passing the cove on the right, and there is heard splash, splash at our side, and then behind us, and out goes a deer. Following that immediately is a plunge in the mouth of the brook, and we know that the deer on the left had been alarmed and started out.

Quick work, now, or no game. A couple of quick, hard strokes of the paddle and the bow of the boat rushes past the point, and I can see up the brook.

In the center of it is a dark object. I have been in it before and know this is the deer. She is standing quartering from us and looking some other way; so I do not see the eyes.

The gun has been brought to a ready, and now it touches the shoulder. A glance along the barrel shows it where it should be and the trigger is pressed. From mountain to mountain the report roars and rolls, and when the echoes have died away we hear a kicking in the alders a couple of rods from the shore.

"You have got her," says Nunn, "though you shot so quick I thought you had missed. I did not see the deer at all."

"I had to shoot quick. That deer had started to go and only stopped an instant to see what was coming."

A few minutes' search among the grass and alders found a very large doe dead. We loaded her into the boat and paddled quickly home. As we hung her up daylight was breaking in the east.

The next day we left the inlet, coming out by Benson's Mines, a much better as well as shorter road.

And now I would like to add a few words on jack hunting, my favorite method. This is the usual method of killing deer early in the season, and so much is against it. There are ways to prevent that, and an active man can "salt" with sulphur every watering place for miles around; and this repeated occasionally will keep deer from watering and to a great extent prevent that kind of killing.

But let us suppose that it is Aug. 15 and we have a right to kill. The law-makers are willing we should kill as we please so long as our method is not cruel nor too destructive. Killing is killing, and I do not suppose it makes any difference to a dead deer whether it dropped to a shot from a still-hunter or by jack-light. What we want is to give the game a chance. Let us see what its chances are in floating. First, natural chances.

The shore area of stream, pond and lake is but a small percentage of the whole woods. Many ponds and streams have little or no feed and deer do not water there. This then limits the hunting ground of the jack-hunter to a very small territory.

Again, hunter and deer must meet at one time and place. You cover miles and miles and of all the deer that come to the shore you see but one, perhaps, because not at the right place at the right time. Deer are not likely to come to water on cold or rainy nights. On windy nights they scent you long before you get within sight. On foggy nights you cannot see and on moonlight nights the game can see you.

Now, don't you see that from natural causes we bring the jack hunter into very narrow limits?

Some say it requires no skill to kill a deer this way; that the guide does it all. The guide must do his part; he must propel the boat in absolute silence; no matter whether the current is swift, or grass, sticks and lily pads obstruct. But the hunter must also do his part, or the most skillful guide will not avail. The light is uncertain and he must many times guess where to aim. Hundreds of shots are fired without result. The guide has his pay, the hunter his chagrin, and the deer a good scare that makes him harder for the next man to approach. It is a fact that if a pond or stream is hunted much the deer become "educated," and the average hunter might as well roll in his blankets and go to sleep as to hunt.

As regards so many being wounded and escaping, I think the stories are overdrawn. I have hunted off and on for thirty years. I have perhaps killed fifty deer, most of them with the jack. I can count some clean misses, but not half a dozen wounded that escaped. If a deer is hit at all hard, a good guide can follow the trail and the deer is pretty sure to be found and killed.

We have this positive evidence, where hounds are used deer become scarce; where dogs are not used, all the "floating" does no harm, though some of it is done early in the season.

By this I do not mean I approve of early hunting. I believe in living up to the law, and I maintain that jack-hunting after Aug. 15 is not more destructive than the natural increase of game will permit. J. H. R.

CANTON, N. Y.

THEY LOVE THE MUSIC.

HUNTINGTON, W. Va., Dec. 22.—Fox chasing in W. Va, however others may regard it, I call it a strange sport, if sport it may be called, that is sometimes engaged in here. To call it hunting may be a misnomer. It is engaged in only by those having a fine musical ear; I mean the ear that can appreciate the symphonic baying of the pursuing pack howling over hill and dale, now near now far away. Not only do the more common class, but the *élite* of the town take interest in the sport. I have seen them with their hounds, without a gun with them, go over the river into Ohio as the sun was setting, to enjoy their royal sport. Why without a gun? ask you. Just to sit down, perhaps by a fire and let off the dogs and wait for the music, which of course begins as soon as the dogs strike a trail. Whether the fox is caught they know not, they care not; but is the concert good? To them it doubtless is. But give me grouse, woodcock and quail shooting and they may have their sylvan canine concerts. I want to see the chips fly when I chop the wood. Quite a few foxes are hunted, the huntsmen riding on horses pell mell, in ye olden style, and "nary a gun wid em," and he loses caste who dares to fire upon reynard at such times.

There is a queer custom here of trailing a dead fox through the streets of a city on Christmas or New Year's day. The man who trails the fox rides helter skelter through town, up one street and down another. Presently a pack of hounds is put on track and follows the trail with great gusto—with all the eagerness and uproar that might be expected in a "live" hunt in a veritable forest.

Natural History.

THE WOODCOCK'S WHISTLE.

Editor Forest and Stream:

I have been much interested in all your woodcock bird whistle papers, and as my experience has extended over more than half a century of woodcock shooting) and many seasons' shooting I have bagged from 100 to 150 birds) and the bird always interesting me, I have spent many pleasant hours in studying its habits in spring as well as in fall and summer shooting. I want you to put down my vote to the wing theory.

I know the bird has a little mouth talk, or note, which I have often heard when the birds were mating and strutting on the ground in the spring, and the same note I have heard often from the old bird when I have been catching the young chicks; but the sound or note is not the same as the whistle of the continuous-flying, full-plumaged bird, and I have so often had the slightly wounded bird in my hand, and held by the bill or feet, make, as I am sure, the same whistling with his wings, that I cannot be mistaken; and the bird when not in plumage, held the same way, does not make the whistle. I know we do not all hear, see or think alike; but any person who will take a full-plumaged woodcock that is lively, hold it by the bill or feet and let it have full use of its wings, cannot but be convinced the whistle is made with the wings.

Audubon should be pretty good authority, and he records the noise as made by the wings; and among all my bird acquaintance I do not remember one bird that has a continuous mouth note when flying, but very many have a wing whistle when flying, such as the golden-eye duck, whistling swan and many others, that can be heard a long distance. The drumming ruffed grouse, noise of the wings of the flushed quail and many others talk with their wings as well as their mouths.

GEO. A. BOARDMAN.

CALAIS, Maine.

Editor Forest and Stream:

I have read with great interest the many articles that have appeared in your paper concerning the ways of the woodcock and have added to the list myself. In looking over your paper for the past year I find about three to one in favor of the wing sound, and all give good reasons, while a few who have had a woodcock in confinement claim that the sound is produced by the bill. I have also asked every sportsman (and they are many) from Maine to Florida and have never fouud one who did not think the sound was produced by the wing on its flight.

On looking over my paper on my return from the field trials I find Mr. Trumbull out with an article in your issue of Dec. 11, in which he contends that the woodcock makes its sound by the bill or throat only. I think any one who writes on this subject should find as near as possible the true habits of the bird, and if possible how the sound is produced, and the last place to find the true habits or nature of man, beast or bird is to confine them in close confinement, which seems to be the only way that Mr. Trumbull or any of his supporters have ever studied them.

I was very sorry that I was not at home to see my papers so as to answer Mr. Trumbull before, but as Mr. Brewster has already done this in your issue of Dec. 25, I will content myself by writing now and trying to show that Mr. Trumbull's article is misleading to the beginner in ornithology.

Now, I don't want Mr. Trumbull or any other man to think that I deprive him the privilege to think as he pleases, but I do think, as I say above, that treatment of any subject of this kind should be as correct as possible, as it goes as recorded fact, and his way of finding the true habits of woodcock I think to be all wrong.

It is time the sportsmen and the ornithologists of this country came out in force to prove if possible which is right. The expense would be light, and if every lover of these birds (and their names are legion) would contribute a small amount to pay a man or a committee of three men to go South now and study them, I think it would be a move in the right direction. They could follow them from Florida to Maine on their trip north and east, and by August we could get a full report of the woodcock, his habits, mode of feeding, the way he produces the sound, and mode of rearing the young.

My article in your journal of Jan. 22, 1890, gives in a rough way my idea of the woodcock. At that time I did not claim he had a note by the bill, but after a close study of them in Febuary I found they had, and wrote your journal to that effect, which you published on March 6. Every observation reported in these two articles was made on the bird in his natural element. I claim that the woodcock does fan its tail and strut like a turkey gobbler, and is one of the proudest things I ever saw, notwithstanding Mr. Trumbull to the contrary. I also say and know by observation, that they do in mating or breeding season have a continuous twitter of the bill and wings combined on their ascent, and that on their descent they have as perfect a song as any lark or bird I ever heard. Also that when on the ground after their ascent and decent they make a very sharp *spate* five or six times, as I described in issue of March 6, and which I cannot describe as other than like that of a drake, only much sharper, and it can be heard for a quarter of a mile on still nights, and as I said in that paper, they keep it up from early sunset until daylight in the morning. This is the sound, as near as I can make it, that Mr. Trumbull's bird made, which deceived the greenhouse man.

But I do say, Mr. Editor, to you, to Mr. Trumbull, and to all unbelievers, that I have on many occasions tried the woodcock by holding it by the bill, also by the feet, and have had it make the pure metallic jingle or whistle with its wings which it invariably makes when flushed by myself or my dogs in cover or open, and I can prove it by plenty of men who would not perhaps wish their names drawn into this controversy.

I will now add to my letter of March 6, that after mating and hatching the young, the woodcock through May and June cease their spiral ascent, also their song note, and after the young bird gets large enough to feed and take care of itself, the last of June or first of July, they begin again the ascent and song, which lasts then until the last of July or first of August, when they begin to molt. Then they are quite dormant and stir very little; and from the middle of August to the middle of September they seek the most secluded spots on sidehills, in briers and bramble, and a dog has to be an extra good one and to know his business to find them, as they will lie and let any one step within a few inches of them without offering to flush, and when they do fly on this occasion they produce no sound by bill or wing, which goes to show that the feather that makes the whistle is not there or is not strong enough to produce the sound.

If I have added anything to the ways of the woodcock I am very glad; and again, if I have hurt any one's feelings by my way of putting things, I am sorry. I am sorry I cannot handle this subject as Mr. Brewster has, but will try to keep up my end in my way, and as I say above I hope the sportsmen of this country will second my motion and put out some men and make a close study of the best bird I ever shot at, and one that is fading away very fast, and let them say how the woodcock produces the sound, and if I am wrong I am willing to put myself into bondage and let Mr. Trumbull study my habits as he has the poor little woodcock, in a dungeon cell.

T. M. ALDRICH.

PROVIDENCE, Rhode Island.

SURROUNDED BY SNOW BUNTINGS.

Editor Forest and Stream:

This afternoon while in pursuit of a large owl abont the field just outside the city limits an immense flock (at least 4,000) of snowflakes (*Plectrophenax nivalis*) came into a buckwheat stubble field, through which I was passing. I was near the center and they settled down to the east of me. I noticed that those furthest from me would fly over the others and alight on the side nearest to me, and concluded that if they were not disturbed they would soon surround me. I sat down on my heels in the snow, and keeping perfectly quiet awaited their coming. I had not long to wait before I was completely surrounded and had an excellent opportunity to watch them. There was a continual jumping up to secure the heads of grapes, which they would hold down with their long toes and claws while eating from them. My position was not an easy one, and I finally had to stand erect. My first motion was the signal for my surrounding company and they seemed to rise as one. The circling motion, which they always make when alighting or starting, brought many of them over my head, and so close were they that I felt the rush of the wind caused by the motion of their wings. I thought I had seen large flocks of snow buntings, but had never seen any that compared with this. It covered acres. From my position I have no doubt that I might have shot a hundred birds with the two barrels of my gun. But I was after a larger bird and knew that the report would be the signal for him to take his departure.

I followed him around that farm of 192¼ acres for three mortal hours, and the last I saw of him was at five o'clock, and so dark that I could just make him out as he passed over the residences in the south part of the city.

Before seeing the owl I saw another interesting occurrence. About a quarter of a mile from me I saw a black object moving about on the snow, and turned in that direction to ascertain what it was. When within forty or fifty rods the object disappeared. As the field was level and free from stones, I could not understand what had become of it. Keeping my eyes on the place where I had last seen it, I approached the spot, only to find the tracks of an animal which I thought to be those of a skunk, but they looked too large. On following the tracks about two rods, I found that they also disappeared in a hammock of the snow. Passing within six feet of it to the opposite side I found an opening, and looking in saw the black fur of some animal. I was now convinced that it was a skunk, and as I was not looking for "Sir Mephitis," I did not walk up and give it a kick and shoot at it as it ran away. I stopped back two rods, and making a small ball threw it at the hammock, when, to my surprise, out jumped a black and white cat, that bounded across the field. I have seen cats crouch and hide in the grass, but did not know they would force themselves under the snow for concealment.

J. D. DAVISON.

LOCKPORT, Dec. 6, 1890.

THE PORCUPINE.

"I SING of arms and the hero," says the poet. He who chooses for his subject the porcupine has abundant excuse to sing of arms, for no legion of oldtime knights had half so many lances at rest as he; but were one in search of a hero he might go a long distance further without much risk of faring any worse. True, I did once read in a boy's paper, generally accounted one of the best and most reliable in the country, a description of a reckless and even heroic charge by a band of porcupines, to avenge the death of one of their number at the hands of a Maine hunter; but to say I believed it would be putting a very heavy strain on the truth. I think the author of the story went as far in the latter direction as was desirable.

Inasmuch as he deals swift and sharp, as well as severe punishment to any animal that meddles with him, the porcupine has long been held up as an embodiment, as well as an emphasizer of the great principle, that every one should mind his own business and not meddle with that of other people. But as example is better than precept, and he of all animals is oftenest found nosing around hedges, orchards, outhouses, lumber camps and back shanties—places where he would seem to have no earthly call, I think it would be fitting to look elsewhere for a practical illustration of that important truth.

Some people speak of the porcupine as an animal that "is always right side up." If by "right," they mean the prickly side, many of us have seen them in another position; and I for one believe that if the whole race were "wrong side up" there would be no great hiatus in the welfare of the world. To me a pocupine seems a sort of an animated Canada thistle, or if you prefer it the thistle is a vegetized porcupine. The beauty of both the plant and the animal may very well be questioned, while their utter worthlessness has never to my knowledgle been a subject of dispute.

I first heard of the animal from the old settlers as having the power of "shooting its quills." As it can strike quick and dexterous blows with its tail, always planting the harpoons where they will do the most damage, I can readily forgive this inaccuracy. It is usually credited with being a vegetarian in diet, but if we can believe half we hear, it is not at all particular what it eats. Like the bibulous individual who has recorded his later life preferences in not altogether faultless verse, it will "take most anything." One day in '87, while the cook in a Maine bark camp was out, one of these brutes entered, rooted the lid off a butter tub, and when the cook returned, was literally "up to his eyes" in the contents.

Mr. Samuel Pugsley, a gentleman living near here and one whose word passes at par with the writer every time, assures me that he killed one in his hen house in the act of destroying his poultry. Indeed, I saw one last summer making very suspicious advances on a flock of young turkeys, and had not the owner of them declined to sacrifice a fowl in the interest of science, and insisted on my shooting the marauder forthwith, I could probably have offered some direct evidence on that point to-day. As it is, it is an open question whether he was rustling for a dinner, or was under the impression that his "plumage" entitled him to associate with fowls, and engage with them in a one-sided game of "tag."

It is a well known fact that one "quill pig" will do as much injury in a field of buckwheat as any like-sized individual among his shovel-nosed brethren, while the damage these animals do in the State of Maine alone by girdling trees amounts to so much that it is a wonder a bounty is not offered for their scalps. Two years ago a valuable horse pasturing near here was badly injured by getting a blow on his nose from a porcupine's tail. The number of dogs that get hurt in the same way is simply enormous. When I state that the porcupine is on the increase, in that vicinity at least, I have summed up the case for the prosecution. Now, can any one tell us of any good this animal does, or state any sufficient reason why it should not be killed on sight?

L. I. FLOWER.

NEW BRUNSWICK.

A QUEER GOOSE.—*Editor Forest and Stream:* Mr. John H. Sherard, a planter of this county, described to me a goose that he captured last Feburary or March on his plantation, which was a unique bird for these parts and defied the erudition of local sportsmen to determine its status among the genus *Anser*. The colors of the body were similar to those of the common wild goose that resorts to this latitude in the winter months, but the head and neck, down to the body, were perfectly white, with pink bill, feet and legs, like the domestic goose. The specimen captured was a solitary bird, and alighted in the clover lot not far from the barn yard. Mr. Sherard made a long shot at it with No. 2 shot, and "wing-tipped" it, hurting it but slightiy. He placed it with the domestic geese in the barn yard, but it showed no disposition to affiliate with them, keeping entirely aloof. I believe it died after a month's captivity. It is described as being taller and more slender in its proportions than the wild goose.—COAHOMA. [You do not tell us what is the common wild goose of your neighborhood in winter. The bird you speak of may have been a blue goose. The description given is so vague and general that we cannot conjecture as to the species of the bird. And guessing in matters of science is not permitted.]

HOW TWO FAWNS TOOK THEIR RATIONS.—Amos Patterson, of East Valley, Wash., has two fine young deer that he has raised on his place. He was out hunting one day and killed a doe with two young fawns. The creatures were very small and ran away in terror at the death of their mother. In a few days Mr. Patterson caught them and brought them home. They steadily refused to imbibe the lacteal fluid through a regulation nipple attached to a nursing bottle, and other artifices tried were in vain. What was to be done? If they were much longer without food they would perish. A bright idea struck Mr. Patterson. Taking the hide of the mother that had been butchered previously he inserted the nipples through the skin. When the fawns felt the warm coat of the supposed mother, they commenced to drink at once, and for a good while after no trouble was experienced in giving them their regular rations.—JO. (Seattle, Wash.).

GOLDFINCH IN CAPTIVITY.—St. Louis, Mo., Dec. 24.—*Editor Forest and Stream:* Being an interested reader of your paper, I would like to ask you or some of your readers for information. For years I have taken a great interest in our American goldfinch yellowbird (*Carduelis elegans*), but in spite of my efforts I have not succeeded to keep them in captivity. I have used the various bird foods, seeds, tonics, greens, etc., have taken the birds before and after moulting, kept them singly and in numbers, inside and out, but to no use. I understand that they can be kept in captivity if you know how to treat them. Any information will be thankfully received through your journal.—D. B. [We have seen many yellowbirds (*S. tristis*) in confinement which seemed to do well on such food as is given to canaries. Canary and rape seed were the foundation of the diet, but of course the greater the variety given the more likely the birds are to do well and thrive.]

VIRGINIA DEER IN AUSTRIA.—Berlin, Dec. 20.—The Count Brenner, father-in-law of the hereditary Prince of Ratisbor, some years ago imported six pairs of Virginia deer and set them loose in his domain, Grafinegg, in Austria. They have wonderfully increased, and at a recent aristocratic hunt three of them were killed. This meat is considered superior to that of the native animal. —*The Washington Post, Dec. 21.*

BLACK FOXES.—Mr. Fred Burke, of Barronsfield, who, as reported a few weeks ago in the Amherst *Sentinel*, shot a black fox, was successful in capturing another of those rare animals a few days ago. He has shot thirty-one foxes this fall, and the other day sold the skins to Messrs. Black & Co., of Truro, for about $225.—*Truro, Can., Sentinel.*

SNOWY OWLS.—Edgar, Neb., Dec. 5.—The snowy owl has again appeared in this vicinity. A farmer brought me a very large one yesterday, and another has been seen east of here a few miles.—H.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

THOSE NOVA SCOTIA LICENSES.

Editor Forest and Stream:

In your issue of Dec. 4, under the heading of "Nova Scotia Licenses," Mr. C. S. Harrington, chief game commissioner, intimates that certain American sportsmen fled the country from fear of arrest for shooting moose without a license. I have reason to believe that Mr. C M. Stark, of Dunbarton, N. H., and myself are the persons referred to. In justice to us both I trust you will give space to the following:

Mr. Stark and myself were strangers to Nova Scotia and its moose hunting grounds. Upon inquiry we were referred to Mr. John Daley, of Digby, who we were informed was the game warden for Digby county, a thorough sportsman and one who could outfit us. After corresponding with him we intrusted him last May to make the necessary arrangements. We arrived in Digby Sept. 12. Each took out a license to hunt big game (which I herewith inclose). It reads:

License is hereby granted Robt. D. Gould, Esq., of Fitsburg, Mass., U. S., to shoot large game in Digby county for one year from 1st September, 1890, to 1st September, 1891, subject to conditions of game laws as now in force in Nova Scotia.

JOHN DALEY, Game Warden, Digby Co.

DIGBY, N. S., Sept. 12, 1890.

We then started for the interior as soon as we could get our traps together. Upon our return to Digby some three weeks later we learned from Mr. Daley that a complaint had been made to the Association that we were shooting without a license, that word had come back to send officers to arrest us, and that he had interfered and stopped them. Later we were fortunate enough to meet the gentleman who made the complaint, and upon our showing him our license we learned for the first time that Daley was not at that time game warden; that he had previously held that position for a number of years, but it had recently been tranferred to the County Clerk.

Now, Digby is a small town. We remained there from Sunday at 9 P. M. until the following Tuesday at 11 P. M. waiting for the steamer. The gentleman who made the complaint, appreciating our position, said he did not care to make us any trouble, and that the Association would investigate the matter. Mr. Daley is proprietor of the Hotel Royal and is considered responsible, and if he had no authority to issue licenses, why have not the Association stopped him before this, as there have been several parties who have taken out licenses through him since he lost the office? Mr. Daley, in signing a license as game warden without authority, must certainly lay himself liable to arrest for obtaining money under false pretenses. From what I can learn, this whole matter seems to be the outgrowth of some local trouble, and before passing judgment Mr. Daley's story should be heard. ROBT. D. GOULD.

FITCHCURG, Mass., Dec. 22.

MAINE—ITS GAME AND LAW.

I AM very sorry to be obliged to say that the hounding of deer in Maine continues. Maine papers are full of items of deer killed. During a couple of weeks I have collected items showing the slaughter of some 16 deer in different sections of that State. This would be all right, and every honest sportsmen would rejoice with the happy hunters, were the fact established that the hunting was fairly done. But such is not the case. The fox hunters have increased, and these fox hunters bring home deer. A party of respectable merchants and business men left Boston on Monday night, for a hunting trip in Maine. They told their friends that they were going for deer and caribou, and that they should stay as long as the open season lasts, or until Jan. 1. This looks fair on the face of it, and as though the hunters had some respect for the game laws of the State were they propose to hunt. But on the express team, on its way to the depot of the Boston & Maine Railroad that afternoon I saw a handsome hound. Was that hound the property of the hunting party? I had the curiosity to make inquiries and found that he went with them.

I learn from perfectly reliable sources that the hounds, mentioned in my former article, as dogging deer on the side of Aziscohos, have twice since my first information been over to the West Arm of Richardson Lake, each time running a deer into the water, which the hunters did not get, for the reason that the deer swam the lake, and neither the dogs nor the hunters had time to follow. This pack of hounds is said to be owned in the Magallaway Upper Settlement.

In the report of the Commissioner of Fisheries and Game of the State of Maine, extracts only of which I have seen, the Commissioners frankly admit that the illegal hunting of deer is carried on in some parts of the State. Would that it were a few parts only! The report makes use of this paragraph: "Yet there is a portion of the State where they have put the law at defiance, and have killed them in and out of season, and with dogs. This is at the expense of the law-abiding portion, and is unjust and unmanly, taking the rights away from the law-abiding citizen. Owing to our meagre appropriation for so large an interest as our fish and game, we have been unable to give them the necessary protection they deserve."

This is an honest statement, and it is worthy of the honorable gentlemen who are the authors of it. It also fully vindicates what the FOREST AND STREAM has had to say in advance of the report. But the idea is shameful, and goes to show how men can bemean themselves, when it is possible to hunt or fish in spite of laws designed for the good of all. Will the State of Maine respond promptly to the needs of the hour, so clearly pointed out by the able Commissioners? Let me say here that it is the one hope of my love for forest sports that the coming session of the Maine Legislature will give the Commissioners of Fisheries and Game the power to enforce the laws of the state, with such wholesome changes as those gentlemen recommend in their able and honest report. I have not a word of fault to find with a single change that they suggest in that report, which report I hope that the FOREST AND STREAM will publish in full. The changes they suggest seem to me to come from deep thought and long experience, and with such changes, and then with as nearly absolute enforcement as the able Commissioners would bring about with a reasonable sum of money at their command, the State of Maine would be about as near the hunters' paradise as it is possible to find in this country where game has been so shamefully wasted. I am glad that the FOREST AND STREAM has led in this work, and I am glad that the experience of gentlemen so amply qualified as the Maine Commissioners are at the helm to direct. Will Maine grant the necessary funds? Can she, as a State, see on which side of her bread the butter lies? Is she not aware that thousands of sportsmen are only too anxious to visit her borders—her very inward forests? Is she aware that no other interest, not even that of timber, is as great, as productive of actual wealth, as the interest of fishing and hunting might be made to her citizens? Will the lumber interest in that State again be allowed to spoil wholesome fish and game Legislation at the last hours of the session of the Legislature his winter? Look at what the Commissioners have already accomplished in the way of the increase of deer; the improvement in fishing, even with the miserable pittance that the Commission has been allowed! Talk about State aid to railroads in that State, why State aid—State backbone—in the enforcement of wholesome game and fish laws will prove one of the greatest boons to the railroads in that State.

The Commissioners of Maine again propose that the open season on moose, deer and caribou be made to commence on Sept. 1. I believe that this can be done without harm to the game interests of the State. They also propose that the same principles involved in the fish law limiting the amount of fish to be transported to his own home, by the person who has legally caught the same, and with his name legibly marked on the property, and accompanied by him in person, shall apply to every species of game. The Legislature to fix the amount thus to be carried including grouse or partridge. This is right. It is sensible, it is even magnanimous. The hunter who has legally killed game in the open season has stolen nothing. He is entitled to his property. For the good of all the State should limit the quantity, however.

But others are to write on this important question in the FOREST AND STREAM. Will they handle the question as sensibly as the honest Commissioners have done in their report? Cranky ideas must not come in here. Only broad-gauge sentiment will answer. The man who would "make jack shooting a State prison offense" must stop and think that the jack shooting of a deer in the proper open season is no more a crime than still-hunting; that the deer are not dogged out of the country by the act; that only one deer is destroyed, if the hunter is a man fit to be in the woods. A method of hunting is to be condemned only when it is found that by it the game is being driven away or destroyed by wholesale. SPECIAL.

A GOOSE HUNT IN NORTH DAKOTA.

Editor Forest and Stream:

About the 20th of October the writer, in company with W. S. Parker, a druggist of Lisbon, N. D., and Dr. O. G. Winters, of La Crosse, Wis., left Lisbon, via Fargo, for Devil's Lake for a few days' sport among the wily wild geese. Taking the morning train from Fargo, a six hours' ride upon the finely equipped Great Northern Railway through a portion of the Red River Valley brought us to the lake with the satanic name, where, by previous arrangement, a team and driver were in waiting to convey us to the hunting grounds. We made our headquarters at the house of a substantial German farmer.

We were up betimes the next morning, eating breakfast by lamplight, and having carefully loaded our ammunition, decoys, etc., into the commodious two-seated buggy, were soon off into the thick darkness of the early morning, headed for the lake where the geese had spent the night. A lively ride of three miles in the crisp morning air behind a span of cranky bronchos managed by a reckless driver brought us to the lake just as the first faint streaks of daylight began to show in the eastern horizon.

Stringing out along the shore at intervals of 20 or 30 rods, and securing such cover as best we could behind the high grass and small bushes that fringed the high banks, we anxiously awaited the morning flight. We had not long to wait; small flocks soon commenced to rise from the center of the lake and start for the feeding grounds, but they seemed to fly in all directions except ours, and the few that came our way kept safely out of reach; finally, just as we were beginning to get chilled and discouraged, a nice flock of "honkers," or Canada gray geese, came within our reach; and, waiting until they were fairly past, we gave them the contents of our trusty Parker ten-bore (charged with 5 drs. of powder and 1⅛ oz. of No. 2 chilled shot), and had the satisfaction of seeing two fine birds come down with a "swish" upon the prairie. In the meantime the other boys were banging away with good success, and the firing became general all along the line. By sunrise the geese were nearly all out of the lake, and, gathering up the results of our morning shoot (a dozen fine birds), we loaded into the buggy again and followed in the direction of the northward flight. About three miles out we found a stubble field thickly covered with geese and brant feeding, and driving them away without shooting, we proceeded to dig our pits and put out our decoys and dead geese. By the time this was fairly accomplished, our empty stomachs warned us that it was "high twelve," and we adjourned to a neighboring house and partook of our noonday lunch.

Getting back into the pits about two o'clock, we awaited the afternoon flight from the lake. It was nearly three o'clock before the first triangle appeared on the distant horizon; soon the honk, honk, squawk, squawk of the coming flocks was heard, and the order is given, "Down there," and we prepare for action. Soon they are over us and taking the decoys beautifully; all ready—one, two, three; bang, bang, bang; whizz, swish, thump; five fine birds as the result of the first volley. From this time on until dark they kept coming at irregular intervals, the short waits adding zest to the sport.

Space will not admit of a detailed account of our three days' hunt; of the crack "double shots," nor of the many misses; of how one old "honker" when he was struck took a bee line at an angle of about forty-five degrees for the pit where the writer was ensconced, and only missed his head by a scratch; nor of the sharpened appetites with which we devoured the baked goose and other goodies of the good German *frau*, nor of the yarns spun around the evening fireside amid wreaths of smoke from our cob pipes.

Suffice it to say that we returned with a bountiful supply of geese and brant, and with minds and bodies refreshed for our respective duties. I purposely omit specifying numbers, fearing that it may overtax the credulity of your readers, and fearing also that the story might not be as large as some one else has told.

We all thought that we had seen large numbers of geese and brant together before, but when we saw the ground literally covered at times for half a mile wide and two miles long, and when we stood on the banks of the lake at evening and saw them coming in, drove after drove, and heard the honking and squawking of from five thousand to six thousand geese and brant in unison until it mingled into the indistinct roar that was simply deafening, we concluded that this was indeed "The Goose Hunter's Paradise." GEO. F. GOODWIN.

LISBON, N. D., Dec. 19, 1890.

A GUN FROM NORTHERN KANSAS.

Editor Forest and Stream:

My friend "P. M. F.," of Burlington, desires to hear from others in this State, and that we may become better acquainted with game in different parts will venture a few words.

We do not live in a good locality for the migratory birds, as we have no lakes, and very few even small ponds. Still living upon the banks of the Solomon River we always have a visit every spring and fall from a limited number of geese, ducks and other wildfowl that follow closely the water, though they do not congregate here as in localities well supplied with ponds and small lakes. Sandhill cranes frequently stop in this vicinity, and one pair at least took up their abode along the river for several weeks the past summer. Whether or not they nested I cannot say, but the writer has often seen them on the wing in the neighborhood, as have also several others.

One morning, two years ago, I shouldered my gun before daylight and started for the river in quest of ducks. The stream is only three-quarters of a mile from town. So I was there and carefully ensconsed among friendly bushes before dawn, waiting for the flight to commence. Just as the first gray streaks broke the gloom, allowing objects against the sky to be seen, though somewhat indistinctly, I observed five large forms on the wing coming down stream straight for my hiding place. I supposed them to be white geese, though they were flying noiselessly; and when slightly past gave the leader one barrel of my duck shot, and the next in line the other. I had the satisfaction of seeing one tumble into the water, and upon getting it ashore found it to be a pelican. I was quite surprised, as I had never known of these birds flying about here, and was entirely unprepared to find them following our stream, apparently searching for a suitable place to drop into the river.

Quite pleased with the turn of affairs and fired with the desire to procure such fine specimens for mounting, I fished some stronger shells, loaded with No. 1 shot, out of my hunting coat, and commenced the task of following up the other four, which comprised the remainder of the flock. They did not appear very wild, and after raising them from the water I adopted the plan of crouching low in the bushes, and if they circled within range, rose and gave them the contents of my gun. After several repetitions of this course, and by persistently following them up, I at length had them all floating dead upon the water. I was obliged to secure the services of a boy with a boat, as I had gone considerably up stream, and we landed the five large birds at the mill near town. The obliging miller, finding that one man was not equal to the task of carrying them, kindly hitched up his team and took me home.

My morning's work was quite a surprise to my friends, especially one sleepy individual (I trust he will not see this) whom I had urged the evening before to accompany me on my early stroll. As he gazed upon the five mammoth frames, covered with beautiful white feathers and the softest of down, and the ten powerful white wings with their gray and black markings, he assured me in classic language that he felt like "kicking himself" to be droning away his time asleep when such game was in the air. The largest bird measured 8ft. 4in. from tip to tip, and the others were only a little smaller.

At some future time I hope to say more to my Kansas sporting friends, and especially upon the subject of our game laws and their enforcement, which with regret I am forced to admit with "P. M. F." are a dead letter, and it is time we awakened to the fact. H. A. R.

KIRWIN, Kan, Dec. 3.

Editor Forest and Stream:

There has not been a flake of snow seen here this winter, and the weather is very fine. There is ice on the river, and one can skate along close to the bank and scare up lots of rabbits, or going back a short distance in the brush get some quail. Quail, ducks, some prairie chickens and lots of rabbits are to be seen in the meat markets now, but he who has only a day or two at his disposal must know just where to go to get a fair bag of anything better than cotton-tails. At this season of the year, when the streams and ponds are frozen over, a great many ducks are killed on the river where the water is too swift to freeze. This year, however, water-fowl of all kinds have been very scarce, on the whole, and I have not heard of any being killed, except in one case; two men were hunting on the Pottawatomie and came on a flock of ducks in an open spot; they fired three shots and killed sixteen.

Around this city is the finest imaginable ground for both quail and prairie chickens, and a few years of real protection would give us an abundance of game.

OTTAWA, Kansas, Dec. 18. F. B.

MICHIGAN SPORSTMEN'S ASSOCIATION.—Grand Rapids, Mich.—The 16th annual session of the Michigan Sportsmen's Association will be held at the Morton House, Grand Rapids, Mich., on Jan. 7, 1891, at 2 o'clock P. M. All game protection clubs are requested to send delegates, all individual members and others interested in the propagation and conservation of fish and game are requested to be present and take part in the deliberations. By order of Board of Directors.—E. S. HOLMES.

COMPARATIVE POWDER TESTS.

FIVE RIVAL EXPLOSIVES AT THE FOREST AND STREAM GUN TRIAL.

ON the day after Thanksgiving of last year (Nov. 28) a trial of more than ordinary interest took place at the FOREST AND STREAM testing screen at Claremont, N. J. The Lyman powder has recently been placed upon the market for the use of shotgun men, and it was desired that FOREST AND STREAM should make a trial of and report upon the new compressed and slow burning powder. The cartridges as they are made, show a compact mass of closely packed powder in the shell. Through the center of the mass reaching down to the flash anvil of the fulminate cap, runs an open duct. The powder starts its ignition up this small shaft or passage, and burning rapidly outward toward the outer portion, gains constantly a broader surface of ignition with a consequent greater supply of propulsive gas until the charge is sent on its way from the gun muzzle. This is the new material which Mr. Lyman has placed before the gunners of the country. In comparison with it were tried charges of black powder, Schultze powder, and the new E. C. powder so nearly akin to the Schultze product. These three charges came from Von Lengerke & Detmold's loading laboratory, and the evenness of these test cartridges is something specially noteworthy. The wood powder charged cartridge was purchased over a shop counter. It was a U. M. C. ready loaded charge, No. 127 of their numbering, and ran more even on analysis than it did from the gun.

The Lyman cartridges were of two lots; No. 1 came from a box of twenty-five purchased by a lad at the shop of Dannefelser, the Chamber street agent of the Lyman Company. The Lyman No. 2 was of a lot offered for test by the maker of the powder. Just what each variety did on test and just how it was loaded so far as weight and quantity of powder and shot may be concerned, the analysis will show. The variation in the results, especially as to pattern, is so wide as to bring the two Lyman powders at the bottom and top of the percentage tables respectively. The gun used in this comparative powder test was a Colt arm which E. A. Summers had just received from the Dannefelser shop. The right barrel had been modified so far as its choke was concerned, but the left barrel was still at full choke and its results ought to show the several explosives at their best. The day was not a particularly pleasant one for a several hours' test on a boggy, springy, salt-water bottom such as prevails at Claremont, but the weather conditions were quite uniform from one end of the test to the other, and upon the whole the day was a very fair one for a test of this sort, and fully as good as those when other arms had been put to test. Mr. Summers was the gunner of the day, firing over a bag rest and doing careful justice to each set of cartridges. Black powder was the first used at the 40yds. range, then followed the Schultze, E. C. and wood, with the Lyman No. 1 closing up the series; at 60yds. the same order was followed. Lyman No. 2 or that specially prepared under a later manufacture, was tried last of all at 60yds., and then the ten trial shots fired at 40yds. closing up the day's work.

In our tables of results the composition of the cartridge is most fully given, and just how the several wads were used in order and quality is noted at length. They were in each case loaded by experts, and in four out of the six cases loaded with special reference to their work as test cartridges. The exceptions being the store-bought wood and Lyman charges. The charges of shot, so far as size, weight and count are regarded, ran very even, the number of pellets ranging from 328 to 333 in the averages. It is, therefore, very easy to strike percentage of performance and note that at 40yds., the standard testing distance at the standard 30in. circle, for three best circles out of five struck for greatest pattern from each barrel, the percentage stands as follows:

Powder.	Right Barrel.	Left Barrel.
Lyman No. 2	61 per cent.	67 per cent.
E. C	60 per cent.	65 per cent.
Black	60 per cent.	64 per cent.
Schultze	57 per cent.	62 per cent.
Wood	41 per cent.	65 per cent.
Lyman No. 1	51 per cent.	51 per cent.
Gun average	55 per cent.	62 per cent.

This showing is not a very brilliant one for the gun, but on comparison between the several charges tried it is entirely fair. The factory-loaded wood powder's work seems to justify all that is heard as to the uncertainty of action of this explosive, and the variation in the two Lyman charges also has a bearing on the growing question of factory vs. special loads for effective work.

When it came to work at the long range of 60yds., especially with the left barrel, where it is alone fair to make the comparison, the black and the two English nitro powders show up in very good shape. This same group of three also stands very closely together in the matter of penetration, with the Lyman following and that unlucky wood powder practically nowhere in a comparative sense. When it comes to hitting at 60yds., there is practically a uniformity all along the line, which simply goes to show that where any work is to be done at these long distances it is a waste of ammunition to try doing it with the smaller sizes of shot.

In the tables and diagrams following the result of each shot fired is noted as to pattern and penetration. In each shot a circle is struck about the bullseye as a center. The sheet of paper is 4ft. square and the scribing circle is then pushed over to include the best possible pattern shown on the sheet. The three best of these selected circles at each distance is taken in making up the average for the gun. With the results taken from the aimed circle there is always a chance of irregularity or slip on the part of the shooter; but with a selected circle struck on a 4ft. square sheet the gun is enabled to show its very best work. If the charge does not manage to get upon such a sheet as this it is time to try another gun or charge or both. In the diagrams A is the point aimed at or the center of the aimed circle, while C is the center of the struck or selected circle. In some few instances the points C and A are identical, but generally it is found possible to improve the pattern somewhat by moving the center of the 30in. circle. The penetration in all the other tests was taken on Dennison's pads, specially prepared for this purpose.

The diagrams of targets will be given next week.

CLAREMONT, N. J., Nov. 28, 1890.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Colt Hammerless. Cost, $60. No. of gun, 1,337. Weight, 7½lbs. Length of barrels, 30in. Gauge, 12. Right barrel, modified choke. Left barrel, full choke.
Weather—Clear. Direction of wind, 4 o'clock. Force of wind, 10 miles per hour. Thermometer, dry, 28°. Do., wet, 23°. Humidity, 70°. Barometer, 30.12in.
Charge, as given by holder of gun:

BOTH BARRELS.
Shell—U. M. C., Von L. & D.
Powder, Brand—Dead Shot FFG.
Powder, Quantity—3½ drs.
Shot—*Make*— —; *Quantity*—1⅛ oz.; *Size*—No. 7 Chilled.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 26.—Thus far the weather predictions have failed as usual, and instead of the severe winter we were led to expect, we have had one of the most exceptional mildness. This will be good for the game, unless we are treated to blizzards later on. To-night it is threatening snow, and we may have a taste of the hard weather which at this date prevails all about us. Christmas day here was mild and pleasant.

There has been little hunting going on, not enough to determine whether or not the ducks have been with us all along. A good many mallards have doubtless been along the Kankakee, and last week they were rising in some open ponds near Koutts in very considerable numbers. Last week also a half dozen mallards were killed one day on Mak-saw-ba marsh by Dr. Buechner and L. R. Brown.

Quail have been a good crop, and offered better shooting than most of our shooters knew or took advantage of. Speed the mild winter, so that next year we may gain an occasional sight of Bob White.

Dec. 28.—The third meeting of the Possum Club transpired last Tuesday evening, and like the previous assemblages was a pronounced success. There were present between forty and fifty members, old and prospective, among others Messrs. Abner Price, W. L. Shepard, John Heiland, M. J. Eich, W. P. Mussey, C. S. Wilcox, C. B. Babeuf, G. W. Andrews, R. A. Turtle, C. K. Herrick, Geo. T. Farmer, C. D. Gammon, O. F. Malcolm, L. W. Stevens, J. W. Sheehan, W. A. Mitchell, F. A. Place, L. W. Hamline, Fred Pfeffer, C. B. Dicks, R. S. Cox, Dr. J. M. Hutchinson. Col. Felton was in the chair and presided with great *aplomb*, *éclat* and *finesse*, insomuch that everything was soon *en rapport*, with a good deal of *jeu d'esprit* and that sort of thing. The committee on organization reported a constitution, which was read and adopted, though nobody knew what was embodied in it. Everything goes in the Possum Club. Only one clause met objection, and the argument over that nearly led to the mobbing of the committee. It was proposed to make the corporate name the "Opossum Club of Chicago." Cries and jeers met this clause when it was read, and shouts arose of "Why not call it the McPossum Club?" "No hyphenated foreigner here," "No Irish need apply," etc., etc. The committee hurriedly apologized, and today the name remains just plain Possum Club.

Letters of regret were read, purporting to come from Mayor De Witt C. Cregier, Bill Nye, Grover Cleveland, James G. Blaine, Chauncey M. Depew and Benjamin Harrison. All these gentlemen will attend later, if they can get away. Mr. L. H. Vories, of Kansas City, and Messrs. Maillet, Hayward and Hart, of Crown Point, Ind., all sent letters of compliment and regret at not being able to come and see possum at the highest branch of the tree. Mr. Abner Price was chosen chairman for the next meeting. It is probable that some sort of regular programme will be formulated by that time, a fact which is highly desirable. Mr. Werner's complimentary banquet to the club is on the first Tuesday in January. The club secretary, Mr. Mussey, had some striking invitation cards out for this meeting, and has designs for something better yet next time. Mr. Werner's possums remain succulent as ever.

Some one or other has mailed to me an unkind clipping from the Louisville, Ky., *Commercial* which alleges that Mallory Davis, of the Galt House in that city, and Virgil S. Wright lately went out bear hunting near Louisville and killed a calf, for which they had to liquidate to the extent of $10. The accuracy of this is not vouched for. It probably cost them more than $10.

Messrs. Wolfred N. Low and Sam Booth have started south on the Missouri trip mentioned some weeks earlier.

Mr. Geo. E. Marshall and his friend Mr. Metcalf have started south, for Tennessee or Mississippi, they don't care which and don't know where. They made up their minds on about five minutes' notice to-day that they needed some quail shooting, and it is now too late for that in Illinois, Indiana, and Missouri—or will be in the latter State by Jan. 1. E. HOUGH.

MISSOURI GAME NOTES.

SENECA, Mo., Dec. 15.—Big snow, heap big hunt, big Injun kill buck. On the 7th of this month we got our first snow storm and it was a good one, being 8in. on the level. On Monday it was very cold; "not much hunt," so said the Injun; but on Tuesday it turned warmer, and the woods were full of hunters that day after all kinds of game. I have only heard of one deer being killed, that was a buck, a very fine one weighing 180lbs. I have not heard of any turkeys being killed, and not many quail; the price of quail is so low that pot-hunters cannot make much by shooting.

Jones, Workman and Harman pulled out on Monday morning for Council House Bottom, about sixteen miles from here. They arrived there about 12 o'clock, and pitched their tent and got things in shape for a few days' stay and then went to the river, put in their boat and set out the decoys, but alas, the ducks had left the river and gone to the spring branches or gone further south, for they only killed thirteen. After waiting and watching all day Tuesday for ducks they left the river and went out on the flat woods to hunt quail, which they found there in abundance. Jones says if it had not been for a covey of quail getting up just as they did he would surely have killed a fine buck, but he shot at the quail and the deer got up about 40yds. ahead, and just behind a treetop from him, and he could not shoot it.

Indian Joe Bigknife was in yesterday. He says, "I killim one buck." The writer was out on Wednesday and killed ten quail in a couple of hours. I have also had some fine shooting at prairie chickens this fall; on two trips I got forty-two chickens, and could have killed more each time, but I always go down on the train and that only gives me a short time in the fields; but for all that it is fine sport to follow my old pointer Rover and see him do the work just as intelligently as you or I could do it. Nothing is more pleasing to a sportsman than to watch his dog approaching a covey of chickens out in the open prairie when they are lying close; it is a beautiful sight. F.

ANOTHER PAGE FOR THE COON HUNTERS.—Next week we shall devote another page to the hunters of the musical coon. Why musical? Because his squeal is not altogether unmelodious, and as "leader" of a band of yelping mongrels and true-voiced thoroughbreds he is a provoker of music sweet to the ears of the followers.

BROOME COUNTY, N. Y., GAME.—Binghamton, N. Y., Dec. 13.—I have been pleased to note the efforts that have been put forth to introduce foreign game birds into this country, and it seems to me that this interest on the part of a few persons certainly calls for an interest on the part of the many that will protect the work that has been done along the lines. About one week ago a young man brought an English pheasant (*Phasianus colchicus*) to a taxidermist of our city to be mounted. In answer to questions, that were answered reluctantly, it was found that the bird (a very fine male) had been sent to him by his father, who had shot it and did not care to give it into the hands of a taxidermist near where it had been killed. It was also claimed that the law allows no shooting of these birds until Dec. 15. Now this is indeed news to me, and if there is any such law I am ignorant of it. I have been unable to find out where the bird was sent from, but am quite sure that it came from some point east of us. The young man admitted that it had been shot near a private park. If there are those who are destroying the game that has been placed here at such an expense in time and money, they should be tracked down and exposed if it can be done. While I am writing I will also refer to the recent action of our supervisors (Broome county) in refusing to pass a law prohibiting the sale and marketing of ruffed grouse and woodcock. These birds are being indiscriminately slaughtered in our neighborhood and shipped to different markets. In fact, there seems to be an almost total disregard for game law around here. Bass and other game fish are speared in warm weather, and only a short time since a party of thirteen were seen "snatching" them through the ice. Robins, scarlet tanagers, rose-breasted grosbeaks, and other song birds were shot during the summer in large numbers without any apparent excuse, except an hour's sport. Some action should be taken, some interest awakened and the law enforced for the protection of these interests in this locality. What can be done?—WILL A. HAKES. [Why was not the game protector advised of these things?]

QUAIL IN TOWN.—Bob White—Bob—Bob White—Bob White. The merry whistle of the partridge, so dear to the ear of every hunter, attracted the attention of the early risers in the vicinity of Fourteenth and K streets this morning just as day was breaking. Among the passengers in the first car of the Fourteenth street line which left the stables was Mr. H. M. Dickinson, a prominent member of the Columbia Athletic Club, a born hunter and a first-class shot. Now, the whistle of a partridge is to him sweeter music than the jingle of money on pay day. As the car in question reached K street judge of his surprise, when on looking out of the car window he saw a whole covey of partridges, fourteen in the bunch, promenading up K street. Now, Mr. Dickinson is in charge of the District sand yard, and the car he was on would just get him there on time. But the temptation was too great, and he had to get off, as he told the conductor, "just to see them fly." Picking up a clod of dirt he threw it at the birds and killed one. The remainder flew into Franklin Park, where he lost sight of them. Later in the day he presented the bird to the superintendent of streets. This is not the first time partridges have been seen in the city. About five years ago the writer shot two in his back yard near Pennsylvania avenue. The birds were evidently traveling and selected the night as the best time. They probably came to Washington to spend Christmas.—*Washington Evening Star, Dec. 24.*

LOCKED ANTLERS.—Metropolitan, Mich., Dec. 24.—Some men working for the White & Friant Lumber Co. found last Sunday two bucks dead with their antlers locked. They were locked on only one side and one buck's neck was broken; the other could not get loose and perished. The boys cut their heads off, and they are now lying on a stump in front of the camp locked together just as found. Both heads have five prongs, and are fair size and shape. They are locked together in such a way that if the horns were scalped off the heads the horns would come apart readily. Their noses being firmly fixed across each other holds the horns together. Anybody interested in such things I presume could get those for a small sum.—B. BRISTOL.

ST. LOUIS, Mo., Dec. 26.—The game laws of this State are very deficient in many respects, and there is a movement on foot among local sportsmen to ask the lawmakers when they meet this coming session to amend them. At present there is no closed season for ducks, and as numbers of wood ducks breed in this State, it is proposed to introduce a bill protecting them during the summer months. All the sportsmen that your correspondent has spoken to in reference to the question agree that the webfeet ought to be protected, consequently there is no doubt if the matter is properly presented to the Legislature, there will be no difficulty whatever in passing such a bill.—UNSER FRITZ.

SCENTING QUAIL.—The question has occurred to my mind why the dog trails the running, hiding quail instead of pointing. That, according to Herbert, the quail does withhold his scent, voluntarily, or necessarily through fright, is certain. But if the dog trails the bird it follows that he smells something. Is it not the scent left by the feet of the bird and which is different from that of the body, else he would point as usual. I conclude, therefore, that there is a body scent and a feet scent, the latter given out while the former is withheld, the two scents differing in character. But I don't claim infallibility.—N. D. ELTING.

A DEER'S TENACITY.—Huntington, West Va., Dec. 22.—The death of a deer caused by a bullet striking its horn, mentioned by "Richmond" in the Dec. 18 number of FOREST AND STREAM, reminds me of a case equally surprising—surprising that the deer of which I shall speak was almost unharmed. Moses Freer, an old hunter, now dead, who lived in Ohioville, N. Y., whose veracity I would not question, said in my hearing that a deer was shot by an acquaintance of his, and against a bone of one of his legs a ball was flattened, the wound thoroughly healed and the bone uninjured.—ELTING.

A BELATED WOODCOCK.—Dec. 23.—While walking to-day through a clump of small pines my dogs flushed a large woodcock. This was about thirteen miles from Boston, and the only way I can account for his being there is the warmness of the weather during the last few days.—J. H. B.

SOME MENAGERIE BABIES.

THE young of all animals are attractive. Those of wild animals are especially so. In a recent number of the London *Globe*, Miss Catherine C. Hopley, well known to our readers, has an interesting article on some of the young creatures in the London Zoo. She says:

Between the Esquimaux puppies, the young African antelopes, and the infantile bears, rival attractions at the Zoölogical Gardens at the present time, it would be difficult to say which are the popular favorites. The puppies entice the lovers of canine pets, the antelopes are an attraction because everything African is the fashion this year; but the two little American grizzlies receive the chief attention because they are most in evidence. They are so demonstrative, and as amusing as kittens. Speke's antelope, however, is a distinguished stranger, rare, and little known; this is the first specimen that has reached England alive, and claims now the prior attention. It is to be found in the gazelle sheds, close to the hippopotamus house, and in the next shed to the very pretty "harnessed" antelope, with its white stripes arranged exactly like harness over its back and sides. This also is African. Speke's antelope was brought from Lake Ngami last spring, by Mr. James A. Nicholls, who presented it to the Zoölogical Society. It was captured by Mr. Nicholls and his companions in the marshes on the north of Lake Ngami, when it was only a few days old, and was carried in a wagon 800 miles to Kimberley. It was an anxious little charge, the species being extremely difficult to rear; and this baby, taken from its mother, was fed on milk during its long journey. It has been spending the summer in the Duke of Marlborough's park, where it enjoyed its aquatic instincts and fed on such aquatic plants as it chose. It arrived at the Zoölogical Gardens on Oct. 14, and for some days would eat nothing. It is now indulged with a daily handful of reeds from the Three Island Pond, but is gradually partaking of dry and more nourishing food, and is growing tame enough to accept a biscuit from a visitor. Coming from just within the tropics it is likely to suffer from an English winter, two South African antelopes, which arrived in October, having already succumbed to congestion of the lungs.

Speke's antelope, *Tragelaphus spekii*, was first known in 1864, and was named by Dr. Sclater, F.R.S., after its discoverer, and described in the "Records of the Zoölogical Society" after the account given by Speke in his work, "The Source of the Nile." Speke had a young male specimen which he was able to keep alive for some days by feeding it on the tender tops of the papyrus, the only thing it would eat. The animals frequent the beds of papyrus on the borders of the lake, live in the swamps and are much in the water. On this account it is difficult to shoot them, as they remain immersed to the nostrils. The Kaffirs paddle their canoes near enough to use their assegais and kill them that way; or they fire the reeds and so frighten them out on to an open space. The natives set great value on the coat of this antelope, the hair of which is long, thick and of excellent quality, the skins being used only by the sable kings and their chief officers. It is of a uniform mouse color, rather reddish on the head, and with a faint dark streak down the back.

The very peculiar hoofs of this antelope attract immediate attention, being long and claw-like, reminding us of the long toes of the wading birds. These excessively elongated hoofs are adapted for traversing the reedy swamps which are the habitat of this antelope. On hard ground it walks with difficulty; and its shed here is strewn with soft peat to make it feel more at home. It legs are also very long and slender, feeble of movement in a walk rather like that of a giraffe, but capable of amazing swiftness where space invites it. The exceptionally long legs, long hoofs, and a coat especially adapted to a moist element, proclaim this antelope so distinctly aquatic that one fears it will suffer for the want of its native lake, and one wishes it could enjoy a spacious lake of lukewarm water, like its neighbors, the tapirs and the hippopotamus.

In form the antelope is like the deer, and seems to be a connecting link between the deer and the goats. Like the latter, it has simple, annulated and hollow horns, permanent, while the former shed their horns annually. Our present specimen, being a female, has no horns, but in the adjoining sheds are other African antelopes whose horns, though varying, indicate the type. Watchful, timid and retiring, are characteristics of the deer and antelope tribe, and some time elapses before they venture to the front of their dens and accept of food from the hand.

Quite the reverse are the bears, who, ever so wild and strange, keep close to the bars and quickly learn to look for and accept a morsel from the hands of visitors. In the two little grizzly bears this habit has been quite noticeable. In a very few days they recognized the keeper, soon they discovered that not he alone was the dispenser of biscuits; and within a week they were accomplished beggars. With remarkable aptitude they have learned the civilized form of requesting favors. Standing erect in front of their dens, with their arms thrust through the bars to the utmost, their long finger-like claws displayed with a supplicating action—so like extending the palm—the dumb show is eloquent as words, "Give, do give us biscuits." Their amusing gesticulation and child-like eagerness draw a continuous crowd; their appeal is irresistible to those who are happily supplied with provender, while those who are not are as disappointed as the suppliants themselves. *Ursus horribilis* is their name; and though their parents and grown-up relatives are, no doubt, very terrible animals, these young scions of the tribe present, thus far, a by no means horrible aspect, but invite caresses rather than horror. Their bright little eyes have an appealing and almost pathetic expression, with something of truthfulness, too. Only over an extra-sized biscuit is their natural ferociousness aroused, when a short, sharp skirmish ensues. Soon over, however, for they lose no time in coming to the front again, and on their hind legs resume their observations and entreaties. They come from the State of Montana, and arrived on Oct. 4, presented by Mr. Ewen Somerled Cameron, F.Z.S.

Bears are admittedly among the more intelligent of quadrupeds and possess abundant native cunning; but these two little grizzlies seem precocious in comparison with some other infant bears that have been in the gardens only a short time. A few cages off there are three very small and young Arctic brown bears from Russia. One of them that arrived only two or three weeks ago lies crouching and moaning as if for its mother, and as yet barely distinguishes the keeper until he presents it with food. It looks up pitifully from under its shaggy brows with a shy, sly glance, but evinces no interest otherwise, though keeping close to the bars. There is yet another very young *Ursus arctos* that behaves similarly, though it has been here since Sept. 24. We may conclude, therefore that the little "horribles" are more adaptable, as they certainly are more lively and amusing than their cousins from Russia.

It was in about two weeks that the young lion, presented by Her Majesty the Queen, learned the dinner hour. At first he was too busy playing with his ball or his tail to take any notice of the sound of the meat truck or of the keeper until the food was given to him; but now he is just as conscious of the time of day as the other lions, and like them, listens for the approaching wheels, leaping to and fro in the same eager fashion.

Those very audible truck wheels are a signal to outsiders as well as to the felines. An interesting example of intelligence and of drawing inferences (which biologists argue is a proof of reasoning in animals) is seen among the canines, who are fed soon after the lions. In warm weather, when the doors of the lion house are open, the noise of wheeling the meat truck can be easily heard at the kennels.

With remarkable keenness the occupants quickly learn to associate the sound with their own coming food, and, in an instant, you see their restless pacing to and fro changed into frantic leaps and bounds. The little foxes are up and down, springing upon the parapet, and the larger animals stretch themselves upward to look for the keeper; all, in fact, are full of excitement, knowing their turn has come. In winter, when the lion house doors are closed, the canines still listen intently for the welcome sound, their quick ears detecting it when to human ears it would be unobserved.

THE NEW YORK GAME LAWS.

We invited Messrs. Knapp & Van Nostrand, well-known game dealers of this city, to give the readers of the *Book of the Game Laws* their opinion as to the present New York law. They wrote as follows:

All reputable dealers in game desire its preservation as much as conscientious sportsmen. It is against their interest to destroy any line of goods handled by them. Their co-operation in upholding a law just in its action is an assured fact.

From the dealer's standpoint the wild duck law is perfectly satisfactory.

The quail, woodcock, hare and rabbit laws are as nearly correct as they can be made; also the partridge or ruffed grouse law, since after Jan. 1 the supply has been drawn from the far north where the birds eat poisonous berries, and their flesh is therefore dangerous to the consumer.

The pinnated grouse or prairie chicken should be allowed to be sold here until March 1. The birds are killed during the lawful period and are shipped here frozen. The law stops the sale Jan. 1 in New York. In Boston they are sold all the year, and thousands of birds pass through New York in transit for Europe during the close season. No birds of this species are killed in New York State; and while the sale is allowed elsewhere the citizens of this State are deprived of the privilege of eating this delicious article of food.

The venison law is very unjust to dealer and consumer. Not one person in ten thousand can go to the mountains in New York State and shoot their deer. No dealer cares to handle New York State venison, for it is, as a rule, thin and dark colored. The fine deer meat does not commence to arrive from Minnesota until Dec. 1. The market hunters have fifteen days to kill in. They hang the deer up and freeze them; and ship them at that time. The sale stops here Dec. 15. After that the meat is sent out of the State, put in freezers, and kept until Aug. 15 of the following year, when the same meat is sold that under a more sensible law might have been consumed when in its best condition the previous season.

The dealers would be pleased if the killing of deer in New York State was prohibited entirely, and only meat allowed to be sold that was proved to be lawfully killed in the West from Nov. 1 to March 1.

With the amendment of the pinnated grouse and wild deer laws, as mentioned above, the laws as they now stand on the statute book are as near correct as it is possible to have them, but we heartily advise and hope that the two exceptions will be corrected. KNAPP & VAN NOSTRAND.

SCIENTIFIC EDUCATION OF THE DOG.

THIS work, "The Scientific Education of Dogs for the Gun," is by a well-known English sportsman, and is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial for even old hands to study.

The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings.

Considerable space is given to the training of retrievers, and the instructions given are excellent; indeed, they could hardly be improved upon, especially those that treat of the rudiments.

In the chapter devoted to pointers and setters, the author gives very plain directions for teaching the dog his duties, and better than this, he advocates the humane system and tells how to bring out his better qualities and intelligence without the use of the whip or spiked collar. We quote a portion of the first chapter on pointers and setters. After giving his method of teaching a puppy to point a bit of biscuit, he says, "When quite perfect at this, go into long grass, and here, at all events to start with, have a drop or two of melted cheese on the biscuit to produce more scent, and if you have got an intelligent pupil and are an intelligent master, you will most likely have a genuine point to scent the first time of asking. Don't overdo this business; remember it is only a means to an end, but I can assure you it is a means, and a wonderful means, to make the real thing very simple by and by. When you have got this dodge perfect with your pup singly, take two out together, let them stand side by side as you throw the biscuit, then touch one dog, it is better than calling him by name, and let him draw on, leaving the other one backing in a standing posture at the point of departure.

"It is a pretty thing, I can tell you, to see this trick done perfectly with half a dozen or more pups out; they should all drop after you have lifted the biscuit, and you should then quietly walk round, at all events the first time or so, and give them a little bit apiece.

"Mind this, if you are unable to teach this performance to any pup without using a whip or even striking with your hand, don't do it at all.

"But, supposing that it is accomplished, what is it that you have done during the past five months, say, of a puppy life. You have got him perfectly obedient; you have got stamped upon his mind his rational instinct—to point, and then slowly to draw on, and to stop at the end of the draw, and more than that, 'to back' in a standing position, and to 'drop' with the certainty of a quick reward, and over and above, and far beyond, in my opinion, you have been making him 'think' all the time, and have never disturbed the perfect confidence that he reposes in you. Look on this system and then on the insane idea of 'walking pups' and then thrashing out of them the bad habits they have contracted through your fault, and physicking out of them, if you can, the thousand and one diseases they have contracted by insalubrious conditions, atmospheric hardships and cur contact. Why, the man who would go in for the latter must be either without experience of any sort whatever or else—well, 'not wise.'

"Ah, but there is danger here of 'overbreaking,' says some one. Bah! What is over-breaking? The whip, exhaustion from overwork and arbitrary, unintelligent forcing at the hands of an ignorant and tyrannical taskmaster."

Part IV. of the book tells how to train the spaniel, and is by far the best work upon this subject that we have yet seen.

The author is a pleasing writer, and interspersed through the pages of the book are numerous anecdotes and lots of sketches of shooting that at least have the merit of being well told, and are well worth perusal. He is a firm believer in animal magnetism, and some of his statements as to the results accomplished by the help of this agency are marvelous. Now, we have lots of faith in the efficacy of "will power," but there is a limit to the distance that it will be effective, and we draw the line at much less than a "quarter of a mile away," although the author states that the magnetic influence can be relied upon to restrain a dog from doing evil even at that distance.

GAME PROTECTOR BRADLEY.

JOHNSTOWN, N. Y., Dec. 16.—*Editor Forest and Stream:* As your paper seems to have taken up the defense of the State Fish Commissioners in the changes they made in the game protector force this fall, and as you have always given impartial hearings to both sides I deem it but fair that you should publish a few lines reviewing the record of Protector Bradley and the circumstances of his removal. The records show that, while his district is probably the worst one in the State for public sentiment in sustaining the game laws, still he has successfully prosecuted and collected more fines than any other protector on the list. When he found that the Grand Jury of Hamilton county would find no indictments for violation of the game laws, by aid of friends he got a law passed making Fulton county indictments applicable to Hamilton county offenders, and then when he found Fulton county juries were not to be depended upon he prosecuted for penalties in Herkimer county, and has won every time. Until now no officer in middle New York has the reputation of pluck and shrewd ability to follow up a case that Mr. Bradley has. In 1884 I met him at Sageville, the county town of Hamilton, in the heart of the wilderness, when the Grand Jury was in session, and used every influence I could to help him get some indictments. When the foreman of the Grand Jury told me how impossible it was to talk about indicting their neighbors, when every man on the Grand Jury had violated the game law probably every month of the year, I was discouraged, but Mr. Bradley was not; and he told me then and there that he would find a way to enforce the law, and he has done so. Not that I think that all violators are caught; far from it; but great improvements are made, and with proper help he would soon hold sway to a minimum.

It is an old saying that "governments are heartless," and the Fish Commissioners illustrate this by their action regarding Mr. Bradly at this time, when he had barely recovered from almost total blindness, caused by his lying out last May on the Mohawk River all one wet night trying to catch netters. While he lay at the Albany hospital of course he could not watch his district, but when, by aid of a surgical operation that cost him the most of his year's salary, he regained his sight, his vigilance at once brought many cases for his shrewd management, probably to bring to judgment penalties this winter. I dislike to publicly criticise the Fish Commissioners, as I know that theirs is a thankless office, and it is impossible to please everybody, but I do think that under the circumstances they should have let Mr. B serve his year out, and if they had any charges against him, at least have given him a chance to be heard in his own behalf. Mr. Bradley's age is the only valid plea against his keeping the position, but age, to such men as he is, fetches little physical weakness, but by adding to his experience makes him really more capable in the collecting of evidence and a knowledge of what is necessary to convict. The indorsement he has of every district attorney in his district shows their appreciation of his ability in preparing cases.

I certainly have no personal interest in this matter beyond my great desire to have the game laws enforced as well as is possible, and I certainly would not urge Mr. Bradley's being the protector of this district if I knew of a better man for the position. But having no confidence in the men whose names have so far been mentioned for the place I shall stand by the man who I know can be relied on until a better man shows himself. M. S. NORTHRUP.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ROD, LINE AND HOOK IN JAMAICA.—II.

KINGFISHING.

[*Continued from Page 459.*]

ALONG the south coast of the beautiful island of Jamaica, down below her deep, blue waters lie valleys, banks and shoals, east, west and far away to the south, and these form the hunting and breeding grounds, and the happy homes of myriads of fish life. The banks, of calcareous formation and densely covered with marine vegetable growth, are located at from two and three to thirty miles and more from the coast line of the verdant plains and lofty hills that are covered along their flats and to their loftiest points with a tropical vegetation, dwarfs and giants. In the deep and shallow waters of this beautiful sea sport countless millions of finny life, from the blowing and portly *Iricheus americanus* to the small crustacean whose frail construction scarce seems capable to repel the force of wind and waves as they beat over his delicate back and rocky home. In these waters may be found the sea scavenger, dusky in color, prowling about devouring all that comes in his way, side by side with the silvery babies too numerous to individualize. There are turtles of all kinds, notably those of the hawk's bill with its valuable shell, and they of green fat fame. Snappers may be found by the tens of thousand, and of many varieties of all sizes and colors; doctors of polished blackness with their lancets, keen of edge, hinged on to either side; parrots of red, blue and green, with pretty poll heads. There are anglers with their innocent faces, porgies with their vent bone, a perfect quill equal to goose or steel for writing purposes. The monster Jew fish running up to 400lbs., the racing barracouta, the fast-swimming bonitto; the dolphin; the rainbow with its prism tints; the gloomy grouper with its delicious liver, large and fat; silks of the deep; jacks with their name legion; the queer triangular trunks; the hinds with their vermillion spots; the calipever, the mullet, the mackerel, the snit, the herring, and a thousand and one others all waiting to be taken, all ready to be eaten. From the sandy beach, and, in places, rock-bound coast, to the deep marine caverns, and valleys, and banks off shore, all willing, waiting, longing to be caught.

Omitted in the list but greatest of them all for sport and value of flesh is the kingfish, the *Cybium solandri*, in whose company, by the invitation in my last, we are about to spend a few hours. The kingfish around Jamaica, principally on the south side and to the west, is, I believe, the *Cybium caballe* of Cuv. and Val. Günther, and *Scomberomerus caballa* of Jordan and Gill, but with his scientific appelation we have nothing to do to-day. He is a remarkable fish of the mackerel tribe, grows to a large size, boneless except the vertebra, flesh firm and delicate, possessing a high percentage of oily matter, and a keeping quality unsurpassed by any fish in the same waters, while as a sporting fish he surpasses all others, and may take rank among the *Salmonidæ*. In color the back is dark, sides silvery and belly a dullish white, and in the juveniles a few vertical stripes or bars will be found on either side. Where he resides for nine months of the year is a matter of conjecture—at least to Jamaicans—but from the middle of March to the middle of June in each year he is to be found in multitudes over the submarine rock formations located in considerable numbers and area along the south side of the island, paying his periodical visit for the purpose of reproduction. Although they come like a flash and disappear as suddenly, they don't entirely leave the coast, for individuals are to be caught all the year round, and these are the youngsters, for it is rarely a large fish is taken, except at the times above written. That they come from the west and north I feel confident, but we need not enter upon that point here.

The Santa Cruz range of hills, one of the health resorts in Jamaica, run north and south, and at their southern end fall precipitously almost perpendicularly into the sea from elevations fifteen hundred feet above. At one point, under the towering and vertical walls, nestles a fishing village on a narrow strip of sandy land, forming a mimic bay of crescent shape guarded from the waves that come from the south and east by a rocky bluff. This little bay —our starting point—some 400yds. across lies glistening under the scraggy walls of the mountain heights, its shore guarded by a dense growth of the *cocolaba* or seaside grape, which assumes the proportions of a large evergreen, and every cool tree under their spreading branches note the dug-outs high and dry, through the foliage see the fishers' huts. In one of these huts—the best—I have passed a few of the hours that form the night, for it was too lovely to be cooped up in a windowless room of small, very small, proportions. I was the guest of the village boss (agriculturist, shop-keeper and fisherman), and the moon blazed forth in all her glory and in her full; dinner was over, eaten under the spreading branches of the *cocolaba*, pipes were fuming and stories oft and true of fish and water were the order of our vigil.

I had slept, dreamed and was awake again. Consciousness brought to me voices mingling with the wavelets and the peculiar croak of the gecko. I am called. I strike a light and find that it wants but a few minutes to 1. After a moment more and I am on the golden sand to find my canoe partially afloat. A cup of coffee, a biscuit, and ten minutes more we are afloat, and away we go as fast as four light oars and a paddle can drive us. In five minutes we are clear of the bay and the bluff, another ten and the cool land wind strikes our faces as it curls down from the heights on our leaving, and the sails are set; unerringly we go on our three hours' pull and sail to the Outer Guinea bank, twenty-five or more miles away. The morning is delightfully cool, the inland wind fills the sails, four oars and a paddle bend merrily and in time, no sea gull flits more rapidly, our dugout is a blithesome craft and dances o'er the waters.

An hour passes, a delightful sixty minutes, during which, while smoking and chatting, I fix up my rod—a stout 10ft. bamboo—attach the reel—of the Nottingham make, carrying 200yds. of a plaited silk line—and fix up the trace with a light boat-shaped lead, wire with two swivels, a large-sized spoon with two triangles, from the lower of which I hang three silvery sprats as tails, and I am ready. Presently my friend the cap'n says: "'Quire, we are passing over McDonnell (a feeding bank): you may get a fish," but we don't, it's too early; and another hour passes. Again the boss informs us: "We are now over Little Guinee (another bank); you must get a king," and we do, a lively beauty of some 27lbs. The bank is narrow, and crossing it at right angles we are soon in deep water on the other side; four miles more and then for the Soho or Greater Guinea, the bank we are bent on fishing.

At last we are there, and our chronometer tells the hour a little past the four; half an hour to rest the men, give them a drink, and let them smoke a pipe is sufficient to show the first signs of light in the east; the time has arrived, we must prepare for action. The canoe's bows are turned to the west, the oars dip and away we go at racing speed. On my side disappears my spoon and trio of sprats, over the other the cap'n flings his double hook baited thus: The first hook, size about No. 20 cod, is bent on to a length of wire, a few feet, and over its barb is placed a second hook attached to a short loop, the points of the two hooks, when in position, being reversed, and upon each hook are strung three sprats; there are no swivels, no leads. The kingfish is a surface feeder, and has not yet learned to prefer a spinning to a wabbling bait. He will be educated one of these days.

Hardly had we attained full speed when my reel sounded and a battle commenced, but the work was not to haul on my side, for scarce had a hundred yards of line left the spindle when I noticed our captain hauling in, and ere many seconds came on board a king of about twenty-five pounds. Quickly the double hooks, freshly garnished, were again cast forth; meanwhile my fish went traveling west, heading the canoe by about one hundred yards. Again and again we shortened the distance that separated us; the tackle was good and there was no doubt about the strain that was on; still the fight continued, and ere it closed fish number two was credited to our boss. Three fish in about twenty-five minutes, not bad to start with thought I. My spoon and the captain's arrangement were soon astern again, and another forty or fifty yards had us fast in what proved in my case to be a beauty. The fun went on without slackening until about 7 o'clock, when a leviathan seized the spoon, and the fight of the morning began; the sport he gave was considerable, the excitement great, but after an hour's play he yielded to the gaff and was drawn on board to join his fellows. After 8 o'clock the feed went off, at 9 was gone, and for the first time since we began we lit our pipes and had a look round and at the beauties that monopolized considerable space in the bottom of our spacious dug-out, much to the inconvenience of our nether limbs; seven and twenty kings, not one less. Nothing more was to be done, so the canoe's bows were pointed north, the lines still trailing astern, and on crossing the inner bank three other victims fell, one to the spoon, the others to our captain's cable.

Merrily pass the three and a half hours' run back to land, the morning was beautiful, the sun bright, our recollection vivid, and the sea breeze cool and strong. Gaily danced our cotton-tree boat as she crested and passed wave after wave. Spirits went down, narcotic fumes up, tongues were garrulous until somewhat past the meridian we rounded the little bluff and glided into the still water, a few moments later our bottom grated on the sandy beach; the slain were counted—thirty—the weight recorded—a pound or two under six hundred. Now was the sport, in comparison with, well say tarpon, worth the candle? Let us consider: Up at 1 A. M., a beautiful night, the lunar light making it almost day. A glorious sail over a placid sea, a balmy zephyr fanning all the way. Sport fast and furious for four hours and over with a fish that has the heart of a salmon, the pluck of a sea-trout, the endurance of a porpoise and the speed of a baracouta, added to which, flesh second to none. When sport is over another delightful run in as buoyant a craft as ever showed stern to a freshening breeze, cheerful companions, and the slain! place them on the golden strand side by side in the sequence of their size and contemplate. Have you thought it out? Well! own up. Yes! it will take many a candle made from mammoth tarpon fat to outweigh the sport that can be had with the Caribbean king. But! I have tried the one, not the other; such is my opinion—*sans peur et sans reproche*—take it for what it is worth. After all, comparisons are very objectionable. One can't have kingfishing, with its many pleasant surroundings, far up north, and more the pity, leviathan tarpon and the *Salmonidæ* are denied to those who live in or visit the islands of the Sea of the Caribs. We must be satisfied with what we have got without comparison with that of others; it is placed within the power of a very few to decide by actual experience which takes the cake.

EDWARD M. EARLE (of Jamaica, W. I.).

NEW YORK CITY, December.

A CARD FROM MR. BLACKFORD.

Editor Forest and Stream:

As you have already noted in your journal, I have been laid aside by a serious illness for the last six weeks. During the larger portion of that time I have been unable to receive any mail or read newspapers. Now that I am sufficiently recovered, I have been reading up the back numbers of FOREST AND STREAM.

I find that a great deal has been written and published regarding the removal of Mr. Drew from the office of Chief Fish and Game Protector. On this point I think nothing more is necessary to be said, except that the New York Fishery Commission took such action as they were perfectly competent and had the right to do. The four Commissioners who voted to make the change did so because they believed that a great improvement might be made in the administration of that department having charge of fish and game protection. But this action of the Commission seems to have greatly disturbed and wrought up the feeling of one John D. Collins, of Utica. In various communications that he has sent to the newspapers, he has seen fit to attack the Commissioners collectively, and the president of the Commission individually. The Commission needs no defense at my hands. Its record is before the people of the State of New York; by that they are willing to be judged. As to the personal attacks make upon me, permit me briefly to make the following statements:

The charge made by Mr. Collins, that I procured the repeal of the six-inch trout law, is false. I have never made any effort for the repeal of any law for the protection of fish and game; on the contrary, I have spent a great deal of time and some money in promoting legislation for the better protection of fish.

Next, the charge that I had some sort of an interest in receiving or selling fish illegally caught by the netters is a lie, and Mr. John D. Collins knew it to be false when he uttered it. I have never received any fish from Oneida Lake whatever, and I challenge Mr. John D. Collins to produce the proof or evidence for his statements, or stand convicted of being a willful and malicious slanderer. I also challenge him to produce any evidence that I have ever done anything as a buyer or seller of fish that has been inconsistent with my position as a Commissioner for the State of New York.

And now, Mr. Editor, there has been considerable said as to the propriety of a fish dealer occupying the position of Commissioner of Fisheries, and if it were not for occupying too much of your valuable space, I should like to spread before your readers copies of correspondence that I have had with the Fishery Commissioners of foreign governments, with the United States Fish Commission, and with the different State Commissions, which I think would clearly demonstrate that so far from the two positions being incompatible, my occupation as a dealer in fish has made such services as I have been able to give to the cause of fishculture and fish protection of more practical value than they would have been if I had been engaged in any other business.

EUGENE G. BLACKFORD.

BROOKLYN, N. Y., Dec. 27.

COD FISHING FOR SPORT.

OF course, the idea strikes one as rather tame, but when followed under the right conditions you will find excitement lurking around on all sides, as well as underneath. About the first of October, as cool weather comes on, schools of cod work in toward the land, and numbers are found in the traps, pounds and gill nets. These shoal water fish, when taken with a hook and line, act much livelier than when they are in deep water, so that a 10 or 15-pounder makes considerable fight before he is landed. The right conditions for this kind of fishing are the four nights before and the two after the full of the moon in the months of October and November, with a clear sky and not too much sea running.

In the outfit, any kind of boat not likely to drown you will do; linen tautog lines, with rather small-sized Harrison bass hooks, two on each line, with respectively 24 and 30in. snoods, sinker weighing 3 or 4oz. In bait, fresh menhaden, herring, small fish, lobster or clams. Start in the evening, soon after daylight has gone and as the moon is well up. Go from one-third to two-thirds as far from the shore as you would fish in the daytime. Keep the hooks about 3ft. from the bottom in from 5 to 10 fathoms of water. There is a weird excitement in this kind of fishing found in no other. You hear the distant cry of the bittern and night heron, notice the phosphorescent trail made by some stray shark or big fish as he plunges by, watch the long ground swell, until it seems as if it were really alive, and with the swash of the sea on shore you by this time have a mighty sharp bite from a cod and he does not at all resemble a log as you pull, but tries his best to get away until landed. During the fishing a spine dogfish or so investigates; then comes a peculiar kind of bite and, as you look over, there is something alongside that reminds you of the mouth of an old-fashioned carpet bag with nails on end stuck around the edge; this is a goose or bellows fish, whose use, as yet, has not been found out. Now you think you have got fast to the bottom but soon find it is a skate about 4ft. across, which comes up slowly in circles, having by prowling around got a hook in one of his numerous outer edges. Then by fishing about half way to the bottom you can catch quantities of frost fish or whiting. Codfish are more numerous inshore and bite better during the night than in the daytime. If after you are through fishing you still wish for more excitements just catch a sea wrong, or rather let it catch you right, as you land on the beach, and you will get enough in the next few seconds to last well into the morning.

FOREST AND STREAM, the weekly gentleman sportsman's journal, comes to hand every week rich in reading that is not only real in its delineations of those noble, invigorating and health-giving recreations of which it is the advocate, but clean and pure in its tone. The dog jockey and fish liar extraordinary having been eliminated from its columns, there remains only meat for the true sportsmen. Its natural history department is always entertaining for both young and old; and the ladies often find a diversion in its columns. This journal can go into any household. The last number announces some very clever articles in the near future.—*Readers' Union Journal.*

While one of the guests at Innimore Lodge, Mull, Scotland, was salmon fishing in the Colleader River, a grouse rose behind him as he was casting back his line. He hooked the bird, and, after playing it for some time, succeeded in bagging it.

THE WOLF OF THE WATERS.

A FAR off, in the extreme northern part of the State of Wisconsin, secure from ordinary intrusion, lie the cluster of small lakes that have become famous among the members of the angling fraternity as the home of the lordly muskallonge. They are scattered in bewildering profusion over a territory many hundreds of square miles in extent, and comparatively few have become well enough known to acquire distinctive titles, and, owing to the absence of an accurate record of such observations and christenings as have from time to time, in desultory ways, been made, several have unhappily received the same name, which fact rather tends to confuse the pilgrim from other lands.

The great majority of them, however, are so remote from the confines of civilization and take such little part in the active affairs of every day life, being seldom looked upon or traversed except by the adventurous sportsman, that they are very likely to remain in their present state of obscurity for some time to come. They represent an immense variety of sizes and shapes, some being bound together in the most fantastically constructed groups, while others stand out isolated and lonely, as though lost and deserted amid the tangled, almost impenetrable mass of forest growths that surround them.

Many have their outlets into the numerous tributaries of the Wisconsin River, being connected in their descent by hundreds of cold, clear, and for the most part shallow little creeks which serve as excellent guides from one to the other. A great many empty, through like channels, into rivers flowing northward on their placid way to Lake Superior. Although there is great irregularity in respect to their various formations, comparative depths and other characteristics, there seems to be considerable order in the distribution of the different groups as far as their relative position to one another is concerned, for there is just about the same amount of space between them all, and the traveler can feel almost assured that three or four miles in any direction will take him to one of these lakes or to the stream that immediately empties into or flows from it.

In size they range from an average width of 200yds. up to five or six miles, the majority being from a half mile to a mile in diameter. They are all, almost without exception, hemmed in to the water's edge by dense forests of spruce, pine, hemlock, maple and birch, with here and there the clean-looking Norway towering in stately majesty above its less favored rivals.

They are all well supplied with game fish of several varieties, and here, whether trolling between high, picturesque bluffs or tramping with gaudy fly along the wooded, secluded banks of the trout streams, the gentle art can be enjoyed in all its perfection. There is an element of primeval, untainted wildness in the surroundings that lingers long in the memory of the enthusiastic devotee, and which lures him back to these lonely spots with an irresistible fascination. He is so far away from the influences of his past existence that he truly seems to move and have his being in a separate and distinct world, and the feeling, while it lasts, is delicious. But the ties of civilization have too firm a foundation in his nature to permit him harboring a very strong desire to lead the unfettered life of the roving woodsman, and when the time comes he gladly returns to the conventionalities of home life.

The yearly immersions in forest depths, the many silent interviews with the inquisitive red squirrel on some obscure runway, the noiseless tramp through deep woods or over the treeless plains, in the dim half light of early dawn, the pleasant reveries in some open glade smoothly carpeted with the soft, yielding pine needles, the long pulls through the white-capped waves of some distant lake where the weird, human-like cry of the wary loon mingles in sweet accord with the light plash of the oars, the sudden flight of the timid duck startled by the appearance of the light canvas boat as it floats silently around one of the numerous bends in the shallow stream, the *honk, honk*, of the wild geese passing high overhead in their swift journey to the south—these are the scenes that appeal to him so strongly and to which he hastens to return with an ever increasing affection. And aside from the matter of refined sentiment, who can estimate the amount of physical benefit received? He leaves almost broken down under the demands of a busy life and comes back tanned, strong and healthy, with a strange, enjoyable feeling of elastic endurance, as though the pure air, fresh from the balsam boughs, had given him new life.

In the course of a year many people find their way to this lake region, some equipped only with hook and line, some in search of the elusive deer, and others to combine these pleasures with the enjoyment of sleeping for weeks in the open air. Quite a number go up during the summer, oftentimes taking their families along, and camp on some convenient lake close to the railroad station where supplies can easily be obtained. But others, whose main object is to secure good hunting and fishing, will penetrate the wilderness as far as possible with the aid of horse and wagon, and, when the limit of this sort of travel is reached, push on to more remote points in their boats or over game trails. In trips of this kind a folding canvas boat is almost indispensable, as it can readily be carried from one point to another, and at the same time is very staunch on the water.

Now and then some rich old fellow, strong in his love of the woods, will come up alone with a single small tent, and, accompanied only by the guide that he has probably engaged in advance, travel from one group of lakes to another, fishing and hunting as he goes, disturbed in his solitary devotions by none.

A few years ago muskallonge were very plenty in all the lakes of this region, but, as the destructive axe of the lumberman cleared the way through the trackless labyrinth, all those lakes at all accessible from their rough wagon roads were soon depleted, and at the present time they are rarely caught except in waters far removed from these points. Many were taken to supply the immediate wants of the voracious lumbermen, but their destruction, for the most part, is due to the despicable desire for so-called "fame" that actuates many unsportsmanlike anglers. Some of this class seem possessed of the idea that the more fish they can kill in a certain length of time, even though they are allowed to spoil by the barrel, the higher they stand in the estimation of their brothers of the craft, and in consequence of this childish delusion thousands of these noble fish were killed and then thrown out on the bank to rot in order that these butchers might gratify their barbarous ambitions. They are one and all sadly lacking in the essentials that enter into the appreciation and enjoyment of manly sport, else they could but realize how lowly they appear in the eyes of the humane sportsman.

As an outcome of this wholesale destruction, hardly a muskallonge can be found in any of the lakes lying at all close to the lumber roads, and as good fishing grounds have become more and more remote and difficult of access, the inexperienced in this part of the country have much trouble in securing reliable information as to the best points at which to locate, and greater trouble in reaching these points after such information is obtained.

Plenty of good sport can yet be had with the muskallonge in these waters, but they can no longer be captured without hard, tiresome marches through thick forests and long journeys over out-of-the-way lakes and their connecting streams. However, the pursuit of this sport justifies all the preliminary work and expense involved, and to many its value is far greater than this.

One dark night in the early part of October, not many years ago, found us plodding along almost at the end of our journey in the very heart of a Wisconsin wilderness. We had traveled since 2 o'clock that afternoon, and if there had been light enough to make our tired faces and drooping forms visible, a single glance would have convinced the most skeptical observer that we were certainly in need of immediate and long-continued rest. Eighteen miles! At home, on the smooth, well-kept highways, this would have seemed a very short distance for a day's journey on wheels, but in the north woods a mile is one of the most indefinite of quantities, and it is almost impossible to find any two inhabitants who will agree as to the exact location of or distance to even well-known points. It is, therefore, better for one not to place too much confidence in the off-hand replies to his anxiously delivered questions. A mile in these woods may mean an hour's hard work or it may be a matter of only a few minutes' exertion, and as hope is a great incentive to action, it is probably better to be without exact knowledge as to the distance to one's destination.

We had virtually been sustained by hope for the last hour or two, as it was now nine o'clock and we had long ago ceased to rely on the teamster's frequent and voluntary assertions that we would soon be there. We would walk awhile to keep warm and then climb upon the sturdy road wagon that carried our outfit, to procure momentary respite for our weary limbs. It was not pleasant riding, to be sure, nor was it for an instant to be considered in the nature of a luxury, but it was a much easier mode of motion than incessant tramping at that particular time.

To those who have passed through these nearly trackless wilds on four wheels probably nothing can be said that would render their reminiscences of such moments more vivid or painful, as they have taken the last degree, but to the uninitiated there might be conveyed a faint, inadequate idea of the wondrous torturing properties of one of these rough vehicles on its natural track—an old, abandoned logging road. The peculiar and characteristic sounds they give out while in motion remain an indestructible element in his memory. It is a continual, unceasing bump, bang, crash, rumble and creak from one end to the other, and the dull, monotonous jar on one's ears becomes in the course of a few hours almost unbearable. When the horses stop occasionally to drink and the dense forest again resumes its habitual silence, a great sense of relief is experienced. The road is always full of fallen logs, chunks of wood, rocks, gullies and holes of every shape and description, and the typical woodsman never for a moment thinks of turning to avoid them, but strikes these formidable obstacles with a straight-forward persistency that is, to say the least, inspiring. They time and again drive over logs over two feet in diameter, and jolt down into those frequent deep openings characteristic of corduroy roads, not only with apparent unconcern, but with a very perceptible feeling of delight.

The one we had engaged was in no wise different from the others, and for seven long tedious hours he had been instilling into our minds many new and startling ideas as to the endurance of wagon material in general and of the human frame work in particular. We began to feel as though we would be deeply grateful to somebody if we could only catch sight of his shanty and know positively that it would not be necessary to bump through this vast forest the night through.

The trail descended into a deep ravine, and we passed down into an almost impenetrable darkness; the sounds made by the wheels were muffled in the yielding sand, and as the bump, bump, crack, ceased for a moment we were surrounded by a silence so deep that it could almost be felt. The trees interlaced their crooked branches overhead and shut out even the pale gleam that would have come from a few stars, of which we had a glimpse now and then through some little opening. A slight splashing noise immediately in front informed us that the horses had entered one of those cold numerous little trout streams that thread the country in all directions, and we dismounted to stretch our stiffened limbs and allow the tired animals to refresh themselves with large draughts of the pure water.

It had been pleasantly warm during the day, but as night came on the air grew chill and penetrating and it was only by frequent brisk walks taken in the dark at the risk of a hard fall that we could keep up sufficient circulation to feel comfortable.

At length, after passing a bend in the Wisconsin River, which flowed in a dark, noiseless, snakelike line between thick growths of pine and hemlock rising straight from the water's edge, we entered a chopping or open place in the forest caused by cutting out the heavy timber, and when the driver gave vent to a long, peculiar cry that rang weirdly out on the night air, we knew that the much needed relief was close at hand.

And so it proved, for near the other end of the clearing we saw a gleam of light that appeared to come through a window of some kind, and soon after drove in between two long, low, heavy-looking log houses that had evidently served as a lumberman's camp in days gone by. The teamster's good wife had wakened at his call and gave us a hearty welcome as we entered the rude but comfortable interior, where a roaring fire in a big sheet iron stove was throwing out welcome rays of condensed sunshine. We ordered supper for two, and then proceeded to thoroughly toast ourselves on all sides while enjoying the savory odors of hot coffee and broiled venison that floated in from the kitchen and served to whet our already ravenous appetites to a keen edge. It would be a useless task to attempt to describe our intense appreciation of that simple meal. We cannot think of it without a glowing sense of satisfaction as of some long-felt wish fulfilled, and to this day it stands preëminent among a host of other but minor feasts.

And the beds! They were soft and clean, a fit resting place for tired out mortals; and while the fire burned lower and lower and the sharp north wind with mournful voice swept swiftly by the rough hewn corners of our rustic retreat, we thankfully closed our eyes and sank into that sweet oblivion which is the just reward and natural result of a clear conscience and a long march through the pure, clear, health-giving air of the pine woods.

The next day dawned bright and beautiful, and after partaking of a hearty breakfast and photographing for future reference the rude looking stucture where we had been so hospitably received, we crossed Little Germaine Lake, on the east side of which we intended to camp, and were soon busy in the pleasant occupation of erecting tents and getting our equipage in good order. Our strong canvas house was soon up, and a few boatloads of short hemlock boughs from the lake shore a little further up were evenly distributed along one side and served as excellent bedding. We placed the large sleeping tent and a smaller one, under which we intended to eat, face to face and about seven feet apart, and over a pole which united the two we stretched a stout convas fly. Our camp stove was placed under this, and by opening the flaps of the tents it was an easy matter to heat the whole space thoroughly, and we were thus enabled to keep everything nice and dry and sleep comfortably even during the coldest weather.

Big St. Germaine, some two by five miles in extent, lay to the west of us, and although there was no water connection between it and the lake on whose shore we were camped, the strip of heavily-timbered land dividing them narrowed down at one point to about twenty-five yards, and this place afforded a short and convenient portage from one to the other. There was a large rugged boulder right in the center of this pathway, and one seated on it, commanding a view of both lakes through the fantastic archway of entwining branches and clinging vines, enjoyed as picturesque and beautiful a scene as he could well wish for. The water was very shallow along close to the shore, gradually deepening until the rays of light could no longer penetrate to the bottom, when it assumed an appearance of almost inky blackness. Both were surrounded on all sides by alternating groves of northern pine, hemlock, maple and birch, in some places growing down close to the high-water mark and in other places standing back far enough to show strips of firm, white sandy soil, which the waves had washed clear of all objects not deeply imbedded in it.

A few years ago these lakes were famed far and wide, among the angling fraternity, as the home of the gamy muskallonge, and it was here that we had come to enjoy our first experience with it.

We were not novices in the gentle art, and many a black bass, salmon and trout had fallen to our trusty rods, but, it should be confessed at the start, that we had never hunted the muskallonge and had never before been on the Eagle waters. If such had been the case, we most assuredly would not have settled down so comfortably and with quite so much self-satisfaction on the shore of St. Germaine. For the most part, we were ignorant of the habits of this denizen of wild waters, and had but faintly outlined ideas as to the best manner in which to pursue the sport, but we had full confidence in our ability to master the details in a short time.

We remained in this camp two weeks, and not a day passed but what we were out scouring the lakes in all directions, yet with all our care and perseverance nothing larger than a five pound lake trout was ever brought in from these waters. It is true we were enjoying ourselves immensely, and, if our expectations had not been pitched so high in a certain direction, we should confessed that the fishing we did have was first-class. We caught many fine large-mouthed black bass with live bait, to say nothing of the great number of good-sized, gamy lake trout, but we had not come six hundred miles for these alone, and we felt that there was still an aching void that had as yet remained unfilled.

Ruffed grouse were plenty, and it was only necessary to take the shotgun and wander along the old lumber roads in the morning and evening in order to secure from six to a dozen fine fat fellows. They were not hard to kill if one preferred to take them as they sat with bobbing heads on a low limb or strutted proudly before him in the open trail; but should he wish to adopt the more sportsmanlike method of shooting on the wing, he would soon find that he stood in need of all his skill. They generally lie quite still until the intruder is almost upon them, when they rise from the ground so suddenly and with such a whirr of rapidly beating wings that unless one's nerves are unusually steady he is apt to be slightly startled. When a few feet from the ground they start off with the velocity of a cannon ball, and it requires a good snap shot to bag this noble bird where the surrounding timber is at all thick. The flesh of the grouse is palatable in the extreme, being juicy, tender and richly flavored, and when one is split open on the back and broiled to a turn, with proper seasoning, there are few things so pleasing to the taste. H. LYNDE.

[TO BE CONTINUED.]

NOTES ON MASSACHUSETTS FISHES.—I have caught two brook trout in my fyke net in Great Harbor, Wood's Holl, lately, and they were full of ripe eggs. I put them in the aquarium and one of the fish deposited her eggs there. The trout lived only a few days in the aquarium. The sea bass and mullet died Dec. 20. The temperature of the water is down to 35°. We are doing well taking cod eggs, having already taken more than 30,000,000. From present appearances, if the fish live two or three weeks longer, we ought to obtain 50,000,000. Cod were very plentiful throughout Vineyard Sound during last fall. The tomcod are now spawning here.—VINAL N. EDWARDS (Wood's Holl, Mass.). In the small streams flowing into Cape Cod and Wellfleet bays large numbers of eels are now being caught. W. P. Burnham, of Essex, Mass., caught twenty-two pickerel through the ice in Chebacco Lake on the 9th inst. Some of the fish exceeded 2lbs. in weight.—*Gloucester Daily Times.*

ANGLING NOTES.

ONE of the weekly sporting papers, referring to an article published in FOREST AND STREAM last week, asks for information regarding the American imitations of trout flies, particularly as to the originals of the General-Hooker and royal-coachman. Unfortunately the writer is ignorant of the big latin names by which scientific gentlemen designate the various flies and bugs used by anglers, but has seen the flies many a time along the brooks and in the fields and woods.

Miss Sarah McBride, daughter of the late famous fly-dresser, wrote an article on this subject some years ago for this paper. She had made a scientific study of the matter; this article was widely copied, and it can now be found on page 602 of "Hallock's Sportsmen's Gazetteer."

One early spring day some twenty years ago the writer of these notes happened to be fly-fishing on a little pond in the western part of Ontario county, N. Y. My companion, A. L. Williams, a famous sportsman and exc l-lent fly-fisherman, had given up casting in disgust and taken to his pipe for consolation, for though the trout were rising in a provoking manner, we could not coax them to look at our flies. We had tried the usual assortment of hackles and wing flies in vain and it certainly looked as if we were going to be badly left. I had about come to the same conclusion as my friend, when I happened to capture a little fly that was fluttering past me, and to which they seemed to be rising. It had light brown wings, a greenish body and no tail. Looking over the leaves of my fly-book I found an old General-Hooker of McBride's make, which was almost an exact copy of the fly I had caught.

As soon as I commenced casting with it the fish began to take, and in less than an hour I had fourteen fine fish in my creel. I lost it on the fifteenth, and as it was the only one and they would not take anything else, we had to give it up. So much for the General-Hooker.

The royal-coachman resembles a moth with white wings and black and red body, often seen about the fields late in the season. This fly also resembles the clay or soldier-fly.

It is to be regretted that some of the manufacturers of trout flies will change the old patterns. If they wish to stick a tail on to the coachman or in any way alter the accepted standard flies, they ought to give them some other names. None of the flies that imitate the moth, for instance, should have tails, and the wings should be dressed rather flat. The gnats and the cowdung also lack tails, and to tie them with them is absurd.

SCARLET-IBIS.

THE QUANNAPOWITT ANGLING CLUB, at its last annual dinner, chose a committee consisting of Messrs. J. P. Hartshorn, A. H. Binden and John McQuinn, to coöperate with the fish committee of Wakefield, Mass., in their appeal to the Legislature for authority to regulate fishing in Crystal Lake. The lease of the lake expires next spring. The season for bass fishing opens by law July 1 of each year, when a grand onslaught will surely be made on the fish, it being generally understood throughout the State that the lake is well stocked and the fish abundant. During the past summer camping parties from other towns were quietly ensconsed on the island, having been told that the lease was off. It is not hoped nor desired to prohibit fishing by the public at large, but simply to restrict it to two or possibly three days in the week, and to prohibit fishing on Sundays. The bearing of the whole matter on the continued purity of our domestic water supply was the chief subject of debate, and it is one which ought to interest all the people.—B.

Fishculture.

RESULTS OF FISHCULTURE.

Editor Forest and Stream:

It is probable that to those of the readers of FOREST AND STREAM who are not particularly interested in fishculture, and are therefore not acquainted with the facts, the statements of Mr. Milton Peirce, which have recently been made concerning the present aspects of trout culture will appear to be quite frank and plausible. Therefore, in view of the attitude he holds toward present methods of fishculture in general a little further dissection of them, as evidence of his competency as a critic, may be advisable. And first, what does he offer to sustain his statements? Simmered down it might be formulated into the following declaration, viz.: "I, Milton P. Peirce, an eminent authority on fishculture on my own showing, say that is so, and therefore it is so." Mr. Peirce's egotism is apparently unconscious, to do him justice. The gist of the controversy between Mr. Peirce and myself is well set forth in the following from the *American Angler* of Oct. 4:

"A MAD FISHCULTURIST.—We print the annexed communication in full at the request of Mr. Peirce, whose main trouble seems to be restlessness under opposite opinions to his own. His dictatorial style is offensive, and discussion of any subject with him appears to lead to personalities that are always avoided and condemned when gentlemen exchange views on public questions. Our editorial, 'A Mad Fishculturist,' published some weeks ago, was suggested solely by the humorous element contained in two public assertions by Mr. Peirce, that Byers (an old veteran) was a callow youth and that he (Peirce) 'knew it all.' We had no special design to belittle Mr. Peirce's abilities or ridicule his pretensions, and cheerfully accede to his somewhat modest request that we should allow him to blackguard us in our own columns.—ED."

I very respectfully decline to accept controversy upon Mr. Peirce's terms. Trout culture is not being abandoned, but is keeping step with other branches of fishculture and needs no very urgent defense. Mr. Peirce states that trout culture has been discontinued in France. Now the papers by C. Raveret-Wattel, F. Muntadas and Frank H. Mason, Consul at Marseilles, in the Bulletin of the U. S. Fish Commission for 1887, are direct evidence to the contrary. Mr. Peirce's observation appears to be of the period when very young fry were deposited as food for the cottoids which inhabit trout brooks, instead of the past four or five years during which the output has been yearlings, which are not only able at once to defend themselves against their enemies but also to devour the smaller of them, and which policy is producing such marked results in this country and in Europe.

Mr. Peirce is willing to admit that if his methods are followed there is still some hope for fishculture. (This appears to be the main trouble with him.) In trout culture it consists in increasing the meanderings of the streams. Even if there were anything in this, those who are at all familiar with trout streams are aware that they will insist upon laying out their own courses.

There is a vague hint of some experiment in shad culture by "Peirce's methods" now being made. This is certainly interesting news and the result will be awaited with great expectations. But let us take up the shad and whitefish culture as tests of Mr. Peirce's fairness and reliability as an observer, since these are commercial fisheries, the statistics of which are regularly and accurately collected, and cannot be controverted by vague and unsupported assertions. Any reasonable person would be convinced by their growing abundance and cheapness that there is a constant increase in the numbers of shad. In spite of the fact that by reason of the wonderful improvements in methods of refrigeration by means of which they not only can be shipped to any distance, but are kept in fresh condition for any length of time, and also notwithstanding the rapidly-increasing population, fine roe-shad were sold in the cities of the Atlantic coast States during the spring of 1890 for twenty-five cents each. Further, so great was the glut that for the first time in twenty-five years the salting of shad was begun on a commercial basis on Chesapeake Bay. Still further, as many as one hundred barrels of shad have been caught at sea recently at one haul of a purse net by mackerel fishermen. These evidences would be explained by Mr. Peirce by the assertion of "a year of plenty." To this I will refer further on.

Mr. Peirce's qualified admission as to the value of artificial stocking as shown by the population of Pacific waters with shad may be supplemented by some statistics of interest. The shad catch of California in 1888 was 151,871lbs., or about 45,000 fish. In many places where the largest runs occurred, notably in Monterey Bay, there is no special apparatus used for shad and more are taken by accident than otherwise. The catch, therefore, while large for a new fishery, probably gives no real idea of the abundance of the species. During 1887 as many as one or two tons of shad were shipped from Santa Cruz, Cal., in one day. They are found as far north as British Columbia and Alaska, and certainly furnish, to a reasonable mind, sufficient evidence as to the beneficial results of artificial stocking. If the one or two hundred thousand delicate little fry carried in cans from the Atlantic coast to California, and deposited in waters to which they were until then unknown, would live and multiply at such a rate, what must be the result of work so much more extensive and constant.

Now to return to the Atlantic coast. If Mr. Peirce were to ask shad fishermen at Gloucester, N. J., Alexandria, Va., or on the Susquehanna above Havre de Grace, whether the shad fishing is improving or declining, he would probably be told with a mournful shake of the head that shad fishing is "played out." It is very evident that it is from such sources that Mr. Peirce draws his inspiration. What are the facts in the case as shown by the carefully collected statistics of the Fisheries Division of the U. S. Fish Commission? Why, that at present the shad catch of the Atlantic coast is increasing at the rate of about one million per annum, that since 1884 this increase has finally resulted in an addition of $1,200,000 a year to the food supply of the country (at the moderate estimate of twenty cents each) in this one species. And to show that this is not mere vogue, guesss work or speculation let us take what statistics are available for the purpose. The first statistics which were taken after the commencement of the artificial propagation of shad, which were those of the census of 1880, which showed the catch of that year to have been 4,140,968. It was not until 1885 that a systematic collection of statistics of the Atlantic coast fisheries was begun. In that year, although at that time as compared with the present the output of fry was but meager, the catch had increased to 5,173,931, an increase of 1,032,963, representing an increase of value of $206,593 over 1880. In 1886 the catch was 5,584,368, an increase in number of 1,443,400 and in money value of $288,680 over 1880. In 1887 the catch was 6,715,405, an increase in number of 2,574,437, and of money value $514,887 over 1880. In 1888 the catch was 7,660,474, an increase in number of 3,519,506, and of money value $703,901 over 1880. The statistics for 1889 and 1890 are not yet complete, but a coservative estimate places them in the neighborhood of 9,000,000 and 10,000,000 respectively. The money value is based on a rate of five shad to the dollar. It will be seen by the above statistics that in the four years of 1885-88 the aggregate money value of the increased production was $1,714,061, and the average annual increase in value $428,515. Now it is well known that it was due to the rapid decline of the shad fisheries and the threatened extinction of that fish, more than to any other cause, that the U. S. Fish Commission came into existence, and to the work of that great organization, supplemented to a small extent by some of the States, alone can be traced this gradual and regular increase in the shad fisheries. How, then, are we to account for the impressions which prevail in some localities that the river shad fisheries are on the decline and which are undoubtedly the basis of Mr. Peirce's erroneous conclusions. Here comes in the value of statistics over the conjectures of disappointed fishermen and the local "*Veritas*" or "*Pro bono publico.*" The explanation of it all will be found in the development of the pound-net or gill-net fisheries of the Atlantic coast. Let us take Chesapeake Bay for example. The number of pound-nets in these waters in 1887 was 973; in 1888 it was 1,414. The statistics for 1889 and 1890 are not yet available, but it is estimated that there are now at least 2,000 of them. By reason of these great pound-nets, some of them stretching two and three miles out from the shore, the bulk of the shad catch is now taken in salt water and finds its way to market to a great extent through new channels. As four men operate as many as ten pound-nets, there is great economy in this method of fishing. The gill-nets also requiring but little capital, have greatly increased in number, and so the fish which find their way into the rivers are apparently less abundant because the catch is divided among a greater number of fishermen.

The proportion of fish taken in the bays and lower portions of rivers is becoming greater each year, and thus the great and expensive shore seines in fresh water are becoming less and less profitable. As a matter of fact, however, there is a constant increase in the number of shad caught in the rivers, as the statistics show. During the season of 1890, which was regarded by the fishermen of the Potomac River as a poor one, 100,000 more shad were caught in that stream than in 1889, as shown by the statistics of Health Officer Addicks, of Washington, D. C.

It is well known that certain of the salt fish industries of New England are declining, simply because, by reason of improved refrigeration, more fish are finding their way to the markets of the country in a fresh condition, and this, to some, has the appearance of a decline in the fisheries themselves. During 1888, '89 and '90 the output of shad fry was many millions greater than during the entire previous history of the work, and this great output will probably be heard from 1891 to '94, showing, it can be safely predicted, a still greater ratio of increase.

Mr. Peirce complains of the meagre shad catches of the New England waters. This can be traced to the meagreness of the output in those waters. The total output of 1886 was 34,659,000. Of these but 5,500,000 were deposited in the Hudson and New England waters. In 1887 the output was 108,425,000, and 5,250,000 of these were placed in the Hudson and New England waters. In addition 6,644,000 eggs were sent to Cold Spring Harbor for hatching and deposit in the Hudson and its tributaries. Here we can trace out cause and effect very clearly. Perhaps in this connection the following concerning the shad fishery of Florida will prove interesting: Compared with 1880, the catch in Florida in 1889 was 1,000 per cent. greater, while the number of fishermen employed was only 200 per cent. greater.

The output of shad fry by the U. S. Fish Commission is now nearly 150,000,000 per annum. The survival of 7 per cent. of these would equal the shad catch of the Atlantic coast. "Does any one suppose that one in fifteen of the plant of young shad made in the waters of the Delaware last season will ever be seen again by mortal eye?" asks Mr. Peirce in the late *Journal of Carp Culture and Rural Hydraulics.* Well, judging by the results on the Pacific, some of them do live in spite of the wails and lamentations of the "prophets." And would the survival of seven out of one hundred of these fry be an unreasonable expectation?

And now, concerning the "years of scarcity and abundance" which prevailed generally before the statistics were regularly and systematically collected, and which are still used as an argument by those who view the question from a purely local standpoint, or are not well informed. Regarding seasons of plenty and scarcity of shad it has become recognized as a law of the species that years of plenty in certain rivers are superinduced by a high temperature of the water in the early season. Thus while the run of shad in southern rivers and coastal waters south of Virginia may be exceptionally large, the passage of these migratory hordes into the Chesapeake and Delaware basins, as well as into the Hudson and Connecticut, is controlled entirely by the temperature of those waters, while as often is the case, the waters of the Chesapeake may be of suitable temperature, a reverse condition may exist in the Delaware, in which case the run in the Chesapeake and tributary streams is usually greater than in the Delaware. Reverse the order and like results are obtained. The movement of these migratory species in spring along the coast from the time of their appearance in Florida rivers is wholly a matter of condition of environment. If the waters are not suitable the migration continues until proper conditions present themselves. A perusal of the reports of the Canadian fishery officials for the years in which the shad were least abundant in our waters shows that they were the most prosperous years in these regions.

Regarding the abundance of whitefish, it is acknowledged by all the leading dealers and fishermen of the largest shipping center on the lakes (Sandusky) that artificial propagation is the only means of maintaining a supply of that species. Again, the facts adduced from the shad hypotheses are applicable to the whitefish. There are seasons of bounteousness in the United States, while the opposite extreme applies to Canada; yet an evenly distributed supply is more generally the rule. With this fish partial returns for 1888 indicate a marked increase in the abundance in localities where artificial propagation has been systematically carried on on a large scale. This is especially noticeable in the fisheries of the western end of Lake Erie. In the region embraced between Toledo and Vermillion, and including those towns, together with Port Clinton, Sandusky, Bass Islands and Huron, the increase in the quantity of fish in 1888 as compared with 1885 amounts to about 12,000,000lbs., having a market value of over $300,000. The catch in 1888 in the region named was nearly as large as that of the entire lake in 1885. Now let us see how the increase of fishing appliances would be likely to affect the individual catches of the fishermen and create the impression among them that the fishery is declining. It is hardly likely that declining fisheries would offer inducements for a rapid increase of fishing appliances. In Lake Erie there were in 1880, 758 pound nets; in 1885, 928. Of gill nets there were in 1880, 5,775; in 1885, 22,664. Of haul seines there were in 1880, 18; in 1885, 71. Persons employed in 1880, 1,620; in 1885, 4,298. Steam vessels in 1880, 9; in 1885, 53. Other vessels and boats in 1880, 593; in 1885, 1,483. Total of primary products of the fisheries in 1880, $29,087,000; in 1885, $57,556,517. This shows the increase for five years, and the succeeding five years, when the statistics are completed, will show still greater increase. If Mr. Peirce is wrong in these matters of shad and whitefish culture, where is he likely to be right?

My purpose in taking the trouble to produce these statistics is not with an expectation of convincing Mr. Peirce of the fallacy of his position, I am well aware that that is impossible. But they will enable the readers of FOREST AND STREAM to form an intelligent opinion on the subject, as they represent not only the carefully collected statistics of a great government bureau, but also reflect the opinions of the great fishculturists of the country, not one of whom will be found to agree with Mr. Peirce. His charge is that they are all self-interested, and in fact no better than robbers. I leave that element of the discussion to your readers. I will stop only to correct one of Mr. Peirce's misstatements. He attempts to make it appear that the publisher of the "Journal of Carp Culture and Rural Hydraulics" was in some way attacked by me. This is not so. That gentleman has my sympathy. The case still remains the same, Milton P. Peirce vs. the world of fishculture. If he was right Prof. Baird was wrong, and all the living lights of modern fishculture are frauds or victims of delusion. And further, if he is right the sooner we know it the better. The country is going to destruction rapidly enough now, according to the "prophets."

Mr. Peirce has some special personal grievances against me

First, he thinks I am not a fishculturist—as he is. I hasten to say that I am not, and never pretended to be.

Second, because some months ago I said that I had recently had an application to lease certain premises for a trout hatchery, he has since persistently advertised me as the malevolent owner of a trout stream with which I wanted to victimize some poor deluded fishculturist, who had not consulted Mr. Peirce. I am not so fortunate. The fact is, I own a little tract of land on which there is a group of springs, such as are used in this neighborhood for hatching and rearing trout. The State Hatchery has a similar group and its enterprise is a wonderful success. I know of five such plants near this city. I spoke of the application simply to show that another enterprising citizen wanted to embark in the business. The land was already leased and used for another purpose.

Third, I said early in this controversy that trout planting had greatly improved the fishing in many streams of this State, I think using the number "a hundred." Ever since Mr. Peirce has been in mortal distress because I would not give him the names of those hundred streams. I desire now to amend by saying "hundreds." I think the Platte alone has a hundred tributaries above where it leaves the mountains, and all its waters, accessible to trout, have been improved by planting, in the main stream and its larger branches, trout fry from the State hatchery. But only a few of these streams have been named as yet, and hence it is impossible to satisfy the consuming curiosity of Mr. Peirce upon that score. Besides the Platte, plantings have been made in a dozen other great river systems, or water sheds, viz.: The Arkansas, Rio Grande, Las Animas, San Juan, Gunnison, Blue River, Eagle River, the Boulders, St. Vrain, Big and Little Thompson, Cache-a-la-Poudre, North Platte, and others. I may as well amend again and change "hundreds" to "thousands." And, bear in mind, the Eastern brook trout is not a creature of accident—*vide* Mr. Peirce's theory of "years of plenty and years of scarcity"—in this region. It is an exotic, introduced here but a few years ago through the State hatchery—the best investment the State ever made.

In order that Mr. Peirce may not stumble over any more imaginary obstacles on my account I wish to repeat that I am not a fishculturist; that I have no trout brook to lease, and am not a competitor in his line of business; that I never caught a fish for the purpose of selling it; that I never sold a fish first or second hand; that I know what I see, believe many things I hear and a goodly portion of that which I read. I know that trout hatching and trout planting in the waters of Colorado have been a marvelous success; I am convinced that fishculture in other lines in many parts of

the world has been no less successful, and that the science is gaining ground every day to the incalculable benefit of nations and peoples. I have lived long enough to see its beginning (in this modern age), to follow its history and to glory in its magnificent triumphs. I do not believe that Mr. Peirce's calling me "callow" in all the sportsmen's papers of the country, as he seems determined to do, will either stop or turn back the wheels of progress in this great industrial enterprise. Nor do I believe that all its disciples are fools and that Mr. Peirce is the only living creature who knows all about it. WM. N. BYERS.

DENVER, Colo.

FAILURE OF TROUT CULTURE.

Editor Forest and Stream:

I notice in your issue of Oct. 9, page 229, under the head of "Angling Notes," you copy certain notes from the Springfield *Republican* and apparently add some of your own, among which I find the following: "Because a few people have made a failure of their attempts to raise trout for the market, it does not follow that all artificial trout breeding is a failure, as some cranks would like us to believe." And you further say that there are numerous instances where restocking of old and fished-out waters have been followed with excellent results, and you quote the Castalia Club waters in Ohio in proof, saying that "there were absolutely no trout in those waters originally," etc.

Now, as I am one of the few who seem to have the courage to state in cold type my convictions on this question, I suppose that the "crank" paragraph is intended, in part at least, for me. Well, I am rather complimented than otherwise by being denominated a crank, for a crank used in this sense is becoming to be considered by intelligent people as a person who makes some subject a specialty, and becomes an acknowledged authority thereon.

Now I wish to repeat what I have before said, in substance, in your columns; namely, that I have repeatedly investigated these alleged cases of success in artificial restocking of trout streams and have in every instance found that there was no foundation in fact for the statements thus published. Doctors Ackley and Garlick, the originators of fishculture in America, were in the habit of trout fishing in "Cold Creek," near Sandusky, 35 to 40 years ago, and I saw the results of their angling. The Castalia Club preserve embraces the headwaters of this stream. There is at this writing an extra session of the Ohio Legislature convened here and, besides the members of the Legislature, a large number of people from various parts of the State are now here. Upon inquiry I find some who were born and raised in the region of Cold Creek, near Castalia, and each of them, together with others who have fished those waters from time to time, assure me that the stream with its little tributaries have from time immemorial been noted trout-producing waters. That portion of the waters cited by you is an inclosed preserve, where only limited fishing is permitted, the same as in the case of the Long Island preserves. Their present fine supply of trout is due to this fact and that the waters have been specially prepared as per plans stated by me in your issue of Sept. 4, page 134, and I here repeat that this is the only efficient mode of trout culture now known, and that artificial hatching is entirely unnecessary. Give the trout the proper facilities and they will produce a healthier offspring than can be produced artificially, and ten times as many as their habitat will support.

In conclusion, I venture the assertion that you cannot furnish any reliable and conclusive evidence that there are any open waters in this or any other country that have been perceptibly improved in an angling sense by artificial hatching. During my personal recollection of more than fifty years, there has always been a constant variation from year to year in the trout supply of scores of streams with which I am personally conversant, the supply decreasing for a term of years to a phenomenal scarcity, and then gradually improving (where natural, favorable conditions remained) until reaching a condition of phenomenal plenty, like the present, which is about the best I remember of; and further, artificial stocking has not in the least changed the result, for the most of the streams referred to have never been artificially stocked and they are fully as prolific as those which have been so stocked in the same regions and some of which have formerly been among the best trout waters of the region. And finally, I will ask you to kindly name a solitary person in all the hundreds or thousands who have tried trout raising for market that has made the least success beyond the "fry stage." I very confidently make the assertion that the individual cannot be found. MILTON P. PEIRCE.

COLUMBUS, Ohio.

SOME FOREIGN FISHCULTURISTS.—In a recent letter to Dr. Bean, Corresponding Secretary of the American Fisheries Society, the following information is given concerning some of the foreign corresponding members of the society: Mr. Arthur Feddersen is now living at Copenhagen and is the Secretary-General of the Danish Fisheries Society. Dr. S. A. Buch, of Bergen, Norway, is Secretary-General of the Norwegian Fisheries Society. Capt. Niels Juel, of Horten, Norway, is no longer President of the Society for the Development of Norwegian Fisheries. Professor-Doctor Malmgren is now Governor of Finland, and Professor-Doctor G. O. Sars is Professor in the University and not Government Inspector of Fisheries. Mr. Feddersen compliments the American Fisheries Society on the excellence of its transactions recently published.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

Four weeks have elapsed since I called upon "Gothamite" to prove his groundless assertion that Mr. Watson and the writer of this "started the long and low craze" in cocker spaniels. A person who wilfully or otherwise makes a statement which he cannot substantiate, and who upon being shown that he is in error refuses to retract and apologize, is not a gentleman. It goes without saying that he is not an honorable man. A person who intentionally sends for publication to a public journal malicious and untruthful statements, sneakishly conceived under the visor of a *nom de plume*, is dishonest; and it follows that the writings of such a person should be forever placed beyond the breastworks of ground where upright and manly discussion can only be successfully assailed by upright and manly discussion.

I do not suppose that Mr. Watson would blame you for having permitted "Gothamite" to impose upon your goodness and willingness to allow a full discussion of the cocker question in these columns. For myself, I can say that instead of feeling ruffled I am disposed to thank you for allowing this "Gothamite" to give us an insight into his character and the motives which prompted him to open out this discussion. The more space you give to correspondents of the "Gothamite" class, and the sooner such fellows are placed exactly where they belong, and the better it is for the dog and his genuine lovers. A few lies about myself do not matter at all. They run off me like water from a duck's back. My reputation was not made in a week, and it cannot be tarnished by a person whose statements and motives are moulded on the lines of a dog's hind leg. I do not now write to defend myself against "Gothamite's" falsehoods, because my record can do that. The object I have in view is to rid the fancy of an unreliable and altogether unworthy critic, and to get at the bottom facts about the cocker spaniels of 1890. Nobody who has read "Gothamite's" letter can believe him sincere, because he makes it as clear as crystal that he wrote: (1) To bolster up the cocker spaniel Doc, now owned by Mr. F. H. F. Mercer. (2) To belittle Jersey and other dogs that can beat Doc. (3) To push into prominence judges who will place Doc over Jersey. (4) To keep in the background judges who consider Johnny and Drake, also owned by Mr. F. H. F. Mercer, unfit for competition in a class of real Clumbers. (5) To get a free advertisement for Doc. (6) To advertise a book.

A friend says you are never happy unless you see a row going on, and for this reason printed "Gothamite's" letter. I think it far more probable that you published it as a means of drawing out something interesting (of course "Gothamite" could not write anything interesting) about the cockers of 1890. Devilish sly this, Mr. Editor, and I have got you down as always being particularly obliging and lenient when a correspondent starts in to "kill Watson and Mason." Your motto at such times seems to be "rope." Pray pardon me if I add that your apparent liking for a dog critic's funeral is not commendable.

How is it, sir, that the moment a man, or a boy, becomes the owner of a dog he imagines himself a judge? It is not so in England, except in rare cases. I would be willing to wager $2.50 against a white and red dog called John that "Gothamite" has just purchased a cocker spaniel and that he has not been to six dog shows in his life. It's the old, old story, a man (or a boy), a dog, windy effusions in the papers for a few weeks, then a funeral. As a rule, the man and the dog die on the same day. One seems to kill the other. I tell you what it is. The unvarnished impudence of the young American dog man of to-day cannot be approached by a beginner in any other business or fancy. For downright, cold, petrifying, pure black cheek he leads the world and wins in a trot, hands down. Of course there is a reason for this, and the American dog man is responsible for it. The beginner has read about Meersbrook Maidens, Rubicons, Robin Adairs *et al.* He argues with himself, when he is capable of arguing, that men who have no records except for cheek are put into the judges' ring and are written up as judges. Says he to himself, "That man never had any dogs. His cheek it was that got him made a judge, and I'll become a judge through the same channel." He seizes a pen, writes a few articles (mostly copied) for the different papers, buys a dog, and in six months appears on the scene as a correspondent for three or four papers and a judge and authority on anything and everything from a black and tan toy pup up to a Plinlimmon. These are the chaps we must come into contact with or keep out of a controversy altogether. No wonder that, as a rule, we keep out.

I well tell you of a case that came under my notice not a long time ago. A boy of 16 or 17 summers sent a letter asking if I would meet him on a matter of important business. I did meet him by appointment, and learned that he wished to buy a spaniel. He would not, he said, purchase any dog that I did not consider a good one, told me he was no judge of dogs and asked if I would accompany him to a certain well-known kennel to look at a dog he had had offered. I assured him that some of his friends in the Spaniel Club would gladly advise him. He would not listen to this, and so I finally promised I would go with him. Arrived at the kennel, I examined the dog and advised the purchase only at a low price, because the dog was not good enough to win in select company. A sale did not take place. On the way home we talked dog, and it was apparent that our young friend could just about distinguish a cocker from a King Charles. We parted at New York, and a short time after I had the pleasure of meeting the dear child at the Philadelphia dog show. He wanted to be a man because he was going to own some dogs, so we had to have a drink. Nothing else would satisfy him. We adjourned to a suitable hotel and the young critic (to be) called for something stronger than milk. I got mine, but the critic got left, the bartender informing him that he could not serve drinks to a minor. When questioned later that worthy said he didn't propose to lose his job through serving drinks to an infant! I felt sorry for the lad, and as a means of consoling him remarked, that if he didn't have a drink he had a dog. Judging, I suppose, that dog meant critic, and that critic meant judge, he braced himself up, and five minutes later he was strutting around and looking as wise as our good friend Mortimer judging a class of black and tan terriers. There was soon to be a show not a great distance from Buffalo and the writer was chosen to judge spaniels. Our young friend turned out in great style, but his dog did not win because he met a better one, which in my opinion was a sufficient reason for pegging him back. Then there was weeping and wailing and lashing of tongues. It was bad enough not to have the drinks at Philadelphia, but a thousand times worse to lose a first prize under the judgment of "the only man in America whose opinion about a dog I value." The poor boy's good opinion of me died that same day, and strange to say, I am as well off without it as with it. What did the child do? Did he examine the winner to see if he was a better dog than his own? Did he get somebody to point out to him the defects in both dogs? Did he think it possible that the judge might just possibly have made a correct decision? Not he. He made a wild rush for a pen, charged on his sister's sweetly perfumed note paper and then wrote out what he considered a very sharp and bright criticism. He condemned the club for not appointing a better judge, told how his own dog should have won, and hoped that another year a competent judge of spaniels would be selected to pass on this neglected but useful breed. He didn't write to blackguard the judge or the club, but simply as a duty and to protect the spaniel. Poor, dear boy, did ums ill-use it? Well, after this there was a calm, which was followed by a clap of thunder and a hustling about for an overcoat. Then the critic (?) and the dog were quickly put to rest in one tiny grave.

And such are our critics (?). These are the chaps who are given full scope to write of us as "self-assured gentlemen." These infants of the fancy are permitted to give points to men who were judging dogs while they were hard at work on a bottle with a rubber tube; and you editors look on and enjoy the fun. Mr. Watson was judging spaniels in this country ten years ago. The writer of this was an exhibitor of spaniels in England exactly twenty years ago. I am informed that five years ago "Gothamite" had never seen a dog show and had never owned a dog. To-day he has the cheek to term me a "self-assured gentleman." If I am "self-assured" with an experience covering twenty years, and if I have attended more dog shows in one week than "Gothamite" has seen in all his short life, what shall we say about "Gothamite's" impudence? It is well for him that he is firing from behind a haystack. Let him raise his visor and we will find him smaller than a microbe in a twenty acre lot.

"Gothamite" commences by saying that "it is with sincerest pleasure I have noted the general improvement in the cocker classes during the past year." May I ask when, where and how did "Gothamite" learn to note "improvement in the cocker classes during the past year?" There has been no general improvement in the cocker classes during the past year. The best classes of cockers were at New York, Buffalo and Toronto. The reports and catalogues go to prove this. While New York was no better than the other two shows a critic (?) like "Gothamite" would surely consider it very much better, because "Gothamite's" dogs (not cockers) were there. For this reason I will take the New York shows of 1889 and 1890, and by comparison endeavor to show "Gothamite" the folly of writing about a breed he knows nothing about. It will be soon enough for "Gothamite" to criticise cockers when he has learned the points of Clumbers.

At New York, 1889, the challenge class for dogs contained Black Pete and Doc. Black Pete won. The corresponding class for bitches had Miss Obo II. and Chloe W. Miss Obo II. won. In 1890 the challenge class for dogs had Jersey, Doc and Hornell Silk, but Doc was "not for competition." He was probably afraid of Jersey. Jersey, who outclasses Hornell Silk, won. In bitches there were Dolly Obo and Bene Silk. Dolly won. Therefore there were four champion dogs and bitches in 1889 and four in 1890. But "Gothamite" says that Doc (winner of second in 1889) is a vastly better dog than the "fish-headed, sway-backed, weak-jointed, almost coatless and lifeless Jersey and Dolly Obo" (winners in 1890). So according to "Gothamite" the champion dogs of 1889 were decidedly better than the champion dogs of 1890. Dolly Obo (first bitches, 1890) is not at all the thing, says this erratic critic, yet bad as she is she beat Bene Silk (second bitches, 1890). The merest tyro in cocker lore, even a man ignorant of the breed as "Gothamite" undoubtedly is, would not say that Dolly Obo and Bene Silk (winners in 1890) could compare with Miss Obo II. and Chloe W. (winners in 1889); so the champion bitches of 1889 were away ahead of the champion bitches of 1890. Taken as a kennel, Black Pete, Doc, Miss Obo II. and Chloe W., the winners of 1889, could easily beat Jersey, Hornell Silk, Dolly Obo and Bene Silk, the winners in 1890. So that any way one looks at it the champion cockers of 1889 were a much better class than they were in 1890. I have fully criticised these dogs time and again in FOREST AND STREAM, and their good and bad points have been carefully noted in "Our Prize Dogs," so I will not go over old ground.

In the open class for black dogs, 1889, that good but by no means perfect dog, Jersey, won well from Baby Obo, a little one showing much true type. The rest (5) were very weak. In 1890 Rabbi was first and Nebo (price, $75) was second. The rest (5) were a long way from being a strong lot. That Jersey (1st, 1889) is a better dog than Rabbi (1st, 1890) no man who knows the first thing about cockers will deny, and Baby Obo should certainly beat Nebo. Taken as a whole, the dogs shown in 1889 would beat the same class in 1890. In 1889 there were thirteen bitches headed by Sensation, Dolly Obo (1st challenge class, 1890) and Lacco. In 1890 there were fourteen, and the order of things was Bessie Beard, Novel, Bessie W. Outside of the winners, the classes were about equal, but the three winners of 1890 would beat the winners of 1889, yet with little to spare. Novel, in my opinion the best bitch in 1890, could not beat Miss Obo II., the best bitch in 1889; and Mr. Willey has in the past shown far better specimens than Bessie Beard, his first prize winner of 1890. I may name Shina as one of these; but she was shown before "Gothamite" went in for dogs. Rabbi, favorably mentioned by "Gothamite," is not a cocker of 1890. I have a distinct recollection of having given him a vhc. card in 1888. Obo II., in his time, could smother many of the best dogs that are running to-day, and Brant, another of the old winners, beat Doc, I think, on more than one occasion. The truth is, there has been no general improvement of late, and "Gothamite," as usual, cannot support his statement with an atom of evidence. The most careful, intelligent, thoughtful and by all odds the most successful breeder and exhibitor in this country has of late devoted much less time to dog shows than he used to, and the cocker classes have suffered as a consequence. I refer to Mr. J. P. Willey.

"Gothamite" alludes to Doc as "that grand little cocker champion Doc." Very well. Doc won his first prize under my judgment at New Haven, 1886. I brought him to the front and he has stayed there ever since. If Doc is of the right sort and was placed over very long and low ones how can "Gothamite" reconcile this with his statement that I started the "long and low craze?"

"Gothamite" concludes by saying, "Our spaniel men have learnt by now what a cocker spaniel should be, and will no longer allow themselves to be led by the nose by Masons and Watsons, who really started the 'long and low' craze. The reason was that six or eight years ago they were to all intents novices." Methinks one or two of them are still novices. But which are "our spaniel men?" The Spaniel Club judges are J. P. Willey, James Watson, A. C. Wilmerding, E. M. Oldham, S. R. Hemmingway, C. M. Nelles, Wm. West, C. H. Mason. Which of these has "learnt?" Mr. Willey considers Jersey a good dog and paid a long price for him. Jersey, we are told, is a "fish-headed" wastrel, so Mr. Willey has not "learnt." Mr. Watson "posed" as an authority and "started the long and low craze." Although "Porcupine" was breeding spaniels when "Gothamite" was trotting around with a ba-lamb at the end of a string, he has not "learnt." Mr. Wilmerding put the "fish-headed, sway-backed, weak-jointed, almost-coatless and lifeless Jersey" over "that grand little cocker, champion Doc." Mr. Wilmerding has not "learnt." Probably this is why he is so popular. Mr. Oldham judged spaniels at Toronto in worse style than "Gothamite" had ever seen, and he bought a half interest in the "fish-headed, sway-backed" Jersey. He has not "learnt." Mr. Hemmingway, who bred Rabbi, the wonderful cocker described by "Gothamite," told me he considered that dog a

long way removed from high-class form. Mr. Hemmingway has not "learnt." Mr. Nelles says "Gothamite" writes deadly rot, perverts the truth and knows nothing about cockers. He further states that Red Jacket is a good little dog notwithstanding that "Gothamite" has pronounced him an "Irish-setter-headed, cheeky, shallow-bodied and over-long" animal. (I didn't know that Irish-setter-headed dogs are cheeky.) Therefore Mr. Nelles has not "learnt." The writer started the "long and low craze," "posed" as a judge, placed the "fish-headed" Jersey over the wonderful Doc, relegated Johnny and Drake to obscurity, and has not "learnt." This disposes of the Spaniel Club's judges, with the exception of Mr. West. This gentleman bought a puppy that Mr. Watson and myself said was a good one—Doc. He placed Doc over Jersey, and is the only spaniel judge who has "learnt" (something). Mr. Mercer got a couple of dogs from Capt. Vieth, about four years ago. These dogs were terribly poor specimens of the breed they were supposed to represent, but Mr. Mercer didn't know it. After reading, digesting and profiting by certain reports which appeared in FOREST AND STREAM, Mr. Mercer withdrew these dogs from competition. This showed excellent judgment on his part, because the dogs could no longer win. Yes, Mr. Mercer has "learnt." Mr. West "learnt" which was the right type of a dog to purchase and exhibit. Mr. Mercer "learnt" which was the right type to keep at home. Neither, of course, was "led by the nose" by Mason. They followed the advise of FOREST AND STREAM and "learnt." "Honor to whom honor is due." May they never forget.

"Gothamite" is not led by the nose by Mason; he does not ape Mason in anything. Not he. But he tells us just the same that Jersey is a "fish-headed, sway-backed, weak-jointed" animal. Pray tell us, "Gothamite," is that criticism original? Is it just your style or is it mine? I thought I had written almost exactly the same criticism in these columns months ago. It is all right, only you have tacked it on to the wrong dog. This may make little difference to you, but it makes a great deal of difference to the dog.

You, "Gothamite," have refused to retract an outrageous falsehood, meanly conceived. Before I retire you to the obscurity enjoyed by Johnny and Drake, I will prove to the readers of this journal that I neither started nor encouraged the "long and low craze" in cocker spaniels. "Our Prize Dogs" was written in 1888. The notes on the dogs criticised were made in 1887. Now turn to page 434 and you will find the following comments on the cocker spaniel Black Pete: "* * * Undoubtedly a good-looking dog, yet not of the type we like. His owner has managed to show him in fairly good condition and under the weight limit for cockers; and, of course, he is eligible to compete in the cocker class. But it seems to us that he has an equal right to compete in the field class; the formation of head and length of body indicate that the latter is actually where he belongs. For the cocker class we want a shorter and more compact body and a head of entirely different formation. Briefly described, Black Pete is a long, low and handsome spaniel, but not a typical cocker." Is that starting a "long and low craze" in cockers? Is it "encouraging" a "long and low craze"? Now read the concluding lines on Helen, page 450: "* * * This bitch has a beautifully formed body, but it is too long in proportion to the length of her limbs. She lacks liberty and is too near the ground; in fact, is not of correct type." This is the starting I gave the "long and low craze"; this is the encouragement it had from me.

Permit me to suggest that for a New Year's gift you give us "Gothamite's" name, that we may shun him as we would a "Brittle" or a "Wildfowler." Happy New Year!

CHAS. H. MASON.

Editor Forest and Stream:

I hope the controversy going on at the present time as to what constitutes a cocker, will bear fruit, and not end in smoke; and that, as several of the gentlemen engaged in the dispute often act as judges at our Canadian bench shows and those held in the United States, they may not adjourn until they agree among themselves what a bench show cocker is, and ought to be, giving to the public his measurement, from the end of his little nose to the end of his little tail. I think that the majority of spaniel men are of opinion that the judging and awards in the cocker classes at the several dog shows held in Canada in the fall of the present year were a farce and an absurdity. A smile invariably comes to my face when I read the reports of the cocker classes in the various papers, at such terms as—"a worker, evidently a worker, he looked the worker all over, etc." How many of the cockers thus commented upon know the scent of a woodcock from a sparrow? I hardly think I would be far wrong if I say one out of ten, and even at this I would be favoring the cocker. Would it not add to the number of entries at bench shows if a class were made for cockers to trail by scent and retrieve, also retrieve from water? As for work, it does not matter one cent whether a cocker is long or short, high or low. It is the breed the dog comes from and the pluck the dog is made of that tells.

As good a cocker for the field as I ever owned, and an all-day dog, was 12½in. high and 30in. long. As a woodcock shooter for the last twenty-five years, with the cocker and field spaniel, and one that has in all probability killed as many woodcock during that period as any man in America, I would say to those wanting a cocker for the field, pick a pup from hunting stock, one with a good-sized head, long, broad nose, long neck, deep chest, strong back and loins, and straight forelegs. The more bone the better. It matters not whether or not the hocks are much bent, as the hocks look rarely straight behind the dog, and do not turn in too much. Now as to coat, avoid a fine, silky-coated cocker, as in nine cases out of ten he is useless. Let the field cocker have a nice, black, glossy coat, with the hair not fine, with lots of feather on chest, legs and between the toes, and a good thick tail. I say avoid the silky-coated cocker. Why? Because if the dog is at all cold or wet, after an hour or two you will have him in at your heel. When you stop to get your lunch he will be found lying shivering and shaking on your coat, or coiled up on a bed of leaves or grass, and when you make a start again to hunt you will have to pull your coat from under him, or if not on your coat, you will have to whistle and call him for several minutes before he can be got to move, and then follows shivering with his tail between his legs.

In the meantime what has the coarser haired little fellow been doing, sitting up alongside of his master watching his every motion, and partaking of his justly earned share of the lunch, and ready to resume the hunt the moment you lay your hands on your gun. This is no imaginary picture, but one that has happened to me again and again, and I dare say others have had the same experience as myself with these silky-coated lap dogs. I do hope that spaniel men and spaniel judges will unite and lay aside all jealousy, abuse and personalities, and come to a thorough understanding between themselves, and give to the public a clear and precise standard, and having agreed upon, and formed the same, stick to it when judging. The records of the awards made by the different judges at Toronto, London, Ottawa and Kingston bench shows, 1890, certainly say we have no standard, so we go it blind. HARRY B. NICOL.

COOKSTOWN, Canada, Dec. 22.

Editor Forest and Stream:

Your correspondent "Gothamite" has committed a most serious blunder in stating that Messrs. Mason and Watson started the "long and low craze" in cocker spaniels. He has already made a double somersault and it is any odds that when he comes down he will break his young neck. If "Gothamite" had been a careful reader of the FOREST AND STREAM during the past eight or ten years he would have learned that only a strong and lucid argument, courteously put forth, could have any chance of beating Mr. Mason in a discussion on dogs. To start in with a misstatement is simply to insure the annihilation of the man who is foolish enough to try it, and "Gothamite" has already half acknowledged he did it, for has he not said "to start" and "to encourage" are one and the same thing? I have heard Mr. Watson say a score of times that a cocker should not be long in body and that we were breeding them too near the ground, and the very best and most conclusive proof that Mr. Mason never favored extreme length can be found in his clever reports in this paper and in his splendid book "Our Prize Dogs." It is well known that Mr. Mason was always a great admirer of Miss Obo II., in fact he was largely instrumental in bringing that good bitch to the front and keeping her there. Yet he says in "Our Prize Dogs" that Miss Obo II. is too long between the couplings. It is rather late in the day for "Gothamite" to apologize, but he should do it, and then get out, leaving the field to those who are content to write the truth and nothing but the truth. If Messrs. Mason, Willey, Kirk, Watson, Laidlaw, Niven, Wilmerding, Nelles, Oldham and "Uncle Dick" will join in the discussion it may be fruitful of good results and "Gothamite's" misstatements will do no harm except to himself. OBO.

NOTES AND NOTIONS.

I NOTE that "Ashmont," in a Western weekly, advises that when a dog swallows some foreign substance he be fed some substance that will adhere to the intrusive object and make it up into a ball, suggesting flour; I will add squash, pumpkin or any of the fruits of the curcurbitæ, they all being largely composed of stringy indigestible matter, admirably adapted to catch on anything and round up into a ball. I suppose that "Ashmont" intends at some early date to issue either a revised edition of his work on canine medicine or a second volume of it. This would seem to be demanded both by the interests of dog keepers and his own reputation. Such "hints" as dressing an irritating spot with carbolic acid to paralyze the local nerves; the efficacy of cocoanut meat as a tanacide, and his directions to facilitate the expulsion of foreign matter from the bowels, are of too great value to be left lying round loose in back numbers of any paper.

Another writer who would serve the doggy public by publishing a book is "Hibernia." Sarcastic, even cutting, as much of his writings have been, I don't know where one will go to pick out more nuggets of solid, useful information, of the most practical kind than to his varied streams of amusing writings. How to recover a stolen dog; how a dog dealer ("Lyin Tommy") knows when a dog is stolen, etc., etc., has been given us by "Hibernia" among his jokings. Add to this his thorough experience with dogs and his scientific attainments, and a book by him would be most valuable and immensely interesting.

So also, many of the suggestions of "R. W. S." were most valuable, not exactly trenching on "Ashmont" but admirably supplementing him. It strikes me that it would be a good notion to gather up the fragmentary articles of solid and permanent value that drift round in back numbers of our kennel press and publish them in permanent form. How often in a discussion of some fundamental question in dogdom will we see some master hand like Dalziel, Lee or Boulton referring back to something that appeared in some paper? By the memory of one man this matter has been saved from obscurity for a time, but how soon it will be lost again? It is a duty somebody owes the doggy public to gather these jewels out of the dust heap of general newspaper articles.

Why is it that dogmen are so contentious? I suppose that question has been asked hundreds of times and, for all I can see, will be asked many more hundreds of times. It is hardly worth while attempting an answer, which must be pretty much a guess after all, but dogmen would do well to bear in mind Lord Mansfield's remark in the trial of the famous "Running Rein" case, that "If gentlemen will race with blackguards they must be judged by the company they keep." So as long as dogmen will recognize "bums" and knaves as on the same plane with themselves in doggy matters the "bums" and knaves will flavor the soup.

In some paper I recently saw a regret that the most notorious knave in dogdom, a man whose name was a synonym for the most unblushing fraud, was not present at some show! THE LOOKER-ON.

REVIEW OF PREMIUM LISTS.

WE regret that we had not an opportunity ere this to review the premium list of the Charleston bench show, to be held Jan. 13 to 17, particularly as this is the first show of the Southern series next month. There are in all 155 classes, with prizes of $10 in the challenge and $5 and $3 in the open classes in most of breeds. Every breed with the exception of bloodhounds, Dalmatians, foxhounds, poodles, Chesapeake Bays, Airedales, Bassets, wire-haired fox-terriers, Irish, Welsh, Bedlington and black and tan terriers, Italian greyhounds and Mexican hairless have challenge classes, and this we hardly think is a wise provision, as it is very certain, so far away from the kennel base, the open classes will fill much better and consequently ought to have had the most money. Numerous cash specials are given, and each breed has a special kennel prize of $5, and this with a $10 special for best kennel of any breed will materially increase the money that can be won. The judges, as we have before stated, are Dr. H. Clay Glover and H. W. Lacy, both of New York. Judging will commence Jan. 14, 1891, and no dog may be removed before Saturday, Jan. 17. Puppies may be taken home the second night. The classification is a liberal one and should be well supported by exhibitors, especially as this is the first stopping place of the circuit, Charleston, S. C., New Orleans, La., and Greenville, S. C. In connection with the dog show, a grand poultry show will be held, styled, owing to its importance, the Crystal Palace Show of America. Exhibitors are promised a Southern welcome in its full sense, and we hear that several prominent kennels from the North will send representatives. All wins count toward the challenge classes, that goal all blue-blooded canines aspire to attain. Entries close Jan. 1, with Benjamin McInness, secretary and treasurer, Charleston, S. C. Entry fees are $2, and New York exhibitors can obtain extra entry blanks at this office.

The New Orleans show will be held Jan. 20 to 25, 1891, at the Washington Artillery Hall. The premium list sets forth quite a tempting array of prizes. The challenge classes for most of the principal breeds have $15 and $10, and the open class prizes range from $10 and $5 to $5 and $3 in the smaller breeds. The spaniels are well provided for by Classification No. 1 of the American Spaniel Club, with prizes of $8 and $4 in the open and $10 and $10 (first and second) in the challenge class for field, and $10 each for dog and bitch cocker spaniels. There are thirty-four specials, cash and otherwise, already promised, besides a special of $25 for the best dog in the show, second getting $10. The judges are Messrs. John Davidson, Hermann F. Schellhass and Hon. N. D. Wallace. Coming just after the Southern Sportsmen's Association's field trials, the show is sure to be well patronized. The entries close Jan. 15, 1891, with Mr. A. E. Shaw, secretary, New Orleans, La., the fee being $2 only. The show being under A. K. C. rules, all wins will count.

The Greenville, S. C., bench show is the last of the Southern circuit, and takes place Jan. 27 to 30. As this club, now known as the South Carolina Kennel Association, has been admitted to the A. K. C., their wins will now count. For the principal breeds there are challenge classes for each sex, with $10 and $5 as prizes. Then in the open classes, all breeds with the exception of greyhounds, deerhounds, foxhounds, Chesapeake Bays, spaniels, poodles, bulldogs, bull and all other terriers, pugs, dachshunde, Bassets, beagles and miscellaneous, have $10 and $5, those named having $5 and $3. The cash specials are quite numerous, showing that a good deal of money can be picked up at this show. For instance, $10 is given for the best pair of mastiffs and St. Bernards (rough and smooth each), there are also several kennel prizes of $5, and a silver cup valued at $20 is offered for the best kennel of all breeds. Mr. John Davidson judges all classes. The entry fee is $3, entries closing Jan. 20 with Mr. F. F. Capers, Greenville, S. C. Great interest is said to be taken in this their inaugural show by the residents of Greenville, and nothing will be left undone to make every visiting exhibitor welcome.

DOG TALK.

I WAS both surprised and disappointed to read in the late papers of the return of the St. Bernard Prince Regent to England. Surprised, because I had not thought American St. Bernard breeders so blind to their own interests and disappointed, in their judgment. Possibly my opinion is not much, but I have seen nearly all the St. Bernards of England and America and I consider him the best living stud dog. It is rumored that he was not a success here as a stock getter. Possibly not, in fact probably not. Have the breeders not yet learned the fact that but one imported dog in twenty is a success the first year. A few get acclimated quickly, but most of them take from six months to a year. I do not wish to provoke controversy or cause any hard feelings or I would name a few specimens in proof of my statement. But to return to Prince Regent. Before he was two years old he had sired the two best St. Bernards of the day, Princess Florence and Scottish Prince. I may be a little premature in calling Scottish Prince better than Sir Bedivere, but he is at least the best of his age. These two specimens are from two different bitches of entirely different breeding, Moss Rose and Lady Ida. Many dogs throw good bitches and many throw good dogs. Many more throw good pups to only a few bitches. Prince Regent has proved his ability to throw good puppies of either sex from different bitches. The two dogs I have mentioned are only the best of his get, he has sired many good ones. Sydney Smith told me this summer that he meant to get him back but I did not dream that my countrymen were so blind to their own interests as to allow him to return.

The Massachusetts Kennel Club have secured a neat club room at 34 Central avenue, Lynn. The boys are beginning to talk about the coming show, and predict a success.

In further confirmation of "J. W.'s" statement *re* imported bitches coming in season some weeks late, I will say that all of those imported this fall have been from three weeks to two months late.

I notice in the *Stock-Keeper's* list of St. Bernard bitches, that Mr. E. B. Sears owns champion Plevna. Whew! Isn't that rather a staggerer for Mr. Moore? I congratulate Mr. Sears on his purchase. She is queen of all the bitches in America. Now let Mr. Moore or Mr. Diffenderffer purchase Princess Florence, and New York show will rival the Windsor St. Bernard Club show.

Messrs. H. A. & W. L. Harris state in a letter to FOREST AND STREAM, published Dec. 4, that my statement regarding White Wonder, in issue of Sept. 4, is false in every particular, but in their so-called "proof" they simply make an assertion without giving the first atom of proof of their statement. I repeat that White Wonder, now owned by Messrs. Harris, is by White Sam out of Rose, and that every word of my statement is true and that I can substantiate every word of it. The gentleman who accompanied me during my investigation lives within a few miles of Mr. Harris. Those who gave me my information are gentlemen of far better standing than Mr. Hinks, and saw the dog almost daily for months. I do not misunderstand Messrs. Harris. I consider them gentlemen, but I can prove that they were badly swindled if they bought White Wonder (Beryl) for a sound dog, and if they did not, still they have purchased a false pedigree. I never yet made a statement in print that I could not substantiate, and until they can prove what they say I would thank them not to call my statement false. NAMQUOIT.

ST. LOUIS, Mo.

THE POINTER CLUB SPECIALS.

Editor Forest and Stream:

The Pointer Club of America offer the following cash prizes, open to dogs owned by members of the club.

New York Show—$25 to best pointer dog in open class, $25 to best pointer bitch in open class.

Chicago Show—$10 to best pointer dog in open class, $10 to best bitch in open class.

Pittsburg Show—$10 to best pointer dog in open class, $10 to best pointer bitch in open class.

The Pointer Club is in a thriving condition, and proposes to do something handsome in the way of offering cash prizes at bench shows and field trials. It is now in order to become a member and a cordial invitation is extended to all.

GEO. W. LARUE, Sec'y-Treas.

NEW YORK, Dec. 29.

DEATH OF FORD LASS.—Chattanooga, Tenn., Dec. 16.—*Editor Forest and Stream:* On the 7th inst. I had the sad misfortune to lose my fine imported Dandie Dinmont bitch Ford Lass, under very distressing circumstances. She was due to whelp on Nov. 30, but was six days behind when she delivered seven fine lively puppies, but it was plain to be seen that she was still to whelp another. I paid no particular attention until night time, when she appeared to be sufferiag, and upon examination I found the pup was dead and turned around. I worked with her till 3 o'clock next morning, but still no relief. Next day I saw my family doctor, got advice from him, gave medicine all day and sat up with her all night. Next day I had Dr. Forbes (a good V. S.) and another doctor to examine her, and they found an operation necessary. As a last resort they took it from her by means of the knife, when it was found to be at least three times as large as any of the others. By that time she had become so weak that she could not stand the operation and died at 11 P. M. In her death I lost the kindest and most affectionate dog I ever saw, and one that can never be replaced. Besides quite a heavy loss from a financial point of view, as I could find no mother for the other seven live puppies, I lost her and eight puppies of as highly bred stock as there is in the United States. Of one thing I am certain; if there is a heaven for dogs, Ford Lass is certainly there, as a better one never lived, and as I laid her in the grave I carefully made for her, I felt a tear roll down my cheek and am not ashamed to own that I wept for so good a friend.—WM. E. HOFF.

A BARZOI MISSING.—Pittsburgh, Pa., Dec. 25.—*Editor Forest and Stream:* Mr. Hacke's Barzoi Czar strayed away on last Thursday night and I would ask sportsmen to be on the lookout for him. He is a white dog, with gray sides and edge of ears lemon, which are small and lay like a greyhound's; head smooth and rather heavy for a barzoi; eyes hazel; coat long and silky like a setter's; forelegs feathered and tail fringed. One of his hindlegs had been broken and has a lump at point of fracture on the inside above the hock joint. He stands 29in. at shoulder.—J. B. GRIMES.

A RETROSPECT.

THE shade of the old year will be upon us when these lines are read by the fancier, and when he turns over in his mind the events of the past year, the lover of dogs and he who counts himself a member of our kennel world, will doubtless reflect upon the vast strides the fancy has made, not only in the last ten years, but in the year of 1890, just departed. And as he speeds the parting year he turns inconstant to welcome the new one, and reflections give place to anticipation as he wonders what new lights in the kennel world will have reached these shores when 1891 in turn gives place to another. In mastiffs there has been little progress made. The breed seems rather at a standstill as far as importing new stock is concerned. At the same time our breeders have not been idle and one hears of wonderful youngsters which will make their debut at Madison Square Garden next February. There is little doubt but that Beaufort will leave his mark, for from personal knowledge we are aware that several are coming on, short-faced enough to please the most ultra mastiff man living, and besides having typical heads they are also well found in body, and this of itself must be counted an advance to be proud of. The sires, Minting and Ilford Caution, have left progeny that will serve to perpetuate their names and especially the latter. So taking everything into consideration, though importations have been few, the home industry bids fair to keep pace with the age.

It is to St. Bernards that the breeders of America must look for that great advance toward perfection. When we add, and we think it is not stretching a point to say so, that we only need two more, Sir Bedivere and Princess Florence, to be able to claim the best specimens in the world, and judging from the past it would not surprise us in the least to have the opportunity of welcoming even these two high-priced jewels of the breed, such is the enterprise and pluck possessed by some of our breeders. With such animals as Watch, Hesper, Alton, Plevna, Lady Livingstone, Altona, La Pucelle, Prudence, Lady Sneerwell, Jael, Donna Silva and other lesser lights making their appearance during the past year, there is little prospect of the breed losing its popularity. That we can also breed them is proved by one kennel's success in breeding two such fine animals as Lord and Lady Melrose, undoubtedly the two best native-bred ones we have yet seen. The future for St. Bernard breeders is bright—very bright. The only question is, will our breeders make the best of the great opportunities they now have to produce something that may hold its own with those of England?

Another breed that, thanks to the specialty club and the coursing of the past year, has sprung rapidly into popular favor, is the greyhound. New men are coming into the ranks, and though breeders are depending more upon the blood already here, the year has not passed without some new foreigners putting in an appearance. Drytime, which ran so well out West recently, is one of them. Champions Charley Davis and Maud Torrington, Conspirator and others whose names escape us at this moment, will all no doubt do good in the cause. The new specialty club started this year is full of life and evidently, as witnessed by the elegant trophy presented at Great Bend, and the coming specialty show this month, intends to do all in its power to encourage the breed.

Deerhounds and Newfoundlands have made little progress, nothing of any note has been imported, and the interest taken in these breeds by the general public is unfortunately almost nil.

Great Danes are fast coming to the front in popularity, and the splendid show of these animals at New York and Chicago in 1890 must have done a good deal for the breed. In Melac, imported last spring, we have a great Dane that any country might be proud to claim.

In setters we have nothing new to speak of, these breeds having in a great measure arrived at a point where we are almost independent of the mother country, when we can count such dogs as Rockingham, Count Howard, Monk of Furness, Sir Tatton, Princess Beatrice and others, among our cracks. Irish setters have not made much improvement. Several dogs have been imported, notably Inchiquin, Stella IV. and one or two others of less merit. In Gordons nothing new has been brought forward, Beaumont, Little Boy, Belmont, Countess Roxie, etc., still reign supreme, though now that Beaumont and Belmont have changed hands their late owner contemplates getting something over that will astonish us and dwarf all former efforts in this direction, so perhaps we may yet see a "Heather Grouse" over here.

Pointers have had little or no help from across the pond, breeders being content to use the material they have at hand, though we hear of several parties on the lookout for cracks to take the place of past and passé celebrities. The good showing made by the pointers in the late field trials will no doubt cause an increased demand, and what was still more a matter for congratulation, the pointers competing had, with very few exceptions, special claims to bench show form, showing conclusively that the two styles are compatible.

In spaniels, the only importations of moment were the field spaniels Baron and Beverley Negus, both handsome specimens and calculated to improve a style of spaniel in which we are at present acknowledged to be rather weak. Not so with cockers, for never have such a fine lot, taking them all round, been shown as we have seen at some of the shows during the year. This is a breed that, once loose from the long and low craze, we have little need of outside help; a little judicious care in mating and concerted type to breed for, is all that we require, and we trust that the discussion now taking place in our columns will be the means of accomplishing this.

Beagles have, owing to the advent of the National Beagle Club, been brought more prominently forward than in late years. The field trials served to stimulate this interest, and though, with the exception of Blue Belle II., no new cracks have appeared, several promising youngsters have been bred. Our breeders fancy they have, and with some reason, little to gain by the importation of new stock.

Collies are still advancing, the most noteworthy importation being that of The Squire, who comes with a big reputation in the stud, which, from all accounts, he is sustaining since his arrival. Several good ones have been imported by the noted Canadian breeders. The Collie Club is in a flourishing condition and is intent on advancing the best interests of the breed, So the cry may go forth that all is well along the collie lines.

Bulldogs have spurted finely this year, that is if such stolid fellows can be said to have a spurt in them. Though these may be content nowadays to take life as they find it, their owners are not, for what with the new Bulldog Club and the several importations, they have shown themselves very much alive. Among those imported this year we find the names of Harper, Duchess of Palma, African King, Princess Crib, Dolly Tester, Dimple (since dead), Mr. Cugle's lot, and several others whose names we cannot remember just now, nearly all good ones and well calculated to help the breed along. The bulldog men will make a strong muster at New York this spring.

Bull-terriers have added to their already well-filled list such dogs as Prince Bendigo, White Prince, White Wonder, Diamond King and several others. We hear of others to come in time for the spring shows, and though we seem hardly able to breed anything very startling, our breeders are ever ready to purchase a good thing when they hear of it. Irish terriers are coming fast to the front, and the importation of Breda Bill, Mr. Comstock's Mars, Ballymoney, and others will strengthen the breed, and although only in the hands as yet of a few breeders we think that as they become better known this game terrier will soon occupy the position he does in England, in quality if not in numbers.

Fox-terrier breeders have not done anything during the past year to excite any comment. Very few new dogs have come over, the notable exceptions being Raffle, Brockenhurst Quick, Rifleman, Dudley Slave, Ebor Nettle, etc. The year is notable in one sense, in fox-terrier circles, owing to the showing of a team of these terriers in England, and the placing of two of them, home bred ones, showed that the nick for champions has not yet been struck. The young dog Suffolk Risk being far the best home bred one. Several new breeders have taken hold of these terriers, and we fancy that even in this breed the small breeders stand just as much chance of pulling out a plum from the breeding lottery as the larger kennels, judging from past results. Wire-haired terriers are coming more and more into favor, especially in Canada, that country being able to make quite a respectable showing.

Black and tan terriers are booming, too, though nothing has been bred at home that will take the place of the imported ones; still with the new dogs that have come to us this last year there are several noted winners. The Senator: Madge, Beauty, Salisbury, Queen III. and two or three dark horses, and with these and those we already have, it is safe to say that New York show of 1891 will see such a collection of black and tans as has never been seen here before.

Among the small breeds several good Yorkshires have been imported, and this year's shows of this handsome little terrier have far surpassed any yet seen in this country. Dogs have been shown that are correct in type, and the miscellaneous assortment of wooly dogs we have been forced to put up with, have been relegated to the place they belong to—oblivion. King Charles spaniels are also looking up, and the importation of Royal Duke and several Blenheims and King Charles for a Brooklyn kennel will surely contribute to their advancement.

A new breed to us has in the year 1890 received considerable attention. We refer to the Russian wolfhound. Handsome in the extreme, they are bound to make themselves felt when seen in greater numbers. Though no really first-class specimens have as yet been imported, though this has not been through any fault of the Americans, still those which are already here give us a very good idea of what we may expect when the real good ones come. This breed being under the care of the National Greyhound Club will also receive due encouragement. There is little else to add about the dogs of 1890. The A. K. C. is in a flourishing and prosperous condition. New members are joining our kennel world almost daily, and the amount of money now invested in dogflesh would have astounded the fancier of 1880. At this rate what shall we have to say in the year 2000? Shall we? dare we? hazard the supposition that we may be shipping dogs to England, or will our climate, as it is claimed, forever keep home bred dogs, as a whole, in the background?

We trust that when another year has past a better feeling may prevail among some of our controversially inclined breeders and fanciers. Such contentions serve no good purpose, but rather the contrary, giving the outside public a false idea of the real workers in the hive. Field trial men must look back with pleasurable feelings, that their trials so far this year have passed off quietly and successfully, besides being memorable for the visit paid us by the English dogs, who, on our own ground, succeeded in wresting some of the laurels from our dogs. We don't begrudge them, but rather shout, come again! We must now draw this somewhat more lengthy review than intended, to a close, wishing our kennel readers, and friends of dogdom in general, a prosperous and a Happy New Year.

MR. GEORGE EWING'S "ROWDY ROD."

ST. LOUIS WILL HAVE A DOG SHOW.—St. Louis, Mo., Dec. 26.—*Editor Forest and Stream:* It has been several years since a bench show has been held in this city, but if surface indications go for anything the prospects are exceedingly bright that one will be held here in the near future. Mr. George Munson, who managed the last show of the kind held here, is what might properly be termed a "hustler." He has succeeded in enlisting a number of prominent sportsmen in the enterprise, and being perfectly familiar with the duties expected of him will surely make the thing a success. The show will be held in one of the naves of the Exposition building, which will afford ample room for 1,000 dogs. A liberal prize list will be made up, and none but thoroughly competent persons will be engaged to judge the canines. There are plenty of dogs owned here to make the affair a big show, and with the number that would be entered from a distance the number of entries should be large.—UNSER FRITZ.

"TRAINING VS. BREAKING."—Kirwin, Kan., Nov. 17.—I have this evening returned from the field with a fine bag of quail and grouse (prairie chicken), shot over a setter less than 17 months old, trained by Hammond's system, and each bird was brought carefully in and delivered without hesitation. Not dropped on the ground after the old style, but with the dog sitting on his haunches and head reached up to meet my hand. I think the method described in "Training vs. Breaking" is perfect, and have no desire to try any other again.—H. A. ROYCE.

DOG CHAT.

WE were unable last week to more than briefly allude to the recent St. Bernard show at Islington, London. Considering the number of dogs imported to this country we think it would be a good plan to keep our readers posted as to the dogs that make their debut at such shows. Sir Bedivere is still the king, and is spoken of as the best St. Bernard they have ever had. Of course, he won the 100 guinea challenge cup and the Halsey trophy, which is worth a little fortune in itself. In the open classes, Mr. J. F. Smith showed a new one called Salvator Rosa, by Lord Bute, which is described as a rich orange, beautifully marked, skull, ears and stop very correct, might be a little deeper in foreface, stands high, with plenty of bone, but is not furnished up yet. He just beat the Birmingham winner, another new one, Lord Dunlo, by Sir Bedivere, who is described as having more depth below the eye, better feet, but does not move so well behind. In roughs between six and twelve months, Mr. Raybold brought out Sir Hereward, who is another son of Lord Bute, described as a capital young dog, very sturdy in body and with best of legs and feet, walking capitally behind with splendid quarters, his worst feature being a short, curly tail. He beat Lord Dunlo, however. In rough bitch challenge class, Plevna, Mr. Sears's new bitch, beat Pegotty. In smooths, Mr. J. F. Smith had a good innings, taking ten first prizes, two seconds, two thirds, one reserve, six cups, the 100 guinea cup for best bitch in the show, and reserve for the 100 guinea cup for best dog. A good youngster by Watch won in the six to twelve months class; he is said to resemble his sire in many points. In bitches Sans Peur won the challenge prize and the 100 guinea cup for best bitch in the show. In the six to twelve months class Houri, a promising young bitch by Watch out of Sils Maria, took the honors. In the novice class, dogs, Sir Hereward beat both Salvator Rosa and Lord Dunlo after a hard tussle. Keeper won the stud dog prize, Angelo coming second, judged by their progeny. A prize given for the keeper of the best conditioned team was won by Mr. Gosling's keeper. This is a prize that might be given with beneficial results at some of our principal shows. Altogether the show was a pronounced success, and especially so among the younger classes. The number of dogs benched was 230, an increase over last year, so there is evidently no diminution in the interest still taken in this fashionable breed.

We fancy that the *Fanciers' Journal* has hardly seen the end of the Krehl-Brittle controversy, and we are not alone in thinking that their duty is not ended with their editorial saying that, as both had had their say, the subject would be of no further interest. When such serious charges were advanced by a correspondent, in common courtesy to a fellow editor and especially one who occupies such a prominent position as Mr. Krehl, some proof should be demanded for the epithets made use of. That this is the feeling on the other side of the pond is evidence by the scoring they get from the *Fanciers' Gazette*, a journal which all know has not too much love for the paper of which Mr. Krehl is the editor. They devote several paragraphs to the subject and the last one is: "We would point out to our American contemporary that its obligations do not cease here. It has allowed a charge to be made without 'any rhyme or reason,' and the mere denial of the fact on the part of the person charged does not end the controversy, because it has no interest to 'our readers.' Mr. Krehl occupies a somewhat prominent position in this country, and whether a man is friend or foe, we, for the protection of the public, intimate it as our opinion that to the English public such charges as have been made in our contemporary are of interest 'to *our* readers,' and that an editor has no right whatever to admit them in his journal until he is beforehand satisfied that they are absolutely correct. We consider that the *Fanciers' Journal* must substantiate the charges it has allowed to appear in its columns, or offer an ample apology to Mr. Krehl. We may also call attention to the fact that it is not an American who does this 'dirty trick,' but an Englishman." Mr. Krehl has asked for proofs, so let them be forthcoming.

Our illustration this week is the noted Rowdy Rod, owned by Mr. Geo. Ewing, of Cincinnati, O. He is by Roderigo out of Juno A., and was bred by the Memphis & Avent Kennels, but afterward sold to Mr. Ewing, it is said, for $3,000. His winnings are: First, Eastern Field Trials Derby, and first, Central Field Trials Derby, in 1889, and it is still fresh in our minds that he succeeded in winning the great Free-for-All Stake at the Central Trials this year. That his good looks also entitle him to consideration is evidenced by his winning one of the Lorillard medals at the Central Trials this year.

The show to be held at Jackson, Mich., by the Central City Kennel Club, promises to be a good one, as exhibitors from all parts have signified their intention to send their stock, especially as the show will be held under A. K. C. rules. Dr. E. L. Kimball, Jackson, Mich., is the secretary, and of him all information can be obtained. Major J. M. Taylor judges all classes.

The National Beagle Club will hold their next quarterly meeting, at which officers for the ensuing year will be

elected, at the Quincy House, parlor G, Jan. 3, at 7 P.M. A good attendance of members is expected.

Mr. W. K. Taunton's mastiff champion Beaufort has proved a great success as a stud dog while in America. We have seen some very good ones by him. Mr. Winchell tells us he has two or three which he believes are better than anything yet bred in America. Some of the best bitches bred in America have been sent to Beaufort since his arrival. To give some idea of his demand as a stud dog Mr. Winchell has at his kennels the following mastiff bitches to be bred to him or ready to be returned: Mr. W. Wade's Emma, by champion Orlando; Mr. Chas. C. Cook's well-known Pharaoh Queen, her second litter by him; another very large bitch, a noted breeder of the West, Mr. Colvin McLean's Media; Dr. Derby's Albion, by champion Hotspur, almost the only Hotspur blood in America, and with as grand a head as her sire. It will be remembered she is the bitch presented to Mr. Derby by Dr. Sidney Turner, the breeder of Beaufort and many other grand ones. A well-known bitch of Dr. Turner's is on the way from England to be bred to Beaufort and will arrive within a few days. The English breeders are just tumbling to the mistake they made in letting him go, but the American breeders are making the most of him while here, as it is rumored Beaufort will return after the spring shows.

At the recent Cadet fair, held in Salem, Mass., in the new armory building, we are told that the Northfield Kennels had on exhibition their interesting collection of Yorkshires and other terriers. Mr. Thomas, the manager of this kennel, must have had his hands full with this collection, which included their well known Yorkshires, two of which have been held in reserve as a surprise for New York in February, bull-terriers, black and tans, King Charles spaniels, Irish terriers, Russian poodles and a Barzoi pup. Over 1,200 people paid a dime each to see this little dog show and from this our correspondent concludes that the town of Salem would not be a bad one to hold a regular dog show in. There are several of these Massachusetts towns where a dog show would be a success and help to interest others in the fancy, though the "men of Lynn" are the only ones who have had the pluck to try it so far.

A Mr. Hughes, of New York, has purchased through a brother of Dr. Niven, in Ireland, two Irish terrier dogs and one bitch. They were to have been shipped three weeks since.

In sending us the list of judges selected by the National Beagle Club, our informant was in error in saying Mr. R. F. Mayhew was one of them. Mr. Mayhew is not a member of the club.

Our acknowldgments are due to Mr. Poag for the excellent photograph of his St. Bernard dog watch. We are told this grand dog weighs now 225lbs.

Mr. Percy C. Ohl writes us that the English Setter Club will make a new departure at bench shows, commencing with the New York show, by engaging an attendant to look specially after the breeds. They think this will prove a great benefit to owners of fine dogs, as they are thus assured their favorites will receive every attention. A member of the club will be appointed who will see that the attendant discharges his duties properly. This is a good plan and might be followed by all specialty clubs. The National Greyhound Club has already, we believe, done the same thing.

A peculiar transaction was brought to light recently in England which may form a precedent for action in some similar case which might arise in this country. Mr. A. M. Hodgson, it seems, is in the habit of giving away bull bitch pups under certain conditions. When the pup comes to maturity he selects a sire and has the pick of the first litter, after which the bitch becomes the absolute property of the person to whom he gave it. He has asked the English Kennel Club to settle his standing in a case where a person to whom he gave a pup, under those conditions, chose the sire himself and then advised Mr. Hodgson of the litter. As the sire of these pups was objectionable to him, instead of taking his pick he purchased one of the pups and now awaits the bitch coming into season again, so that the original conditions may be fulfilled. He wanted to know whether, under the conditions given and imposed with the bitch, he was the breeder of this first litter. The Kennel Club decided that, until the original conditions are complied with, Mr. Hodgson is still the owner of the bitch and as such is therefore the breeder of the litter he objected to.

We have received several inquiries about the coming specialty show of the National Greyhound Club, which proves that the event is looked forward to with interest by the ever increasing body of greyhound men. Such a venture on the part of this young but energetic club we trust will be well sustained by a goodly entry, and, as the show is only for one day and in a warm and well ventilated building, averse as we are to the showing of puppies as a rule in the ordinary dog shows, a goodly show of saplings would be very pleasing to dog men, so that we can judge of the progress made in the breed in the past year or two. The fact of Mr. Mason judging insures the dogs being put in their proper order. The prizes are liberal and the club medal will be an object well worth the winning.

We have only space to briefly allude to a subject which has been touched upon by several dog men in the course of conversation. We allude to the altogether too easy manner in which charges against persons are allowed to be made before the A.K.C. No matter what merit the case may have it is not investigated at once, but is placed on record in the minutes of the A.K.C. or the *Kennel Gazette* as so and so brings charges against so and so. Now we think that the rule in vogue at bench shows, to insist upon a deposit in case of a charge being made and this forfeited in case the charge prove frivolous, would be a protection for reputable men against those who may use the good nature of the A.K.C. as a lever for their own ends. We have one case in our mind of those now on the list, which, according to what we have heard, is simply an imposition, but still the name of a reputable man is put down in a list the readers of which presuppose that his actions have been reprehensible.

The English Kennel Club has shown itself not too old or obstinate to learn, and the numerous proddings it has received of late from the *Canine World* and others as to its arbitrary actions in the matter of disqualifications for mere clerical errors have evidently had good effect. The secretary of the E. K. C. at the St. Bernard Club dinner, spoke of the mild measures which they will henceforth adopt. The secretary after going through the catalogues will mark the "wrong 'uns," then ask to see the entry forms: if this does not prove satisfactory the exhibitor will be called upon to explain. Should this fail to acquit, the cases will be laid before an "advisory committee," which idea is doubtless a leaf out of the American book. This committee will then investigate, and finally advise the club what to do in the matter. According to *Stock-Keeper*, this is passing from Draconian severity to mild maternal indulgence with a vengeance!

Judex nascitur, non fecit, that's very catchy and like a good many other terms of like nature, is used with an abandon that shows a not too intimate knowledge of its meaning. Judges are born, not made, is the wisdom set forth by "Nutcracker" in the English *Stock-Keeper*, in his American notes, which consist mainly in reproving Dr. Wesley Mills for his audacity in writing a report of a dog show. The term we speak of arises of course from the more or less true saying that poets, artists, etc., are born, not made. A man can draw and sketch simply from the talent that is in him, a poet can rhyme without attending a rhymery, a musician may through his peculiar gifts produce harmony, though practice alone makes him perfect; but can, for instance, a surgeon, perform a difficult operation without a long course of previous study and experience? So it is with the dog judge. Does one suppose for an instant that a man, however much the "dogly intuition" is bred in him, can be set down in a ring of say fox-terriers or spaniels, and without previous training, experience and study of types, and so on, correctly or even approximately place them according to merit? All moonshine! Judges are made to a great extent, though of course, like good mechanics, engineers, doctors, lawyers, etc., the good judges have a love and a natural leaning toward their hobby. It is not necessary that a man should have been a breeder to be able to place the dogs correctly; that is another fallacy that is fast being exploded. "Any one," says Scotch Baillie, "with an observant eye and a ready brain can become a judge of dogs," and we quite agree with him.

Mr. Charles S. Hanks, of Boston, on his way to Siberia, is on the lookout in London for some fox-terriers to bring back with him when he returns to this country.

Mr. C. L. Wilton's new purchase, the fox-terrier Rifleman, arrived last Saturday on the Italy after a sixteen days' voyage. His new owner is well pleased with him, head and body being particularly good, we are told.

The noted bull bitch, The Graven Image, has been purchased by one of our countrymen through Mr. F. Hinks, of Birmingham. She has won numerous prizes and will be a decided acquisition to the bulldog ranks over here. Another importer is Mr. Andrew J. Hatch, of New Haven, Conn., who has purchased Bloater Girl, the noted dam of Mr. Pybus Sellon's Dorinda. Bloater Girl is a well known winner, so that the competition in the bitch class at New York will evidently be a hot one.

As a warning to those who are in the habit of feeding their pets with the bones of birds we may say that Mrs. E. Forder has had to pay dear for her carelessness. She has just lost her famous King Charles champion Jumbo II., who was choked from this cause. He was by Don Carlo out of Mrs. Forder's Queen of Bow, and his death means a great loss to the breed generally.

Fanciers' Gazette is the only English paper to hand this week, and this is their first Christmas number. Though it contains no kennel news, it is replete with interesting articles by well known writers, sketches of dogs and a colored print of Ormskirk Amazement and Ormskirk Excelsior, two of Mr. Stretch's crack collies. In their "Prologue" one paragraph interests American fanciers, they say: "Remembering our Antipodean brethren, we do not wish to forget those across the Atlantic, both in Canada and the States. The former are the good, the latter the bad boys of to-day. How we should like to get at those McKinleys and have a few moments talk with them so that we could let off a little of the pent up steam!! Ah well! We must leave them as they are. May their Christmas turkey be scraggy! their plum pudding give them indigestion! their mince pies be sour! No more pleasant trips for our judges to trans-Atlantic shores; for that contract is an infringement of protective laws, and even the modest fowl must pay 1½d. per pound ere he can enter, even though his advent is to raise high the standard of pure bred stock, unless as many formalities are gone through as is necessary to win a seat in Parliament. Then there are the fees to be paid. Veritably, American consuls in England must worship at the shrine of McKinley, and sing songs of praise to the new divinity discovered by our American cousins. Only one consolation can be found, and that is they have to pay the piper." And doubtless he will be paid.

We see by the *Stock-Keeper* just arrived, that Mrs. F. Smyth has added to her already strong kennel by the purchase of the St. Bernard brood bitch Veda II., by Lord Nelson out of Margrave Winnifred, from Mr. A. Little, of Workington, England. Veda sailed on the steamship Queen, Dec. 18, after having been served by Lord Bute.

NATIONAL GREYHOUND CLUB SHOW OF 1891.—*Editor Forest and Stream:* The premium lists of the show of greyhounds, deerhounds and Russian wolfhounds will be ready for distribution on Tuesday, Dec. 30, and prospective exhibitors can obtain them from Mr. H. W. Huntington, 148 South Eighth street, Brooklyn, N. Y., by application. The lists will be mailed to all owners of the breeds represented by the club, and it is hoped the show will receive the support of the entire fraternity and admirers of the breeds. Mr. C. H. Mason will judge all classes. The liberal prizes offered, coupled with the fact that the show will be for but one day, ought to be appreciated, as no doubt it will. The premiums will be $10 in champion classes, $10 and $5 in open classes, and $5 and $3 for puppies, each sex having its own class. The feeding will be looked after by Messrs. Spratts. The effort of the club to bring these breeds promptly to the front where they justly belong, will, I feel sure, meet the hearty approval of those owners and exhibitors who have their improvement at heart. Owing to a misunderstanding with the committee, and the fact that the original date, Jan. 17, conflicts with the Charleston show, another date will be chosen, of which I will advise you at the earliest opportunity.—H. W. HUNTINGTON, Sec'y (Brooklyn, N. Y., Dec. 29).

THE POINTER CLUB OF AMERICA.—New York, Dec. 25.—*Editor Forest and Stream:* The annual meeting of the Pointer Club of America will be held at the New York show, Feb. 24, at 4 P.M., at which meeting matters of much importance will be presented. By order of the president, GEO. W. LARUE, Sec'y-Treas.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Abbess of Kent. By Frederic Joy, Detroit, Mich., for liver, white and ticked pointer bitch, whelped July 9, 1890, by King of Kent (Priam—Kent Baby) out of Lonnie Bijou (Foxchase—Diablesse).

Yale Howard and Daisy Howard. By Geo. W. Neal, Westville, Conn., for blue belton English setter dog and bitch, whelped Aug. 18, 1890, by Count Howard (Sir Alister—Mena) out of Daisy Foreman (champion Foreman—Jolly Nell).

BRED.

☞ **Prepared Blanks sent free on application.**

Susie Gladstone—Dad Wilson. J. S. Hudson's (Covington, Ky.) English setter bitch Susie Gladstone (Gladstone—Jessie Turner) to his Dad Wilson (Cambridge—Dido II.), Dec. 12.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Elf. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Elf, Dec. 12, six (five dogs), by their Royal Krueger.

Sunrise. John Poag's (Toledo, O.) St. Bernard bitch Sunrise, Dec. 24, nine (five dogs), by his Watch.

Lady Snowflake. Geo. W. Lovell's (Middleboro, Mass.) English setter bitch Lady Snowflake (Prince Noble—Cassandra F.), Dec. 22, seven (three dogs), by P. H. Gotzian's champion Monk of Furness (champion Sir Alister—champion Belle of Furness).

SALES.

☞ **Prepared Blanks sent free on application.**

Jack—Lone Star Zip whelp. Liver and white pointer dog and bitch, whelped Oct. 10, 1890, by J. Leicht, Beeville, Tex., to A. Lipper, Eagle Pass, Tex.

Colonel J.—Dilly J. whelps. Cocker spaniels, whelped Oct. 10, 1890, by Geo. C. Jones, Emporia, Kan., a black, white and ticked dog to Geo. Clark, Omaha, Neb., and a liver, white and ticked bitch to Chas. Brown, Lincoln, Neb.

Staunch Bob—Flash whelps. Liver, white and ticked pointers, whelped Oct. 14, 1890, by Wm. H. Case, Lockport, N. Y., a dog to H. A. Bishop, Bridgeport, Conn., and a bitch to W. H. Gordon, Ellenburgh Center, N. Y.

Dad Wilson—Dixie whelps. Black, white and tan English setter bitches, whelped April 26, 1890, by J. S. Hudson, Covington, Ky., to F. J. O'Connell, Coal Grove, O.

Dad Wilson—Daisy Cambridge II. whelp. Black and white English setter bitch, whelped Aug. 6, 1890, by J. S. Hudson, Covington, Ky., to J. C. Hankins, Hebron, Ky.

Dad Wilson's Boy. Black, white and tan English setter dog, whelped July 15, 1888, by Dad Wilson out of Dolly S., by J. S. Hudson, Covington, Ky., to G. O. Smith, Wheeling, W. Va.

Susie Gladstone. Black, white and tan English setter bitch, whelped May 2, 1886, by Gladstone out of Jessie Turner, by Geo. H. Hill, Maderia, O., to J. S. Hudson, Covington, Ky.

KENNEL MANAGEMENT.

J. H. H., Schuyler's Lake, N. Y.—I have a setter dog that is partly blind in one eye. I think he stubbed it early in the hunting season. Under the sight there is a small speck or blueish skin formed over it. I have dressed it with morphine and ten grains of vitriol in a half pint of water. He can see a little out of it, and it does not get any worse. Can you tell me in your next issue of anything that will clear it, it looks like a felon. Do you think it will be all right again? Ans. This is a cataract, and the surgeon's knife is the only sure remedy.

M. F. S., Troy, New York.—I have a St. Bernard puppy which is five months old and weighs 92lbs., and which has grown proportionately well, except that his forelegs are bent and appear weak. His bones are very large and I don't understand why his forelegs do not straighten out. His body is heavy, which may be the cause. What should I do to aid development? I give him exercise daily. Ans. Continue to give gentle exercise, and as your pup is young yet, his legs will, more than likely, become straighter as he gets stronger. There is no remedy unless you care to try a sort of carriage to sustain the body when walking, as Mr. Gosling, of England, did with his noted young dog Scout, with beneficial results.

MULTNOMAH, Portland, N. Y.—Will you kindly inform me through the columns of FOREST AND STREAM whether there is any reliable remedy for rheumatism in dogs? The sporting dogs of this country seem to be unusually afflicted in this respect. My Irish setter Mike, not yet seven years old, has been a great sufferer from rheumatism for over two years; and as much might be said of many of our best dogs. Ans. Open the bowels with a dose of syrup of buckthorn, and administer the following:

Sodii salicylatis	ʒij.
Aqua	ʒiij.

Dose one teaspoonful in a little milk every two hours until the dog improves and then at longer intervals. Keep the dog warm. If local treatment is necessary, if joints are swelled, paint the afflicted parts with tincture of iodine. Keep the system up but do not feed too rich food, and give the dog plenty of excercise.

J. H. G., Jamestown, N. Y.—I have an English terrier bitch, 15 months old. When she was about 8 months old I had her spayed, and several months later I noticed that she favored her right hind leg, and since that time she has gone on three legs. I have tried several liniaments used for sprains, etc., but with no satisfactory results, and owing to the fact that her half sister also showed the same tendency to favor her hind leg after being spayed, I cannot but think that the operation in some way caused it, notwithstanding the fact that she did not go lame until several months later. She seems to be well in every other respect and plays a great deal, apparently suffering very little if any pain. I wish you would reply in your next issue. Ans. We should advise you to have a veterinary surgeon examine the bitch. No doubt a blister would be beneficial. These cases are apt to become chronic if not attended to in time.

M. B., Franklin, Ind.—Will you please tell me what should be given to a fifteen months old pug dog for tape worm? Also can you suggest any easy method of giving him medicine, as it is almost impossible to administer it to him. The dog in question is very lean and poor. His head looks entirely too small for his body. Do you think it is because he is young? Will his proportions be right when he is older? His colors are good and I have no reason to suppose he is not of a pure breed, unless that is a sign. Ans. Beat ten drops of oil of fern into a raw egg and give after a twenty-four-hour fast. Follow this, in an hour or so, with a spoonful of castor oil. The dog has no doubt been dwarfed through the irritation and pain caused by the worm. Rid him of this and he will doubtless soon be all right. The best way to administer medicine to a dog is to clasp it firmly between the knees, and with one finger make a sort of cup of the corner of the dog's mouth, then pinch the nose to compel him to swallow; the latter only in case of obstinacy.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEW ARMY RIFLE.

THE board of United States Army officers ordered to report on a small caliber rifle suitable for the army of the United States, met during the early part of the past week at the Army Building in this city and adjourned to Jan. 20. It consists of Col. A. V. Kantz, 8th Infantry, President; Lieut.-Col. R. H. Hall, 6th Infantry; Major G. W. McKee, Ordnance Department; Capt. H. B. Freeman, 7th Infantry; Capt. G. S. Anderson, 6th Cavalry, and Capt. S. E. Blunt, Ordnance Department, Recorder.

The board is directed to select a magazine system for rifles and carbines, and also to test and report for adoption such smokeless powder as is deemed most advisable to use. In its sitting of a few days' duration the board has drafted its rules to govern the test of small arms. The arms to be tried may be submitted from any source, only they must not exceed a .30cal., and must be adapted to the Frankfort Arsenal cartridge. The smokeless powder to be used in the tests has already been contracted for with Belgian establishments. Other grades of nitrate powders will be open to acceptance. All tests will be competitive. The session of the board is not limited, and in all likelihood will be prolonged until a desirable arm is obtained. The tests will be made at Springfield, Mass., and will be inaugurated during the early part of March. The delay is necessited because of the non-receipt of the nitrate powders. This delay, however, will afford inventors more time in which to prepare specimen weapons.

The necessity for a small caliber rifle has long been felt in the United States. To-day the army and marine are using the Springfield singleshot breechloading piece. As a serviceable weapon there is, perhaps, none better in the world than the Springfield. On the other hand, the low initial velocity of its shots make it in point of fighting efficiency immeasurably inferior to the new German rifle, to the new British or to the new Austrian rifle.

The Austrian rifle, the Mannlicher, has a caliber of .315in. It weighs 9.681bs. and has a vertical fixed box magazine holding five cartridges. The Mannlicher has a muzzle velocity of about 2,000ft. per second.

Denmark has a rifle, the Krag-Jörgansen, of .315cal., and a velocity of 2,099ft. per second.

The Belgium Mauser rifle of .301cal., working on the bolt system and using a bullet encased in a German silver envelope, has a velocity of about 1,800ft. per second.

The new English rifle of .303cal., working on an improved Lee system, has a muzzle velocity, using ordinary powder, of 1,800ft. per second.

The German infantry rifle, pattern 1888, of .311cal. has an estimated initial velocity of 2,034 foot seconds. Its sights are graduated to 2,242yds.

The new Swiss rifle, the Schmidt, of .295cal., has a muzzle velocity of 2,362 foot seconds. Its estimated rate of fire is 30 shots per minute. The Schmidt is operated on a bolt system.

The new French Lebel rifle is of .3228cal. maximum and .3142cal. minimum. It has a muzzle velocity of 2,194 foot seconds, and it is said that a Lebel bullet can pierce over 15in. of oak at 220yds. The powder is a secret compound of gun cotton and collodion, which is reported as producing no smoke, little noise and very slight recoil.

The new Portuguese rifle is the Kropatschek of .315cal. It has a muzzle velocity of 1,745 foot seconds.

In comparison with the above the United States Springfield rifle is found to have a .450cal. and a muzzle velocity not exceeding 1,300 foot seconds. It is at the same time a single loader, while all of the above pieces are magazine guns.

BOSTON, Dec. 27.—The Massachusetts Rifle Association held its regular weekly shoot for rifle and pistol at its range to-day. The shooting conditions were very good for winter weather. The special event of the day was the directors' gold medal match, which after a very close contest was won by Mr. H. Severance. Following are the scores in detail, distance 200yds., Standard American target:

H Severance	7	7	8	8	8	7	9	6	10	8—80
S C Sydney	5	9	6	7	9	10	8	8	8	10—81
W Charles	9	6	8	6	9	10	7	5	10	7—78
H Cushing	6	6	7	6	10	6	10	7	6	10—77
O M Howard	6	9	8	6	9	7	7	9	7	8 6—74

All-Comers' Off-Hand Match.

H Severance	82	M T Day	72	J B Hobbs	68
W Charles	81	D Martin	71	S T Paul	65
I B Thomas	81	F W Chester	70	A S Hunt	63
S O Merville	77	O Moore	69	C Clark	61
S T George	74				

All Comers' Rest Match.

J Francis	111	M T Day	102	A S Hunt	85
S T Crawford	103	F W Chester	93	J B Hobbs	80
A H Ballard	102	J French	89		

The Massachusetts Rifle Association have just completed their programme of matches to be shot at their range at Walnut Hill during 1891. This list includes 10 prize matches, to be open every shoot day for rifle and pistol, besides the practice and all-comers' matches, as follows:

1. Victory medal off-band match, six prizes. 2. Victory medal rest match, six prizes. 3. M. R. A. seal medal off-band match, six prizes. 4. M. R. A. seal medal rest match, six prizes. 5. Military medal match, six prizes. 6 Record off-hand match, six prizes. 7. Record rest match, six prizes. 8. Record pistol match, four prizes. 9. Three hundred shot off-hand match, six prizes. 10. Two hundred shoot rest match, six prizes.

Also a special gold medal will be given to the shooter making during the year the highest score of 10 shots, either at off-hand or rest. The standard American target will be used in all of these matches except the military medal match, which will be shot Creedmoor count. Nos. 6, 7, 8, 9 and 10 matches will each close June 30 and the other Dec. 31.

CREEDMOOR EXTENSION.—The Creedmoor Commission has at last taken definite steps to acquire more land about the Creedmoor Rifle Range. The addition which is to be made consists of between forty and fifty acres on the west and north of the present range, and most of which has heretofore been leased by the Commission and the association before it. At a meeting held this week at Albany by the Commission a resolution was adopted authorizing the purchase, and Gen. Robbins was directed to open negotiations with the owners. Said owners now ask $100 per acre for the land, which the Commission will not pay, and if Gen. Robbins cannot effect a compromise then the Commission will take the matter into court and begin proceedings to acquire title to the land by the right of eminent domain.

NEWARK, N. J., Dec. 30.—The bullseye match projected by Our Own Club opened on the club ranges, at 136 Springfield avenue, this evening, and should attract many visiting riflemen, as well as the best of those belonging to local clubs. The bullseyes will be 4in. in diameter, and the prizes will be awarded for the first to sixth best center shot, by machine measurement. Each ticket will entitle a shooter to three shots on one bullseye, and he may purchase an unlimited number of tickets. The match will be open on Tuesday, Thursday and Saturday evenings of each week until 200 tickets have been sold.

SYRACUSE, N. Y., Dec. 25.—The bright light this afternoon interfered somewhat with the efforts of the marksmen to make good scores at the range of the Onondaga Rifle Club, yet several remarkably high scores were made, as well as some poor ones. The first match, off-hand, 10 shots, possible 120, resulted: Barnum 67, Stillman 76, Ball 50, Cately 24, Seely 70, Smith 69, J. N. Knapp 58, Grossman 59, Robotham (rest) 89. The second match off-hand resulted as follows: Barnum 77, Stillman 84, Ball 67, Smith 70, Knapp 56, Grossman 78, Seely 77, Lathrop 58, Cateley (rest) 96, Robotham (rest) 82.

THE TRAP.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Jan. 1.—Germantown Gun Club, New Year's Day Tournament, at Germantown, Pa. Address Harry Thurman.

Jan. 1.—All-Day Tournament, at Auburn, N. Y. J. Henry Kerr, Secretary.

DEATH OF ANNIE OAKLEY.—London, Dec. 30.—Much regret is expressed at the news of the death at Buenos Ayres of congestion of the lungs of Miss Annie Oakley, the celebrated female rifle shot, and one of the most popular members of Buffalo Bill's Wild West Show during its sojourn in London.

RUTHERFORD, N. J., Dec. 20.—Boiling Springs against Leonia Gun Club, of Leonia, N. J., at 25 bluerocks from 3 traps at unknown angles, American Association rules:

SPARROWS AT THE TRAP.—Mount Vernon, N. Y.—There was a novelty in the way of trap shooting at our club on Thanksgiving. It was found shooters would not come down and have to pay 30 cents every time they went to the score, consequently the attendance was meagre. English sparrows were thought of and now the problem is solved. They were tried and proved an undoubted success, and as they are very cheap every one can shoot live birds without blowing in a big pile of money. I believe they will even supersede pigeons entirely, for they are out of the trap like an arrow, no duffers among them. I write the above for the benefit of clubs similarly placed, and any one writing to me can have the address of the party selling them.—W. Cox.

WALNUT HILL, Dec. 24.—Santa Claus stopped at this range to-day on his way toward Boston and left some of his presents with the gentlemen who make up the trap-shooting wing of the Massachusetts Rifle Association. To-day witnessed the close of all the matches which have been running during the past season, and the knowledge that the prizes were to be awarded brought out a large number of contestants. The most important match of the year has been the diamond pin match, in which the winners were decided by taking into account not only the excellence of the shooting but also the regularity of the attendance. Those who won choice of prizes were as follows: Mr. Bowker qualified at 15 shoots and won first prize, $20 in gold; Mr. Parham, 15, second prize, a set of table cutlery in plush case; Mr. J. Nichols, 15, third prize, diamond scarf pin; Mr. W. Gale, 13, fourth prize, split bamboo trout rod and fly book; Mr. O. R. Black, 12, fifth prize, $10 in gold; Mr. T. Curtis, 12, sixth prize, Lovell pearl-handled, double-action revolver; Mr. M. Sergeant, 11, seventh prize, $5 in gold; Mr. G. Wheeler, 9, eighth prize, pair of opera glasses; Mr. Hosmer, 9, ninth prize, $5 in gold; Mr. Stanton, 8, tenth prize, $2.50 in gold; Mr. Bradbury, 8, eleventh prize, $2.50 in gold; Mr. M. Knowles, 7, twelfth prize, $2.50 in gold; Mr. W. Bennet, 6, thirteenth prize, whist set. Mr. Nichols was awarded the gold medal for the highest aggregate in the total number of competitions, 17. The match for the Keystone trophy also closed to-day, with the leaders well bunched. Mr. Nichols again came to the front, however, and is now the owner of the handsome badge. The management of the Association evidently meant that no contestant should go unrewarded, for every one present who had competed in the main event of the year was presented with a souvenir prize, in addition to those above noted. The summary of the day's sport follows: Diamond pin match, 20 Keystone targets and 5 pairs standard targets: Wheeler 27, Stanton 24, Black 22, Cady 21, Bradbury 18, Parham 18, Barrett 17, Nichols 16, Curtis 16, Knowles 15, Gale 14, Needham 15. Keystone trophy match, 20 Keystone targets: Stanton 19, Parham 17, Swift 17, Johnson 16, Black 16, Cady 15, Needham 12, Wheeler 12, Knowles 12, Gale 10.

NEWARK, N. J., Dec. 25.—The cold, raw wind kept the shooters in a shiver, as well as causing the scores to be low, at the combined shoot of the South Side and Woodside gun clubs at Newark to day. The shooting was all at bluerock targets and the South Siders were present on invitation of the Woodsiders. Lunch was served by the latter club, and all the sweeps from 9 o'clock A. M. to 4 o'clock P. M., were well filled. The winners as follows:

Event No. 1, 5 singles: Miller, Geoffrey, Brientnall, Heller and Walters 4.

Event No. 2, 10 singles: Miller 9, Hunt 8, Walters 7, Osterhout 6, Lee and Sickles 5.

Event No. 3, 10 singles: Hunt 8, Brientnall and Heller 7, Geoffrey 6.

Event No. 4, 10 singles: Brientnall 8, Hunt and Heller 7, White 6, Geoffrey 5.

Event No. 5, 20 singles, $2 entry: Hunt 19 Geoffrey 17, Brientnall 16, Phillips, Thomas, Heller and Miller 14, Walter 10.

Event No. 6, 15 singles, $1 entry: Hunt 13, Brientnall 12, Heller, Geoffrey and Miller 11, Phillips 10.

Event No. 7, 15 singles, $1 entry: Geoffrey, Brientnall and Miller 13, Heller 11, Phillips 10, Hunt 9.

Event No. 8, 10 singles; Sickles and Miller 9,T. Dukes and Walters 8, Geoffrey 7, Hunt 6.

Event No. 9, 20 singles, $2 entry: Miller 20, Hedden 17, Geoffrey 15, Dukes 14, Walter 12, Sickles 10.

Event No. 10, 15 singles, $1 entry: Hunt, Miller and Brientnall 12, Heller and Geoffrey 11, Phillips 8.

Event No. 11, 10 singles: Geoffrey, 9, Hunt 8, Sickles, Cottrel and Miller 7, Walters, Hill and T. Dukes 6.

Event No. 12, 15 singles, $1 entry: T. Dukes 14, Miller 12, Sickles 11, Geoffrey and Cottrell 10.

Event No. 13, 10 singles, $1 entry: T. Dukes 9, Sickles 8, Miller 7, Osterhout, Cottrell and Walter 6.

Event No. 14, 10 singles: Walters, T. Dukes and Miller 8, O. von Lengerke and A. O. Hedden 7, Osterhout and Geoffrey 6.

Event No. 15, 15 singles, $1 entry: Hedden 14, Hunt 13, T.Dukes and Miller 10, Sickles and Von Lengerke 6.

RED BANK, N. J., Dec. 25.—Shooting by the Riverside Gun Club was well attended to-day and the sport proved very interesting. The marksmen shot at both live birds and bluerocks, under American Association rules. The programme opened at 10 o'clock and lasted until dark. Following is a summary of the events:

First event, 10 bluerocks: Fred Bealle and Oscar Hesse, 7 each; Edmund Throckmorton 6; John Cooper, Ten Broeck, Davis, Jacob and John Worthley and Leander Campbell; 5 each; Edward Bussell and Nell Campbell, 4 each; Walter Parsons, 3; John Dey, 2; Albert Ivins 1. Bealle won first money in the shoot off.

Second event, 10 bluerocks: Bealle, Throckmorton and John Cooper 7 each, Dey, Bussell and John Worthley 6 each, Leander Campbell, Davis, Daniel Kearney and Ivins 5 each, Jacob and C. Worthley 4 each, Parsons 3. Bealle won first money in the shoot off, and second and third moneys were divided.

Third event, miss and out at live birds, $1 entrance: Bealle and James Cooper 1 each and divided; Henry White and John Cooper nothing.

Fourth event, miss and out at live birds, $1 entrance: Bealle and James Cooper 2 each and divided: White and John Cooper 1 each.

Fifth event, miss and out at live birds, $1 entrance: White and Bealle 3 each and divided, Ivins 2, James and John Cooper nothing.

Sixth event, 8 live birds, $3 entrance, 2 moneys: M. F. Cornell and James Cooper 7 each, White, Ivins and Dey 6 each, Bealle, Davis and John Cooper 5 each, John Bergen 4, James Bray 3. Moneys were divided.

Seventh event, 5 live birds, $3 entrance, 2 moneys: Cornell, James Cooper and Bussell 4 each, Bealle, White and Dey 3 each, Wm. H. Little and Davis 2 each. Moneys were divided.

Eighth event, miss and out at live birds, $1 entrance: Bealle and White 2 each and divided, Cornwell 1, James Cooper, Ivins and Throckmorton nothing.

Ninth event, miss and out at live birds, $1 entrance: Cornwell 2, James Cooper and Bealle 1, White nothing.

IMPORTED ARMS.—The Board of General Appraisers in New York handed down a decision last week of considerable public interest. Schoverling, Daly & Gales protested against the rate of duty which the collector assessed on twelve finished gun-stocks, with locks and mountings. These articles were complete and ready to be attached to barrels which had come by another steamer. The collector had assessed the stocks at the rate of 35 per cent. ad valorem, with a specific duty of $1.50 each, under paragraph 170 of the McKinley tariff law as "double-barreled sporting breechloading shotguns valued at not more than $6 each." The importers alleged that a gun-stock did not constitute an entire firearm and should be assessed as "manufactures in part of steel under paragraph 215 of the new tariff law, at 45 per cent. ad valorem." But ex-Judge Somerville, who made the decision, said that gun-stocks or other parts of guns separately imported would be ordinarily classified as manufactures of wood or metal. But this was a case unlike any that had been considered by the board or decided by the courts. In deciding the case the appraisers take the view that the stocks and the barrels were imported to be put together in this country. Therefore, the importations should pay duty as breechloading shotguns.

ONEIDA, N. Y., Dec. 27.—Oneida Gun Club annual side shoot for supper. Captains, Maxwell and Markham, 25 single kingbirds, 18 and 16yds. rise, 3 traps, unknown angles, American Association rules:

BROOKLYN, Dec. 25.—E. C. Maginnis, of the Atlantic Rod and Gun Club, shot a match with Henry Brown, of Brooklyn, at the Prospect Heights Gun Club to-day. The match was for $100, 30 birds each, 30yds. rise, under Hurlingham rules. The former won, killing 30 straights. Brown killed 29. Woodlawn Park, L. I., did not have a very large attendence of members to-day, and the shooting also was poor. Four sweepstakes of 5 birds each were shot. The first was won by Dr. Van Sell. He divided the second with Dr. Schurz. Dr. Schurz won the third, and Dr. Van Sell the fourth. the two shooters making a clean sweep of the board. Dr. Van Sell shot from the 25yds. mark, and Dr. Schurz from the 30yds. mark.

THE SOUTH SIDES.—South Side Gun Club, Newark, N. J., New Year Day reception, from 9 A. M. to 5 P. M. The pleasure of your company is requested. Load for bluerocks and clay-pigeons, and come prepared to stay all day.—W. R. HOBART, Sec'y; I. H. TERRELL, Manager.

BERGEN POINT, N. J., Dec. 25.—The gunners of the New Jersey Athletic Club held their annual Christmas anniversary clay-pigeon shooting carnival to-day on the organization's grounds here, the forenoon and early part of the afternoon being spent before the traps. The card for the day's sport comprised eight events for prizes, the matches and results being subjoined:

First event—A walking match at 10 birds each for two prizes. First prize, George W. Purdy, 10; second, G. DeWitt Smith, 9.

Second event—A shoot for three prizes from unknown angles at 10 birds each: Henry M. Popham, first prize, 10; A. F. Compson, second prize, 9; Charles A. Pope, third prize, 8.

Third event—A match for three prizes at 20 birds each: George W. Purdy 20, first prize; Major James M. Taylor 18, second; G. De Witt Smith 16, third.

Fourth event—A shoot for three prizes at 5 singles and 5 pairs each: First, George W. Purdy, 10; second, G. DeWitt Smith, 9; third, Charles A. Pope, 8.

Fifth event—A match at 30 singles and 5 pairs each for four prizes: First, a handsome ivory-handled pistol, George W. Purdy, 31; second, G. DeWitt Smith, 26; third, John Newman, 25; fourth, Edward L. Vredenburgh, 23.

Sixth event—A competition, Keystone system, at 10 birds each, for two prizes: Major James M. Taylor first, 8; Edward L. Vredenburgh second, 7.

Seventh event—A walking match at 10 birds each, for three trophies—For first G. DeWitt Smith and Major James M. Taylor tied at 8 breaks each, Elmer E. Bigoney secured second with 7 hits, George W. Purdy captured third with 6 smashes.

Eighth event—A walking match for two prizes at 6 pairs each: First, Major James M. Taylor, 5; second, E. L. Vredenburgh, 4.

Dec. 27.—Six inches of snow covered the rifle range of the New Jersey Athletic Club's grounds at Bergen Point to-day, but did not deter the gunning detachment of the organization from holding its regular weekly competition during the afternoon. The marksmen were clad in tarpaulins, oilskins and gum boots. They cleared a calendar of sport numbering half a dozen prize events at clay-pigeon targets, the results of which are summarized below:

First event—The twenty-third competition, at 20 birds each and class handicap allowance, for the club's gold emblem: Edward L. Vredenburgh first with 15. The other principal scores were: Major James M. Taylor 14, Charles R. Pope 13.

Second event—A shoot, Keystone system, at 20 birds each, for two prizes: First, George W. Purdy, 18; second, Edward L. Vredenburgh, 15.

Third event—A walking match at 10 birds each for two prizes: George W. Purdy captured first with 10, Charles A. Pope secured second with 8.

Fourth event—A competition for three prizes at 10 birds each from unknown angles: Elmer E. Bigoney got first with ten; with 9, George W. Purdy gained second.

Fifth event—A walking match for three prizes at 20 birds each: Edward L. Vredenburgh 20, first; George W. Purdy 19, second; G. DeWitt Smith 18, third.

Sixth event—A shoot at 5 pairs each for three prizes: First, Charles A. Pope, 10, second, George W. Purdy, 9; third, A. F. Compson, 7.

RED BANK, N. J., Dec. 22.—Inclosed find scores of the Riverside Gun Club's regular monthly shoot at live birds, which was held on Friday, Dec. 19. The wind blew a gale from the northwest, causing a great number of birds to come in either direct or to the right. Many birds that were killed dead in bounds were carried out by the force of the wind. Sweep No. 1, at 5 live birds, 3 ground traps, A. S. A. rules:

Beale	1112110—6	E M Cooper	1221111—7
White	1111111—7	Dr Crater	21c0110—4
Ivins	0111112—6	Bergen	2010c0—3
Cornwell	12c1220—5	John Cooper	0221111—6
Throckmorton	2111260—5		

White and E. M. Cooper div.; ties on 6 and 5 shot off in No. 2.

Sweep No. 2, at 5 birds:

White	01111—4	Ivins	12111—5
E M Cooper	10111—4	Little	02102—3
Beale	11011—4	Worell	02011—3
Throckmorton	1c012—3	John Cooper	0c122—3
Cornwell	11120—4		

Ivins first in No. 2 and second in No. 1; White second in No. 2; Cornwell third in No. 1; Throckmorton third in No. 2. c Dead out of bounds. 2 Killed with second barrel.

THE WAYNES ON THEIR NEW GROUNDS.—Philadelphia, Dec. 20.—To-day, for the first time since August last, our gun club held a shoot on our own grounds. In our late quarters we had to give way to improvement. Where we scattered lead from out shotguns the Midvale Steel Co., in their extended works, will soon be turning out the immense steel tubes and rings for Uncle Sam's heaviest rifled breechloaders. After a lively skirmish for grounds, in which one disappointment followed another, we at length dropped into our present quarters, which we think second to none in this neck of the woods. We are located at Sixteenth and Wingohocking streets, on a knoll overlooking the Wingohocking Creek, a little breezy at this season but very pleasant in the summer, as we shoot with our backs to the sun, with plenty of shade trees in the rear. We have eight minutes walk east from Wayne Junction, and no mud holes, in fact, paved sidewalks extend to within one block of the grounds. The attendance to-day was slim and shooting somewhat rocky. Cheyney took another lease on the gold badge. Full score appended. Match at bluerocks, 5 traps, 16 and 18yds.:

New Publications.

PENNSYLVANIA BIRDS.*

IN our issue of Jan. 31, 1889, we called attention to an exceedingly valuable report upon the birds of Pennsylvania by the State Ornithologist, Dr. B. H. Warren, and announced that a revised and enlarged edition would doubtless be provided for by the State Legislature at an early day. The new edition is now in process of distribution through the Pennsylvania State officials and other persons mentioned in the act providing for the publication. This new edition, however, instead of being limited to 10,000 copies, as we anticipated, includes 19,000 copies, 15,000 of which will be distributed by members of the present Legislature. The first edition of the work contained 272 pages and 20 plates; the present edition contains twice as many plates and 176 additional pages of text. By copying the plates from Audubon's "Birds of America" the expense of original drawings was saved. The plates were colored from specimens either in Dr. Warren's collection or belonging to the National Museum. As a measure of economy the lithographer was again restricted in the number of colors to be used, but the reproductions have suffered little, if at all, on this account. While the number of plates is but 100, there are 160 species figured, and, as a rule, the two sexes are shown, and in many cases the young as well. We may repeat what we said about the contents of the first edition in order to convey an idea of its scope. The introductory pages are devoted to brief explanations of the topography of a bird and the descriptive terms used in the accounts of the species. The descriptions are clear and concise, sometimes limited to a few lines when the species is figured. Full notes are given on the habitat in the State, the time of arrival and departure, the nest and nesting habits, the size and color of the eggs, the feeding habits and the food as determined by the records and the examination of thousands of stomachs. Dr. Warren endeavors, by demonstrating the nature of the birds, to foster public sentiment in favor of protecting those that are really serviceable to the farmer and the fruit grower, as many useful birds which are now destroyed would be rigidly protected if their true character were known. The appendix has been notably increased by statements as to the food of hawks, owls, crows and the English sparrow, as well as by some shorter papers. It contains also a glossary of the technical terms used in describing the species.

The work of Dr. Warren and those associated with him in the painstaking investigation of the birds is deserving of the highest encouragement and the most unstinted praise. The text of his Report is clearly and neatly printed on good paper, the binding is half morocco, and altogether the superiority of the new edition over the first may be taken as an index of the increased sympathy with the author's efforts in behalf of the birds of Pennsylvania.

*Report on the Birds of Pennsylvania, with Special Reference to the Food Habits. Based on over Four Thousand Stomach Examinations. By B. H. Warren, M.D., Ornithologist, Pennsylvania State Board of Agriculture. Second edition, revised and augmented. Illustrated by one hundred plates. Harrisburg: E. K. Meyers, State Printer, 1890, pp. xiv+434.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

Yachting.

Yachtsmen who do not see what they want under this heading will please lookunder the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

A DISPUTED QUESTION.

Editor Forest and Stream:

Permit me to take exception to the somewhat summary manner in which you decide a question so extensively discussed and on which so widely different opinions are held, as the second one referred to in your issue of Dec. 18, under the head of "Some Points About Markboats." It seems to me that the editor, while at perfect liberty to criticise and discuss, should not arrogate to himself the right to judge and decide a point which at the very time is announced to come before the race committee of the club to which the contestants belong at its next meeting for decision, and where opinions contrary to the one expressed are held by representative yachtsmen and practical helmsmen.

As to the point in question, if you will allow its discussion, it seems to me that while it may be judged by the rule you give (Rule XXXIV., Section 13), that other rules also apply, and must be considered as regards their bearing on the main rule, and I also object to your setting forth what you term "the common sense of the rule" against the custom which I and others claim to be universal, viz., that to claim the allowed rights at the mark the leeward and overtaking boat must have the mark.

This is the main question: As the boat A is on starboard tack, leading and to windward, she is in nowise bound to grant, by anticipation, to B rights which do not yet exist. It may be B's misfortune to have got in a position where she hopes to obtain a

position between A and the mark, but she risks not being able to get there in time, and in such case must either slack sheets and stop way or else wear ship and lose time. She well knows that A cannot bear away on her in the least, and it would, therefore, be unjust to allow B to force A into giving up her weather advantage merely that she, B, should obtain a racing advantage.

The other rules which it seems to me bear on this case are as follows: Rule XXXIV., Sec. 6. "An overtaking yacht shall in every case as long as on overlap exists keep clear of the yacht which is being overtaken," and Sec. 12, same rule, "When two yachts, both close-hauled on the same tack, are converging by reason of the leeward yacht holding a better wind and neither can claim the rights of a yacht being overtaken, then the yacht to leeward shall keep clear."

You quote Dixon Kemp; on referring to page 180, fifth edition "Yacht and Boat Sailing" I find Rule 21 of Y.R.A., the concluding clause of which I quote: "The overtaking yacht if to leeward must not luff until she has drawn clear of the vessel she has overtaken."

Rule 21, Y. R. A. (page 182) headed "Requiring a yacht to tack when approaching a shore or other obstruction closehauled" expressly excepts a mark vessel, I quote: "If two yachts are standing toward a shore or shoal, or toward any buoy boat or vessel and the yacht to leeward is likely to run aground or foul of such buoy, boat or vessel (a mark vessel excepted) and is not able to tack without running into collision with the yacht to windward; the latter shall at once tack on being hailed," etc.

In the case under discussion there is no question of going ashore or of any dangerous obstruction if B should be forced to the leeward of the mark. Even if holding a better wind she is bound to keep clear, and what B might do in the way of luffing if the coast was clear is outside of this discussion, as she is bound, being the overtaking vessel, to keep clear in any case.

I respectfully submit this, which to me and others seems the rational view of the case in question, although having a wholesome respect for the last word which is the editor's prerogative when differed with.

GUENN.

We are very glad to give space to a further discussion of the question, and only hope that others who are interested in it will follow "Guenn's" example and state their views. We were aware that the abstract question of the construction of the rule had been laid before the race committee of the Seawanhaka C. Y. C., but as the actual race, which has created a good deal of interest through this foul, was in itself a very trivial one, being sailed entirely outside the club, and long since settled so far as the two contestants are concerned, there can hardly be any impropriety in discussing it in public.

The main question is very clearly stated by "Guenn," but in arguing it he limits it to one special case, in which the leeward vessel, B, is the overtaking one, and also holding the better wind. As a matter of fact, in the Tuxedo race B had come up on port tack and gone about to leeward of A a short time previous to the collision, but whether or no she was the overtaking yacht we cannot say, nor does it matter in the least. The rule under discussion is a general one, and covers a wide range of position. In order to discuss it thoroughly we will take "Guenn's" statement of the question, but assuming that the boats are merely in the relative positions given; A to windward and B having an overlap on A as the two near the mark. We may assume that the two started the race in the same relative positions; that they came evenly together in cross tacking, neither being positively in the lead, or even that A is the overtaking vessel. The main question would be precisely the same under any of these prior conditions, and yet neither of the sections, 6 and 12, quoted by our correspondent, would bear on the case. The same applies to the Y. R. A. rule No. 20, as also quoted.

Rule 21 of the Y.R.A. is practically embodied in sections 13 and 14 of the S.C.Y.C. Rule No. XXXIV., though the wording is different. As we read this rule in connection with Sec. 13, it only strengthens our argument; it expressly says that a yacht shall not compel another to tack in order to give her room at a markboat; but, if the former can go clear without tacking, the latter must give her room to do so. This is precisely B's claim, that he could pass the mark without tacking; he did not hail A for room to tack, as he might have done had there been an obstruction to sea room in place of a mark in the course, but he hailed for room to pass the mark on the same tack. As we understand the position of the other side, the case would have been the same if B, instead of making a pilot's luff, had been sailing just enough freer to have gone by the mark with sails full.

It may be that a case might arise in which B is clearly the overtaking vessel and at the same time holding the better wind, so that the two converge, and that the sections 6 and 12 would enter into the discussion; but this we think is very doubtful and in any event may be deferred until the main question is settled.

The Y. R. A. rule No. 18 is clearer on the main point than the S. C. Y. C., reading as follows: "When rounding any buoy or vessel used to mark out the course, if two yachts are not clear of each other at the time the leading yacht is close to and actually rounding the mark the outside yacht must give the other room to pass clear of it, whether it be the lee or the weather yacht which is in danger of fouling the mark." Under this rule it is clear that the following yacht need not be abreast of the mark, in fact, he may be a considerable distance away. A would probably be considered to have what has been termed in this discussion an "overlap on the mark" as soon as any part of her hull and spars actually lapped it. Now if she were a big schooner, with a sail base of 175ft. from bowsprit end to boom end, B might be over 150ft. from the mark and yet have the right, through overlapping A, to hail for room. The distances would be vastly different, but the principle is the same as in the case of the smallest catboats or canoes. The S. C. Y. C. rule is less definite in not specifying that the leading boat must be actually covering the mark.

We cannot promise "Guenn" the very last word, but we will be glad to hear from him further, and especially in regard to what we unfortunately termed the common sense of the rule. If our reading is incorrect, and B must actually be abreast of the mark before she can claim room to round, of what possible use is the disputed section 13, and how has it so long survived the rigid scrutiny of committees on the revision of the rules?

THE SEPTEMBER GALE OF 1889.

ALL things must come to an end, and I passed out into the night on the memorable evening of Sept. 7 with regret. I closed the door on a cheerful picture of rooms made bright with all that taste and refinement can command, in vivid contrast with the outer darkness. As I crossed the lawn Bruce Price's many-gabled masterpiece rose in dim and fantastic outline behind me, relieved only by the warm and brilliant light streaming from the windows, while below me, the pier stretched out its shadowy length. The wind that for two days had been quietly moaning in the east had now changed the character of its song, and with a crescendo of portentous meaning was telling the sailor of streaming decks, plunging and groaning hulls, shrieking cordage, and cold and sleepless nights. The sea was clattering noisily on the beach, and every sign of nature pointed to what the mariner quaintly calls "a spell of weather."

The gig lay awaiting me in the shelter of the breakwater, and after a long wet pull the black high side of our 31-ton British "coal wagon" loomed up before us. We were quickly on deck, with the boat on the davits, and soon the anchor light and the two red lights swinging gently on the flagstaff aft had charge of the deck. "All hands," with that sweet confidence in Providence or "the old man" which characterizes the sailor, speedily joined Mr. Murphy.

The increasing sea before long, however, aroused the "old man" (not Providence), a glance on deck demonstrated the necessity of more ground tackle under foot. The crew was called; in a short time we were riding to both anchors, and repose again descended on the little ship.

Morning brought with it a moderate gale from the northeast, but the sea running more easterly had increased enough to set our craft rolling uncomfortably, as she lay tide rode. At a little after eight bells the small manila parted where it pressed across the bobstay. As quickly as skillful and eager hands could do it, the trysail and storm jib were brought on deck. Stopped upon their luff, they were bent on and hoisted, sheets rove off ready to shoot home and fully prepared for setting at an instant's notice. Owing to the subcellar construction of our craft and the shoal water of Black Rock Harbor, we were anchored far from the shore, yet with but little water under our keel. Any further accident to our ground tackle sending us adrift, would, therefore, prove disastrous, and naught but prompt and skillful action could prevent our stranding. With the sea then running and the increasing gale evidently upon us, this meant serious damage, if not the loss of the vessel and our lives. From this moment the deck could not be left, and the crew remained there night and day until the storm was over on Saturday morning, going below for their meals only.

And such meals! Aft, with the solitary comfort of a swinging table, I did well enough, as dishes preserved while on it some stability; but forward, the fo'castle floor and nature's implements, the fingers, did duty for those invented by civilization. Skill born of long practice enabled me to accomplish a tubbing on that morning, but it was the last effort until quiet again reigned, and a razor was ornamental only during the same period. The noises developed by that eternal roll were as disagreeable as numberless, and time was passed in recovering the articles continually breaking adrift.

As the day wore on it grew worse on deck, for a small rain added its mite to the discomfort. In the afternoon an enormous flood tide, bringing with it an increasing wind and sea, threatened the destruction of the Pearsall breakwater, its solidity and strength alone saving it. All the lighter structures up in the harbor, although less exposed, were much damaged, and their wreckage was soon floating on the agitated waters of the Sound. The steam yacht Unquowa, anchored inshore, by this time was rolling so violently that we feared she would turn turtle, and in our discomfort we consoled ourselves with the thought that if we were badly off she was "wusser."

Our lot was like that of the policemen in the "Pirates of Penzance," an unhappy one, and with longing eyes we gazed upon the soft green of the lawns as it rose from the very edge of the foaming waters to the cottages, framing them in with an effective background for their varied outlines and warm coloring. With a glass the ladies could be seen on the verandas watching the tossing vessels. Behind the shelter of Fairweather Island the smaller yachts lay in greater security, but vieing with their larger sisters in the violence and eccentricity of their movements. An unlucky naphtha launch broke adrift and started off on an independent cruise that ended disastrously on Penfield Bar. Willing hands went to her rescue and she was dragged ashore in a very demoralized condition. We understood afterward that one of my guests dubbed "Matie," who, unable to get on board on his arrival, had been stopping at the cottage, here distinguished himself. With a courage worthy of imitation he took off his shoes and stockings, dashed into the water at least a foot deep, and, painter in hand, stimulated all hands to concerted action by singing "Captain Ranzo" in the teeth of the gale. Naught but the stern discipline maintained on the quarterdeck of the flagship, the thorough instruction there obtained and the superior quality of the whisky dispensed on board could breed such mariners, and I hope in time to reach the standard of Annapolis with my pupils.

Night settled down with a dreary monotony of noise and discomfort which banished all sleep. The men, wrapped up in the clew of the trysail, passed an unhappy night, while I below spent the time, with pillows in hand, in search of a quiet corner. Four nights did I unsuccessfully, and nailing my ears fast to the floor, with staples driven down over my great toes, is the only scheme that has presented itself to my liveliest flights of imagination.

On Wednesday morning the sea had gone down a little. A boat sent on shore brought off some books, a few gastronomic delicacies and a kind note from the chatelaine, begging the commodore to desert his lonely watch for the comforts and companionships of the cottage. The weather was still so threatening that I did not dare to leave the vessel. In a short time the sea again arose in its might and further communication was cut off. Another one of my afterguard had now arrived on the scene and was quartered at the cottage, being unable to get off, at least, so they sent word with many protests of loyalty; but their commander has always thought that the charming presence of the chatelaine, the skill of the "chef," the excellence of the wine cellar and the downiness of the beds proved too much for their fealty. The books were my only solace during the dreary monotony of the following days.

On Friday the steward found that our supplies were giving out and it became absolutely necessary to reach *terra firma*. This looked to be impossible, for the surf, higher than ever, was dashing up over the breakwater even at low water. The boat was lowered with the greatest difficulty and, with the skipper and two men in her was started for the shore.

The skipper, like many good sailors, is an indifferent waterman, and I therefore gave him careful instructions how to proceed. By rowing diagonally across the sea, head to wind, the shelter of Fairweather Island could have been reached in safety. This he failed to do, and steering straight in for the land was soon in shoal and breaking water. Away went the boat, mounted on the crest of a big comber, at incredible speed; the oars were tossed from the broken oarlocks, and becoming unmanageable, she disappeared from view in a smother of white water.

Up to this time the green hillside had for days been drearily void of life. The rain had kept every one indoors. The cottages and hotel wore a deserted, dreary, water-soaked look, and a good glass alone revealed any signs of humanity behind the dripping eaves of the verandas. As if by magic, the scene changed, people came running from every where, the lawn was like a race course, and even the gentle sex hurried to the beach, in spite of wind and rain. A most curious effect they produced, rushing about in seemingly purposeless manner, like so many ants! Presently they congregated in one spot; the boat arose from the water, and was carried up on to the green sward. Then a conclave held counsel around the derelict, and three yellow clad forms, our unfortunate men, went off to the house, shaking themselves like so many Newfoundland dogs. The group lingered around the boat, held by some occult fascination until a cart came down and trundled her off to the head of the harbor. The ants all crawled away into their nests, and the wind and rain again reigned supreme over the scene.

This interesting pantomime coming to an end our own situation forced itself on my notice, and sad to say, for a moment I became panic-stricken; and as the ancient mariner says, "there was the devil to pay and no pitch hot!" We were left with one ablebodied seaman, an undersized cook, an invalid steward and a feather-weight commander. With the latter at the wheel what could one and three-quarters worth of man do with those trysail and storm jibsheets in a hurry? Our old craft would have run away with us with disastrous results. Our gear held on, however, and the boat was seen after a while coming out from under the lee of the island. The ducking had evidently washed some of the cobwebs from the skipper's brain, and shaping a proper course he brought the boat safely alongside, riding the seas so buoyantly as to ship but little water.

It was no easy matter, however, to get her to the davits with the crew on board. She plunged frantically, threatening destruction to herself at every instant. Skill and activity triumphed, however, and without damage she was secured and the stores landed in the icebox. A lost oar, several broken tholepins and a ducking for the men was the total damage done. The "afterguard" sent off a message expressing great concern for my safety and an enormous desire to join me; this latter part being delivered by the skipper with a skeptical smile. Their anxiety soon manifested itself, for they hoisted signals on the pier flagstaff, asking me to accept assistance. This I declined, knowing that none could be rendered in such a sea, and having by this time regained confidence in our ground tackle. They nevertheless telegraphed to Bridgport for a tug. One started, but two or three plunges outside the harbor light nearly swamping her she turned back.

Left alone in our discomfort, night closed down with as large a sea, and its attendant noise and motion, as during any part of the week. Toward morning, however, a sensible decrease in the motion was felt, and the wind blowing more fitfully showed signs of going down. Saturday's sun rose smiling, nature quickly resumed her usual aspect, and naught of her ruffled temper could be seen but the discolored water stirred up in her angry mood. An hour spent dragging for our lost anchor and chain secured it. The warmth of the sun soon dried our sails. A vigorous morning toilet applied to our little ship removed all traces of the storm, and by noon we were all ataunto, "ship-shape and Bristol fashion." Lunch on shore served to relate our several experiences. The "afterguard" told of their heroic efforts to rescue or to join the commodore. The chatelaine related her many pangs and fears as she gazed on the little ship madly tossing on the waters. The commodore told the chatelaine's "wusser half" what a poor harbor he had. The half retorted with a violent tirade against blarsted British cutters, contending that his American harbor was a first-class shelter for sensible American boats, for which alone the Lord intended it.

The commodore promised to reform, and to build his next boat with the keel on top of the mast, thus bringing peace and an adjournment to the sideboard. The usual result taking place, they were seen together for the rest of the day wrapped in American flags, chock a block with patriotism, and the September gale of '89 became a thing of the past.

R. CENTER.

OLD AND NEW STYLE YACHTS.

Editor Forest and Stream:

"Podgers" must have had doughnuts and cheese for dessert, or he could not have written such a blue grumble as you printed lately about modern yachts. I wish some yacht sharp would give him a description of all the admirable improvements over old styles seen in most modern built craft. I had a sail in one of his wave smashers not long ago, a beat to windward in a moderate sea in a 33ft. l.w.l., 11ft. beam, 6ft. draft., with good lines and sail plan. The lee drift was astonishing, the water flew all over the cockpit, the lee bow spanked the head seas savagely every plunge. Well, we arrived—in the afternoon—with the kerosene and hard-tack mixed. I have made the same passage under like conditions in my cutter in half the time, without leeway, spray, spanking or more heeling, and *sans* flavored biscuit. She is 28ft. l.w.l., 9ft. 3in. beam and 7ft. draft. I have outsailed many well-modeled, larger-sized country craft, because mine would hold on to the water, part the seas like a knife, make small lee waves, drag no water, stand up to the wind and sneak close to the wind's eye. Modified cutters, such as Williams, Gardner, Smith, Burgess and others design, are the nearest perfection for comfort, safety, speed and beauty of any craft in the world. They are so nearly perfect that only a practical eye can detect any difference in a new craft from its predecessor. Whether they resemble English or Turkish, they have enough about them to be distinctly American, and that have come to stay. Compare the Shona and Saladin or the Minerva and Milicete, for example. A 28ft. l.w.l. yacht is a little fellow after all; dock her overhanging ends and you may as well put in rowlocks and stick to the harbor; leave them and she is a seagoing craft of some dignity.

The clipper-bow gives much room for handling anchors and sails, improves appearance and lines, lessens pitching, supports the bowsprit and increases room below. There is little objection to the forward overhang, the fogies all howl over the fan-tail. My yacht is 37ft. over all. Suppose I cut off the after overhang four feet. I then have a fairly wide stern, and an old-fashioned stub-tailed craft. Room around the cockpit and in it could be gained only by increasing the beam, and we know how that diminishes speed and draft. The fan-tail gives just as much additional room, as it extends beyond the mainsheet traveler. The cut-tailed yacht has less deck room and less stowage room below; the mainsheet is troublesome and must be handled in the cockpit; it is difficult to pass the reef earing and to tie outer reef-points; there is more liability of being boarded by following seas, and by raging seas when anchored in an exposed roadstead; there is more drag in rough water, and she is open to the suspicion of having been built by the mile and chopped off when wanted. Bob-tails ought not to be encouraged on this side of the ocean.

The after overhang is a graceful finish to the sheer and the run and refines the underwater lines so that the drag is diminished; it gives the mainsheet space for kinks, coils and capers; its foot room is invaluable in handling the mainsail; it splits following seas and lets them heave the yacht ahead, and lessens the settling in the trough of the sea; it makes the mainsail look in better proportion, and enables one to carry a larger one for racing; it will not be abandoned by any one who cruises, "blow high, blow low," outside or in.

What is the golden ratio between beam and draft? Generally the greater beam the less draft. We have wisely avoided the extremes of English dimensions. A beam of 9ft. on 28ft. waterline is enough to afford plenty of deck room besides the skylight or trunk and permit the most exquisite lines of entrance and exit under water. A boat sails with bow deep, stern deep and side half buried part of the time, hence the necessity for the long overhang forward and aft to permit the banishment of bumps and the drawn-out delicacy of lines, as well above the water as below, to cheat the water of its friction and force. A 7ft. draft is about right for the other dimensions given. This allows 6f. 6in. head room under skylight or trunk, space for trim ballast under the floor, low-hung outside ballast with great leverage and consequent stability and safety, and a grip on the water more comfortable and effective than any centerboard gives.

These dimensions and features are the essentials of such a craft as "Podgers" has condemned in his sighs of sentimental aspiration for—he don't know what. They represent the smallest yacht possible for one to live aboard of comfortably and to cruise safely up and down the New England coast. This ideal has been built and used in all kinds of weather; and though I should like a larger yacht—just as one finds his house getting smaller and smaller as his goods increase and wants another—I cannot see any improvement desirable after comparison with the best of the Marblehead fleet. Heavy with stores, with sails stretched by many a gale, with no experience in racing or in the tides off Marblehead, we went into the Labor Day race of the Corinthian Y. C. with three chopped off stubtailed yachts, having advantages of special preparation, large harbor sail areas and expert yachtsmen with knowledge of the course. Notwithstanding these, Orinda came in second, beaten only by a much larger yacht. Away with the old type sloop and "Podgers's" lamentations.

DR. W. H. WINSLOW.

CORINTHIAN NAVY.—The Board of Education will meet at an early date and form plans for the carrying out of the new laws regarding the granting of certificates to amateur seamen and navigators. Com. Robert Center is chairman. A dinner to celebrate the birthday of the navy will be held during January. Members who would like to attend will send their names to Jas. W. Gibson, 757 Broadway. Proposed for membership Geo. W. Johnson.

NEW YACHTS.—Mr. John B. Paine, who has been so successful in his two designs, Swordfish and Hornet, has completed a design for a 40-footer which Lawley will build this winter. Three new thirties are reported as ordered from Mr. Burgess.

NEW YORK YACHT RACING ASSOCIATION.

Editor Forest and Stream:

The last meeting of the year of the New York Y. R. A. was held at O'Neill's on Dec. 26, with Com. A. J. Prime, the president, in the chair. Delegates from the following clubs were present: Bayswater, Columbia, Hudson River, Jersey City, Newark Bay, New Jersey, North Shrewsbury, Staten Island Athletic, Williamsburgh, Yonkers Corinthian and Oceanic yacht clubs. In addition the owners of the winning yachts of the regattas of 1889 and 1890 were present to receive souvenirs and prizes.

The financial report of the regatta sailed Sept. 1 was submitted by the regatta committee and showed a balance of $107 net profit; there will probably be added to this about $75 more, which will bring the grand total up to nearly $200, which, with the balance in the treasury after paying the prizes, will leave the Association $500 to the good. This sum does not include over $500 used in the purchase of prizes for the recent regatta and for souvenirs for that of 1889.

A committee appointed at the last meeting to consider the advisability of having a dinner, submitted their report. They informed the Association that each club belonging to the Association would be limited to the use of eight tickets; three to its delegates and five at large. Wednesday, Jan. 28, 1891, was fixed as the date, and covers will probably be laid for 150. The place has not yet been selected, but will possibly be O'Neill's if accommodation can be obtained there.

The executive committee, to whom was referred the question of the Just Woke Up protest, submitted their report. In FOREST AND STREAM of Oct. 16 this matter was discussed at length, but we will again refer to it. At the recent regatta of the Association on Sept. 1 last, the yacht Just Woke Up, sailing in Class 3, appeared at the starting line without a number and requested permission to sail over the course, and was directed so to do by one of the judges. Although being handicapped the Just Woke Up finished first, beating all her class. A protest was filed, claiming that the rules were infringed by her in not carrying a number. This protest was upheld by the regatta committee, and the Just Woke Up was disqualified. From this decision an appeal was taken to the executive committee. The executive committee overruled the decision of the regatta committee, giving as their reasons that the judges who were delegated by that committee instructed the yacht to start, and while they may have and probably did exceed their authority, their error should not be visited on an innocent party, viz., the owner of Just Woke Up. The executive committe recommend, however, that in future races of the Association the rules be rigidly enforced, and that their decision on this point is not be taken or construed as creating a precedent.

It has been said that there is too much red tape about the proceedings of some of these regattas; that judges are in the way in nine out of ten regattas at which they serve; that a regatta committee is sufficient to manage a race; that its members arrange the preliminaries, see that the boats are entered in proper form, and being familiar with the event at which they serve, the management of the race is a simple matter and can be accomplished far better without judges than with them.

Our experience has been, that while the above may prove true in some instances, in the majority of races that we have attended where judges have acted, they have been selected not for "figure heads" but for their known ability and as experts in the matter of taking the correct time of a great number of starters. On the other hand, in the smaller clubs of which this assotiation is composed, different committees are selected each year, and while they attend to the detail of the regatta, they select men of experience to aid them in the important duty of timing the race. Of course the recent regatta of the New Rochelle Y. C. will be pointed out as an example, but if our friends will only delve a little they will find the fault rested entirely with an inexperienced regatta committee.

After some miscellaneous business was transacted, the presentation of prizes took place.

The following are the winners in their respective classes with the prize awarded to each:

Class C, Dolphin, walkover, one-half value prize, a pair of marine glasses.
Class D, Avalon, an oil painting, by Butterworth.
Class E, Mergus, two bronze statues with table lamp.
Class F, Forsyth, an oil painting, by Butterworth.
Class G, Christine, two bronze figures.
Class 1, open sloops, Eagle Wing, bronze clock.
Class 2, open sloops, Cameron, pair marine glasses.
Class 3, open sloops, Just Woke Up. (This prize is withheld, as the committee have not looked into other protests entered, as they did not deem it necessary until the appeal from their decision disqualifying her for not carrying a number was decided.)
Class 4, cabin cats, Edna, marine glasses.
Class 5, cabin cats, Ripple, marine spirit compass.
Class 6, open cat Norah, diamond charm.
Class 7, open cats, Nadeya, oxidized silver cigar box.
Class 8, Undine, oil painting by Butterworth, in which 19 yachts are shown in the race.
Class 9, Bon Ton, piano lamp.
Class 10, Galawater, walkover, one-half value, gold locket.

In addition each of the above received a champion pennant.

Souvenirs—gold watch charms—containing on one side the flag of the Association in colors and on the other the name of the winning yacht, were presented to the winners of the 1889 race as follows: Gertrude, Mergus, Forsyth, Lurline, Amateur, Corlett, Rival, Lone Star, Bessie, Norah L., Alida, Pauline B. and Bon Ton. After the presentation the meeting adjourned.

The next meeting of the Association will be the annual one for the election of officers and will be held at O'Neill's on Feb. 4, 1891. It is expected that at this meeting application for membership will be made by two or three of the larger clubs. X.

EASTERN Y. C.—The Eastern Y. C. has a committee out which is considering the advisability of making additions to the club house at Marblehead Neck. The lot to the northward of the club house having been recently purchased, it was thought at one time that the club house might have to be moved forward to prevent the view from being interfered with. But C. S. Eaton, the new owner of the lot in question, very considerately decided to build his new house in such a position that it will interfere very little with the view from the club house veranda, so that there is now no necessity of moving the house. Several plans are being considered, and the matter will not be decided till it is brought before the next meeting of the club. The most probable plan at present is one which includes a two-story addition to the south of the present house and connected with it by a covered walk which will bridge over the driveway. On the ground floor of this addition there is a ladies' reception room and a billard room, both of which are lacking in the present house. The second story will be used for rooms for the servants, with some additional rooms for members.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

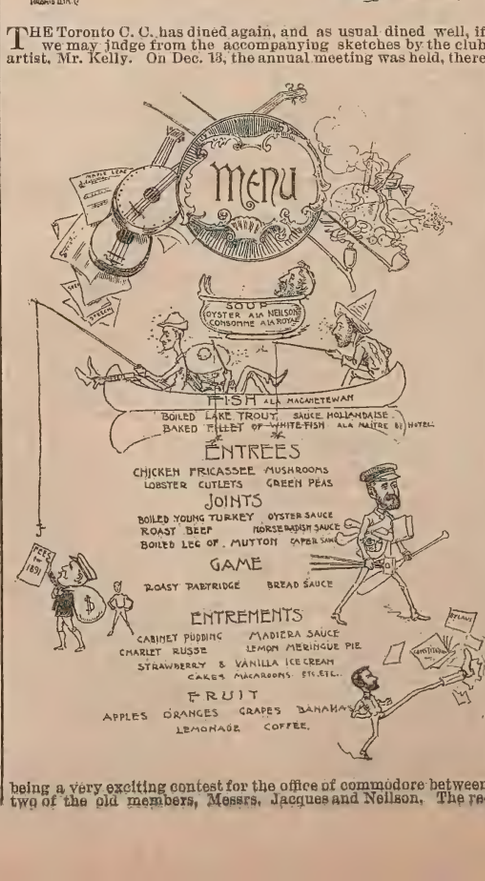
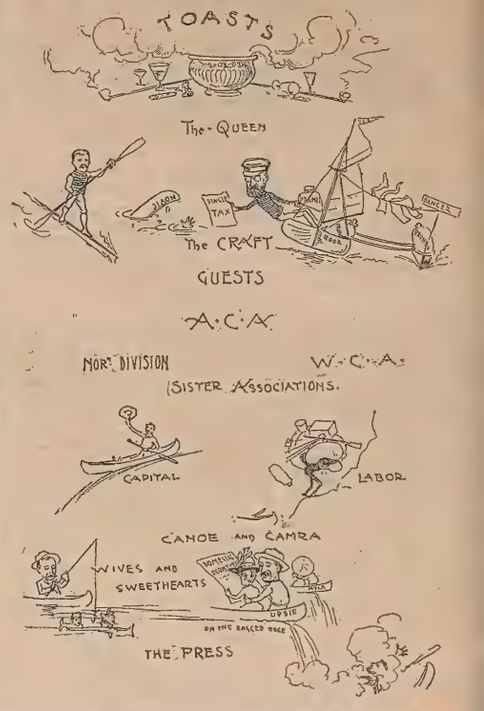
CANOEISTS' WINTER QUARTERS.

THE evenings at the New York Canoe Club winter quarters, 19 West Twenty-fourth street, have so far proved to be successful and popular that it has been suggested by many that the membership be made more general. The location is central and the fencing rooms, presided over by Capt. Nicolas, are unique in their way, being decorated with pictures of canoeing, duelling, etc., and handsome weapons and curios. In addition to the canoeing talks, contests with foils, single sticks and gloves have been much enjoyed on these evenings.



Although the subscribers have so far been solely members of the New York Canoe Club who have engaged the rooms and assured the success of the scheme, it is the desire of the club that the meetings should benefit and entertain as large a number as possible. With this end in view the privileges of membership to the winter quarters is thrown open to all, subject to such restrictions as govern all social organizations.

If liberally supported by other clubs and canoeists these informal meetings can be made at slight expense still more attractive, and may grow into a permanent organization. The subscriptions for the winter are $5 and applications may be addressed to B. H. Nadal, 19 West Twenty-fourth street, who has been appointed by Com. Howard as committee in charge of the winter quarters. The next meeting will be held on Friday, Jan. 9. The rooms will be open on every Friday thereafter during the winter. It is the intention to provide every other Friday some special programme or attraction. It is especially understood that all canoeists and their friends, whether subscribers or not, are cordially welcome on any of these evenings. On last Friday week Capt. Nicolas, who can do many things besides fencing, served an excellent plain dinner to sixteen men, and these dinners may be made a feature of the meetings.



TORONTO C. C.

THE Toronto C. C. has dined again, and as usual dined well, if we may judge from the accompanying sketches by the club artist, Mr. Kelly. On Dec. 13, the annual meeting was held, there

being a very exciting contest for the office of commodore between two of the old members, Messrs. Jacques and Neilson. The result was as follows: Com., D. B. Jacques; Vice-Com., W. H. P. Weston; Rear-Com., Harry C. Fortier; Sec., W. C. Jephcott; Treas., Hugh C. McLean; Committeeman, H. R. Tilley; Regatta Committee, Colin Fraser, W. C. Lee and Harry C. Fortier. The dinner took place Dec. 15.

MOHICAN C. C. SMOKER.—The camp-fire of the Mohican C. C. on Dec. 10, given by George G. Plyer, a member of the club, at his residence on Broadway, was a great success. After the elaborate repast long clay pipes were handed around and soon the room was blue with smoke. Mr. Will Wheeler, Mr. Titus, Mr. Ransom and Mr. McLaughlin entertained the company with mandolin and banjo music, songs were sung, speeches made and yarns spun. Prof. Goewey told some capital stories and Captain Winne quite sustained his reputation in that regard, keeping the table in a roar. The camp-fire ended with the presentation by Captain Winne in a graceful manner of the handsome silk banners made by deft and fair fingers and won at the Labor Day regatta. Among those present were the following: Samuel Anable, Perry W. Babbett, Max Bender, Wm. S. Egerton, W. D. Frothingham, Wm. D. Goewey, Wm. S. Hackett, E. Darwin Jenison, Fred G. Mather, Harry S. Miller, Fred Mix, Cuyler Shaw, Edwin J. Sipple, Albert T. Smith, Wm. C. Titus, Wm. B. Wackerhagen, Wm. A. Wheeler, Chas. V. Winne, George G. Plyer, S. Howard Ransom, John Holmes, Alfred McLaughlin.—*Albany Journal.*

BROOKLYN C. C. OFFICERS, 1891.—Com., Joseph Rudd, Jr.; Vice-Com., M. M. Davis; Purser, M. V. Brokaw, 64 Hoyt street, Brooklyn, N. Y.; Meas., D. A. Nash; House Committee, H. C. Ward, D. A. Nash, W. T. Wintringham. Regatta Committee, R. J. Wilkin, John Johnson, M. M. Davis.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. S. B., North Platte, Nev.—We do not see how we can assist you in the matter, though we should think you could breed the dogs named without any bad effects. The person you speak of bears a good reputation, as far as we know.

J. C., New York.—Central American game includes deer, turkey, curassow, quail, plover, partridge and prairie grouse, ducks and geese. For modes of getting there consult the shipping guides of the *Journal of Commerce* shipping columns.

L. W. F., Manchester, Conn.—In the FOREST AND STREAM of June 3, 1875, there is a cut of three dogs which in their days were noted. The one in the center of the group (a jet black) was owned, I think, by a Mr. Fred Schuchardt, and was bred at the "Suffolk Kennel Club's" quarters, on Long Island, and the strain had been kept pure for a great many years. Can you tell me whether they are still bred there, and, if so, will you kindly give me the address of the party who has charge of the kennel? Ans. We do not think this kennel is in existence at the present time, perhaps some of our readers may be able to enlighten you.

G. M. N., Boston, Mass.—If it would not be too much trouble for you, I would be greatly obliged if you would kindly decide the following bet for me: Given, a bitch with a good strain of fox-terrier blood; let her be covered for the first time by a mongrel and have pups; let her be covered the second time by a full-blooded fox-terrier. A bets that the second litter of pups will be full-blooded; B bets to the contrary. If you will give us your opinion on this question at your earliest convenience, I will esteem it a great favor. Ans. A wins, as it would hardly be correct to give the credit for the second litter to the mongrel which sired the first.

TARPON FISHING.

TRADE MARK

Anglers contemplating a trip to Florida this coming season will find it to their advantage to inspect our celebrated

Tarpon Rods, Reels and Lines.

The largest tarpon (184 lbs.) ever killed on a rod and reel was taken with one of our Nolbwood Tarpon Rods. They are pronouuced **"PERFECT"** by all who have used them.

OUR NEW **SOFT LINEN TARPON SNELL** IS THE BEST.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

Theory of the Steam Engine.
Boiler Efficiency.
Boiler Mountings.
The Engine and its Parts.
The Screw.
Laws Applicable to Steam Yachts.
Extracts from Lloyd's Rules.
Racing Steam Yachts.
Management and Care of Machinery.
Principal Types of Yacht Machinery.
The Design of Hulls.
Addenda: Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work Cloth, 98 pages. Price $1.00.

ANSWERS TO CORRESPONDENTS.

ATLANTIC SALMON IN WINTER.

THERE was published in the New York *Tribune* of Dec. 13, 1890, a statement to the effect that Mr. Blackford was displaying in Fulton Market, this city, some enormous salmon, captured in nets off Cape Cod. Since the capture of the Atlantic salmon at sea in winter on our coast has not heretofore been recorded, so far as we are able to learn from the published accounts, we doubted the correctness of the report and supposed that the salmon were really the species now found so abundantly in the markets of Eastern cities under the name of Kennebec salmon, although it is really a Pacific river trout, known as Gairdner's trout or steelhead salmon. We, therefore, applied to Mr. Blackford for further details concerning the subject and have from him the following letter:

NEW YORK, Dec. 29, 1890.—*Editor Forest and Stream*: The statement you saw in the *Tribune* was correct. On Nov. 26 we had two salmon weighing 10 and 12½lbs. They were shipped from Provincetown, Mass. On Dec. 5 two more specimens weighing 7½ and 24½lbs. were received. One was taken at Provincetown and the other at Truro near by. The last two fish were taken in a mackerel seine with about 200 large mackerel and a large number of small ones, being a late run of mackerel which strike this coast every year within a few days of Dec. 1. These were the handsomest salmon I have ever seen and were perfectly stiff in *rigor mortis* when taken from the barrel.—WALLACE E. BLACKFORD.

Commenting on the unusual occurrence a correspondent writes: "It seems to me to be very important as tending to solve the problem of where the salmon go in the winter. I have never read or heard of our salmon being netted at sea before, and from their entering the northern rivers (in Labrador) earlier than the St. Lawrence, Bay Chaleur and Maine rivers, it has been supposed that they winter in the northern seas."

We have said that we are unable to find any record of the taking of *Salmo salar* at sea, in the winter, in the western Atlantic. Mr. Charles G. Atkins has recorded his belief that large salmon, in prime condition, are running into the Penobscot from the sea every month in the year. He has also stated that the salmon which spawn early are believed to return at once to the sea, while the late spawners often remain all winter and are carried out by the spring freshets. The same authority has noted that Capt. Treat, at Eastport, Me., has found herring as long as five inches in the stomach of salmon, and salmon are known to bite occasionally at the baits on cod and hake hooks on soundings. This is about the extent of our information as to the marine life of our salmon, consequently the appearance of the species off Provincetown is a distinct and important addition to our stock of knowledge concerning the migration of *Salmo salar*.

We have long believed that if suitable methods were employed salmon might be found in winter in the Gulf of Maine at no great distance from the estuaries of the rivers, which they periodically visit for the purpose of spawning. There is a regular winter fishery for the same kind of salmon in various parts of the Baltic. Elsewhere we have given a brief description of the methods pursued in this fishery, and it is highly probable that if similar means of capture were employed in the seas adjacent to our salmon rivers the winter habitat of the species would soon be discovered.

The salmon, while in the sea, is said to frequent localities in which the bottom is sand. Those portions of the Baltic which have a successful winter fishery for the salmon are characterized by such a bottom. Here the conditions are favorable for the production of the food which the salmon requires.

Investigations of our own waters might be carried on in localities possessing this qualification.

SNAP SHOTS.

IT would be difficult to say which is received with the more enthusiasm, the woodcock or the coon, as demonstrated by the way in which each is adopted as a subject for communications to the FOREST AND STREAM. When we promised a page for the coon hunters the other day, they straightway sent in enough for two pages. An installment of the coon hunting experiences is given to-day, and others will follow. As for the woodcock, there is in hand a most interesting mass of testimony for and against the wing theory. All this will be published next week.

It is a pleasure to note that the secretary of the Smithsonian Institution, who has charge of the National Zoölogical Park at Washington, has adopted the plan suggested in these columns some time ago, and will seek to make use of the advantages afforded by the surplus of certain species of wild animals in the National Park for stocking the Washington collection. As we then pointed out, there is a better way of disposing of these creatures than to kill them. The Government has a zoölogical garden to fill, and the National Park has an over-supply of game. The natural and sensible thing is to transfer the bears and other specimens from the Yellowstone to Washington.

The Forestry Commission will shortly report on its scheme for making a great State forest preserve in the North Woods. Meanwhile the Adirondack Park Association has been engaged in a similar work, although quite apart from the State Forestry Commission; and, according to a recently adopted programme, it will ask for legislation on the subject. The plan of campaign will be: To secure as early as possible the passags of a law preventing the building of railroads across State lands in the Adirondack forests, except upon the consent of the Commissioner of the Land Office and State Forest Commission, after hearing and due notice; also the submission to the people at the general election in 1891 of a proposition to allow the State to issue bonds to cover expenses.

Dr. James A. Henshall sends us the draft of a bill prepared after extended correspondence and consultation with farmers and sportsmen. The bill is simple, explicit, readily understood and free from prolixity. It is in these respects a model specimen of legislation. The changes suggested commend themselves as wise and such as will secure the desired end. It is worthy of note and commendation that game and fish legislation is in many States characterized by haste and want of due consideration and preparation in a much less degree now than formerly. In Ohio Dr. Henshall has followed what is in effect the course adopted by New York when the Legislature of this State appointed a game law commission. By enlisting the views of intelligent persons throughout the State Dr. Henshall has, it is to be presumed, prepared a bill embodying the wishes of the majority; and having been prepared in this intelligent way, the bill, if it becomes a law, will be likely to have a stronger public indorsement than if its provisions had embodied merely the opinions or wishes of a single society or club or coterie.

We shall begin next week the series of papers already announced, from the pen of Miss Fanny Pearson Hardy, whose "Out-Door Papers" are pleasantly remembered by so many readers. The chapters are descriptive of an expedition in the Maine wilderness, and they deal with the question of game and fish protection from the standpoint of one who is familiar with the feeling of Maine people on this subject. Miss Hardy's former contributions were so well received that we hardly need assure those who read this paragraph that in the new series a treat is in store for them. We have also several letters descriptive of some Maine fishing resorts, less celebrated than many others, but offering decided attractions to anglers. With all this the FOREST AND STREAM for some weeks to come will be of special interest to those who are so fortunate as to go "down to Maine" on pleasure bent.

The average person regards the hunting grounds of East Africa as practically inexhaustible; but measures have recently been adopted by the British East Africa Company to forbid the further indiscriminate slaughter of large game in the territory under its control. The reason assigned for this action is that the game animals will be required for food to support the multitudes of workmen who will be engaged in East African enterprises. If reports be true the officials in charge of the construction of the Canadian Pacific Railroad through Maine are possessed of the notion that the game and fish of that State have been preserved for a similar purpose there; for the gangs of laborers on that line have systematically killed trout by dynamiting and spearing on the spawning beds. In some respects we are not so very far behind the heathen of the Dark Continent.

If the Connecticut Legislature would create the office of State Game and Fish Warden, with a salary attached and a reasonable allowance for expenses, and put Mr. A. C. Collins, of Hartford, into the position, the people of the State would get their money back, and more too, the first year. As things go now the Connecticut Association of Farmers and Sportsmen, of which Mr. Collins is the head and heart, is doing most excellent work for the public good at private expense. Its record shows what might be done with adequate means and an officer who could give more time to the work.

We have not yet received from Mr. John D. Collins, of Utica, anything in the way of what he may have considered proofs to make good his charges against Commissioner Blackford. As already suggested in these columns Mr. Collins has no time to lose if he would justify his course and relieve himself of the odium which among all honorable men attaches to one who makes false accusation against another.

The report of the game laws codification committee of this State will be in the form of a bill which will contain six titles as follows: (1) Providing for the Game and Fish Commission; (2) for parks and game preserves; (3) relative to quadrupeds; (4) relative to birds; (5) regarding fish; and (6) for game protectors.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal the name of that friend.

DEATH OF DR. E. STERLING.

READERS of FOREST AND STREAM will learn with sincere regret of the death of Dr. Elisha Sterling, of Cleveland, O., on Dec. 29. For many years, indeed from the establishment of the paper to within a week or two before his death, Dr. Sterling was a frequent contributor to our columns. An intelligent student of natural history, an ardent sportsman of the old school, and having a memory richly stored with reminiscences of early days in Ohio, he drew from an apparently inexhaustible fund of observation and experience.

One of the last manuscripts sent to us by Dr. Sterling is one which is still unpublished and to which reference was recently made. It is descriptive of hunting scenes in Ohio, Michigan and Indiana, being extracts from the camp diary of a well-known Ohio sportsman. Dr. Sterling's interest in outdoor sports and woods life seemed never to flag. The following appreciative notice of his life and character is from the Cleveland *Leader:*

The death of Dr. Sterling places another bright name in the galaxy of eminent Cleveland men who won distinction and have passed away. Dr. Sterling was born in the State of New York, Aug. 15, 1825. His parents came to this city in 1827, when there were not more than a few hundred persons in the village. The site of the old Sterling homestead is now the Andrews mansion at the corner of Euclid and Sterling avenues. Young Elisha early evinced mental vigor of an unusual degree, and having a desire to study medicine, he was taken into the office of the celebrated Dr. Ackley. At an early age he graduated from what was then the Cleveland Medical College, showing great promise as a surgeon. That was during the rioting and bloodshed in Paris in the reign of the French Emperor, Louis Napoleon. Dr. Sterling at once proceeded to Paris and went to work in the hospitals, where he found abundant opportunity to develop his ability and observe the methods of the best French surgeons. He studied directly under Jean Victor Coste, a surgeon of wide fame. The skill of the young American was so apparent that the court physician invited him to perform a surgical operation upon Louis Napoleon.

He became acquainted with many celebrated men while abroad, and among them Baron von Humboldt, the great naturalist. In that manner Dr. Sterling's innate love for natural history, afterward so prominent, was undoubtedly stimulated. The young doctor, while in Europe, traveled more than twenty-five hundred miles on foot, studying the habits and customs of the people and pursuing his investigations in botany and natural history. In 1852 he returned to Cleveland and took up the practice of his profession.

In 1854 he married Miss Mary Hilliard and the same year joined a Government expedition sent to California and Oregon. Through the influence of his friend, Dr. John S. Newberry, the eminent geologist, he was appointed the naturalist and surgeon of the expedition. In the party were Generals Sheridan, McCook and George Crook, the Indian fighter, then young army officers. When the war broke out Dr. Sterling went to the front with General Barnett's light artillery as surgeon.

Dr. Sterling spent much time in his favorite pursuit—that of naturalist. He was an expert taxidermist. His interest in fishculture is well known, and his name is recorded as one of the benefactors of the country whose efforts brought the Government Fish Commission into existence. He was one of the founders of the Kirtland Society of Natural History, and a frequent contributor to magazines and periodicals of a scientific character. His love of birds and animals and his close observation of their habits made him an authority on the subject. At the same time his early promise as a surgeon was fulfilled. He practiced his profession, natural history not being his main pursuit in life. Some of his surgical operations gained for him a national reputation as being the first and most successful of their kind—notably the amputation of the tongue followed by the recovery of the patient.

Dr. Sterling was one of the original members of the Ark, which will always remain one of the most prominent and striking figures in the history of Cleveland's vigorous young days. The father of William and Leonard Case had a little wooden office building on the Public Square back of where the postoffice now stands. He gave it up to William, who became the agent of the Connecticut Land Company. William Case was a naturalist and began the task of collecting specimens of every American bird. His friends who were interested in the project enthusiastically aided him, among them Dr. Sterling, himself a naturalist and taxidermist, R. K. Winslow, who is a taxidermist, Colonel Stoughton Bliss, who was a good hunter, Captain Ben Stannard, who was a fine taxidermist, Leonard Case, George Stanley, J. J. Tracy, Edward Scoville, John Williamson and a number of others whose names shine in the history of the city. They were a company of congenial spirits and they called the little wooden office building the Ark, and became known themselves as the Arkites. William Case's collection of birds was completed to his satisfaction, but became damaged in later years and was deftly restored by Captain Stannard. Part of it is in the possession of the Kirtland Society of Natural History and part remains in the present Ark. A collection of minerals was begun and the Arkites took up the study of horticulture. The old Ark where Dr. Sterling was a frequent visitor has long gone the way of all temporal things, but when Case block was transferred to the trustees of Case library, the Arkites had rooms in it, and a life lease was given to fifteen of them. Of these fifteen, eight are now living and the Ark still flourishes.

Twelve or thirteen years ago Dr. Sterling suffered from blood poisoning contracted while performing a surgical operation, and for a time his life was despaired of. He never recovered his former health. During the last years of his life he suffered greatly from an injury to his ankle, received while getting off a street car, and entirely gave up the practice of his profession. Though he was not known to the younger generation, he will be missed by the older men, with whom he had active interests in the days that are gone.

Dr. Sterling leaves a widow, a son, Richard Sterling, of Colorado, and four daughters, Mrs. Y. P. Morgan and Misses Agnes, Dora and Katherine.

The Sportsman Tourist.

A GUN, A TRAP AND A FRYING-PAN.

I.—HOW THEY WERE LOST.

THE famous Lake St. John and the surrounding country was historic ground as early as the beginning of the present century. The incidents in the first part of our story happened there and then. At that time there were no pleasant farms stretching back from the lake border. No roads. No shrieking locomotive. No steamboat. No village church spire. But there was the same treacherous lake. The same Grand Discharge with its wonderful rush of water. The same mighty tributaries. The Ouiatchouan, with its 280ft. fall as it enters the lake. The Grand Peribonca with its succession of chutes, beautiful to the eye but dangerous to approach in any kind of boat. One isolated trading post of the Hudson's Bay Company was there, and that was the only indication of civilization. The power of the mighty tribes, the Nasquapees and the warlike Montagnais, was on the wane. Continued war and internal dissention had thinned their ranks, but they held possession of the soil and brought many a pack of fine fur to the trading post.

Among the Montagnais was one Massepa, an Indian of mighty stature, not a chief, though he might have been had he but exerted his natural powers as hunter, trapper and, above all, warrior. Massepa was the story teller of the tribe. Their only literature was tradition. Massepa knew every old legend, and could weave fact and fiction into such an entertaining web as to hold his listeners entranced for hours. This story telling became a passion with him. He would neglect everything for the sake of an audience, were it composed only of women and children. So it happened that he became a drone. Seldom meat or fish in his wigwam, although the moose and caribou were plenty, and the waters contained then, as now, a full supply of pike, doré, ouitouche and, above all, ouananiche.

One spring when the country was young, in May, things came to a bad pass with Massepa. There was nothing in his wigwam to eat. No supplies of any kind. Even the women and children were tired of his stories, and the warriors of the tribe declined longer to support him and his family. Worst of all, he had only two charges of powder for his gun, and powder could not be begged or borrowed. He had a small pack of furs which he had accumulated during the winter. In his necessity he said to himself: "I must take the furs to the post and get, at least, powder and lead." The winter quarters were up the Peribonca, many miles from the lake where the trading post was. The snow was going out and the river was a mighty torrent. But his canoe was in good order. His arm was strong and he did not fear the rushing water. "I will go to the post," said he, "and when the winter nights are again long they shall beg in vain for their stories." So, in bad humor, he started, taking with him only his gun with his two charges of powder, one trap, his frying-pan—a great luxury in those days—and his pack of furs. The current bore him with great rapidity toward the lake. First, twenty miles of rapid smooth water. Then, five miles of rough water. Then, past the beautiful lake Tshitagama—an offset from the main river, down fifteen miles of rapid smooth water. Here begins the succession of cascades or chutes which brings the mighty river on a level with Lake St. John. At the head of the first cascade Massepa halted for the night on an island. He was hungry and very cross. He had expended his last two charges of powder on his way down. One on a caribou, the other on an otter. He had missed them both, and this added to his ill humor.

The situation was now becoming desperate. His gun was now useless. He could not stay to set his trap and wait, and even then, had he caught anything, it might not have been fit to eat. So after some trouble he caught a large pike, which would at least serve for supper and breakfast. Then he laid himself down under his canoe, with his pack of furs for a pillow. He could not sleep. He was vexed because he was obliged to think of work again. His vanity had received a severe blow when he was made to understand that stories were very well for long winter nights, but the tribe could not afford to have one of its best hunters and warriors, with his finest gun and the best traps, sit idle in his wigwam either sleeping or story telling. So he laid awake making plans.

He said to himself, "My gun is now useless, for I have no ammunition. I can't wait while some animal is getting into my trap, and my frying-pan is of no good now, as I must live on fish till I get to the trading post, and there I can cook on a forked stick. The river will carry me to its mouth by sunset to-morrow in spite of the many portages around the chutes. I can sleep at the mouth till early dawn and then paddle quickly across to the trading post before the wind rises and makes the lake unsafe for a canoe. As I come back I shall be loaded with provisions as well as powder and lead. It is hard work to paddle against this mighty water. I will leave my gun, trap and frying-pan here on this island safely hidden and recover them on my return."

Thus reasoned Massepa with himself. At daybreak he rose and, after cooking some of his fish for breakfast, procured several sheets of birch bark. In these he carefully wrapped his gun, trap and frying-pan and covered them with moss at the foot of a large tree, then he carried his canoe and furs across the island to the foot of the chute, and started on his journey down the river. The first of the falls that he approached he passed without difficulty, as the portage begins some way above the quick water and ends at a safe distance below it.

The second chute is now called "Devil's Chute," because it is so dangerous to pass. The water rushes through a long cañon. The portage begins in the quick water just above the fall and ends at a point where the water is still dangerously rough. What cared Massepa. His arm was quick and strong. He had passed this chute many times and was perfectly familiar with it. He steered his canoe boldly toward the cataract. When it seemed as if he must be carried over, he directed the boat by a quick movement close to a certain rock well known to him. On this he leaped lightly, took his pack on his back, his canoe on shoulders, and proceeded rapidly over the barren rocks and around the falls. On the other side he launched the frail boat in the turbulent water at a well-known spot and proceeded down the river.

The next chute was easily passed, and the next. Then came a short portage where it was necessary, as at the Devil's Chute, to approach close to the fall and, by a quick motion, turn the canoe into a little offset or lagoon which opened into the river almost at the edge of the cascade. Massepa had done this many times and approached the quick water with perfect confidence. He was really a little careless, for his ill-temper had not subsided. The quick water began to hurry the canoe with great rapidity. As he approached the little opening he saw, to his horror, that he was too far out in the stream. He should have been close to the bank, but he was out quite a distance in the river. His brooding over his fancied wrongs and impoverished condition had made him careless of his course. He saw this too late. With frantic strokes of his paddle he strove to head the canoe into the narrow opening by the side of the fall where he would ride safely in smooth water. The awful power of the mighty river was too much for him and he saw that he was lost. With true Indian stoicism he headed his boat straight for the terrible cataract and calmly awaited his fate. In an instant boat and man were lost to view in the rushing, seething, toiling waters, lashed into foam by the sharp cruel rocks.

The other falls, lower down, completed the ruin worked by this one. Down the last sixteen miles of rapid water to the Great Lake St. John there were borne, a little later, some remnants of a pack of furs, fragments of a birch bark canoe and the mangled disjointed remains of Massepa, "the story teller of the Montagnais." These were carried far out into the lake where the water swallowed them up, except some fragments of the boat, which were at last still further splintered on the rocks of the Grand Discharge.

Massepa was greatly missed. No one ever knew how he died. No one ever took his place. But his gun, and trap and frying-pan remained snugly wrapped up in their birch bark covers. The moss grew thickly over them, hiding them more securely. As the years passed by the lumberman came and cut the tree, but he did not disturb them. In this way it happened that the gun, trap and frying-pan were lost.

II.—HOW THEY WERE FOUND.

As the century grew old the traces of man's progress began to show along the Peribonca River. The lumberman came yearly. The portages around the chutes became worn paths. Stray logs and remains of temporary camps were here and there to be seen. The usual course of events took place to show the near approach of civilization. The sportsman appeared at length.

One of these, from the City of Churches, made his way along this river in the year '89. He was in haste to reach Lake Tshigama, not, as yet, visited by one of his kind. Night overtook the party—sportsman and guides—as they reached the island where Massepa laid his treasures over fifty years before. As the party reached the end of the carry every man bustled about to get comfortable for the night. Tents were pitched, fire built, supper cooked, bed prepared, etc. Moss or browse was necessary to make the bed softer and more level.

One of the guides found a beautiful bed of moss at the foot of an old stump. On removing this, the long-hidden treasures of the old Indian story teller were exposed. The frying-pan and trap, after the rust was removed, proved to be in fair condition. But the once beautiful gun was beyond hope of repair. It was an old flintlock. The wood of the stock extended to the end of the barrel. The flint was in place ready for use. The hard wood of the stock crumbled at the slightest touch. The ramrod fell in pieces from its loops. It was a rare old treasure to take carefully home and preserve as a souvenir. The sportsman appreciated this, and told the guides to take great care of it. The guide who found it, however, was a headstrong fellow, who believed that to find was to own. He had never owned a gun, and conceived the insane idea of having this old king's arm restocked and otherwise repaired to make a gun for himself; so he ruthlessly tore off the old rotten wood and disjointed the gun completely. When the sportsman saw this, some hours after it was done, he said, "Well, I declare!" or words to that effect. But the choice relic was ruined; and thus it happened that the gun was found and at once lost again and forever.

L.

BROOKLYN, Oct. 1.

Natural History.

FOR THE NATIONAL ZOOLOGICAL PARK.

SECRETARY NOBLE has sent to Capt. F. A. Boutelle, the acting superintendent of the Yellowstone National Park, the following letter: "There is herewith transmitted to you a copy of a letter just received from the secretary of the Smithsonian Institution in which he says that he will be glad to receive for the National Zoological Park buffalo, deer and elk at any time, and any other park animals, with the exception of bears and pumas, for which it will not be practicable to provide proper accommodation before the 1st of May next. He further states that as rapidly as the larger animals are captured they may be forwarded by freight and the smaller ones by express and that he will on notification make arrangements at Cinnabar, Mont., to receive and forward them at once. The attendant expenses, such as boxing, transportation and food for the animals, will be defrayed from the Zoological Park appropriation. He adds that a male puma will be exceedingly acceptable at once. Several pairs of the wolverine and badger would be very desirable also. I have consulted the assistant attorney general as to my authority to have animals of the kind named captured and transmitted to the National Zoological Park and find that the statutes give me all the power necessary to perform this action, and I may add that it is in my opinion a most desirable thing to do for the good of the people and one in which I shall take great pleasure in having hearty co-operation. I wish you would write me your views as to what animals can best be taken and when. I suppose that you are not prepared to send any buffalo, although about this I may be mistaken. I judge that the elk and deer must be sufficiently abundant to spare a pair of each, together with a number of smaller animals, with which you are more familiar than I am. If your men are to be exposed to any particular hardship in accomplishing this purpose I will expect to make them comfortable to a rea-

sonable degree out of the contingent fund of the Park, about which you can advise me. If you are prepared to proceed with this business and think that it ought to be done without delay to any extent you are hereby authorized to act. All expenses will be carefully noted and if they have to be paid in advance I will furnish the money from here and get it repaid from the National Zoological Park. Knowing that you will understand this business thoroughly without further comment from me I submit the matter to you. This will accomplish one of the purposes for which the Yellowstone Park was established."

The following reply has been received from Capt. Boutelle, who is now in the field near Fort Keogh: "As you will observe, I am a little off my beat, having been called out by the Indian disturbance. I hope that as soon as it is known that my services will not be required for active operations to be ordered to return with my troop to my special duty in the Park. I have a fine organization and came out very cheerfully, but somebody ought to be in the Park at all times. If these Indians in the Bad Lands come in I can see no reason why I should be kept out longer, unless there are plans of which I know nothing. I am very glad that you have decided to send specimens of our Park game to the Zoo at Washington, and I shall be a very willing agent in the work. I and my men will do it at just as small expense as possible. It will be a very hard matter to get some of the animals, the puma particularly, as from their habits of the males destroying their young they are rare everywhere, but the elk, deer, antelope, buffalo I can get surely. The carnivora will probably have to be taken in the winter in box traps, which will cost something, but the buffalo, elk, etc., can better be taken young and kept in the Park until fall and then shipped. The Park should supply buffalo, elk, black-tailed deer (there are a few in the southern part of the Park), moose (with difficulty and expense), grizzly and black bear, wolverine, puma, badger, porcupine, beaver, perhaps otter (hard to get), woodchuck, squirrel; coyote, Canada lynx, timber wolves (very scarce), three varieties of rabbits or hare, several varieties of the little chipmonk, several varieties or kinds of birds. I sent a cage to the Smithsonian last spring.

"Rumor has it," the writer continues, "that my regiment will exchange with the Sixth Cavalry in the spring. This will naturally carry me away from the Park, unless an exception is made in my troop. I shall leave the charge with great regret. I have hoped to remain until I could see an abundance of fish where fish had never been before, the Zoo at Washington filled with animals branded Y. N. P., the hotels commodious and well managed, and some law established through which the scoundrels who violate the laws may be punished. As it is now, they say that the Park is the safest place in the country, as there are no game laws there. As a matter of fact I manage to keep them out almost completely."

THE WOODCOCK'S TWITTER.

Editor Forest and Stream:

In your issue of Dec. 25, Mr. Brewster says, referring to me and my woodcock narrative of Dec. 11: "The vocal notes of his bird were so like the whistling of ducks' wings as actually to deceive his companion, Mr. Marchant, into the belief that wild ducks were passing over at the time; yet in the closing paragraph of his article he affirms that, when a woodcock 'twitters' he squeals, pipes, squeaks rather than whistles, and adds, 'the sound made in swift flight by the wings of this and other species—many of our ducks, for example—is perhaps more appropriately termed a whistle.'"

Mr. Marchant's exclamation to which Mr. Brewster refers, was this: "Wild ducks going over—don't you hear 'em!" his idea being that the "two very positive notes of remonstrance" came, not from the wings, but from the mouths of his imaginary ducks. The notes were instantly recognized as vocal by us both. Mr. Brewster's inference is, of course, a very natural one, as ducks do so little talking while on the wing, and having thus inferred, it is not strange that he, and many who read his kind and courteous review of my narrative, should imagine that these and the other vocal notes were more like the sounds produced by the wings of birds than the facts of the case really warrant.

In the original draft of the narrative I included a detailed account of the bird's actions when liberated, but fearing that my paper would occupy too much of your space, I reserved this and certain other minor details for publication in another form. I think, however, that I had better add here a brief account of his good-bye flight. I took him into the country—as I told you before—and into a field in which there was underbrush, and kneeling placed him on the ground. He stood for a moment looking backward inquiringly, then lifting his head walked slowly into a patch of dead grass, picking his way through the tangle with most astonishing ease, and causing scarcely any noticeable movement of the dried blades and stems through which he passed. After he had proceeded two or three yards I sprang to my feet suddenly for the purpose of frightening him, and at my movement he flushed, making a short flight of perhaps twenty yards, feeling probably a little stiff at first from want of exercise. He lighted in the next field and stepped off with more animation than before, though not more rapidly, following the course of a cow path. When I had climbed the fence and approached to within about a rod of him, he again jumped, this time more energetically, and flew rapidly over a hill and out of sight, though not so rapidly as I have often seen and heard woodcock fly. In neither of these flights did I hear any sound other than that of very faint, scarcely perceptible fanning. The narrow outer primaries, it will be remembered, were fully developed and intact in this specimen. GURDON TRUMBULL.

HARTFORD, Conn., Dec. 31.

Editor Forest and Stream:

The writer has hunted woodcock many years, killing hundreds of them, and could hardly help becoming somewhat familiar with their habits and many peculiarities. That the sharp metallic whistle of a flushed woodcock is made by the wings is my firm belief. Mr. Brewster's article in FOREST AND STREAM of Dec. 25 gives so many good points in support of this theory that I wish to thank him for coming to the support of the "wing whistlers." How many times I have seen a sly old cock flop up as silently as an owl, steal off to some out-of-the-way corner, and when followed up and flushed to a point spring from the ground with a whistle so loud and sharp that there could be no mistaking the manner in which the sound was produced. It is a pretty good vocalist that can execute as rapidly and with the volume of tone that a plump October woodcock will bid you an adieu with when flushed. In a long flight it always seems that the whistle continues as long as the bird increases its speed; when the limit is reached it flies silently and finally alights.

It is taken for granted that Mr. Trumbull has visited the woodcock in the breeding season, witnessed their circling in the air and listened to their notes. Here you have their vocal powers to perfection and not to be confounded with any sound made by the wings. Will he kindly state if the notes of his captive bird were the same as those made at this time? There are so many interesting things about this bird that the many articles appearing in FOREST AND STREAM from time to time have afforded much pleasure, and some amusement. They will doubtless stimulate sportsmen to a clear observation of the woodcock's ways, thus adding to the knowledge of all.

W.

ENCOURAGING THE WINTER BIRDS.—"Hermit's" suggestion in regard to chickadees for public parks seems to me worthy of both consideration and a thorough trial, and I give my mite of experience toward a practical solution. Three years ago chickadees and woodpeckers were only occasionally seen about the house. At about that time I put a few pieces of pump tubing in the trees; that and each subsequent winter I have constantly kept pieces of beef suet fastened to the branches. As a result, while the birds do not remain constantly, still from November to April the following birds are almost daily visitors: Hairy and downy woodpeckers, chickadees and white-bellied nuthatches, while I have seen an occasional black and white creeper and one pair of brown creepers. I have not been able to discover whether they use the tubing for roosting in or not. Last spring a pair of blackcaps acted as though they were about to build in one, but were prevented by the bluebirds.—M. E. H. (Jefferson, Ja.)

JAPANESE PHEASANTS IN OREGON.—*Editor Forest and Stream:* In September, 1888, while traveling by stage in the vicinity of the Umpqua River, Oregon, I had a striking illustration of the absolute fearlessness and adaptability for domestication of the introduced Japanese pheasant. Passing through the timber not far from a clearing we first saw these birds and they were not at all alarmed by our presence, but disappeared leisurely into cover. Soon afterward we emerged suddenly from the timber and the stage reached a farmhouse in the clearing. Here, to my astonishment, I saw a considerable number of the same birds feeding with the domestic fowls. I was glad then that I had not tried to train my revolver on the pheasants, for, as I remarked to the driver, I might have accidently killed one.—W. A. WILCOX (Washington, D. C.).

THAT GROUSE IN THE WATER.—*Editor Forest and Stream:* I notice in your issue of Dec. 25 a short comment by "O. O. S." on my article ("Food of the American Goshawk") which appeared in your issue of Dec. 4. If "O. O. S." will read that article more carefully he will see that Mr. Woodworth wrung the bird's neck and not I, as he has stated. I will freely admit that it was very cruel to take the grouse from the water where it had gone for protection and kill it as he did. Had the bird fell into my hands he would have received different treatment from that meted out to him by Mr. Woodworth.—W. L. BISHOP (Kentville, N. S.).

THE CURLEW'S BILL.—In writing you the other day the woodcock paper I intended to speak of the power curlews have of inflexing the upper bill same as the woodcock, so as to run along the groove of the lower mandible and to clean out whatever may be adhering there. Prof. Baird told me this and a Jamaica man, a Mr. Hill, said the ibis also do the same.—GEO. A. BOARDMAN.

A DECEMBER ROBIN.—Lockport, N. Y., Dec. 30.—A robin seen in December! You would hardly believe it, but such is the case. One was seen by the well known attorney William C. Greene, yesterday in his yard, and was seen again this morning by Mr. Greene and his family. Mr. Greene could scarcely credit his eyes, but there could have been no illusion.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS.—Purchased—One red-bellied spider monkey (*Ateles rufiventris*), seven rhesus monkeys (*Macacus erythræus*), one pig-tailed monkey (*M. nemestrinus*), two vervet monkeys (*Cercopithecus lalandi*), four green monkeys (*C. callitrichus*), one ostrich ♀ (*Struthio camelus*), one yellow hanguest (*Cassicus persicus*), two red-backed hangnests (*Cassicus harmorrhous*), two golden-crowned conures (*Conurus aureus*), two European crossbills (*Loxia curvirostra*), two melodious finches (*Phonipara canorum*), one crested ground parrakeet (*Calopsitta novæ-hollandiæ*), one lesser sheathbill (*Chionis minor*), two blue-bearded jays (*Cyanocorax cyanopogon*), four Greek partridges (*Coccabis saxatilis*), and one anaconda (*Eunectes murinus*). Presented—One wildcat (*Lynx rufus*), one sparrow hawk (*Falco sparverius*), one screech owl (*Scops asio*), one Cayenne rail (*Aramides cayennensis*), one red-tailed buzzard (*Buteo borealis*), two ring doves (*Turtur risorius*), one robin (*Turdus migratorius*), two alligators (*Alligator mississippiensis*), and one banded rattlesnake (*Crotalus horridus*). Born—One zebra (*Bos indicus*). Exchanged—One painted box tortoise (*Cistudo ornata*), and one snowy owl (*Nyctea nivea*).

Camp-Fire Flickerings.

"That reminds me."

A PROMINENT lawyer and sportsman of this city, W. C. G, who generally spends a few weeks during the fall among the ducks in Canada, was out a few days since after rabbits, which are very plenty this season in this county. The next morning Mrs. G. gave one to the Irish man-servant and told him to clean and dress it for dinner. After waiting an hour and no rabbit putting in an appearance she started out on a hunt for the servant, and on finding him asked how long it would be before the rabbit would be ready, and was informed that he had got it about half picked. He had picked the feathers from the ducks given him to clean and supposed the rabbit had to go through the same operation. J. L. D.

FOUR MEN AND A BEAR.

Editor Forest and Stream:

Seeing once in a while an account of a bear hunt in your columns, I thought perhaps one more would not be amiss. Several years ago I had been in the Adirondacks fishing, and stopped, as usual, on my way out at Corey's, at the head of Upper Saranac Lake. Corey came home that night from Follansbee Pond, where he had been fishing for muscalonge, and reported them very plentiful; so we decided to stay over another day and try them. We started next morning—Geo. B. Durfee and his guide, Ed Flagg, myself and my guide, Rob W. Nichols. We crossed Indian Carry, down the Ampersand Creek and out into Raquette River for the pond. In going down the river we came to quite a wide place with a long, narrow island in it. Just before reaching the island I saw something swimming in the river, and asked Rob if it was a dog. He looked and said, "No, it is a bear." We were in a pretty fix, with neither gun, pistol, hatchet nor axe in our boats. "Well," said I, "let's have some fun anyhow." So we changed places with our guides, we taking the paddles and the guides standing up in the bows of the boats, each with an oar in his hands. We paddled down, one boat each side of that bear, and then the fun began. First one and then the other would bring down the butt of their oar with all their might on that bear's head till the blows resounded far and near. Still he kept swimming, the blows kept falling and he constantly crowding toward the island. When I found he was going to land and had reached within a dozen feet of the shore, I thought I would change the order of exercises, and shoved my boat directly between him and the shore; he just raised one paw and made a strike for the boat; I only avoided the blow by swinging the bow nearer the shore. As it was, he just missed us, but scraped his claws down the side of the boat, leaving marks that always remained. Then he dived, went under the boat and came up the other side on to the island. We were out of the boat about as soon as he landed, and, dragging it after us, were in the water on the other side about as soon as he was. Then the pounding operation recommenced. He crowded us toward the shore in spite of all we could do. I kept calling to my guide to hit him on the nose if he wanted to curl him up, but he couldn't seem to find any place except the top of his skull. He crowded us to the mainland and just before he reached it Ed gave him an extra blow, breaking his oar, and he went down, and we thought we had him; but he was so near shore his feet touched bottom and that gave him courage, and, coming up, he blew the water from his nostrils, took a few more steps, and went lumbering off into the woods. Well, we landed. We didn't follow that bear. We had no further use for that bear. In fact we didn't want that bear any more. Don't think we would have taken the gift of him. We sat down and talked it over. Tried to find out which of us was the biggest fool. Told how we might have given him a shove with the oar and sent him under water and when he came up shoved him under again and soon drowned him. Also how a few raps over the nose would have fixed him, and several and various other ways in which we might have captured him. If any of your readers think they could have captured a big bear in the water with nothing but a couple of fish poles and a couple of oars, I should like to see the fun. Well, we continued on to Follansbee Pond and had the best of luck fishing, I got one muscalonge weighing 22lbs. Durfee one of 18 and one of 15, besides some sixty more from 2 to 10lbs. We reached Corey's safely that night, where the women folks made us a present of a leather medal, cut from the leg of an old boot, for going bear hunting without a gun. WALTER AIKEN.

FRANKLIN FALLS, N. H., Dec. 22.

CONCERNING SIGHTS.

Editor Forest and Stream:

I notice in the Dec. 25 number of your paper that "Hunter" has some trouble with my combination sight. His experience is not an usual one, and I imagine he carries his rifle in a peculiar way or else he has a sight of my first design with a weak spring.

In timber shooting in the snow there is more or less attention required to keep the snow off the rifle and from its getting into the muzzle. When the rifle is carried so as to be ready for a quick shot, the barrel is more likely to be covered with falling snow than any part back of it. Neither is the combination sight often touched by twigs, much less knocked out of place by them.

If "Hunter" will use the extra large aperture, *i. e.*, $\frac{1}{8}$in. diameter, such as I recommend in my catalogue, he will have no trouble with the frost filling the aperture.

One of your correspondents of some time since complained that at dusk he could not see distinctly through the aperture. If he would use this size aperture and shoot with both eyes open, he will not only be able to shoot better than with any rear barrel sight, but much quicker also.

I conclude that "Hunter" leaves the rear barrel sight on his rifle, as he speaks of often having the combination sight folded. If one has the crotch sight on the barrel he cannot get the best results from the combination sight.

My wind gauge sight is a better hunting sight than the combination sight. One of its advantages is, that it cannot be folded back on the tang of the rifle, and consequently is always ready for use. The top of this sight moves forward by very slight pressure and comes back of itself. It can be turned down forward when the rifle is put away. This sight can be elevated to known distances instantly and without taking the eyes from the game. I will venture to say that this improved sight will meet the wishes of "Hunter" in every respect if he will give it a trial. WILLIAM LYMAN.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

COONS BY DAY AND NIGHT

A THANKSGIVING HUNT.

LAST Thanksgiving Day my copy of FOREST AND STREAM, of the issue of Nov. 20, reached me, and as I sat enjoying its perusal, the coon stories reminded me of my first Thanksgiving Day in California. I determined then and there that when I got time I would commit the events of that day on paper, for my own amusement as well as (I hope) for that of my readers. In accordance with that mental promise, although somewhat late in the day, I will now attempt the task:

The scene of my hunt was in Colusa county, on the banks of the Sacramento River, about 15 miles below the town of Colusa; and the time was Thanksgiving Day, 1877. I was a newcomer to the State, having only arrived the previous spring, and was just recovering from an attack of typhoid fever, with which my new home had greeted me. Everything was new to me; country, climate, scenery, people, game, everything! Even the typhoid fever was a brand new article, and one that did not impress itself upon me as being at all a desirable article to have in the house.

By Thanksgiving Day I had partly recovered my strength, and being anxious and eager to get a chance at the geese, which were clamoring in all directions, night and day, I took a riding horse and went down the river a couple of miles from where I was stopping at the ranch of a friend. The horse they gave me was a Splendid Old Ruin, and ought to have been called Baalbec, like Mark Twain's. He was given me as safe, and warranted not to buck if I shot from his back. He turned out to be like many other old ruins, however; you never know what you are going to meet with in them until thorough exploration has been made. He looked as if all in the world he wanted was to lie down somewhere and be forgotten. If ridden without spurs he would go ten hours in a mile easy, and never sweat a hair. If you got off his back, he needed no tying, as he would just stand there and meditate until your return.

But the sequel will show what was left in the S. O. R. when once awakened.

The geese were all over the country in countless thousands, and one would think, to look at them from the ranch house, that they could be knocked over with a club, so I mounted the S. O. R. and started out to gather in a few dozen.

I was at this time the proud and happy owner of a full-blooded pointer that had been given me a few dayf previously. I did not want him at all, but my friend, the donor, thought I was suffering for a dog more than he was and sent him to me per express, charges prepaid, so there he was and what could I do? Especially as the dog adopted me at once, and killed and brought to me no less than three chickens the very first day of our acquaintance. I rather discouraged him in that pursuit by means of three feet of trace-chain and afterward, if he killed any more chickens, he never brought them to me. He was a good dog, spoiled by bad training, and despite his many failing contrived to wag himself pretty deeply into my affections. His tail had met with an accident in his youth and he had only a six-inch stump left, but this he used with such effect that it looked like a halo around his stern when he was putting in his best licks with it. When I was a boy I had a little dog with only about an inch of a stump—"but that's another story!"

By the way, all dogs ought to have a name, and mine was called Sport. I didn't want Sport's assistance in goose hunting but that made no difference to him. Just as soon as he saw me mount with a gun in hand he determined to go along and help, and all hands on the ranch, together with all the discouraging remarks I could think of at the time, couldn't prevent his doing it. He just went out half a mile or so on the ranch and sat down and waited to see what direction he was going to have to take, in order to be along and have his share of the fun.

After we got started he kept about half a mile ahead of me and didn't leave a goose in that part of the country. To say that I was angry wouldn't do justice to the occasion. I coaxed and commanded, wheedled and scolded to no purpose, and finally lost my temper and yelled cuss words enough at him to paralyze any common dog, but they never paralyzed him, and he kept right on hunting geese.

I finally gave it up in despair and turned toward the timber lining the river bank, determined to give the dog a chance at his legitimate game—quail. Many spots of the banks were thickly timbered with oak and sycamore, with a dense tangle of undergrowth, consisting of wild rose bushes, briers and grapevines, in which dwelt many varmints of all kinds, and in local parlance, a "right smart chance" of quail.

The old dog now retrieved his lost character a little, and it was not long until the pockets of my hunting coat began to bulge with birds retrieved in excellent style by Sport, and handed up to me as I sat on the S. O. R. with such a proud delight that I could do no otherwise than forgive the old scamp.

Here and there along the river, at varying distances from its banks, little mottles or islands of timber exist. In one of these, I marked down a very large bevy of birds, and when I had finished with those I was then engaged with, I went in quest of them. Before I reached the spot every last bird of the lot took wing and flew to the river. I shot two as they passed, which Sport handed up to me, and while I was reloading he entered the timber. In two or three minutes he commenced a most excited baying in the heart of the wood, and presently he became intensely excited, as I could tell by his loud and almost continuous yells. There was only about two acres of ground in the patch of timber, but it was so dense that from no side could I get a view into it of over ten yards in extent. I tried to call the dog out, supposing he was baying a wild hog, but he would not come. My voice seemed only to excite him further, and he got fairly frantic.

At last I dismounted, and leaving the S. O. R. in a deep train of thought, attempted to penetrate the thicket. The dog heard me coming, and redoubled his yells. After infinite labor, and at the cost of many a painful scratch, I reached a point near the center of the wood, and straightened up and gazed around. Some twenty yards away stood an oak stub, about 35ft. high, with two or three branches near its top, covered with a grape vine. Clinging in this vine were three large coons, and a gray fox stood at the top of all, with his feet spread wide apart, resting on the swaying branches of the vine. At the foot of the tree was old Sport, frantic with excitement. He would spring from the ground as high as he could leap, grab a mouthful of the bark of the oak, and fall back into the briers, immediately to repeat the performance. My gun was a muzzleloading Greener (but few breechloaders were in use here then), and both barrels were loaded with No. 9 shot for quail. After viewing the novel and interesting sight for a moment, I threw up my gun and fired one barrel at the lowest coon in the bunch. This failed to knock him down, and only set him to drawing for a higher seat among the congregation. I then gave him the second, which knocked him down, and from the yells and squalls which immediately arose from the foot of the tree, I knew that Sport and he were having a picnic.

I commenced reloading as fast as possible, using coarse goose shot for the charges, but before I could get the caps on the largest coon of all backed down the tree and escaped, taking advantage of the dog being engaged in another direction. I tried to force myself through the thorny tangle to the foot of the tree to stop him, but being still weak from the effects of the fever, had to desist. I lost no time, however, in reloading, and was just in time to tumble the second coon as he was following his companion down the tree. All this time the fox stood without a motion, as beautiful a picture as I ever saw. He would glance at me and then at the scrimmage still going on among the briers as unconcernedly as though he had no personal interest in the affair. I finally gave him the other charge and dropped him after the coons. I again loaded my gun, not knowing but all the surrounding trees were festooned with coons and foxes, and slowly forced my way to where first the snarls of the coon and then the howls of the dog showed that the battle still raged, and that first one and then the other was getting the best of it. My presence incited the dog to greater efforts, and soon he got a "strangle hold" on his opponent and "brought his shoulders to the carpet," and won the match and all the gate money.

Old Sport was not born with blue blood in his veins for nothing. He "stayed with" his man in grand style and won the fight against a heavy male coon, only slightly wounded, in a way to shame many a boasted "coon dog."

After great effort and two trips I got the game out to where the S. O. R. still stood busily thinking, and proceeded to tie it to the saddle. While thus engaged, a large flock of geese came clamoring over, and much to my surprise I brought down one with each barrel.

Gentlemen! but wasn't this luck? Twenty-three quail, two geese, two coons and a fox, all in one afternoon! If any one can beat that on an every-day common goose hunt, let me see the color of his hair! After tying on the game, I mounted and broke into the S. O. R.'s train of thought with a dig in the ribs with the butt of the gun. Right there was where I made the mistake of the day. The Splendid Old Ruin awoke to his surroundings, took one sniff at his odorous burden, and in just one minute and a half by the clock had bucked himself clear of everything, saddle and all, and was making Salvator time for his stable.

It was interesting while it lasted, but, thank the Lord! it didn't last long. Talk about riding a trip hammer! Why, that would be comparative fun to the way this old fiend bucked! First my hat came off; then the game began to come up and hit me in the face and the small of my back; then I had to throw away my gun so as to have both hands to hold on with; next it began to rain dead quail out of my pockets; and finally he got me to coming down as he was going up, and that settled it. The next thing I knew I was sitting on the ground, with my teeth all loose and a kink in my spine, my game, gun, saddle and blanket scattered around, and the horse nearly home. Old Sport was sitting in front of me, spatting the ground with his stump of a tail, and now and then licking his wounds in a manner that showed he was proud of them.

I was demoralized, there's no use denying it; and weak and sick I sat there until my friend, alarmed by the S. O. R.'s return riderless to the ranch, hitched up his team and came down the river hunting for me.

Thus ended my goose-quail-coon-fox hunt—the first I ever made in California, and the only one I ever made anywhere that yielded such a variety of game on such short notice. AREFAR.

AUBURN, Cal.

ONE KIND OF COON HUNT.

The writer participated in an unsuccessful coon hunt recently—not the regulation night hunt that one reads about with the setting of yelping dogs and flaring torches, but an impromptu, daylight affair.

It was in the Newington woods, a few miles south of Hartford. A light snow, which had fallen the day before, covered the old crust and made tracking possible, though not very easy. I had been amusing myself by untangling the windings of various animals' tracks; squirrels, rabbits, foxes, etc., when about three in the afternoon I came on the trail of a very large coon. The coon had been walking in the bed of a tiny stream, which, being spring water, had melted the surrounding snow and so made a path where he could walk without leaving any tell-tale tracks. Just at this point, however, he had reached the end of his tether in the spring which gave rise to the stream, and his trail was doubly plain by reason of the mud which had clung to his paws.

I followed the footprints across a road, and then down an old wood trail to a place where trampled ground and broken bushes showed that a horse had been tied. From scattered oats and human footprints leading further into the woods, I concluded that some one had left his horse here while hunting; but why this man, whoever he was, had not noticed the coon tracks I cannot tell. He had crossed the trail several times before; at the foot of a giant hemlock it abruptly ended. No doubt he was after rabbits, and didn't know a coon track from a cow track.

The hemlock had low branches, and it did not take me long to make up my mind to climb it. About two-thirds of the way up was a nest of dead leaves and branches, and just as I reached this the coon, an enormous yellow old fellow, raised himself out of it and began climbing the tree. I started down, the other way, as fast as I could. Up to this moment I had not seriously expected to see a coon. I was out for a walk more than anything else, and had not even brought a pistol—which was probably the reason of my luck. I remembered a farmhouse, however, within half a mile, and at once set out for it as fast as I could go, with the intention of borrowing a gun. It was growing dark and there was no other house near. I knew that coons had an unexcelled reputation for toughness, but I thought I could kill this one with a large enough club—and it was my only chance to bring it to bay. Accordingly, having cut a stout stick about 2ft. long, and having slung this to my wrist by a piece of cord, I again climbed the tree. The coon was just where I had left him, and allowed me to get within a few feet before he moved. Then he started for the top of the tree and I after him, climbing hand over hand as fast as I could, for I wanted to reach the top at the same time as the coon. Up the coon went till I thought he would never stop. The tree grew so small that I could clasp it with my hand, and finally bent under the coon's weight. Then he stopped, probably realizing that without wings he couldn't mount higher, and began turning.

Cornered coons are said to be much worse than cornered rats, as they are bigger. This old yellow codger, gritting his teeth in my face, looked ugly against the sky, but I was ready for him and did not allow him to open the ball. I had a good grip on the tree with my left hand, and leaning back I hit him over the side of the head with all the force I could bring to bear. He hung for an instant and then fell. I dodged, and as he passed struck him a second blow.

I heard the coon fall through the branches and then strike the ground like a thousand of brick. Then all was still. I waited thirty seconds or more breathlessly, and then, uncertain whether he was dead or not, I threw the club in the direction he had gone. At once there was a commotion. The leaves cracked, and the next moment the coon shot out from the shade of the tree and began climbing the hill above at a "do or die" rate.

I did not wait further developments, but descended the tree as fast as I could well fall out of it. But though I found the trail, and though I followed it until dark, up ledges and down ledges, I could catch no sight of the coon. The trail headed straight for Hartford, where no doubt the coon was hastening to get out an "assault and battery" warrant. B.

HARTFORD, Conn.

IN COLD WATER STYLE.

Here it is the middle of November and we of the Western slope are just perusing FOREST AND STREAM of Oct. 16. The first article that strikes my eye is "The Coon Hunters" and your query as to whether they have been idle or unsuccessful.

Now I am not a coon hunter either by profession nor choice, for, as Judge Whalley says of the wild goose, if there is any living thing for which I entertain a supreme contempt it is a coon. But there are coons and coons nevertheless, and we knights of the rod and gun have our experiences with this noble beast of the forest and henhouse at intervals, whether we hold him in contempt or *vice versa*. An old coon has quite a chunk of brain and what he has is just the right kind for his business. He is cunning, quick-witted, discreet, pugnacious in a pinch, tenacious and resolute.

Well, as I was about to say, one night in October Harry Beal, Bill Story and myself, with our dogs and duck guns, started on foot down the Willamette River for Dowes Lake. We started about 3 o'clock A.M. in order to get the early morning flight of ducks. It was a fine starlit night, but no moon. Shortly before reaching the lake the dogs commenced to raise merry Cain off to the left on the bank of a little round wapato pond. Our first thoughts were of cougars and wildcats, and we hurried down to help the dogs. One side of the pond was fringed with scrubby willows, and on our approach some "varmint" dropped out of one of these and ran out into the pond. The dogs, all ambitious to immortalize themselves by some heroic act at the beginning of a day's hunt, and each urged on by the assumed ferocity of his companions and our hurried advance, rushed in after his unknown highness. Then there was considerable "fuss and feathers" and some fighting; but it was so dark that we could only discern four dark objects bobbing around at a lively rate some 20ft. away. We could not take a hand in the *melée*, even had we desired (doubtful), on account of the depth of water and the miry bottom, and firing was out of the question of course. But the preliminary skirmish did not last long and my setter struck out for the shore, his ardor considerably dampened and his ideas of heroic conduct materially modified. Close in his wake came Harry's dog with the appearance of having received satisfaction.

Storey's dog, a powerful red Irish, would not give up the fight, and came up smiling for the second round. We then and there passed judgment on the respective merits of the dogs. Pat's staying qualities were admirable. He was the hero of the hour. We all admired his pluck, but the sequel condemned his judgment.

Now a coon may be a suck-egg and a thief, but he is nobody's fool, and an old coon knows that he is more than a match for any ordinary dog in deep water where neither has a foot rest. So this varmint struck out for deep water, and Pat after him; but no amount of urging could induce the other dogs to aid their brother in distress. Away went varmint and away went dog, while we circumambulated the pond to prevent the victim's escape. By lying close to the ground I could dimly see two dark objects on the gloomy waters of the pond. Time rolled on. The victim found he could not safely leave the pond, for wherever he sought a landing he found a man with a gun. From where I was stationed the glimmer of the starlight on the water gave me a better opportunity to observe the movements of the contestants than either of my companions had. We could not shoot on account of the dog; in fact, I alone could see the objects, and only dimly. So we waited, watched and listened.

Presently Pat either got mad or his second wind, or both, and with a spurt overtook his supposed victim right at the center of the pond. Whew! spit! bang! razors in the air! Well, we have all heard of geysers, boiling springs, volcanic eruptions in mid-ocean, but this was the first thing of the kind I had ever observed by starlight. "Brief and sanguinary" are the correct words I believe. Then all was still. The silence was even more oppressive than before, and I could see but one dark object quietly leaving the field of battle. I looked in vain for the pursuer. He had met the enemy and— "What's the trouble?" called Storey from across the pond. "Nothing," said I,

"except that I guess your dog is a goner." He and Harry started to come around, when presently I was relieved by seeing dark object No. 2 emerge from the water and pull straight for shore. It was Pat, about the worst done-up dog I ever had the pleasure of pulling out on dry land. His strong constitution is all that resurrected him. He staggered and fell, and probably knew how it felt to drown. But in five minutes he was as good as ever, and, no doubt, had more respect for coons than he had before the lightning struck him.

The coon needed rest by this time too, and, as luck would have it, he tried to make a landing within six feet of where Pat and his master stood, and the old dog had the satisfaction of seeing his coonship conquered at last. He was a monster, an old settler, a regular old moss-back. He had undoubtedly been sucking eggs, breaking up birds' nests and devouring wounded wild fowl in that neck of the woods ever since Mt. Hood was a hole in the ground. He was a proficient and a thoroughly educated coon in coon-lore.

Whether the raccoon or Indian "arrathkune" derived his European name from a curious habit he has of dipping or washing his food in water before eating it, as is claimed, I do not know, but he certainly is almost as much at home in water as on dry land, and is a most formidable foe when pursued by a dog to deep water. I know of an instance where a coon drowned two dogs that followed him into the Columbia River. S. H. GREENE.

PORTLAND, Oregon.

TREEING COONS BY SIGHT.

I think beyond a doubt that the so-called "good coon dog" does just as much looking overhead as he does smelling under foot. At any rate, I own more than one dog which carries with him this sterling quality as well as one of the best of noses.

It was a cold night in February, 1890, when I had an undeniable demonstration of this fact. It was about 2 o'clock in the morning, and after a fairly successful hunt we had started for home. The horn had been sounded and the pack was at our heels. After tramping about two miles in the direction of our headquarters, one of the hounds jumped a trail and started off at full cry. Of course he was followed immediately by the rest of the pack with the exception of one old black hound (old Ben), who in the last coon fight had been severely bitten through the foot. It had been my intention to keep him back if the other dogs started a trail, but it was not necessary, as he stayed quite willingly, no doubt on account of the pain in his foot.

The wind was blowing in fast gusts, and as we trudged along with old Ben at our heels we could hear, now loudly and now faintly, the baying of the distant pack borne to us on the winds. Presently we came to a road which was inclosed by fences on each side. Going down this road for a short distance, we concluded to wait for the pack. I had seated myself on the side of the road when I noticed old Ben looking very intently up into the treetops on the other side of the fence. He did not look long, but with one bound cleared the fence and ran to the foot of a thick low tree about ten yards distant from the fence. Once at the foot of the tree he threw his head high in the air and gave tongue to that deep, melodious tone so familiar to all Southern coon hunters, which tells them that the game is treed. I ran to the foot of the tree, placed the lantern on my head, and as I walked back the light of the bullseye rose higher and higher until it rested on a dark form that could be taken for none other than that of a coon.

Just about this time the panting pack arrived at the foot of the tree, after having followed the trail through all the wanderings of the coon now overhead. The pack no sooner arrived than they joined in the chorus with old Ben, and one would think from the way they stood on their hindlegs and chewed the bark and limbs of that tree that they would need no one to cut it down for them, but would pull it down themselves. It is needless to mention that in less than an hour one more coon was added to our already lengthy list.

I give the above instance as but one out of at least half a dozen that have come under my personal observation during the past year. In the above case I watched the dog closely and he did not once put his nose to the ground, and I am sure he could have had no scent from the coon, as the wind blew from the wrong direction.

LOTOR.

THE PENNSYLVANIA SEASON.

AUBURN, Susquehanna Co., Pa., Dec. 31.—To-day completes the open season for all game in this locality. It was practically closed by a heavy fall of snow on Dec. 17.

The sport began with squirrels Sept. 1, and they were numerous enough for good sport. A goodly number of woodcock were about late in the summer and during the early fall; but owing to the water-soaked condition of all the land, they were so scattered as to be hard to find. I found them as often on dry upland as in their usual haunts.

But I have never known so few grouse in the covers since I carried a gun; caused, doubtless, by the excessive rainfall during the breeding season of the past two years. Extreme wet weather means death to a majority of the young chicks. The decrease in numbers in the past two years is shown by the fact that, shooting over the same ground and about the same number of days each season, during the fall of 1888 I bagged thirty-four, in 1889 fourteen, while this season I secured but four. Nov. 23 I crossed the Susquehanna into Windom township, Wyoming county, a drive of seventeen miles, where I found more game, but not so plenty as in the same locality last season. And every one had the first law of nature down fine and knew how to take care of themselves. Was out two days and bagged six.

As for rabbits, they have been an unlimited quantity all through the season. They were apparently as plentiful at the close as on the opening day. Besides the shooting, almost every thicket and brier patch contained traps and snares. But to the last, any one with a good beagle and in a legitimate way could bag as many as he could desire. Their number must have been legion to stand such a drain. One dealer told me he was shipping 500 a week, and that last season he handled 2,500. With the right kind of a dog they furnish a good deal of sport. But the trouble comes in when getting home with from four to ten in your pockets. BON AMI.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 27.—Rabbit hunting has attained more dignity and importance this winter than at any time of late years, and it is astonishing what resources this region can show in the way of cottontail shooting. This is a sport which made the first breaking in I ever had with the gun in the field, and I have never yet gotten over the boyish enjoyment in it. Last week, all things being favorable, it seemed eminently wise and fitting that a little cottontail hunt should be arranged. As I believe was mentioned earlier, Charlie Gammon was to have been chief conspirator in this scheme, but at the last minute it turned out he could not go, as such things so often do turn out. It is bad luck to change one's mind, especially about a hunting trip, so I went right on down into Indiana alone, trusting to luck for a companion. I got off at Shelby, about fifty miles down the Monon road, and spent the night there. This is right near Water Valley, on the Kankakee. Fuller Island, the scene of the late rabbit stories, is about six miles north of there, and the rabbit shooting in the country about, in almost any direction and beyond two or three miles from the railway tracks, is fair to middling, or may be better than that.

The hotel at Shelby is probably the worst on earth. I do not say it is absolutely the worst, because I did get a good bed to sleep in, but including this fact I am ready to say it is probably the worst hotel in the world, in general bleakness, emptiness and cheerlessness, and in the terror that walks by day over its table d'hôte. A small and excessively blonde boy lighted me to bed at about 11 o'clock, and at some time soon thereafter, it seemed to me, knocked at the door and informed me that breakfast was ready. A few moments later I was struggling with the breakfast. I do not like salt pork when it is slippery, or coffee when it is cold and pallid, or buckwheat cakes when they are clammy with the dew of antedyspeptic melancholy, or potatoes which are proof against the plain steel fork of commerce. I did not like that breakfast, and I don't care who knows it. I wish the cook knew it. He was a new cook, a man of a history of grief apparently, and a visage to curdle the sorghum in the jug, and a fine intelligence of how not to cook anything on earth. Some cooks are built that way, and they reach a perfection in that negative art which is often a source of wonder. From cook and cookery I turned to the buxom waiting girl. I couldn't bear to displease the girl, and I ate many more of those cakes than discretion would have suggested.

"I ain't used to working in a hotel," said the handmaiden with an independent toss of the head; "I just come over for a little while. I ain't been here but about three days. The landlady she's sick. She's got twins, she has, and the cook has to tend to everything 'xceptin' what I do. Won't you have another cake?"

I was cold, shivery, cross and half fed when the first gray of morning appeared, and I stepped out into the chill morning air to find Tim Curtin, the section boss on the "Three I" road (L., I. & I. Ry.), which crosses the Monon here. Charlie Gammon had told me that Tim would probably get me at least part of the way over to De Motte, the next station east, which was to be the base of operations. I found Tim just running his hand car out of the car house. By great good fortune it happened that he was going clear past his own section, over to De Motte, about eight miles from Shelby. Tim sized me up a few moments, and finally told me I could go over with him on the car. A bluff good-hearted Irishman as ever walked, is Tim Curtin, and ready to put himself out to oblige even a stranger. We were soon friends, and in a few moments were pumping away on the hand car, Tim, myself and the solitary hand who constitutes Tim's "gang" on that peaceful bit of railway track.

All this being something new in the way of going hunting was just as pleasant as going hunting itself, and I wasn't in any hurry to get to DeMotte; not as big a hurry as Tim was. A hand car is built this way: You pump up and down, up and down; no pump no go; and after you have once taken hold of the handles you can't let go, because if you do you'll fall off. No matter how tired you are you have to keep on pumping up and down, up and down, and no matter whether you push a pound or not the muscles in your back have to work all the time anyhow. I stood this all right for ten minutes, and even enjoyed it five minutes after that, because I was finding so many new muscles in myself that I never heard of before, but after that I began to get alarmed, and pretty soon I thought I was going to die. But the two Irishmen were happy as larks and were singing as they sped along the rails. This annoyed me excessively and I resolved to pump till I fell off before I would say a word about a stop for breath. We crossed the Kankakee bridge, trundled across the wide marsh beyond, and finally pulled up for a moment at the end of Tim's section, about four miles out of Shelby. Here the pause was only brief. Tim and his man took off their coats and I took off mine. The pumping thereafter was harder than ever, and it seemed hours before we got into DeMotte, though the time was just one hour from Shelby. Oh, that mine enemy had to pump a hand car.

Charlie Spencer keeps the store and post-office at De Motte, and he also keeps the beagle. De Motte isn't a very big place, not more than a few dozen houses at best, it not being very large for its age, which antedates the railway considerably; but it has one feature of superiority over any city of any size. It has a beagle hound which is the best beagle in Indiana, and the best beagle in the United States, as any one will maintain who ever saw and hunted with old Sport. This gray-muzzled, sawed-off, preternaturally-wise looking old hunter was among the first to welcome me to De Motte, where I had never set foot before. Sport knew very well that a rabbit hunt was up.

I had never met Mr. Spencer, the owner of Sport, but it didn't take any great while to get introduced. Mr. Spencer couldn't go hunting that day, but Sport could go, and so could Hank Granger, who also was out with the Gammon party when they were down. Hank Granger is a Kankakee hunter of long-time experience. I don't know whether Hank Granger is a better shot than Charlie Spencer or whether Charlie Spencer is a cleverer fellow than Hank Granger, and will give that up, unsettled. But I do know that if they were not genuine gentlemen they would not have treated any stranger as well as they did me. Thanks to them, I had a chance to see a little work with the beagle and all in all enjoyed one of the pleasantest little outings ever seen.

Hank and I went out before dinner for a preliminary whirl, Sport gravely leading the way down to the railway track, and evidently considering himself a chief factor in the expedition; which indeed he was. We went only about half a mile from town, and turned into one of the little oak openings or mottes of scrubby trunks which cover the whole surface of the country thereabouts. We had hardly crossed the fence when a flurry in the short grass told of a hare making for the woods. He never got there, however. A moment later, Sport was roaring along another trail, which led out into the swamp. The hare sprang from the grass a few feet ahead of him, and at once rolled over at the crack of Hank's "pump gun." And then we had a nice long run after another one, in cover so thick you could hardly see your hand before your face, and finally another shot from the "pump" rewarded the patient little hound, who was sticking to the winding trail and was only about 30yds. behind the game when it was stopped. Then we ran yet another, a very "long" rabbit, and didn't get him, and started yet another, and did get him, and had a shot at a ruffed grouse which went right on, and another shot at a fox squirrel, which Sport treed in great style and which we butchered with the shotgun, very abominably, but the best we could do without a rifle. And then we went in to dinner in a cheerful frame of mind, for now it was apparent that cottontails were thick as flies in summer, and that Sport understood cottontails from the ground up.

I had now forgotten my breakfast at Shelby and the long hour of agony on the handcar, and life seemed very much worth the living on this clear December day in the woods. Moreover, the boys sent me over to Mr. Croxell's for dinner, and there was an example of the kindliness of fate. Mr. Croxell is a '49er, a justice of the peace, and a comfortable philosopher withal. The *Century Magazine*, in its early gold days articles, missed Mr. Croxell and his nine companion 49ers who now make all of the once large Indiana army who crossed the continent in the gold seeking days. I had all the advantage in the world over all the magazines, as I sat and listened to the wonderful stories of a time the mere thought of which will thrill any live man to-day. Furthermore, Mrs. Croxell is one of those good souls to whom good cookery is as natural as easy breathing. What visions of baked chicken, of aromatic coffee, of butter—actual, firm, golden butter, of twelve kinds of country fruit preserves, genuine, delicious, unforgetable, of potatoes brown and crisp, of buckwheat cakes mathematically round, scientifically equal brown, poetically intact and self-respectful and thrillingly grateful to a palate almost weary of this sinful world—no one can know the import of all this who has not lived in Chicago—and then in Shelby! Let me recommend De Motte, rather than Shelby, to northern Indiana shooters who prefer comfort. But it should be borne in mind that on this side of the river the vast expanse of the De Golyer Club grounds run clear down to the railroad and cover most of the best duck marsh. So may be the duck shooters would best keep on Shelby side.

But we were after rabbits, and after dinner we got them. This time we went in the opposite direction, toward the river, and at 2 o'clock debouched into the short cover about a mile west of town, Sport again taking the lead.

Unless one has a trailing dog, he can never tell how many rabbits are in a bit of woods, for the little fellows slip off unobserved or lie too close for notice by the human eye. It is all the worse when there is no snow, and when the ground, as it was here, is bare and brown and leafy. But with old Sport along the case was different. We kicked a few rabbits out of the grass by chance, it is true, but these represented only a small part of what the wise old beagle found. There was hardly a moment when he was not baying on a trail, and as soon as we killed the rabbit he was running, he was off and loudly announcing another. Sport never leaves the trail he is running for a fresher trail, and once started, there is no stopping him till the rabbit is killed. He will then make a great pretense of biting the dead game, in reality hardly disturbing a hair upon it, and at once is off again at a business he loves even more than the human hunters do.

The philosophy of the chase *au beagle* lies in the fact that a cottontail is a natural twister and doubler when pursued. The hunter says "the beagle will bring the rabbit right around where it was started," and so apparently it will, unless a much-chased rabbit leads straight off for some distant hollow log or burrow, although the real fact is, that the rabbit brings the beagle around again to where it started. Again, Sister Mollie rarely works very hard ahead of a slow dog, but runs, squats, twists, doubles, hops, or sits contemplatively erect as her taste or fancy may suggest, only caring to keep a little ahead of that faithful and tireless "on, on, on-on!" which follows her every move through the thickest cover. Mounted on high stumps on the open hillside, we could see the whole panorama of this chase in miniature sweep by us, time after time. The hare was rarely ever more than than 50 or 60yds. ahead of the dog, and only put on a spurt once in a while, after the first flurry of fright had worn off. By getting the general direction through the voice of the beagle, one could get in ahead, and if he reached the line ahead of the dog by 40 to 60yds., could nearly always get a shot. Both Mr. Granger and Mr. Spencer, from long acquaintance with Sport, have great judgment in thus securing chances at the game, and they kill rabbits in cover so dense and close that no one would think of getting a shot there ordinarily.

In a little while Hank and I had the tactics of the local cottontails pretty well solved, and we stood around on stumps and had more fun than a little rolling over the white tails that came bobbing past. There is more fun and more excitement in hunting rabbits this way than in any other, though one must have a well-broken beagle. Sport is evidently well bred, and his natural hunting sense and his long experience have added all he needed. To-day I do not believe he can be beaten as a rabbit dog by any other beagle or by any other dog in the country. I presume that thousands of rabbits have been shot ahead of him, for he is old, his reputation is wide and his owner, Charles Spencer, is very accommodating with him. Hank and I killed fifteen rabbits that afternoon in cover where I doubt if a dogless hunter could possibly have killed half a dozen.

There are a good many quail scattered through that country, and we found frequent sign, but only got up one bevy, out of which we got four. This was on Dec. 20, the last legal day in Indiana for quail, ruffed grouse or squirrel. At night we found after backing in our

afternoon's spoils that we had hung up nineteen rabbits, four quail and one squirrel, not having actually hunted more than half a day. My trip, originally solitary, lonesome and at Shelby much disgruntling, had now changed to a very bright and roseate-colored little experience, and I almost forgave the cook at Shelby for his designs on my life, thinking that after all this is a fairish sort of a world to live in sometimes.

One's mother calls it "out of order," and the doctor calls it "bilious," and writers call it "megrims," and the ignorant call it "ugliness;" at any rate, I had all those things when I left the Smoky City. But now, between the handcar and Mrs. Croxell's butter, chicken and coffee, all this had fled utterly, and in the morning I arose in that state of mind and body usually attributed to fowls of fighting proclivities. The early sun, unspeakably mild and pleasant for the date, shone clear and peaceful over a very beautiful landscape of motte, and marsh, and blue timber line beyond; the air was clear and pure, and to look and breathe was a privilege and a blessing. No megrims. No bilious. Plain glad to be alive, as any animal, human or otherwise, ought to be.

Mr. Spencer could go along to-day, and so could Andy, Mr. Granger's boy, and so could another boy, anxious as all boys are, to go rabbit hunting. So we numbered four guns and a dinner pail bearer.

The rabbits were just as numerous and just as obliging as ever on that day, and by half-past two o'clock we had twenty-odd cottontails piled up on a big stump near the railroad track, to be left till called for. Mr. Spencer had done yeoman work with his pump gun, Hank had done about the same with his pump gun, Andy had a few scored to his single-shooting, double-barrel, snap-and-go-sometimes shotgun, and I had some. We all had a lot of fun, but I believe old Sport had more of that than all of us put together. Certainly, so far as results in rabbits were concerned, the hunt was an intense success and we were content to go home early in the afternoon.

That evening I left my new found friends, the better off for having met them, the richer for one more experience in shooting around Chicago and the more firmly convinced that it pays never to change one's mind, especially about going hunting. After dark my faithful friend Tim Curtin was again on hand with his automatic inquisition machine, the handcar, and soon we were rolling away toward Shelby. It was a lovely moonlight night and we had no trouble in finding our *cache* of rabbits on the stump. The whole top of the handcar was covered with rabbits. Not a head of all the game could I prevail upon Charlie or Hank to take, and so I turned toward the city with nearly 150lbs. of game at least, I should think. I know that when I reached my office I had a four-bushel coffee sack full of rabbits, and it was all two men could comfortably lift. So all the office had rabbits.

The moonlight handcar ride was something of a new experience itself, and my two companions were good company enough for a king. All in all, what more does one want than may lie in the possibilities of a plain rabbit hunt, much sneezed at sport as it is? I would not ask a pleasanter trip or pleasanter companions or better fun. Charlie Gammon missed it by not being along. But, never mind, he'll be wanting to go fishing some time next year and then I won't go with him, so there, now. I believe I mentioned that Mr. J. H. DeLong, of New York, just back from a long trip through Mexico, had debated going on this trip with us. Doubtless he would have seen some fun if he had gone. Rabbit hunting as conducted by Messrs. Spencer and Granger at De Motte, with Sport as leader of the hunt, is one of the applied sciences, and an hour on a handcar with Tim Curtin on the other brake, is an Irish movement cure whose virtues have never yet been sufficiently sung.

Jan. 3—Mr. L. P. Utterback, of Nebraska City, a gentleman and shooter who travels in Nebraska and West, is in town this week. He reports quail as having been unusually abundant in Nebraska the past season, especially along the Republican Valley. At Red Cloud the shooting was remarkably fine.

Mr. John Gillespie is again sick and absent from his corner at Jenney & Graham's. His friends miss him, but hope he will soon pull out all right.

Messrs. C. F. Smith and Geo. Rankin, of Pekin, Ill., with perhaps others, will start in a few days for a 30 days hunt in Arkansas, the scene of former successes.

Mr. Geo. J. Maillet, of Crown Point, Ind., is in the city. I saw him down in an oyster house, eating Blue Points and looking happier than anybody.

Charlie Burton and Hank Smith did go rabbit hunting up at McHenry, after all. They tried ferreting without any muzzle on the ferret, though not till afternoon, prior to which time they had bagged 14 or 19 rabbits. A farmer dug a well down after the ferret the next day, and found the rabbit it had killed in the hole, but the ferret had absconded and will now probably proceed to do some rabbit hunting on his own hook.

Mr. David Oliphant is in receipt of a big pickerel, caught through the ice at Lake Wauconda, where the destruction of fish is going bravely on. Mr. Bangs sends down the fish. Mr. Bangs keeps an alleged hotel in the summer, and loves anglers. Yet on this very lake Mr. Oscar Blomgren tells me he once had an invitation, not from Mr. Bangs, but from a resident fisher, to go out and assist in dynamiting some fish. Mr. Blomgren made the fellow leave the lake. These are methods of the summer hotel men; to be careless, summer or winter, who fishes or how he fishes. Money, and the last cent of it, as quick as possible, is what is wanted at Wauconda and plenty of the other lakes around here. The hotel keepers and natives catch the fish in the winter, sell them to the anglers at 5 cents a pound, and then expect the anglers to come and pay $5 a pound the next summer.

A Swedish gentleman of northern Minnesota is importing some specimens of the great grouse known in Sweden as *arre*, and once known in Scotland as capercailzie. He wishes to introduce the bird into the wooded regions of his locality, and thinks it will do well there. If this great bird, nearly as large as a turkey, and as wild and shy as any game bird, could by care and effort be added to our game birds, a most desirable event would be added to the history of sport. But this is a poor country to bring a bird to if it needs any protection.

On the ledge above the windows of my office the English sparrows congregate, and my friend Oliphant, who lives above, tells of a duel he lately saw fought out on the stone ledge below his window between two of these pugnacious and gritty birds. He says they fought to a standstill, and lay eyeing each other, with wings stretched out and breasts throbbing, but too tired to make a movement. He thinks both birds died.

Some days ago a gentleman residing in the East, but well known throughout the Union for his patience and knowledge in ornithological matters, wrote in regard to the use of the term "tiger brant," employed in the casual mention of a Dakota shooting trip from which some Chicago gentlemen had lately returned. The query was in this form: "I want to know the species referred to, and whether the term is in common use in any locality." From what I had heard of the bird referred to I supposed it was the one known in the West, especially along the Arkansas River, as the "speckled brant," although the name "tiger brant" is, so far as I ever heard, unknown there. I replied to the query practically to the above effect. Since then I have been able to talk with Mr. Geo. T. Farmer, the shooter who used the term "tiger brant." As his words may bring out yet further discussion of the vernacular names of several of our wildfowl, I may perhaps be permitted to give them here. Mr. Farmer once was with the Hudson's Bay Co., stationed above Winnipeg. He remarked:

"The 'tiger brant' is a bird which is I think undoubtedly a mongrel between the Norway goose and the laughing goose. I think it a freak. It is not usually numerous, and I do not think it a clear species. It is not known by that name widely, probably nowhere but in a limited region in Manitoba and Dakota. I may have been the first to give the bird that name, so far as I know, though I have often heard it so called since in these regions, and never heard it called by any other name. In description, this bird has a slate colored breast; it has no white collar, like the Canada goose, but the neck is white and slate blended. One distinguishing mark is the long and pointed feathers which are set on back of the wing, just as you will find on the pintail duck.

"The Norway goose, as I always heard it called, is a mottled gray and brown in body color, with white neck, white breast, and yellow bill and feet.

"The laughing goose is, I think, the same bird that in lower latitudes is known as 'speckled brant.' The breast is heavily mottled.

"The wavy goose, as known in the Northwest, is a white bird, with black tips to the wings. The snow goose is much the same, barring the black tips to the wings.

"The Hutchins goose is marked much the same as the Canada goose, but is very much smaller.

"There are two kinds of Canada geese, the long-necked and the short-necked. They are of about the same size and markings, the only difference being in the length of the neck. I have often killed both sorts. I killed two tiger brant on the Dakota trip this fall. As I understand it, we have no real brant in this country, the true brant being a salt water bird."

Mr. Farmer's remarks are interesting because they give the local names, from a shooter's standpoint, and not from that of a naturalist. If I may be allowed, I would like to give the local names of some of these same birds as we knew them on the Arkansas River, in Kansas, which was the only place where I ever shot them to any extent.

The Canada goose is largely known along the Arkansas as the "honker," rarely as "honker goose" and sometimes as "Canada goose." I never heard of the long or short-neck distinction there.

The Hutchins goose is the commonest goose on the Arkansas except the "white goose." The Hutchins goose is there commonly called the "gray goose." When a shooter there spoke of having killed "so many geese" he always meant these "gray geese" (Hutchins) or "white geese." The honker was always specially mentioned. In this country in Illinois, Indiana and Iowa the hunter in speaking of "geese," or "wild geese," always means the Canada goose, because that is now almost the only one seen here.

The terms "wavy," "waver," or "wavy goose" I never heard on the Arkansas. The "white geese" all come under one head, and no distinction in name was made for the black wing tips.

The term "speckled brant" was not used any oftener, and perhaps not so often as the name "brant," referring to the same bird. I never have killed one of these birds.

The terms "Norway goose" and "laughing goose," or "laughing brant" I never heard on the Arkansas. In our shooting there we used often to kill white geese with reddish feathers mottled all over the breast, and other geese mottled in all sorts of ways in slate, brown and gray, but these we always lumped off under the general name of "geese," and considered as mongrels of the different clearer species. I imagine that one of those big flocks of the Arkansas River would have presented an interesting variety of geese for the naturalist to study. But in all of our experience there I never knew a bird which, in memory at least, tallies quite with the detailed description given by Mr. Farmer of the "tiger brant." Neither did I ever hear the names "Mexican geese" and "blue geese" given by Capt. Bogardus in his book "Field, Cover and Trap Shooting" to some wildfowl known near this locality in earlier days.

In my boyhood, in central Iowa we used occasionally to kill a bird which was known all through that region as the "brant." In size it was between the Canada goose and the mallard duck. It was marked almost identically like the Canada goose, white color and all, but as I vaguely remember it now, this bird was certainly not the same as the Hutchins goose. It had no name but "brant" in central Iowa, and was much prized as a game bird. I very well remember the shrill chattering gabble of these birds in flight. It was the note of the Canada goose, keyed very much higher and given more rapidly. But we never used the term "laughing brant" there. I never have seen one of these "brant" in Illinois, and I never saw a "white" or "wavy" goose in either Illinois or Iowa. These seem now to cross further west, stopping on the Platte and Arkansas rivers.

It would be very interesting if Mr. Thos. Johnson, who lives at Winnipeg, and shoots all through that country, would give us the names of these birds as he knows them in his section. And I wish "Shoshone," who certainly knows a great deal about the wildfowl along the Platte, would, of his wider experience, tell what the same birds are called out there. Thus a considerable distance in the north and south migration will have been covered, and perhaps somewhere in that stretch of country we may hear more of the "tiger brant" or of these strange crosses and mixes in the goose family.

E. HOUGH.

COMPARATIVE POWDER TESTS.

IN presenting the cuts of the leading targets made in the comparative powder test a good opportunity occurs to comment somewhat upon the various points of that test. Above all things it emphasizes what we have often take occasion to remark, and that is the influence of loading upon the result attained. Thus it was that the Lyman powder, loaded by the powder inventor for all-round work, turned out the leading per cent. and far ahead of a previous article of the same brand. So it was that the E. C., the Schultze and the Dead Shot powder, loaded by Von Lengerke & Detmold, the accredited agents for these powders, came to the range loaded in the very best fashion. On the other hand the wood powder, which was purchased at the last moment, came from a stock of factory-loaded ammunition put up nobody knows when and it is claimed not loaded for the best results from the particular powder employed. It would even appear from the analysis that the proper charge of powder, according to the label, is not found in the cartridges.

Upon this matter of loading, we would once again allude to the importance of having wads of a size large enough to fully fill the gun barrel from the chamber mouth to the muzzle of the piece. This is especially true of nitro powders and where a wad pushed a short distance into the barrel shows a ring of light all about it, there is little wonder that the gas passing by the wad mixes with the shot and sends the pellets in a confused scattering shower, without any sort of a pattern at the point aimed for.

Our test of Nov. 28 then turned out to be a test of loading as well as of powders, and those who study the results for all they are worth, will not be convinced that the wood powder cartridge did that brand of explosive full justice in the comparative exhibit.

Another point of note, in giving credit where credit is due, is in the shells used with the E. C., the Schultze and the Dead Shot powders. They were made by the U. M. C. Co. for Von L. & D., and are differently constructed from the other American makes of cartridges. Instead of a flat cap with which the flash of the fulminate has to travel around the anvil and then through a long narrow paper funnel or channel before reaching the lower end of the powder charge—these are made like the new English cases, with deep narrow caps delivering the heat and flash of the exploding fulminate well into the charge of powder.

While the several powders were under trial, another set of cartridges were brought out. They had reached the office of FOREST AND STREAM accompanied by the following explanatory note:

PHILADELPHIA, Pa.—*Editor Forest and Stream:* As there has been some discussion as to whether American wood powder deteriorated with age I take the liberty of forwarding to you twelve cartridges loaded in October, 1888. They were loaded as follows: No. 12, U. M. C. Club cases, primed with black powder as much as was held by a small cup, made by wrapping a piece of paper around a leadpencil and then doubling the end over, 3¼drs. American woodpowder, trap grade, Bridgeport Gun Implement Co.'s measure struck off was then added and settled by shaking and striking the block with a small wooden mallet. Three No. 12 black-edge wads were then inserted and each settled separately with a blow of the mallet. On this 1⅛oz. Spark's No. 8 chilled shot were added and then a cardboard wad and the shell crimped. In using wood powder I have never found the slightest difference in the loads and have never been jarred by a single one in the slightest degree; neither have I been troubled with pitting of my gun barrels, possibly because I clean my gun after each day's use. As these shells are loaded with No. 12 wads it would be advisable to use in trying them a gun bored small instead of one that will allow a 12 wad to drop through the barrels.—G. G. D.

On analysis the cartridge showed up as follows:

Loading.	Powder.	Shot.
Card over shot and B.E.	1..44 grains.	545 grains. 510 pellets.
and P.E. over powder.	2..42 grains.	558 grains. 514 pellets.
Black powder at base.	3..44 grains.	544 grains. 505 pellets.
Average.....43 grains.		547 grains. 510 pellets.

Three shots were fired from each barrel of the Colt gun under trial. One of the right barrel shots was aimed too far off to be a fair showing, but the others pan out as follows, the left barrel, although a full choke one, not showing best pattern:

Right Barrel.			Left Barrel.		
Aimed Circle.	Selected Circle.	Penetration.	Aimed Circle.	Selected Circle.	Penetration.
1.191 pellets	258 pellets	5 sheets	1.159 pellets	174 pellets	4 sheets
2.....	.....	. . . .	2.239 pellets	252 pellets	9 sheets
3.293 pellets	293 pellets	6 sheets	3.295 pellets	295 pellets	8 sheets
242 pellets	275 pellets	5½ sheets	231 pellets	240 pellets	7 sheets

This it will be seen gives a percentage of pellets accounted for in the selected circles of 54 in the right and 47 in the left barrel. The powder turned out from the cartridge in good shape, and there is no doubt that somewhat of the rather medium result shown come from the looseness of the wads in the barrel, bored as American barrels too largely are, very appreciably above the gauge marked on them.

In examining the targets following, the point A is the center of the "budd" placed on the white sheet and the point C is the center of the circle struck for best pattern, as in all these cuts the object in giving them is to show how even the arm patterns, as this important point is not covered in the tables of figures.

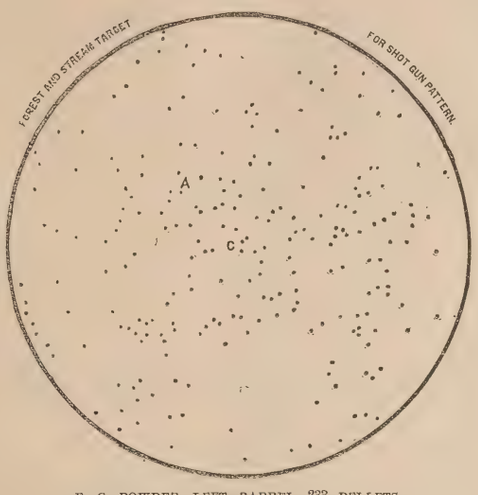
Editor Forest and Stream:

To guard against misapprehension by the public will you kindly permit us the following statement regarding your article on "Comparative Powder Tests," in your issue of this date, Jan. 1.

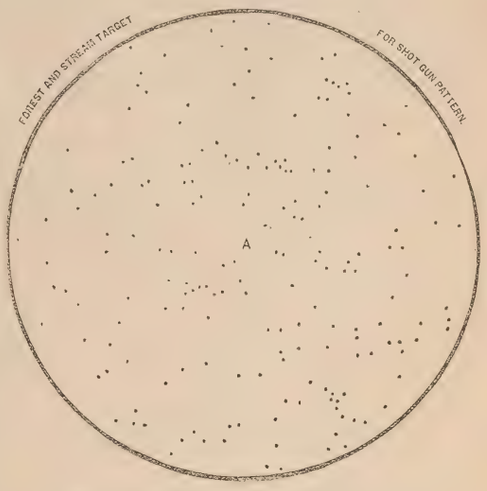
Those of our cartridges which you call "Lyman No. 2" were not, as you seem to suppose, "specially prepared," nor were they "loaded with special reference to their work as test cartridges." Those that were used at Claremont were taken from the stock on hand at our agency in New York city and differed in no respect from the regular goods that we were then, and are still, selling to the public.

Regarding the statement that our so-called No. 2 cartridges were "loaded by experts," this is no more true of the cartridges used at Claremont than it is of all the goods of our manufacture. The peculiarities of our powder are such that, in order to bring it into a compact perforated cake that shall have all the advantages incident

BLACK POWDER, RIGHT BARREL, 207 PELLETS

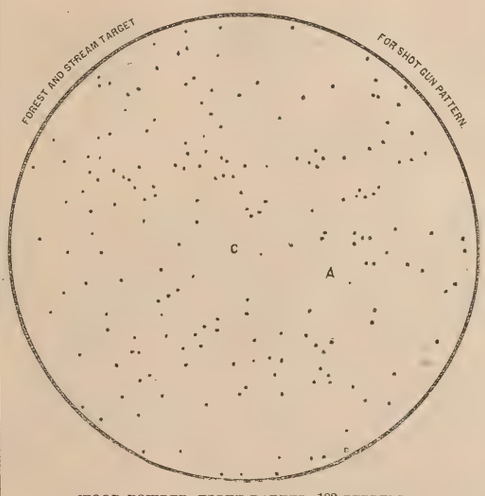


E. C. POWDER, RIGHT BARREL, 222 PELLETS.

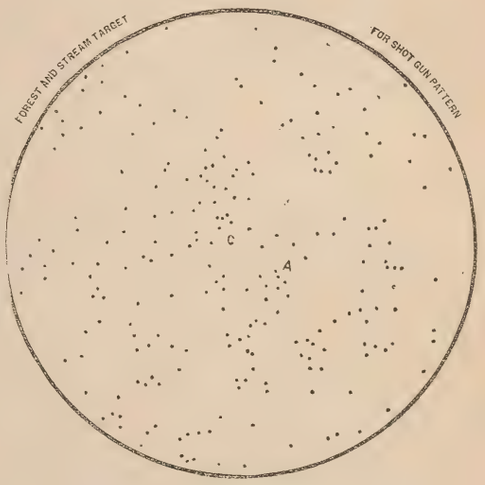


LYMAN POWDER NO. 1, RIGHT BARREL, 174 PELLETS.

BLACK POWDER, LEFT BARREL, 220 PELLETS.



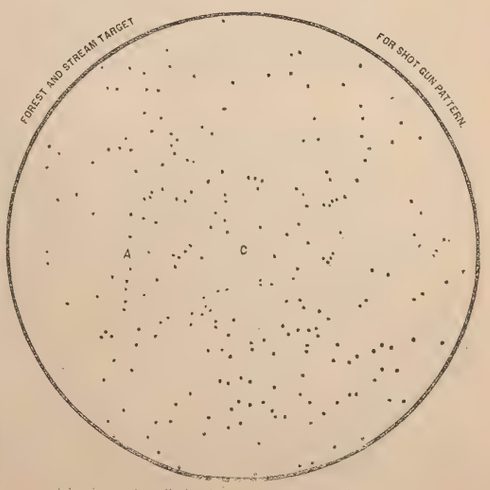
E. C. POWDER, LEFT BARREL, 233 PELLETS.



LYMAN POWDER NO. 1, LEFT BARREL, 173 PELLETS.

SCHULTZE POWDER, RIGHT BARREL, 195 PELLETS.

WOOD POWDER, RIGHT BARREL, 183 PELLETS.



LYMAN POWDER NO. 2, RIGHT BARREL, 230 PELLETS.

SCHULTZE POWDER, LEFT BARREL, 211 PELLETS.

WOOD POWDER, LEFT BARREL, 229 PELLETS.

LYMAN POWDER NO. 2, LEFT BARREL, 230 PELLETS.

to that form of charge and yet shall possess the requisite uniformity of action, expert skill on the part of the manufacturing artisan is necessary. We take pleasure in having it made known, through the columns of your excellent journal, that all of our standard cartridges are "expert" made.

In one respect we think that the trial at Claremont and your report of the same does us a positive injustice. You comment on the wide difference in performance between our so-called "No. 1" and our so-called "No. 2" cartridges, and say that this difference "has a bearing on the growing question of factory vs. special loads for effective work." This is an error, for the fact is that the two cartridges were made by the same persons and with the same tools. But a more important fact in this connection is that the "No. 1s" were taken from the remains of the first lot that we put upon the market, and were made before we had accurately gauged the public demand as to the force required for the average charge. The manufacture of this grade had been wholly discontinued before the Claremont test and the more efficient and reliable Expert No. 2 substituted as our regular commercial goods.

Had we been consulted as to the conditions of the test at Claremont (which perhaps would not have been unfair in a trial which you represent as specially designed to put our new explosive in competition with the most approved sporting powders of the day) we should have insisted, as a matter of simple justice, that the trial be made with those cartridges only that we had adopted as our regular improved manufacture. Would it not also have been fairer that our cartridges, taken from stock, should have been compared with rival cartridges also taken from stock, and not with those which were "specially prepared" by their respective representatives "with reference to their work as test cartridges?"

We should have been gratified again had your report set forth the facts in regard to the recoil and smoke of our cartridge, which as represented by the expert selected by you to do the shooting, were noticeably low.

LYMAN CARTRIDGE CO.

No. 9 CHAMBERS STREET, New York City, Jan. 1.

[The statement of the Lyman Co. respecting the two cartridges of that make in the test of Nov. 28, is entirely in accordance with facts, and not contradicted by the report of the trial. When the comparison was urged by the Lyman Co. representative, an invitation was extended by him to take a sample box of loaded shells from stock. This was subsequently done several weeks before the date of test, and accounts for Lyman No. 1 of the test. Later the charge No. 2 was offered for use at the trial with the statement that this was then, as it has been since, the standard output of the company. The low percentage of the two stock-bought charges in comparison with the other ammunition seemed to justify the remark that there was a bearing in this fact upon the question of factory vs. special loads. Standing beside the gunner on the day of the test, it was seen at a glance that as far as smokelessness went, the Lyman powder was excelled by none.—GUN ED. F. & S.]

Editor Forest and Stream:

Shotgun users are your debtors again. The report from your ranges at Claremont, of Nov. 28, is instructive and valuable. The results established seem to corroborate those of similar experiments there and otherwheres previously made and to confirm the unwritten opinion of the majority of sportsmen that for all-round reliability nothing has yet been found to exceed black gunpowder, a confirmation very satisfactory to those of us—and many of us there be—whose purses appreciate the difference between cartridges which cost one cent and a half a piece and those which cost two or three times that amount. For certain uses of certain persons, and for all the uses of certain others, the costly nitro-compounds will always be a *sine qua non;* but the advantage claimed for these explosives, as, less noise, less smoke, less recoil, will assume smaller proportions when black-powder shooters use lighter loads, as they certainly will if they heed the lessons taught by such gun and powder tests as yours, especially if they have any experience of the eye-stinging vapors, the ugly "kicks," the breech-fouling and defiling residuum, the bursted shells, the balling of shot and the "unaccountables," so often concomitant to the use of nitro-explosives.

It is to be regretted that nothing has yet been devised to accurately determine, at the ordinary gun testing ranges, the penetration of shot. The pad used is almost worthless. The slotted carrier charged with cards at regular intervals is better, but its value is impaired by the varying of the cards not only in their composition but as well in the tightness of their lodgment in the slots. I suppose we will never have the gratification of studying the targeting at your ranges of the high grade English guns of Purdey, Dougal *et id genus omne.* There are such within five miles of your targets, "80yds. killers" in the fond opinions of their owners, but they make no appearance in the records of the FOREST AND STREAM gun tests, in whose impartial scales many a pet theory has been weighed and found wanting; for behold, even the very cartridges, under the monotonously accurate count of those tests now submit themselves for trial loaded with approximate uniformity. CROTON.

NEW YORK.

ABOUT LOADING.—Ponkapog, Mass.—I have been much interested in the discussion upon the different charges of powder for a twelve-bore shotgun, and I am in favor of good-sized charges, as in my experience they have invariably proved best. An illustration of this occurred last fall when shooting snipe. The first time I tried them my shells were loaded with 3drs. powder, and though they were large, strong birds and flushed a trifle wild, I was surprised to see how few I killed. Thinking that the difficulty might lie in the charge, I ordered twenty-five shells to be loaded with 3½drs. powder. A short time after I chanced to have half an hour or so to spare; I took these shells and went after snipe. I had seven shots at single birds and out of those I dropped five, killing them dead every time. This may be I or it may be my gun, but I have my own opinion. The principal thing that made me use larger charges was a very large snipe which rose and was flying across a stream when I fired my 3drs. at him and knocked out a dozen or more feathers. Much to my disgust the snipe, after steadying himself, managed to fly across the river and drop on the other side, where it was impossible to secure him. If I had used 3½drs. then I do not doubt that I should have killed him.—J. H. B.

THE OHIO GAME LAW.

Editor Forest and Stream:

I beg to call your attention to the proposed amendments to the game laws of Ohio on the following pages. These amendments are in accordance with the views of the Ohio Fish and Game Commission, the Cuvier Club, of Cincinnati, and many sportsmen and farmers throughout the State, to whom I sent blanks for the express purpose of obtaining their opinion on the subject.

The greatest evil at present existing is the want of uniformity in the game laws of contiguous States, one result of which is the probability of our market being filled with game during the close season in our own State, when the said game may be lawfully killed in adjoining States; and this objection applies to every species of game recognized by our laws. On the other hand, we are deprived of the privilege of shooting or purchasing game during the Christmas holidays, the only season that a majority of our people can afford to enjoy the pleasures of the field, and the time of all others when the purchase of game is desirable.

By referring to the game seasons of the several States surrounding Ohio it will be seen that the proposed amendment to the Ohio game laws is in the nature of a compromise with the adjoining States. The attention of the proper authorities of said States will be called to this fact and every effort will be made to induce their State Legislatures to so amend their game laws as to conform to our proposed laws.

It will be observed that our proposed open season for squirrels begins June 1; for woodcock, pheasant, prairie chickens and ducks begins Sept. 1; for deer and wild turkey begins Oct. 1, and for quail and rabbit Nov. 1; that all open seasons close on Jan. 1. This simplifies matters greatly. The laws for deer, wild turkey and prairie chicken, which can hardly be said to exist in the State, are principally to govern their sale in our market and to protect neighboring States.

The usual excuse for violating our present quail law is that it is the shortest open season in the Union for that bird, or that many who can shoot only during the Christmas holidays are deprived of that pleasure. By extending the open season from Nov. 1 to Jan. 1 (a period of two months), while not so long a season as the majority of adjoining States, it is amply long enough, and would satisfy hundreds who now feel aggrieved. There were, probably, more quail in Ohio in 1890 than ever known, which is to be accounted for by the mild winter and the absence of deep snows during the past few years, and not to our short open season. Deep snows are more destructive to quail than an open season throughout the entire year.

It is proposed, as will be seen, to do away with two great evils—summer shooting of woodcock and spring shooting of ducks. Woodcock are immature, and soon spoil when shot in the hot days of July and August. Ducks are lean, tough and fishy in the spring, and unfit for food. Every true sportsman will appreciate and favor these proposed amendments.

With the amended laws, there will be no excuse for a man to be seen afield with gun or dog before Nov. 1, because we, practically, have no deer, wild turkey or prairie chicken, and the pursuit of squirrels and pheasants necessarily restricts the sportsman to the woods and thickets, and of snipe and woodcock, to wet and marshy ground.

It would be idle to refer to the great good to be derived from just, equable and uniform game laws in increasing and preserving the game of the several States—the facts are patent to all—but I would appeal to the farmer, above all others, to give his influence and consideration to the protection of game. The farmer can do more than all others in this direction. The game is on his land; it is constantly under his eye; he has the authority of the trespass law to keep intruders away, both in and out of season; and while the people at large can make and enforce laws for its protection, it is to the farmer that they look, principally, for its preservation.

I know that many farmers think that the game laws are made entirely in the interest of sportsmen, and on this account are either lukewarm in their support, or opposed to their enforcement; but there never was a greater mistake than this. I am also aware that some farmers regard game protective clubs as organizations for selfish purposes only, and look upon them with suspicion. I know that the effective organization known as the Cuvier Club, of Cincinnati, is regarded by many farmers in this light, and while the imputation may be a natural one, it is untrue. The object of this club, as defined in its constitution, is for the protection, preservation and increase of game and fish as food for the people, and not for sporting purposes. Of its very large membership, less than one-tenth ever shoot or fish, and the majority of those who do, go to more favorable localities outside of the State for their sport.

We expect the farmers to work hand in hand with us in protecting our song, insectivorous and game birds, by favoring the passage of the proposed amendments to our laws, and to give us their moral and active support in enforcing them. JAMES A. HENSHALL,

Sec'y Ohio Fish and Game Commission.

CINCINNATI, Dec. 26, 1890. Cor. Sec'y Cuvier Club.

The bill is as follows:

A bill to amend sections 6,960, 6,961 and 6,963, Revised Statutes of Ohio:

SECTION 1. Be it enacted by the General Assembly of the State of Ohio, that sections 6,960, 6,961 and 6,963 of the Revised Statutes of Ohio be amended to read as follows:

Sec. 6,960. Whoever shall kill, maim, trap, net, snare, catch with bird lime or any similar substance, poison or drug, any bird of song, or any insectivorous bird, or any linnet, bluebird, yellow hammer, yellowbird, thrush, woodpecker, catbird, pewee, martin, oriole, killdeer, snow bird, hummingbird, wren, robin, meadow lark, kinglet, lark, dove, mockingbird, swallow, chewink, nuthatch, warbler, finch, sparrow (except the house or English sparrow), grosbeak, bobolink, phœbe bird, or any wild bird other than game birds (the shooting of which is regulated by law), or disturb or destroy the nests or eggs of any bird mentioned above, including game birds, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be fined not less than five dollars, nor more than fifty dollars, and in default thereof, imprisoned in the county jail until said fine and costs are paid.

For Scientific Purposes: Said Section 6960 shall not apply to any person killing or catching any of the birds therein mentioned, or taking their eggs for scientific purposes, provided that such person has a certificate, granting such privilege, from the Board of Fish and Game Commissioners of Ohio.

Game Birds: The term "game birds" as used in this section shall mean the birds mentioned in Section 6961, Revised Statutes.

Sec. 6961. No person shall on any place, catch, kill or injure, or pursue with such intent, any quail, except between the first day of November and the following first day of January, inclusive, of each year; or any

Ruffed grouse or pheasant, except between the first day of September and the following first day of January, inclusive, of each year; or any

Pinnated grouse or prairie chicken, except between the first day of September and the following first day of January, inclusive, of each year; or any

Woodcock, except between the first day of September and the following first day of January, inclusive, of each year; or any

Wild duck, except between the first day of September and the following first day of January, inclusive, of each year; or any

Wild goose, except between the first day of September and the following first day of January, inclusive of each year; or any

Wild turkey, except between the first day of October and the following first day of January, inclusive of each year; or any

Squirrel (fox, gray or red), except between the first day of June and the following first day of January, inclusive of each year; or any

Hare or rabbit, except between the first day of November and the following first day of January, inclusive of each year.

No person shall at any time catch, trap or snare quail.

No person shall at any time or place kill, wound or catch, or pursue with any such intent, any wild duck or wild goose with any device or instrument known as the swivel or punt gun, or with any artificial light, or with the aid of any sink-boat or battery, steam or naphtha launch, or with any trap or net, or with any gun other than such guns as are habitually raised at arm's length and fired from the shoulder;

No person shall at any time or place kill, wound or catch, or pursue with such intent any wild duck or wild goose on Monday or Tuesday of any week, except in the waters of Lake Erie and estuaries and bays thereof:

No person shall shoot or hunt any birds, game or animals, or have in his possession in the open air for such purpose, the implements for shooting or hunting the same on the first day of the week, commonly called Sunday.

Any person violating any of the provisions of this section shall be guilty of a misdemeanor and, on conviction thereof, shall be fined not less than $25 nor more than $100, and in case of neglect or refusal to pay such fine, shall be imprisoned in the county jail not less than 30 days; and all fines collected under this act shall go to the county fish and game fund in the county wherein the offense is committed, unless otherwise directed and ordered by the Fish and Game Commissioners of this State.

It shall be the duty of prosecuting attorneys to prosecute all violators of this section in their respective counties. And it is hereby made the duty of the wardens and assistant wardens of this State to prosecute all violators of this act, in connection with the prosecuting attorneys of the counties wherein such offense shall have been committed, and such prosecuting attorneys shall be entitled to the same fees as are now allowed by law for the collection of forfeited bonds.

Sec. 6963. No person shall catch, kill or wound, or pursue with such intent, any wild deer, except between Oct. 1 and Jan. 1, inclusive, of each year; and any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor and, on conviction thereof, shall be fined not less than $25 nor more than $100, and in default thereof shall be imprisoned in the county jail not less than 30 days.

SECTION 2. Said Sections 6960, 6961 and 6963 of the Revised Statutes of Ohio are hereby repealed, and this act shall take effect and be in force from and after its passage.

MR. DEERY'S PARTRIDGES.—A despatch from New York states that the Customs authorities there have, upon the request of the Canadian Customs, been looking up figures regarding shipments of partridges made to the United States by Thomas Deery, of Bonsecours Market. Deery, it is charged, made large shipments of these to New York under the name of "poultry," some of the largest purchasers of game in New York having been supplied by him. The buyers in New York readily gave all information regarding their purchases, and this information is now in the hands of the Customs officials at Ottawa. The Canadian game laws prohibit altogether the export of partridges, and a fine of $100 can be imposed for each and every shipment. Mr. Thos. Deery keeps stall No. 1 in Bonsecours market, and deals largely in game and poultry. Having secured orders for shipments of partridges from parties in the United States, Mr. Deery had no hesitation in filling them, and under the non-committal designation of "poultry," shipments of partridges went steadily across the line. In all about 210 shipments were made. The Customs officials got scent of Mr. Deery's unlawful practices, however, and one fine day in November, Mr. Waters, special officer, paid a friendly visit to Mr. Deery's store and asked permission to look at his books. Mr. Deery cheerfully complied, and felt indignant when, after a short examination, the Customs officer seized the books and sent them to Ottawa. After the books had been examined at Ottawa they were returned to Mr. Deery, with the intimation that the Government proposed to collect a little fine for this offense, at $100 a shipment. The total fine for which Mr. Deery is liable is $21,000, which he is indisposed to pay. Mr. Deery immediately retained Mr. J. N. Greenshields, Q. C., and proposes to fight the case out in the courts. He pleads ignorance of the law forbidding the export of partridges, and thinks that on this account the fine should not be insisted upon. The case will come up at the next Exchequer Court.—*Montreal Star, Dec. 26.*

A NEW ROCHESTER ASSOCIATION.—Rochester, N. Y., Jan. 3.—*Editor Forest and Stream:* A new organization for the propagation and protection of game and fish in this vicinity was organized here last night. A constitution was adopted and the following officers were elected: Pres., Wm. S. Kimball; Vice-Pres., J. R. Fanning; Sec'y, Edmond Redmond; Treas., Frank B. Bishop. Directors, James H. Brown, J. W. Oothout and J. K. Beckwith. The annual dues were fixed at $3 and no initiation fee is to be charged. It is the purpose of the association to obtain from the South or West 5,000 quail and liberate them in the counties surrounding this city. The members do not intend to try and monopolize the shooting but several of them have made liberal subscriptions to a fund for purchasing quail. The coöperation of farmers and all others who want to see the experiment succeed is invited, and when the birds are procured they will be distributed free of cost over such grounds as there is reasonable hope that they will thrive on. The name of the society is the Monroe County Sportsman's Association. The next meeting will be held at the same place on the evening of the day next week that FOREST AND STREAM arrives in Rochester, and all who see this and are interested are earnestly invited to attend and become members. An association like this should certainly succeed in this county, and if the aims are carried out, will be a power in furthering the interests of legitimate sport in this section.—OSCEOLA.

ST. LOUIS, Mo., Jan. 2.—Before another week shall have been added to the score of time there will be organized another club for the purpose of controlling a game preserve. The scheme is backed by a number of well-known sportsmen, all of whom are very enthusiastic over the location which is to be secured. A preliminary meeting is to be held the early part of next week when steps are to be taken to launch the organization and give it a name. The land which the gentlemen have in view is known as West Prairie. It it situated about twenty miles north of here on the Alton road. Generally speaking it is low and marshy, having a couple of good sized lakes on it, and is famous for snipe and ducks.—UNSER FRITZ.

VIRGINIA GAME.—The quail shooting season, which closed Dec. 25, was one of the most remarkable known for many years. The birds were extremely abundant. Mr. Frank Belt, one of the most successful gunners, killed 300 between Nov. 1 and the close of the season. Many birds are left over. Near Berryville, Clarke county, in going a distance of about three miles along the Shenandoah River, Dec. 29, Mr. Cannon saw eight coveys of quail while hunting rabbits; the coveys contained about 8 to 10 birds each. The same state of things is reported to be general. Pheasants have been more plentiful than usual on the Blue Ridge Mountains. Rabbits are common enough. Mr. Cannon, who was armed with an old musket, killed 17 in one day.—R. E. LEWIS (Washington, D. C.).

SIDE-HUNTS.—The game count list of the Palmyra, N. Y., Forest and Stream Club is as follows: Fox, 200; geese, wild, 100; partridge, 50; duck, wild, 59; coon, 50; woodcock, 40; skunk, 40; hawk, 40; owl, 40; snipe, 30; plover, 30; squirrel, black, 20; gray, 20; red, 20; rabbit, 20; woodchuck, 20; pigeon, wild, 20; weasel, 20; rail, 20; marsh hen, 20; kingfisher, 20; dove, 10.—ALEX. P. MILNE, Pres.

Sea and River Fishing.

TROUT FISHING IN NORTH CAROLINA.

"THERE are no trout in North Carolina," said a gentleman to a friend of mine in the cars of the R. & D. Railroad. My friend was on his way to try his fortune among the trout up here; the other gentleman was on his way to Florida to hook a tarpon—if he could. Now a ½lb. trout caught in a clear stream with a rapid current rippling over clean gravel and rocks, with rapids and cascades at the foot of which the fish lie waiting for a chance fly, and winding through shady woods and groves of rhododendrons and laurels, picturesque gorges, and moss-covered rocks which rise in cliffs 100 to 500ft., is worth more than any tarpon taken after a week's waiting on a boat anchored over a mudhole. And when one may haply take a fish of a pound or more or a *Salmo irideus* of 2 or 3lbs., and fill a 12lb. basket in half a day's fishing, I should say there are trout in North Carolina. And this is just what may be done here in the northwestern corner of the State, where the Tennessee, the Chattooga and other large rivers have their birthplace. Here the elevation above sea level is about 3,500 to 4,000ft. The water is cold, pure and clear as crystal; there are no mosquitoes or other troublesome flies, and abundant streams. Yes, there are trout in North Carolina, the genuine crimson-spotted brook trout (*Salvelinus fontinalis*), and the beauty of the mountains through which the streams meander in the bends, or ripple over rapids, or rush down the numerous falls adds much to the pleasure of the sportsmen who have found out that there are trout in the South. Just here the three States of North Carolina, South Carolina and Georgia corner together, and the waters which flow into the Atlantic rise from the clearest, coldest springs within gunshot of those which flow into the Gulf of Mexico. It is the highest point of the Blue Ridge, which here forms a sort of horseshoe, and rises almost perpendicularly 1 500ft. above the highest portion of the Piedmont country, forming an extensive table land. The rocks are the oldest of the geologic series, the granites and schists, which do not make mud, and from which the copious rivers from the clouds, which often sweep the surface and envelop the high peaks, pour out as pure as they fall. No finer trout are found anywhere, and although the season has as yet hardly begun my friend aforesaid has enjoyed some very fair fishing with the fly. As to quantity let me give doubters a few facts—not fish stories. I have seen a man who had a boy with him to string the fish bring in more than 300 in half a day's work. Yes, it was work, not sport, he was a pot-fisher and a poacher, whose object was to get fish for sale at one cent each, take them as they come on the string.

I have sent two men a mile down the stream at the end of the season with a box, with small holes in it, to take fish alive to stock a breeding pond with, and in three days more than 1,000 fish have been turned into the pond. This is necessary to keep up the stock, unduly reduced by the poachers aforesaid, who supply the boarding houses and hotels during the summer, and who prefer my portion of the stream because it is near the town. So much for quantity. I should say, however, that for several years past there has not been so much poaching as formerly, and by stocking my pond late in the season the fish are brought up to the headwaters of the river, where they spawn and so keep up the supply, finding their way down again after having spawned. I have taken brook trout, here called mountain trout, 14 to 21in. long. The rainbow trout, of which I put in some hundreds of fingerlings three years ago and several thousands of eggs since, have since then reached a weight of 3lbs.; two of that size were caught last summer. This is three years' growth. It is an interesting fact that these fish do well in the streams here, and that they are crossing with the common trout, as I have seen one of them, I should judge a pound or more in weight, on a spawning bed, fiercely driving off the smaller brook trout and keeping the bed to himself.

The fishing streams are numerous. I have about seven miles of water (the Cullasaja River) on my premises and the fish go down stream at least seven miles below me, until the water is too warm for them. In the next county the head branches of the Tuckasegee affords 15 to 20 miles of fishing. The Nantahela River, west of here, is a fine cold stream, in some of the gorges the sun never strikes the water. The headwaters of the French Broad, in Transylvania county, N. C., and of the Chattooga, in Georgia and South Carolina, also afford good sport, but they are not stocked as they should be. Highlands, a small town, mostly populated by Northern people, is the center of the trout district, while the streams in Haywood, Mitchell and adjoining counties all have more or less trout, and might have more if the owners would take pains to replenish the stock. But it is not in all human nature to expend time, and trouble and money for the benefit and enjoyment of strangers, and in all but a few instances the fact that trout fishing is to be had for the asking is not spread abroad. But that there are trout in the South, and fine ones in plenty, to be taken under the most agreeable circumstances, is very well known to at least a few persons who could truthfully certify to the fact; and the thirty miles which intervene between this place and the nearest railroad depot will hardly stand in the way of those who enjoy the gentle sport of luring the trout from the eddies where it loves to lie in wait for the fly. HENRY STEWART.

HIGHLANDS PARK, Macon county, N. C.

[The rainbow trout was probably occupying the nest of the brook trout as a poacher and not as a mate, its spawning season beginning in April or May. The rainbow has a special weakness for eggs of other members of the salmon family.]

SALMON FISHING IN WINTER.

DURING the winter months, especially in March and April, very successful fisheries for the Atlantic salmon (*Salmo salar*) are carried on with hook and line in the Baltic, along the northern coast of Germany from Rugen to Memel, at depths varying from 16 to 33 fathoms from 6 to 20 miles off shore. On the Pomeranian coast this method of capture seems to have been very general from ancient times, and it is now more common there than on any other part of the German coast. The same style of fishing is practiced in winter in the open sea near Bornholm, Sweden, and off the coast of Blekinge. Off the southeastern coast of Scania, Sweden, there has long been a winter fishery for salmon with hook and line. Fishing begins in autumn and continues through the winter, subject to interruptions from storms. A description of the method of using salmon lines is published in the Bulletin U. S. Fish Commission, Vol. IV., page 326, and in Report U. S. F. C., part XII., page 386, plate I. From these sources we have selected the essential particulars.

The line is 180ft. long and is provided with three hooks, made of galvanized iron wire, and is kept floating near the surface by means of four floats of wood or cork; it is kept in position by an anchor line set in 120 to 180ft. of water. The anchor line has a glass float 6ft. below the surface of the water and a second one from 48 to 72ft. above this. The line is fastened from 4 to 6ft. below the upper float. The hooks, which are 3in. long and 1½in. across the bend, are baited with fresh herring. The gangings, or snoods, are represented to be 15ft. long. The fish is cut near the vent, the point of the hook passed through the body and again through the eyes and out at the side of the head. In the autumn fishery each boat carries four men, with from forty to sixty lines.

The success of these fisheries greatly depends upon the weather. The salmon also seem in some years to leave one part of the Baltic and go to another. On the south coast of Scania the method of catching salmon with lines has been almost entirely abandoned, because scarcely any were caught.

IN FOREST AND STREAM of Oct. 23, 1879, we find the following statement: "Eastern salmon spawn in the fall, yet there is a late run which spawn in January and February, and return to the sea as kelts in June." It is really strange that we do not hear more frequently of the capture of *Salmo salar* in our bays in winter, and we must believe that if the proper investigations were made the fish would be found. Here is a problem worthy of patient effort and scientific study—infinitely more important than endless discussions about the names of things and the relative values of conflicting opinions.

CHICAGO FISHING NOTES.

CHICAGO, Ill., Dec. 23.—Mr. Fred D. Divine, the well-known maker of fishing rods, of Utica, N. Y., is in town to-day, debating whether to sell some more rods or go home and spend Christmas like a white man. Mr. Divine promises a new thing or two in spring styles.

The ice has formed on the lakes north of us, and the butchery of game fish at Antioch and many other points on the Fox Lake system is going on in a manner perfectly frightful.

One or two correspondents have lately spoken of "croppie roosts." I wonder if anglers hereabout know that the Fish Commission a year or two ago put down a quantity of brush to make croppie nests in Fox Lake. The work was done at night, so that the locations might not be learned to the destruction of the fish which would in time come to frequent the spots. I never have heard that the locations have been discovered. The brush was sunk largely as a protection to the young fry placed in the lake at that time.

Dr. W. H. French, of Cedar Rapids, Iowa, left on the 16th for a tarpon trip in Florida. Mr. Fisk, of this city, had a pair of shark hooks made for him; large steel contrivances, fastened on dog chains. E. HOUGH.

ANGLING NOTES.

WE receive a good many inquiries from anglers and tourists who are about going south, regarding the proper tackle to take with them for Florida fishing.

Of course, tarpon require special tackle as described under "Angling Notes" in our issue of Dec. 25. For the ordinary run of fishing such as anglers will be most likely to indulge in, the following outfit is necessary: For channel bass, also called redfish and spot, the same rod, reel, etc., such as we use here for striped bass along the coast should be taken. This rig will answer for any of the large fish found along the coast and in the rivers. But there are many fish like the spotted weakfish, commonly called sea trout, the sheepshead, which run small in Florida, the pompano, etc., that do not require such stout tackle, and to obtain good sport it is better to take along a lighter bait-rod, which will also answer for the big-mouth bass. With this rod, a multiplying reel should be used, filled with from 50 to 100yds. of No. 9 or 12 Cuttyhunk line.

Great sport can be had with a heavy fly-rod. There are many of the smaller varieties of the salt-water fishes that take the fly in addition to the fresh-water bass, but the flies must be large and finished off with wire at the head or they will not last long. A few stout leaders, both double and single, will be needed and the usual assortment of sinkers and swivels.

The following hooks will be necessary: No. 7-0, 8 0 and 9-0 knotted O'Shaughnessy for heavy fishing. No. 4-0, 3-0 and 2-0 Sproat on double gut snells on loops for weakfish, black bass, etc. No. 4 Sproat on single gut or double loops for pompano, etc.

The best artificial baits for black bass are the fairy and phantom minnows No. 4 to 6, and the plain metal spinners No. 2 or 3. Spanish mackerel take pearl or bone squids and the bluefish will take these also as well as the tin squids. A good gaff and landing net are indispensable. SCARLET-IBIS.

A CURIOUS HABIT OF SHAD.—*Editor Forest and Stream:* It may be of interest to know of a peculiar habit of shad in the town of Steuben, Maine. The fish arrive in June and are taken in brush weirs set for herring as late as October. At times they go into Dyer's Bay at high tide and remain on the flats when the tide recedes. The fishermen do not think that the shad are stranded, but are inclined to believe that the habit is due to a dislike to return to salt water. It is observed that the fish make holes in the soft mud and sand, in which they remain until the water again covers the flats. From conversations with the fishermen it would appear that during some seasons large numbers of shad are seen at the the head of the bay and are easily taken with the hand. The annual number reported to have been thus caught in 1888, 1889 and 1890 was between 150 and 200, although many more could no doubt be secured were the fishermen so disposed. This habit of the shad was not learned of elsewhere in Maine and appears to be unique. —HUGH M. SMITH.

DYNAMITING SHEEPSHEAD.—Somers Point, N. J.—The report of killing sheepshead with dynamite is correct. It was done one morning about sunrise and quite a number of fish were caught, but it was impossible to find out full particulars. This is often done under pretense of working on wrecks. There was some talk about the thing at the time. The place where the explosion took place was long known as a favorite locality for sheepshead. This was the only time I knew dynamiting to be done inside of the beach. The winter fishing for white perch is poor at present on account of the great scarcity of the fish. Mud hens, or clapper rails, were plentiful this fall. There are some ducks now in Great Egg Harbor Bay.—B.

PENNSYLVANIA FISH PROTECTION.—A reunion of the members of the Pennsylvania Fish Protective Association will be held at the rooms, No. 1020 Arch street, Philadelphia, Pa., at 8 o'clock, P. M., on Thursday, Jan. 15, 1891. Invitations to members have been issued by a committee of the association, of which Mr. A. M. Spangler, of 529 Commerce street, is the chairman.

"THE WOLF OF THE WATERS."—This sketch, of which a part was given last week, will be continued in our next issue.

Fishculture.

CONNECTICUT FISHCULTURE.

THE twenty-fourth report of the Fish Commissioners of Connecticut begins the first of a biennial series and covers the period from June 30, 1888, to June 30, 1890.

The money appropriated for the use of the Commission is devoted to the artificial propagation of shad and the purchase and distribution of trout for stocking the brooks and streams of the State. The hatching of shad in 1889 at Birmingham, on the Housatonic River, was under the charge of Mr. Henry J. Fenton: 8,262,000 shad fry were planted in the Connecticut, Quinnipiac and Housatonic rivers. Mr. Fenton notes that fine shad of good size were abundant at the hatching grounds, while in the lower part of the river the catch was 30 per cent. less than in 1888. The next season's operations with shad were under the supervision of Mr. Robert A. Chalker; 4,309,000 shad were placed in the rivers already mentioned. The falling off this season was due to cold and high water in the early part of the run. The total catch of shad in the Conneticut in 1889 was 42,325, and in 1890 it fell to 34.318.

While the results of shad propagation have been discouraging the trout distribution has been profitable. "According to the many reports received by the Commissioners from persons who have fished in the various streams throughout the State during the past two years, it is clear that the stocking of such streams has been decidedly successful, for no single brook in Connecticut was ever so thickly populated with trout in that period." 339,000 brook trout were distributed in 1889, and 336,000 in 1890. These were divided among numerous applicants, over a large area of territory suitable for trout.

Reports indicate a decided increase in the number of salmon in the Connecticut River and we take pleasure in quoting the following notice of the praiseworthy example set by one of the pound owners: "During the past summer Capt. Fred Ostman has released from his fish pound 27 salmon weighing from 3 to 4lbs. each. This he has done in order to allow the fish to breed in the waters adjacent to this place, and thus stock the Pawcatuk River with these fish. If other parties throughout the State would emulate the example set by Mr. Ostman we could soon gratify our epicurean tastes by feasting upon Atlantic salmon fresh from the water." The salmon now caught are the result of artificial introduction dating some years back.

We regret to find that Connecticut has lost by resignation two of its oldest Commissioners, Hon. R. G. Pike and Dr. William M. Hudson, both of whom were appointed by Governor Jewell, in 1869. Mr. Pike served until January, 1889, and Doctor Hudson until 1890. The services of these eminent men have been of extreme value to the State, and it is to be hoped that they will continue to interest themselves in Connecticut fishculture even though their official relation to it has ceased.

RAINBOW TROUT IN MEXICO.—In our issue of Aug. 21, 1890, we referred to the rapid growth of rainbow trout in Mexico. Señor Chazari has recently communicated to Col. John Gay, of the U. S. Fish Commission, some additional details of his experiment with this species. He writes that although very sensitive to the temperature of the water during incubation and the first four months of its life, after that time he has succeeded in rearing the trout in water having a temperature of 82 deg. Fahr., losing only a few individuals in summer. The food given to them consists at first of earth worms and later of ox meat, usually the heart. The development of the rainbows with this kind of food has been very satisfactory. Some individuals thirty months old weighed more than 3lbs., and a few which escaped into a stream containing a plentiful supply of good water flourished wonderfully. Señor Chazari recently found one, whose death was caused by an abnormal development of the stomach, which measured 22in. in length and weighed more than 5lbs., its age being not over 32 months. The lake trout has proved much more delicate than the rainbow and grows more slowly, as does also the brook trout. The California salmon presented to Mexico by the U. S. Fish Commission arrived in perfect condition, and are greatly cherished by the Mexican Commissioner.

COLORADO FISHCULTURE.

DENVER, Colo., Dec. 30.—The Fish Commissioner submitted his report to Governor Cooper last evening. The following abstract of the document is given in this morning's *Republican:*

When I took charge I found the only hatchery in use (nine miles below Denver on the Platte) in very bad condition. After more than eight years of service the cheap wooden structures had decayed so badly as to be unfit for another season's work. There was, however, a fine lot of trout fry ready for distribution, somewhere about 300,000. These were sent out over the several lines of railway for distribution in public waters. A few thousand fry were sold to private parties. I do not encourage the sale of fish to stock private lakes; had I done so there would not have been any left for public waters. I pursued the same policy this year, and only sold small lots to four or five persons. People who desire fish to stock ponds can easily obtain all they need from those who make a business of growing eggs and fry. The live fish dealers of Denver are able to supply almost any kind of fish suitable for stocking ponds or lakes.

The State has so large a territory to stock that there is never enough to go around. As soon as the work of distribution for 1889 would permit an attempt was made to establish the branch hatcheries that the law called for. The amount of money at my disposal for each of the three branches was limited to $400 for the construction. I discovered that this sum was inadequate, and determined to use the old branch hatchery at the outlet of the Twin Lakes. The result was not satisfactory, owing to the difficulty of catching the spawning fish from the wild waters.

THE DENVER HATCHERY.

The Denver Hatchery had to be entirely rebuilt in order to hatch the eggs for the season of 1890. This work has been done, new ponds made, the water supply increased, a dwelling for the superintendent constructed, a stable for the horse and wagon and a complete change made in order to facilitate the handling and shipping of fish. To-day the establishment is in better order than at any time since the place has been in use. I placed W. S. Kincaid in charge as superintendent Oct. 1. The season of 1890 has been successful, although the branch hatchery at Gunnison did not succeed in securing a sufficient number of breeding native trout to enable them to score a success for this year. However, a fine showing is made for 1891. At the Twin Lake Hatchery over 50,000 native trout were hatched and distributed in 1890, and a large supply of eggs insured for next season. At the Denver Hatchery over 478,000 eggs end fry were distributed for 1890. These were sent all over the State. The State superintendent traveled over 9,454 miles distributing them, and part of the time three other persons were employed in the work. The season of 1891 bids fair to eclipse all others. Everything is in excellent order and there are now in the Denver Hatchery over 400,000 eggs, and the season is not half begun.

MAGNITUDE OF THE WORK.

There are about 6,000 miles of the trout streams in Colorado and not less than 500 lakes. These bodies of water are mostly barren of fish life, yet they are excellent for the growth of fish. The reason is that the waters abound in life, making excellent fish food.

ECHO LAKE HATCHERY.

Echo Lake, not exceeding forty acres in extent, has produced many thousand trout that weighed over a pound each since it has been stocked, and is now alive with them. This is one among many hundred lakes that are scattered over our mountains. The field for fishculture is far in excess of what is generally known. Such bodies of water contain enough food for 10,000 trout to thrive on for two years. This would yield five tons of the choicest fish for an outlay of say $100 for the young fish as seed when but 2½in. long. The experience at Echo Lake has shown a better growth than 1lb. in two years for the planting. There are over 500 lakes in these mountains as large or larger than Echo and all now stocking. If the State should succeed in placing 10,000 trout fry in each of only 100 of these, the increase of a choice fish food for the people would exceed 1,000,000lbs. in two years at no other cost than the planting, as these idle waters now contain the food. If half should be lost the gain would be still 500,000.

The State can produce these seed fish for less than $5 per 1,000. By an expenditure, therefore, of less than $5,000 it is possible to furnish the seed for a food product of over 5,000,000lbs. The rapid growth of the trout in our lakes is due largely to the presence of countless swarms of gammams, or fresh-water shrimp. Other aquatic insects exist in great abundance.

BARREN RIVERS AND STREAMS.

There is within our 104,000 square miles of territory over 1,000 miles of suitable waters that now contain no trout. The North Park has by far the largest area of such waters. Big Laramie has only the few trout placed there by private enterprise and the generous aid of Wyoming's Commissioner. The rest are such streams as flow above high impassable falls. These waters should be stocked with the Eastern brook trout, which are better for the reason that our native trout have a natural habit of running down stream upon the approach of winter, and are apt to get below these impassable falls.

There is room for both the United States hatchery at Leadville and all the State can do besides. The United States hatchery is not solely for Colorado waters. They intend to grow trout for other States and Territories. Their work has, so far, been confined to Eastern brook trout, but will handle our mountain varieties in the spring.

Because the work is of great magnitude I have sought to encourage private enterprise and have recommended the construction of branch hatcheries.

I could easily dispose of 7,000,000 trout, and really need more every year. Both the hatching and feeding capacity at Denver should be enlarged. An increased flow of water can be had by extending the present system of drains up along the base of the bluff that now yields the water for both ponds and hatchery, and this should be done without delay. The number of fish to be carried the present season is much larger than in any previous year.

PROPAGATION OF TROUT.

The reason the State Commissioner devotes so much time to the propagation and distribution of trout is owing to the fact that most of our waters are naturally adapted to those fish, and not suited to bass, pike, perch, etc. These waters are the natural home of the trout and all varieties introduced here have done remarkably well. There has been a great deal said about the brook variety of our common sucker. The statement of their being a destroyer of our trout is, I find, hearsay. New varieties of trout introduced into Colorado waters have shown no tendency to change their habit of spawning. The growth of our native black-spotted trout when placed in new waters is rapid. The European brook trout, *Salmo fario*, has shown excellent growth in Chaffee county and the ponds of General John Pierce in West Denver. The rainbow, *S. iridea*, also an introduced variety, has made wonderful growth and given much satisfaction to anglers.

Our branch hatcheries have been constructed with a view to propagate our native mountain trout, of which we have several Rocky Mountain varieties. Their eggs will hatch in water of sixty degrees Fahrenheit in eighteen days.

SCREENS FOR DITCHES.

Reports still continue to come in about the destruction of fish on our irrigation canals. It is only a question of another season before all the water flowing in our streams where the destruction is greatest, will be used by the canals. I can see no use in placing screens at their head gates, as the trout would perish, being held there in great numbers with no deep water to afford shelter or food. I believe that by making large dams in the streams above where the ditches are taken out, that the trout would not go below them, but remain in the deep waters all winter, where they would find food and shelter. Thousands of them do find shelter in all our deep pools and natural lakes. Irrigation is of such great necessity that every drop of water will be used, and then the screens will be of no benefit. We have enough of trout water to furnish good angling for all time to come if properly cared for. There are over a hundred miles of trout waters above Del Norte and the great canals on the Rio Grande alone.

The improvements asked for will enable the commissioner to place in the public waters of the State more than 3,000,000 trout. This will not only contribute a vast amount of fish food for the people at a nominal cost, but will attract visitors in great numbers to our mountain resorts.

The expenditure asked for will bring back returns far greater than a like sum expended for any other purpose.

The experience of the Commissioner goes to show that the small sum of $500 allowed him for actual expenses is wholly inadequate to enable him to visit and encourage fish propagation in so vast a territory as is embraced in this State. Our State has the water and the fish food, and by proper means can grow the fish.

GORDON LAND, Fish Commissioner.

MAINE FISHCULTURE.

THE report of the Commissioners of Fisheries and Game of the State of Maine, for the year 1889–1890, shows gratifying progress in stocking the waters of that commonwealth. The number of anglers visiting the State, many of whom have built cottages on the shores of inland lakes and ponds, is steadily increasing, and the benefits derived from their presence are clearly apparent to all. To quote from the report, "They come for the sport of catching our fish or shooting our game; it goes to swell the wealth of our State and is a benefit to all; it supports many a poor man in our backwoods, who acts as guide; it sells the product of many a farm which lies away from market, and at city prices; it runs many hotels back in our forests; it patronizes our railroads; in fact, it is a product hardly second to any. Without our fish and game many farms and thriving villages would have to be abandoned, where now they have many comfortable homes." Maine is wonderfully rich in ponds, lakes and streams, which are full of choice fish, while the forests are full of game. Most excellent laws are upon the statute books, and if they were obeyed the supply of fish and game need never be diminished. There is, however, a vast deal of illegal fishing and shooting, and not a little injury from polluted waters. The deadly spear and the villainous dynamite destroy thousands of fish upon their spawning beds, and in a certain portion of the State deer are killed in and out of season with dogs. On the headwaters of the Penobscot River fifty moose were killed last spring by a Frenchman living in Canada. Maine is suffering for the want of adequate protection, and unless the relief asked for is soon granted, crust-hunting, dogging, the spear, dynamite and mill refuse will undo all the labor of the Commissioners and leave the State shorn of its chief attractions.

The continuance of the Penobscot as a salmon river is threatened by the presence of dams and pollution from mills, and unless the condition is speedily improved the future of that river is without promise. In 1889 600,000 salmon were planted in Maine rivers, two-thirds of them in the tributaries of the Penobscot, and the remainder in the tributaries of the Kennebec and Androscoggin. In 1890 200,000 were placed in the Crooked River, a tributary of the Presumpscot, and an equal number in the Kennebec and the St. Croix. The following requisites for the successful introduction of landlocked salmon are announced by the Commissioners: "The ponds must be of good size and of clear pure water, with streams flowing in of swift running current, clean gravelly bottom to which the fish can have free access to deposit their eggs, and must also contain plenty of fresh-water smelts or spring spawning minnows for food. The smelt spawns and hatches at the same time in the spring when the young salmon are beginning to feed, and is just what they need at that time to sustain them. We think many of the young salmon die for the want of proper food, and the young smelt is what they require. We have caught the young smelts at Sebago in the spring and put them with the young salmon beginning to feed in the hatching house, and they would be as eager for them as a cat for a mouse, and would pursue them until the last one was eaten. * * * Last fall the results of our hatching operations and protection began to show. Hundreds of young salmon from ¼lb. to 2lbs. came up the river (Crooked River), many so small that they went through the slats of our weir—something never seen in the river before. Last spring a great many small salmon were taken in the lake trolling. In previous years it was an exception to take one of less than 4lbs. Nearly all the opposition to our operations by the people living on the banks of the river and vicinity has ceased, and their sympathy is in our favor." Associations have been formed for fishculture and protection at Rangeley village and at Auburn Lake. At both of these places hatching houses have been built with private funds. Six hundred and fifty thousand landlocked salmon were distributed from the hatcheries at Auburn, Enfield, Weld and Edes Falls in 1889, while in 1890 740,000 eggs of this species were hatched at Rangeley, Weld, Enfield and Edes Falls. The greater part of these were deposited in tributaries of Sebago Lake.

The Commissioners recommend the following changes in the fish laws: (1) A heavy penalty and imprisonment for using dynamite or any other explosive in taking fish. (2) The repeal of the prohibition against using spoons, since they cannot be seen when in use and are no more deadly than other bait. (3) Placing a bounty upon the killing of seals, which are of trivial value and prove very destructive to salmon and fishing apparatus. (4) A measure to prevent the destruction of young salmon on the board floors of weirs, which are left dry at low tide.

The report of the Commissioner of Sea and Shore Fisheries for the years 1889-90 follows that of the other two Commissioners. Mr. Counce estimates the catch of lobsters on the Maine coast in 1890 at about 20,000,000, a reduction of 20 per cent. compared with the yield in 1888. Lobsters seem to be decreasing in number yearly, and probably some of the practices of the fishermen will explain this decline. It is illegal to retain females, but many lobstermen knock off the eggs and defy detection. Many fishermen also destroy all undersized lobsters taken in the traps in order to prevent their returning and eating the bait.

Menhaden returned to Maine waters again in 1890, and it is estimated that 10,000,000 were converted into oil and fertilizer. Certain steamers have cast their seines contrary to law in small bays and rivers and escaped before the wardens could board them. Small menhaden are useful for bait, and many of them are canned as "sea trout," "ocean mackerel," and "blueback mackerel."

The list of the Commissioners of Fisheries does not agree in many respects with the one soon to be published by FOREST AND STREAM. The appendix is devoted chiefly to valuable statistics of the sea fisheries furnished in advance of their final publication by the U. S. Commission of Fish and Fisheries. There is also a letter from Adolph Nielsen, Superintendent of Fisheries of Newfoundland, containing some details of the propagation of cod and lobsters. Up to Nov. 17, 1890, the output of the hatchery at Dildo, Newfoundland, was 17,100,000 cod and 15,070,800 lobsters. Mr. Nielsen briefly describes his cod hatching boxes and refers still more briefly to his patented floating incubators for lobsters. The incubators, he states, hatched 390,934,500 eggs during the last season, and the young lobsters were fed on chopped mussels and occasionally yolks of eggs until they had finished their first moult. The appendix closes with a graphic sketch of the sardine industry, copied from the *St. Louis Globe-Democrat.*

U. S. FISH COMMISSION WORK.—The present season promises to be the most successful known in the hatching of cod and pollock by the U. S. Fish Commission. Up to Jan. 1 the Woods Holl station had taken 51,000,000 cod eggs and turned out 12,000,000 fry, the hatching percentage being 55 per cent. If the same ratio is continued the output from this station will be 30,000,000 young cod. At Gloucester the number of cod eggs collected was 38,000,000 and of pollock eggs 35,000,000. It is the intention of the Commission to push this work on marine food fishes to the fullest capacity of the stations.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 15 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brumby, Secretary, Marietta, Ga.

DOG SHOW AT CANTON, O.

[Special Report by the Judge.]

IN July last a meeting was called at Canton, O., by some of the dog and poultry breeders to discuss the advisability of holding a bench and poultry show in that city. It met with general approval, and it was unanimously decided to fix the dates for such show for Dec. 30, 1890, to Jan. 3, 1891.

To show that business was meant, they at once selected the following officers: A. G. Dart, President; S. W. Gibbs, Vice-President; Jas Sterling, Secretary; H. G. McDowell, Treasurer. Executive Board, A. G. Dart, S. H. Oberlin, H. Berrar, Ed. A. Reed, J. H. Barr, A. A. Dart, Jas. Sterling. Judge of dogs, Joe Lewis, Canonsburgh, Pa. Superintendent of Exposition, Ed. A. Reed, Canton, O.

I may here state that many of the dog friends in that city and locality were of the opinion that if such a show were held it would meet with little or no success, but on the contrary, I am glad to state that it proved satisfactory, financially and otherwise.

It was held in the "Big Tabernacle," about three squares distant from the center of the city, a building not well adapted for such a purpose (although well ventilated), it being very dark and small to suit the number of entries, there being about 150 dogs and 800 entries in poultry. There being no other building suitable, the club had to put up with the inconveniences. The foundation stone of the show now being laid, it is hoped that the affair will prove an annual one.

It was mentioned by many present about applying for membership to the A.K.C., and if accepted I think there would be no difficulty in getting two or three hundred dogs here.

The secretary, Mr. Jas. Sterling, I may mention, was entirely new to the "dog" business, he being formerly a chicken breeder, and though this was his first effort in this capacity he gave universal satisfaction. The committee, in my opinion, did well in selecting him, as he was indefatigable in his efforts to make it a success. He is a hard worker, kind and sociable, with a pleasant smile for every one with whom he comes in contact. His duties he discharged admirably.

Ed. Reed, the general superintendent, together with E. Probert, Salem, O. (specially engaged as superintendent of the dogs for that week), made good managers, it being their first attempt. Mr. Probert attended to the feeding of the dogs, who did justice to Spratts biscuit. Mr. John M. Bergold, Canton, an old exhibitor of beagles, volunteered his services, which were much appreciated, he retiring for that week from his usual business to assist the boys, and indeed he made it thoroughly pleasant for every one concerned, and in time, I think, we shall have him again in our ranks. The judging started on Wednesday morning, and the dogs in all classes numbered over 150.

Among the list of exhibitors we find the name of the Oriole Kennels, Youngstown, O., represented by H. F. Peck, manager, who had his usual string of fox-terriers.

In the pointer class Mr. John R. Daniels, Cleveland, O., had also his string of dogs, and handled by Mr. Ridge, a man well adapted for the business, and a hard worker. The Howard brothers, Columbus, O., attended and exhibited their kennel, having their latest importation, the pug dog Penrice, which is a good one, and will undoubtedly make it "warm" for the pug breeders when shown in the eastern circuit. E. Probert and Sons were there with their usual kennel of King Charles and Blenheim spaniels. John E. Morgan, Martin's Ferry, O., also showed up with his fine kennel of French poodles. Mr. H. W. Loeffler, Masillon, O., attended with his fine kennel, and I would like to see him show up in some of our Eastern shows, he owning such a magnificent collection. The Kildare Kennels were well represented there by champion Ruby Glenmore, Kildare and Winnie II. Mr. Cook, Canton, O., had for exhibition only

his kennel of English mastiffs, champion Moses being among them, and in the pink of condition. The awards are as follows:

MASTIFFS.

In the challenge and open dog class for mastiffs there were no entries. In the bitch class E. Probert, Salem, Ohio, took first with Queen, who was a little flat in skull and a little long in muzzle, which gives her a plain-looking head, has fair size and plenty of bone. Bell (same owner) secured second; is plain in head, moved badly behind, but is a good size and shown in good condition.

ST. BERNARDS.

This class had but two entries. Don, owned by I. H. Hunt, Massillon, Ohio, won first in the open class; he is a grand specimen, standing about 28in. in height and measuring 27½in. in skull, his color being a handsome tawny and white. He is a large dog, has good head, legs and feet, and his worst fault is being a trifle cow-hocked. The dog in my opinion will be able to get something wherever shown. Second was withheld. Professor Swartz won first and second in the puppy class, and both were sired by Victor Joseph.

NEWFOUNDLANDS.

One entry. Nero won first; a large dog, but lacking quality, a poor specimen.

DEERHOUNDS.

One entry. Boues, owned by Mr. Brooks, of Salem, won first, possessing good legs and feet, good bone and fair head.

GREYHOUNDS.

J. Johnstown's Duke won first, but has poor legs and feet, fair head, light eyes, ears a little heavy, and is a poor mover. John E. Campbell's Dart, second, is a fair specimen, but lacking in quality. John E. Boylon's Duke, vhc. F. T. Hack's bitch Roxie, first, has good legs and feet, but is a trifle cheeky; fair head, neck well arched, ribs well sprung; a good mover and shows lots of quality.

FOXHOUNDS.

The open class numbered seven entries. J. F. Stucker winning first with Troller, a handsome black and tan dog, with a foxhound expression, a good head, good legs and feet, and should this dog be shown in good condition, he will probably make it hot for his rivals. He is one of the best dogs I have seen for some time. Oriole Kennels' Full Cry, third, is a fair specimen, a little coarse in head and slightly out in front, has fair legs and feet and good body. Christopher Hasse's Jack vhc., J. S. Weckman's Sport and Frank Brislen's Jack hc. In bitches, Oriole Kennels' Primrose, first, is a nice little black and tan, a good mover, showing lots of foxhound quality, and I would advise the owner to breed her to something stronger and more after the type. F. P. Ames's Queen, second, black, white and tan, has a long, slim head, flat in skull, having no stop, giving her a sour expression; is also long in body, too leggy and straight behind.

POINTERS.

In the challenge class Lord Graphic secured first. This dog has been described before. He was well handled by Mr. Ridge, and being shown in the pink of condition, won the special for best pointer in the show. In the open dog class H. W. Loeffler's Don Croxteth, first, was an easy winner. This is the first time this dog has been seen on the bench; a large size and very much resembles old Faust; he has a nice head, is a little short in neck, good shoulders, legs and feet, nicely ribbed up, having a good loin and quarters on him; he might have moved a little better behind; was shown in good condition. A. Dannemiller's Damon, second, has a fair head, ears too heavy, short in neck, and a trifle throaty, fair legs and feet, but moving badly behind. John Ridge's Duke, third, is a nice little pointer, showing lots of quality, but badly handicapped through being shown with large dogs. G. A. Schraesher, Jr.'s Chip of Beaufort, vhc In bitches Mr. Thos. Thornton's Minnehaha took first. This bitch, a liver and white, has been shown before, and a description has appeared in your columns. H. Strunk's Lady Beaufort II. was given second. She is a lemon and white, possessing a good head, though light in the eyes, short in neck, good shoulders, legs and feet, nice body, good mover, but a trifle leggy. E. H. Reed's Diablanch, third, a liver and white, has a fair head, but is a trifle flat in skull, fair legs and feet, is only 14 months old, and acted much like a puppy, but in time will develop into a fair bitch. She is a daughter of Robert le Diable. E. Probert and Son's Nellie and H. W. Loeffler's Birdie Pape, vhc. H. W. Loeffler's Mollie Scott and G. Graff's Nellie, hc. In puppies J. R. Daniels's Lord Graphic's Gem, a grand little liver and white bitch, won first; she shows lots of pointer quality, is a good mover, and I think in time will develop into something better. H. W. Loeffler's Bell, second, liver and white, about 4 months old, a nice puppy, showing lots of bone and good quality. Alexander Chatelain's Sport and H. W. Loeffler's Bob White, vhc.

ENGLISH SETTERS.

Champion Paul Gladstone was on exhibition only. He looked well, and being in good condition, made many new friends. In open dogs, J. J. Linch's Blue Hope got first. He is a black, white and tan. A dog showing much quality, having a good head, a nice skull, ears hung nicely and a good square muzzle, making it a typical head, a trifle short in the neck, good shoulders and chest, a little long in the couplings, good quarters, legs and feet and plenty of bone. Wm. McKenna, Jr.'s Gath Gladstone second, a black, white and tan possessing a fair head, but thick in neck, excellent body and feet. H. W. Loeffler's Dick McBeth, vhc. J. J. Clark's Ohio Ben Dur, hc. Bitches had Dan Cobaugh's Bell Mandan winner of first. This bitch, black and white, is built on the racy type of an English setter, appears to be speedy and should be a good worker, has a fair head, good legs and feet, but would look better if more fleshy. R. H. Bulley's Blitzen, second, black and white, plain in head and seems to be tied up some way in the shoulders. E. O. Portman's Princess Nellie Mandan and H. W. Loeffler's Alice McBeth, vhc. T. W. Edwards managed to get first in puppies with Ponto. He is a merry little mover, almost too young to criticise. Reed and Poyser's Ranger II., second. G. A. Schraesher, Jr.'s Royal Beulah and W. Reed's Ranger, vhc.

IRISH SETTERS.

Kildare Kennels' champion Ruby Glenmore was first in challenge class. This bitch is so well known that comment is unnecessary. I think her to-day the best bitch of her class in America. In open class, Kildare Kennels' Kildare scored first. He has improved in condition considerably since shown in Rockford. Bitches had Henry Determing's Peggy first. This is the first appearance of this young bitch; she is a dark mahogany color, has a nice typical head, a good neck, but might be sprung a little more in ribs; good loin and hindquarters, fair legs and feet. W. L. Washington's Winnie II. got second place. This bitch has also improved since shown in Rockford. The two entries in puppies were both poor specimens.

GORDON SETTERS.

Geo. T. Given's Rover was first, but is an inferior specimen.

COLLIES.

W. J. Sampson's Dainty Davie received first. This dog was shown all out of coat and condition, but had a good head. In bitches, John E. Campbell's Sable, first, is too thick in head, ears too heavy, and has a sour expression. W. J. Sampson's Branco Lassie second, H. G. McDowell's Scott and John E. Campbell's Lassie vhc.

SPANIELS.

H. W. Loeffler's Bessie Ober awarded first. A nice merry little cocker, stands on good legs and feet and has a nice typical head. T. W. Edwards's Beauty second.

POODLES.

John E. Morgan's Lord Bute first premium; same winner secured second place with Pearl. Lord Bute was an easy winner over Pearl, and was in the best of condition. I would like to see Mr. Morgan keep on breeding French poodles, as it appears to me breeders in general of this species have quit, and also noticed that that class in shows is not fully represented any more. Pearl, winning second, was a little out of condition, she suckling six puppies in the show.

BULLDOGS.

First and second withheld for want of merit, John J. Hassler securing vhc. with Tobe.

BEAGLES.

Lewis Waltenbaugh was first with Duke in the dog class. This is a nice merry little beagle. He has not the best of heads, his skull is only fair and ears a trifle heavy, and is snipy muzzled and his eyes are too prominent. He possesses a good neck, which is set well on his shoulders, a good body, good legs and feet and has plenty of bone. Philip Feil's Little Joker was over size and consequently thrown out. Lewis Waltenbaugh also won first in bitches with Bessie. She was an easy winner; poor in head, good body, legs and feet. This brace secured the silver cup offered by the National Beagle Club and also the pocket knife offered by one of the members of the National Beagle Club. E. Probert & Sons captured second with Cricket, a puppy only six months old, but a promising youngster, Mr. J. S. Harmont's Bessie, vhc.; E. Probert & Sons' Bugle Girl, hc.

FOX-TERRIERS.

Oriole Kennels' Blemton Volunteer won first in challenge class, being shown in excellent condition and somewhat improved since I last saw him. In open dogs Oriole Kennels won first with Oriole Trap; I cannot say that I like either his head or eyes, and he had but little to spare from his kennel companion Blemton Ransack, who won second. Ransack is a gamy little terrier, having good body, legs and feet, his worst fault is being a little too cheeky. In bitches Oriole Kennels won first and second respectively with Marjoram and Blemton Vice. Marjoram won first easily, being in excellent condition. Blemton Vice has somewhat gone off since I last saw her. All these fox-terriers were a gamy lot, showing lots of quality, like the balance of Mr. Logan's dogs.

SKYE TERRIERS.

Neither first nor second awarded.

BLACK AND TAN TERRIERS.

T. M. Edwards got first with Pede.

PUGS.

Howard Bros.' imported Penrice received first in dogs, with lots to spare. He posseses a grand head, good mask, well-wrinkled, is short in muzzle, ears about right, a nice full eye, and short body, a double-curled tail nicely carried, good legs and feet, and is a grand specimen. His color is a golden fawn. The owners of Penrice took first in bitches with Satteen. She could be a little better in head, but is a good specimen. In puppies Kate Bellingham secured first with Tiny and second with Billy.

KING CHARLES SPANIELS.

Mr. R. P. Forshaw was unfortunate in his dogs not getting to the show in time for the judging, but the class was reopened and the award given him with Ruby L. She is a grand specimen of that breed, having a correct head, with good skull, ears long and well carried, is short in muzzle, and has good full eyes. She has good body, legs and feet, and moves well behind. E. Probert & Sons secured second with Charlie. This one is different in type to the first prize winner, being larger. He has a good skull, ears well carried, but is a little off in muzzle. Same owners' Polly vhc.

ITALIAN GREYHOUNDS.

C. F. Lawrence was awarded first prize with Challis. She was an easy winner for this honor. Color, a nice golden fawn, has a grand head and ears well carried. She will always be in the money wherever shown. Henry Determing's Dolly second. She is fair in head, having a thick skull, but legs and feet poor, and show age. Helen Staffer's Puck, vhc. Ben Eibel's Beauty, hc.

BULL-TERRIERS.

In bitches prizes were withheld in the dog class. Frank W. Moulton's Libertas, first. She was an easy winner. She is of the true type, possessing a fair head, but is a little cheeky, has a good body, with fair legs and feet.

SPECIAL PRIZES.

Youngest lady exhibitor, Kate Bellingham; second best pug dog, Billy; best collection of beagle, Lewis Waltenbaugh, Canton, O.; best brace of beagles, Duke and Bessie; best beagle bitch, Bessie; best English setter dog pup, Ponto; best pointer dog in show, Lord Graphic; best pointer bitch in show, Minnichaha; best foxhound, Troller; best Brandom puppy, E. Probert & Sons; best kennel, Oriole Kennels, Youngstown, O. (oil painting); best Irish setter, champion Ruby Glenmore; best English setter dog, under 2yrs., Gath Gladstone; best Irish setter bitch, champion Ruby Glenmore; best Irish setter dog, Kildare; best brace of Irish setters, Kildare and Ruby Glenmore; best dog in open class, Kildare; best Irish setter bitch in open class, Peggy; best kennel of Irish setters, Kildare Kennels; best dog or bitch in the show (any breed), Don; best dog in show, Don; best English setter puppy (any sex), Ponto; best pug (any sex), Penrice; best field trial record, Lord Graphic; best collie, Sable; best bitch (any breed) in show, Ruby Glenmore; best St. Bernard, Don; best French poodle (any sex), Lord Bute.

JOE LEWIS.

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

Mr. C. H. Mason, with his usual inquisitorial manner, "calls" upon me to produce evidence as to his remarks anent Doc. A "request" would answer quite as well.

I think it was in a report of one of the spring shows in '88 that I observed the remark by Mr. Mason on Doc. I have the paper somewhere among hundreds of others, and when I can find time shall look it up. For the rest, "hearsay" is all I have to go upon. However, if Mr. Mason denies that he made the statement and does not desire the credit for having spoken highly some years ago of this grand little dog, I very gladly withdraw my statement.

It is true, as Mr. Mason says, that I was practically unknown as a dog man till 1887, after he had first awarded a prize to Doc. I got the Clumbers rather more than eight years ago for my own shooting, but did not care about sending them such a distance to the shows. In 1887 at the urgent entreaty of several leading spaniel men I sent down Johnny and Drake, winning twelve first, second and special prizes with them at the leading shows. Since then I have won prizes each year with very fair success. I had a spaniel ready to enter at a show about fourteen or fifteen years ago, but being late the entry was refused. Dogs have been my constant companions ever since I can remember, and goodness only knows how many I have owned! though until I became my own master, about nine years ago, I was not allowed to breed them. Until this season, when my defective eyesight rendered shooting not an unmixed pleasure, I have every year spent weeks and months behind my pets afield. No kennel in the world can compare with my collection of Clumber spaniels, despite luck as hard as any man has had to contend against. I have probably owned ten or twenty spaniels for every one of Mr. Mason's. Thus it will be seen that I am far from being the "beginner" Mr. Mason would have your readers think me.

Fortunately my estimation of Mr. Mason is exactly in accord with his opinion of me. I care naught for his opinion, good, bad or indifferent. In fact, his good offices would be far more distasteful to me than the enmity of the man. Thus, far from annoying, his remarks serve only to amuse.

It is really astonishing what flights Mr. Mason's more than vivid imagination will take him when it suits his purpose. The statement that he "downed" the "lemon and white monstrosities" is one of the most remarkable. He commenced his "downing" campaign in '87, yet the same dogs and their offspring and relatives have been winning prizes ever since," down to so late as last September, at the show held here, where, out of the twenty Clumber entries, fifteen were closely related to old Johnny. This does not look much like the "downing" Mr. Mason prates of.

Probably Mr. Mason's next move will be to claim credit for the importation of Boss III., Snow, Bromine, Lass o' Beauty, etc., even though they were not purchased until two years after he had inaugurated his "killing" campaign.

The "insulting letters" he complains of contained no mention nor word of Clumber spaniels in them, and therefore have nothing to do with the case. If Mr. Mason had not wished to "round" on the unfortunate gentleman of the defunct *Kennel and Gun* by bringing up, in his usual pleasant way, the respective merits of two of the "monstrosities," there is every likelihood that the aforesaid "downing" campaign (which didn't "down") would never have been instituted. It grieves me sorely that Mr. Mason should be put to so great a strain in the matter of keeping "Gothamite" and "Mercer" apart. He is not the first to make this remarkable discovery (?), but I am so used now to the accusation of being "Espan," "Peregrine," and a host of other unidentified anonymes, that if it pleases him he may continue in his belief. It gratifies him and it certainly does not hurt me. Perhaps, though, he had better "guess again."

To guard against possible pitfalls he had best keep "Mercer," "Dogwhip," and "Clumber," in his discussion, apart from "Gothamite." F. H. F. MERCER.

OTTAWA, Canada, Dec. 29.

Editor Forest and Stream:

It is certainly my duty to thank your many correspondents who have replied to "Gothamite" in regard to my having, in conjunction with Mr. Mason, "started the long and low craze," If, as Mr. Mason has so very plainly stated, Mr. Mercer is the author of that assertion, I think an apology is due, not for what he did say, so much as using a *nom de plume* to which he has no right nor title. Besides, Mr. Mercer, by his publication of a book on spaniels, has really no reason for using any but his own name or his best known alias, "Dog Whip."

Regarding the statements of "Gothamite," which started this discussion, I think your many correspondents have relieved me of any necessity for refuting them, so far as I am connected therewith. They bore condemnation on their face, and were only amusing as a display of ignorance. On that ground I did not consider them worth noticing. If I remember correctly, he specially commended Doc and Hornell Velda. Well, who picked out Doc? Mr. Mason gave him equal first at New Haven in the puppy class, and when I saw him I at once telegraphed Mr. West that it was the dog for him to buy. Mr. West had, before the show season that year, written me regarding a spaniel and whether he should import one. I told him to wait and I would get him something at one of the shows. On my recommendation Mr. West gave $100 for Doc without seeing the dog.

Hornell Velda I first came across at Buffalo show of 1888, and I told "Uncle Dick" she was the best he had ever bred. I am of the impression that her owner had ranked some of his others higher, and that I told him he ought to know better. If any one can refer to a catalogue of that show I think he will find I am correct.

I believe "Gothamite" in another letter said something about my declining to judge the working cocker special at Buffalo. What of that? How could any sane man tell by looking at a dog whether or not he was good in the field? As well ask a judge in the trotting horse ring to award a special to the one possessing the greatest speed. In place of being something to reproach me for, it is my opinion that I never did a more sensible thing in the judging ring.

JAS. WATSON.

PHILADELPHIA, Pa., Dec. 31.

Editor Forest and Stream:

I have read the various letters on the cocker question in your paper of late. Mr. Nelles and Mr. C. H. Mason have to my mind shown up the whole scheme and punctured the bubble of Messrs. "Gothamite" and Mercer. Mr. Nelles has shown his ability to breed a good spaniel and rightly refutes the unjust slander on Red Jacket by "Gothamite" in order to bolster up Doc. As the owner of Jersey, another dog which they have slandered, I would like to state that I consider him the most typical cocker now being shown, excepting Miss Obo II. I have no desire, though, to puff my dogs into a position that they cannot win on their merits by such methods as those adopted by Messrs. "Gothamite" and Mercer. I have not time to follow them and refute their various misstatements. It is not necessary, as it has already been done by Mr. Mason. His letter and statements I believe to be correct in every respect, and most particularly so in regard to the improvements in cockers for 1890. Give us "Gothamite's" name, and to Mr. Mercer my advice is to stick to Clumbers and show breeders of other breeds that he knows something of the breed he affects, before he poses as a critic on other classes he knows nothing about. Messrs. Mason and Watson are considered our best spaniel judges. Mr. Mason, in his book "Our Prize Dogs," written in 1887, has criticised over 125 spaniels, and where is the owner that can show that one is wrongly criticised? There is no need in my defending Mr. Mason or Watson, as your readers all know they are able to take care of themselves, but honor to whom honor is due, and in justice to myself and the improvement of our spaniels I must cast my vote for them and against such inconsistent and false critics as Messrs. "Gothamite" and Mercer have proved themselves to be. Their calling for a working cocker and holding up Doc as a sample is on a par with their wisdom and knowledge shown in all their criticisms. J. P. WILLEY.

SALMON FALLS, N. H., Jan. 5.

DEATH OF BOYCOTT.—Cincinnati, O., Dec. 25.—*Editor Forest and Stream:* Once more, and I hope for the last time, I must write of the death of a true friend. Boycott (11803), our grand little pug dog, and a proud gentleman he was, too, died Dec. 22, 1890. Cause was asthma and heart disease. For an hour he made a game fight to live, while I worked with him, but to no avail, and he passed away with his big handsome eyes turned up to mine with such a mute appeal of true fidelity that I will never forget it. "Boydie" lies in a deep grave alongside of little Lady Thora, and a headboard now marks the resting place of "only a dog," but as noble and intelligent a dog, and a truer friend than many human beings I've met. All true lovers of "man's best friend" can imagine our intense sorrow, and while some human beings who could to their benefit learn much from the many noble examples set by dogs may read this and say "What a fuss over a dog," this is written for the more noble human beings to read—those who know and love dogs.—A. G. EBERHART.

DOG CHAT.

WE have received the premium list of the second annual exhibition of the Elmira Poultry and Pet Stock Association's bench show, to be held Jan. 22-26, 1891. There are no stipulated premiums, but all the entry fees will be pooled and paid in premiums (except 10 per cent. retained by the association) so that the second prize shall be one-half as much as the first. Challenge classes are provided in nearly every breed, with one prize only. Separate classes are made in all breeds to the number of 140. Entries close Jan. 15. Numerous specials are set forth, among which we notice $10 for the handler showing the largest number of dogs; $10 to the exhibitor having the best kennel of not less than five. The show is not under A.K.C. rules, nevertheless there will doubtless be a good entry. Mr. J. Otis Fellows judges all classes excepting beagles, greyhounds and wolfhounds. Mr. C. S. Wixom is superintendent.

We regret to hear from Capt. McMurdo that his promising young pointer Tapster, winner of third in the Pointer Derby at the Central Field Trials last month, succumbed to distemper a few days since. We are, however, pleased to hear that Rip Rap, Moonshine, Maid of Kent and Bar Maid are doing well, though Zig Zag, who did such good work in the last trials, is still seriously ill. Sportsmen will join us in the regret that, after making such a creditable showing in defense of the pointer this ill luck should have come to mar the pleasure which Messrs. Dexter and McMurdo felt over the success of their dogs.

Beaumont, champion Gordon setter, whose sale to Mr. C. M. Hunt, of Palmyra, N. Y., we chronicled during the Central Trials, did not stay long in his new quarters, for we hear that Dr. Meyer has repurchased him. Mr. Hunt called on us on his way to Florida last Friday. He still retains Belmont and expects a good litter from her by her whilom kennel mate, early in February. Mr. Hunt takes Bendigo, winner of the Gordon stake at Lexington, N. C., with him, and will hunt him during the winter. He also expects to shoot an alligator, and when he does he will forward to us the very latest verse of his popular song, "Listen to My Tale of Woe."

It will be remembered that some time since FOREST AND STREAM suggested that the collection of homeless dogs in this city should be given in charge of the A. K. C. The *Herald* has now advanced the idea, through Mr. Pelham Clinton, of delegating this important duty to the S. P. C. A. Of this plan we heartily approve; and in fact would welcome almost any change that would alter the existing state of affairs and do away with the political side of dog catching. That it is good policy to catch the dogs that roam our streets, curs in other words, no one will gainsay, but this is not done under the present rule. There is not money enough in it, but rather seek they the dogs belonging to Madam or Mister, who may be expected to redeem the same. The way this part of the city's machinery is run is a disgrace to any civilized country. Let us have a Home for friendless dogs by all means, and let it be under the charge of those who are accustomed and prepared to deal with animals in distress. There are enough dog lovers in this city to amply support such a scheme, and now that a paper like the New York *Herald* has taken hold of it no doubt something will soon be done to remove the present stain.

Friend Dole has favored us with one of his rare epistles—a sort of round up for 1890. In it he gives us several tid-bits of news. We wish other of our friends in dogdom would do the same. Mr. Dole has sold the bulldog champion Harper to Mr. F. W. Sacket, of Washington, D. C., but now a student at Yale. This gentleman has also purchased, through the same source, the bull bitch Graven Image, whose importation we alluded to last week. This constitutes the nucleus of a good kennel of bulldogs which Mr. Sacket intends to get together. Graven Image is the dam of the noted Holy Terror. We are told that Harper is looking in great shape just now. Now comes the other side to the tale. Mr. Dole's Bendigo, one of the best stud dogs he ever owned, has joined the majority. Frank feels his loss keenly, though he has luckily a good deal of his blood left in his kennel. As if this was not enough, just to make things pleasant for Christmas, he found Miss Gladstone dead in her kennel on Christmas morning. As she was in whelp to Hinks and being herself by Dutch out of champion Maggie May, this is another serious loss. Our friend adds, "You know the hardest thing for a man to lose is a good brood bitch, as they are so very scarce." In addition to this he has lost a dozen puppies, but as he says, "I am keeping right on and still have a kennel full of nice dogs which I expect to be in the money when the time comes." Among other things he tells of the death of that grand little pug, the best ever seen in this country—champion Bradford Ruby. Mr. Peck told him he died about two months ago. There is some consolation even in this, he has left one good son behind him, and one almost if not quite equal to him—champion Kash.

An exhibition of about forty dogs took place last week at Providence, in connection with the Rhode Island Poultry Association. Mr. Michael Flynn, Jr., was the superintendent. Particulars of the winners have not come to us yet, but we hear that for a local show the class of dogs present was quite good. Mr. Robert Exley, surely that is an old name in mastiffs, won in a class for that breed with Chief, by Berkshire Caution out of Zetta, and Elmwood Belle was the winner in St. Bernards, a daughter of Beauchamp and Queen of Scotland.

Can this be true? The great Sir Bedivere to head the list of America's grand team of St. Bernards! Pardon our enthusiasm, for the rumor of this purchase almost takes one's breath away when we remember that something like $8,000 was refused for this dog at one time, and critics say he has improved since then.

Mr. Sears, of Melrose, Mass., who has had not only the pluck to pay for this dog, but also to risk this sum in getting such a precious piece of dog flesh across the water, must indeed change that "e" in his name for an "o," for his ambition evidently knows no bounds. Mr. T. H. Green, who bred Sir Bedivere, has repeatedly refused all offers for his dog, and no doubt the fact of his brother, who has had charge of the dog, having to accept a position abroad, and Mr. Green himself being too busy to attend to such a valuable animal, is the only reason that induced him to part with him. Sir Bedivere has won 15 first prizes, 29 cups and medals and is four times the winner of the greatest honor a St. Bernard can achieve, the St. Bernard Club 100 guinea challenge cup. We believe he has never been beaten. He is by Nero III. out of Bena. The following is a list of his winnings: First, puppy class, Warwick; first, open class and cup, Birkenhead; first, open class, 100 guinea challenge cup, gold medal and two other cups, St. Bernard Club show, Sheffield, 1888; first, open class, and two cups, Liverpool; first, open class, 100 guinea challenge cup and piece of plate, Kennel Club show, London; first, open class, cup, two gold medals and the Deakin challenge cup, Manchester; first, champion class, cup, 100 guinea challenge cup, piece of plate and the Halsey trophy, St. Bernard Club show, Windsor; first, open class, and cup, Birkenhead; first, open class, gold medal and two specials, Scottish Kennel Club, Edinburgh; first, challenge class and cup, Kennel Club show, Glasgow, 1889; first, challenge class, and cup, Liverpool; first, challenge class, the "Deakin challenge cup" and gold medal, Manchester; first, challenge class, and two cups, Leeds; first, challenge class, and medal, Birkenhead; first challenge class, 100 guinea challenge cup and the Halsey trophy, St Bernard Club show, London, 1890.

In speaking of his breeding it is interesting to relate that another dog, champion Pouf we believe it was, was selected as the proposed mate for Bena, but through some cause this could not be carried out, and as a last resource Bena was mated with Nero III. This chance service resulted in bringing into the world the finest St. Bernard ever bred. The great Watch is the only dog which has pushed him, and now that the latter has got his growth, the meeting between the two will indeed be an interesting one. Sir Bedivere was whelped Aug. 27, 1887, so that he is now in his prime. Mr. Halsey, the donor of the Halsey cup, was the one to offer the largest price for Sir Bedivere, and no doubt the reason he has not accepted the chance of buying him now is, that he is somewhat disgusted with St. Bernards and their owners, especially since his pet scheme of an opposition St. Bernard club has fallen through. He has now gone to Algiers, Africa, for the winter, and allows breeders the use of his dog Jim Blaine free to St. Bernards, excepting a small fee to the kennelman. To return to Mr. Sears and his kennel, the thought comes to us when will all this competition end? and can we keep pace with it?

A few minutes after the above was written who should step into our sanctum but the new owner of Sir Bedivere. We had already telegraphed him to verify the rumor, but there was no need for an answer when one looked at the satisfied face of Mr. Sears. He sent his agent, Edward Booth, who brought Lothario over here from Hull, England, off on Saturday, on the Cephalonia, and arriving in England on the 13th, he will start on the return journey, with the crack, on the 15th, so that he is expected here by the 25th, giving him ample time to be prepared for New York show. Mr. Sears had to be pretty prompt in his purchasing, as another gentleman was after him, and who, but for his recent sickness, would perhaps have captured the prize, as we are told he has already offered $1,500 for the bargain. Mr. Sears offered $6,000, and a cablegram came soon after, "$6,500 buys the dog!" Mr. Sears cabled, "Done, my man starts to-morrow," and that is how Sir Bedivere was sold for the biggest price ever paid for a dog outside of greyhounds. Mr. Sears is delighted with Plevna, her size, bone, coloring, and very small ears make her very attractive, we are told. Truly it may be said 1891 has opened well.

There is certainly not enough patronage in this country for a man to count on reimbursement for such an outlay as $6,500 for a dog, and we only hope that after the novelty has worn off and expectations are not realized that a good fancier be not lost. We know of several cases of this sort. The foregoing sentence does not particularly apply to this purchase, but that of high priced dogs in general.

Assistant secretary Spaulding has informed the secrerary of the American Mastiff Club that a challenge cup, which the Old English Mastiff Club has offered to send to this country for perpetual competition, will be admitted to free entry upon the production of satisfactory proof that it is intended for use as a trophy or prize. This reminds us that there is a feeling among St. Bernard men that a subscription should be started with a view to providing for competition in this country a valuable and handsome trophy, something similar to the 100 guinea challenge cups in England, or the Halsey trophy. We should think that considering the class of breeders who are interested in St. Bernards here, this object would not be very difficult of attainment. Most of the specials now given by the St. Bernard Club are for American bred dogs. This is quite right and proper, but some grand trophy is needed and one that would tempt our cousins across the water to come over and try to wrest it from us.

In conversation the other day with a New York delegate of the A. K. C. who represents a club in a Western State, the question arose of delegates being criticised for their actions in voting so much with the majority in most of the motions before the A. K. C. meetings. Our friend thought it unfair, for as many of the delegates are New York men, they naturally in most questions, by continual conversation, become of almost one mind on certain subjects. Now, it was suggested that the outside clubs should instruct their delegates as to their desired action more than they have hitherto done. It was then advanced that these clubs do not know what questions will arise till the secretary's report is read at the meeting, so that the delegate is after all thrown on his own resources. Would it not therefore be a good plan for the secretary of the A. K. C. to forward to secretaries of clubs whose members do not attend as delegates, a copy of the intended report, so that these clubs can instruct their delegates on the course they would wish them to take. This is the crude suggestion and doubtless our courteous secretary can devise some plan whereby this difficulty can be met. This would stop a good deal of the cry of—clique.

Mr. Huntington writes us that the National Greyhound Club will hold its show on Tuesday, Feb. 3, 1891, instead of Jan. 17, as announced, as the latter date conflicted with that of the South Carolina show, at Charleston. Premium lists will be mailed on the 3d inst. A sale of dogs will also take place at 3 P. M. on the afternoon of the show.

We have a letter from Mr. Wilmerding on the spaniel question, but it must lay over until next week along with others. In justice to Mr. Wilmerding we may say that Doc does not belong to Mr. Mercer, as Mr. Mason states, but is Mr. Wilmerding's property, and will continue to be so. We might as well say right here, that the spaniel controversy is getting outside of the first question. Keep personalities out and stick to type for the subject.

Mr. J. M. Tracy tells us that he and Mr. John Davidson will judge all classes at the coming New Orleans show.

THE GORDON SETTER CLUB OF AMERICA.—*Editor Forest and Stream:* A meeting of the executive committee of the Gordon Setter Club of America will be held Jan. 10, at 2 P.M., at 1293 Broadway, New York, for the election of new members and such other business as may come before it. Members are requested to send in the names of any new applicants for membership which they may have to the Secretary, L. A. Van Zandt, Yonkers, N. Y., that the same may be acted upon before the New York show. The Gordon Setter Club is now on a firm foundation with a rapidly increasing membership. It will give special prizes at the leading shows and have a man in attendance to look after the welfare of the Gordon setters. The specials at New York will be $10 to best dog and $10 to best bitch in open class, $5 to best puppy. It is also considering the matter of field trials and will undoubtedly have some attractions to offer next fall.—L. A. VAN ZANDT, Sec'y (Yonkers, N. Y., Jan. 1).

THE SCIENTIFIC EDUCATION OF DOGS FOR THE GUN.—In our notice of this excellent work last week we omitted to state that it was for sale by the Forest and Stream Publishing Co., and the price $2.50.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

THE MARYLAND K. C. AND MR. MALCOLM.

THE following resolution was offered and adopted at the regular monthly meeting of the board of governors of the Maryland Kennel Club, held at Baltimore, Md., Dec. 4, 1890. W. STEWART DIFFENDERFFER, Sec'y.

Whereas, The presence and conduct of H. Malcolm, Esq., has been, and is, detrimental to the interest of the Maryland Kennel Club,

Be it resolved by the board of governors of the Maryland Kennel Club, he be, and is, hereby requested to resign as president, and as a member of the board of governors and of the Maryland Kennel Club, the resignation to take effect at once.

[True copy.—W. STEWART DIFFENDERFFER, Sec'y.]

BALTIMORE, Md., Dec. 5, 1890.—W. Stewart Diffenderffer, Esq., Sec'y Maryland Kennel Club.—Sir: I am in receipt of a copy of a resolution purporting to have been passed by the board of governors, and as a member of the club, in reply thereto, I will state that in consequence of the unfortunate differences which have arisen among the board of governors it seems to me that the usefulness of the club is likely to be impaired, unless such differences can be arranged; and so believing, I am perfectly willing to tender my resignation as president and member of the board, provided that all other officers and members of the board tender their resignation at the same time. Should this course be adopted, the club would have an opportunity of selecting another new set of officers and governors from whom harmonious actions might be expected. I am not aware of any reason why I should cease by a request of a minority to be a member of the club itself. Being one of its originators and being interested in the objects for which it was incorporated, I decline most positively to cease to be a member and consider the purported resolution, as having been passed by five members of the board of governors, a high-handed piece of arrogant malice, knowing as I do, this day, that I have in my possession votes of over two-thirds of the club's membership giving me power to cast said votes as I think proper.

[Signed.] Yours, H. MALCOLM, President.

RESOLUTION.

Whereas, Harry Malcolm during the month of May, 1890, had issued credentials not permitted by the constitution (or by-laws) of the Maryland Kennel Club, of Baltimore City (and contrary to the spirit thereof), to one Charles J. Peshall as a delegate to the American Kennel Club, of New York city, which action has been greatly detrimental to the interests of the Maryland Kennel club, and

Whereas, By reason of such action of said Malcolm, and the consequences therof he has been suspended by the American Kennel Club, and because of such suspension he cannot continue to be president or a member of the Maryland Kennel Club without great detriment and damage to it and the value of the dogs of its members, and will moreover injure the prospects and jeopardize the success of their approaching bench show, if not completely prevent its being held, as will appear from the communication hereunto appended; and

Whereas, His resignation as president and as a member of the club has already been requested by the board of governors, but he has not resigned; and

Whereas, He has threatened to break up the club; and

Whereas, He has repeatedly disobeyed the spirit and letter of the constitution and by-laws and by voting on questions on which he had no right to vote (as appears by reference to the records of the meeting of the board of governors of Nov. 14, 1890, and other meetings) has greatly disturbed the peace and harmony of the club and endangered its existence and greatly injured it.

Now, therefore, Be it resolved by the board of governors of the Maryland Kennel Club that said Harry Malcolm be, and he is hereby removed from the position as president of this club, and that his membership in the club be, and the same is hereby suspended under Article 10 of the by-laws.

The above resolution was offered and adopted at the regular monthly meeting of the board of governors held at Baltimore, Md., Jan. 1, 1891. W. STEWART DIFFENDERFFER.

NEW YORK, Dec. 30, 1890.—Edwin C. Farber, Esq., Attorney for Maryland Kennel Club, New York.—Dear Sir: Replying to your communication of even date, I beg to advise you: First—That the suspension of Mr. Harry Malcolm by this club, deprives him from enjoying any of the privileges that are accorded by its rules governing bench shows. Second—He cannot exhibit or take a prize, or act as agent for any person, at any show held by a member of this club. Third—He cannot act in any official capacity at any show while under penalty of such disqualification. Lastly—In case the Maryland Kennel Club should hold a bench show with Mr. Malcolm as its president, while he is still under suspension by the A. K. C., the said Maryland Kennel Club is itself liable to suspension. Yours truly, A. P. VREDENBURG, Secretary.

[True copy.—W. STEWART DIFFENDERFFER, Sec'y.]

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

Promptly at 8 P. M., on the evening of Jan. 2, a meeting was called to order by the president, Mr. O. H. Brooking, and the roll call showed only Mr. B. S. Turpin and Mr. Geo. P. Berry to be absent. The meeting was then eloquently addressed by the president, who in his speech spoke of our phenomenal growth of the last eight months, our eminently successful field trials just concluded, our object the improvement of the beagle, both in the field and on the bench, and the plainly evident fact that our work had already created many friends for the little hound. He then suggested that we should not rest on our laurels, but should now turn our attention to the bench shows. Concluding with a cordial invitation to the members of the American Beagle Club and all interested in any way in this breed to co-operate and join with us, assuring them that their suggestions will have every consideration, and recalling to their minds the fact that in "Union there is strength."

The minutes of the previous meeting were then read and accepted. The report of the field trial committee, which was as follows, was also accepted: Total receipts, $282.85. Total expenditures, $280.54. Balance on hand, $2.31. Bills payable, $41.20. Messrs. W. F. Rutter Jr., and H. V. Jamison, members of the field trial committee, then spoke at length on the subject of field trials. Various communications were then read, and action thereon referred to the executive committee. It was voted to give $10 at the Pittsburgh show from club money, and this amount will undoubtedly be increased to $25 or $30 by private donations. The application of Mr. F. G. Eibel, of Lancaster, Pa., was then acted on, and he was admitted to membership in the National Beagle Club. Here I will say that the club have admitted to membership, per the executive committee, since the October meeting, the following: Dr. N. Rowe, of Chicago, Ill.; H. W. Lacy, Kennel Editor FOREST AND STREAM; Paul C. F. Hoffman, Hartford, Conn.; Ed. C. Wilson, Olney, Ill. At this point Dr. Power spoke regarding the officers of the past year, stating it as his opinion that the present ones had greatly contributed to the success of the club, and that they deserved a vote of thanks, which were heartily given.

The following gentlemen were then elected to office for the ensuing year: President, O. W. Brooking; Vice-Presidents, W. F. Rutter, Jr., W. A. Power, H. V. Jamieson; Sec.-Treas., F. W. Chapman; Executive Committee, Geo. P. Berry, W. S. Clark and B. S. Turpin. The proposed alteration of the by-laws (Articles V. and VI.), *i. e.*, raising the initiation fee from $2 to $5 and the dues from $2 to $3 per year, was then

put to vote and lost. It was then moved that the dues be raised to $5 per year and the initiation fee be $5 per year also, as per 14 suggestions by mail. Motion carried—yeas 16, nays 3. It was voted that the club open a donation list, the money received therefrom to be devoted exclusively to the purchase of special prizes for our field trial and bench shows, the same being the suggestion of Mr. H. L. Krender and others. Moved that the club act on the matter of the rejection of the application of the N. B. C. to the A. K. C., laid on the table at our last meeting. Carried.

Moved and carried, that the club make application to the A. K. C. at its next meeting, and that the secretary call attention of the A. K. C. to Article III. of its Constitution. Moved that there be a rule prohibiting the running of spayed bitches and castrated dogs in any trial under the auspices of the N. B. C., same to be inserted in the running rules. Motion carried. Moved and carried that the N. B. C. hold a banquet at the time of the Boston show (N. E. K. C.) in April next, in connection with our quarterly meeting of that date. The same to be held at no expense to the club and to be under the direction of the executive committee. The report of the treasurer of the N. B. C. was then read and accepted. Total receipts, $28.05; total expenditures, $7.50; balance on hand, $20.55; bills payable, $41.20; amounts due the club about $75. Meeting was then adjourned.

F. W. CHAPMAN, Sec'y and Treas.

BOSTON, Mass., Jan. 5.

THE NATIONAL GREYHOUND CLUB.

Editor Forest and Stream:

At the request of a large number of the members of the Western coursing clubs, the National Greyhound Club has prepared a code of rules for use by all the coursing clubs of the United States and Canada. One of these rules reads as follows: "No greyhound shall be allowed to run at any coursing meeting held after Oct. 1, 1891, unless it shall have been duly registered in the National Greyhound Club Stud Book."

It is the intention of the club to issue the stud book annually, and in addition to the pedigrees of all greyhounds, deerhounds and Russian greyhounds, to give a review of the coursing season and of all dog shows held in America during the year, and also to add many other attractive features which will make the book invaluable to lovers of the breed. One of the rules established by the club as to bench shows is as follows: "No greyhound, deerhound or Russian greyhound (Barzoi) shall be allowed to compete for any special prize offered by this club at any dog show unless it shall have been duly registered in the National Greyhound Club Stud Book."

The labors of the stud book committee in preparing the first volume of the stud book will be very arduous, and it is hoped that all owners of hounds will give the committee cordial and prompt support.

Blank forms for registration may be obtained from Mr. J. Herbert Watson, 79 Downing street, Brooklyn, N. Y., or from any member of the committee.

Stud Book Committee: Greyhounds—J. Herbert Watson, 79 Downing street, Brooklyn, N. Y.; H. C. Lowe, Lawrence, Kan.; D. C. Luse, Great Bend, Kan.; J. R. Dickson, San Francisco, Cal. Deerhounds—J. E. Thayer, Lancaster, Mass. Russian greyhounds—W. Wade, Hulton, Pa.

At a meeting of the board of directors held Dec. 15, the committee on prizes was instructed to have medals made from the designs submitted and offer them at the coming shows, as follows: Solid silver medal for best greyhound dog and bitch, deerhound dog and bitch, Russian wolfhound dog and bitch. These will be the handsomest medals ever offered by any kennel or specialty club, and will be of solid silver, three inches in diameter. On obverse side will be, in bas-relief, a deerhound, a greyhound and a Russian wolfhound; on reverse side a deer, a jack rabbit and a wolf. As these will be trophies well worth winning, and can be competed for only by such dogs as are registered in the National Greyhound Club Stud Book, it is hoped all owners of any of the breeds will register at once, and so be eligible to compete. The following are the names of the judges indorsed and recommended by the club: C. H. Mason, New York; J. F. Kirk, Toronto, Ont.; H. C. Lowe, Lawrence, Kan.; H. W. Huntington, Brooklyn, N. Y.; Geo. Wilson, Chicago. Committee on prizes, L. C. Whiton, N. Rowe, M. Phister.

SEPARATE TRIALS FOR IRISH SETTERS.

Editor Forest and Stream:

Now that some plucky owners of Irish setters have commenced running their dogs in public field trials, it is evident that the great body of believers in the merits of that beautiful animal are awakening to the absolute necessity of proving their claims by that—the only means. Writing and bickering have only resulted in bad blood, perseverance is the way by which pointers and English setters have attained their perfection, and this will reward our efforts also in a few years.

I think that Irish setter men had better, for a time at least, run their dogs in special and separate field trials. This course would call out large entries of Irish setters; and in a very few years we would have a list of winners to choose from that would compete favorably with any breed.

The quicker, surer and better way to accomplish this would be to avail ourselves of the grounds already in use by the Eastern or Central Field Trials Clubs, and offer special stakes for special and separate Irish setter trials thereat.

With this view, a scheme is being discussed among some Irish setter men which will soon be offered for consideration, criticism and action. Contributions are promised; and it only needs concert and less controversy among us to set the ball well in motion. To succeed, we must do as owners of pointers and English setters have done—send our good dogs to field trainers in time to get them ready for the field trials of November and December next; and not rush them off to the breakers in September or October with the expectation that a month or two of training will make field-trial dogs of them. Too brief training of northern dogs for field trials in a field trial country, has been the cause of the poor showing of the Irish and Gordon setters this year. We can, and will, do better next season; our pride is up; our ships are burned behind us and there is no turning back. We have a good dog—as good as any if we will only educate him properly.

A MEMBER OF THE IRISH SETTER CLUB.

NEW YORK, Jan. 5

NOTES FROM MT. WASHINGTON KENNELS.

SOME few weeks ago, I, with deep regret, read of the death of that renowned setter dog Gladstone, known throughout the world as a wonderful stud dog, and a successful competitor at field trials, as he possessed wonderful field qualities, and his services have, no doubt, improved the type of English setters.

This leads me, on account of receiving numerous letters during the past few months, respecting Paul Gladstone, the renowned son of the late Gladstone, to pen a few lines concerning him, which may be of interest to sportsmen in general.

In the first place, I am proud to state that I am now sole owner of him, a dog pronounced by many dog men to be the best son old Gladstone ever sired.

Besides being used in the stud, he has been hunted over all the season, showing now as much eagerness for work as ever, and for a dog of his age he retains excellent speed, range, nose and style, and just goes as fast as ever, in fact he can eclipse younger dogs containing his own and Count Noble's blood. I can truthfully state that there have been more than 200 quail killed over him in this locality this fall. The season here being short, I have been reluctantly obliged to quit hunting, and retire from field sport for another year.

On Dec. 10, Mr. Norwood Johnston and I journeyed about 10 miles into the country and made our headquarteas at Squire Trimbles, where we remained for that night. He is a very homely and humorous old gentleman, and entertained us right royally; doing everything that he possibly could to make us comfortable. We had a good time with him, I can assure you, and greatly did he enjoy the pointing and backing of the dogs, this being his first experience in hunting over bird dogs.

After refreshing the inner man, we started off for our evening's hunt. A stubble field was the first we reached, and Brandom II., a son of Mr. J. H. O'Denny's Brandom (late) made a fine point on a covey in the open field, and the scattered birds flew into a corn field. Following them, we saw a crowd of people and soon learned that a sale was being conducted at a farm near by.

Commencing to shoot, a dozen or so of the crowd came down as spectators, which made the hunt more interesting and amusing, as none of them had ever seen a bird kill ed on the wing or dogs pointing. Whenever a point was made, a general rush ensued, all being anxious to look for the bird, but they could not understand why the dog should thus stand without seeing the birds. In the corn field Redlight, (son of Count Noble—Belle Redmont) owned by "Daddy" Wilson of Pittsburgh, scored a point, which proved to be another covey. These also scattered, and gave us a good afternoon's sport, much laughter being caused by the quaint remarks of some of the crowd. JOE LEWIS.

CANONSBURG, Pa.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Cincinnatus—Cornelia G. whelps. Black, white and tan English setters, whelped April 27, 1890, by J. E. Dager, Toledo, O., a dog each to L. Shuster, Jr., Philadelphia, Pa., and W. H. Drane, Clarksville, Tenn., and a bitch each to Geo. C. Hore, Hamilton, Ont.; — Smedley, Glen Mills, Pa., and Howard Stearns, Kewanee, Ill.

Russia. White bull-terrier dog, whelped Nov. 8, 1889, by Rusher out of White Violet, by F. P. Kirby, Philadelphia, Pa., to Abbott Lawrence, Lowell, Mass.

PRESENTATION.

Count Roy. Blue belton English setter dog, whelped June 8, 1890, by Frank out of Madame Drue, by J. N. Brumson, Callender, Ia., to F. B. Farnsworth, Washington, D. C.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

R. S. V., Rahway, N. J.—We have a pet Maltese cat, four and a half years old. A year ago we first noticed a wheezing noise in his breathing; had a cough all winter and head seemed stopped up; kept mouth slightly open most of the time, with tongue projecting. Apparently did not breathe through the nose at all. Several months ago the cough almost ceased, when he commenced having an offensive discharge from the nose, first thin and colorless, but now thick, and of a greenish tinge. He sneezes a good deal. We have several times thought of giving him a dose to put him to sleep, but as he is in fairly good condition and appetite is good most of the time, we thought there might be something to help him. We gave him cod liver oil last winter. Can you tell us what to do for him? Ans. Keep the nostrils clear from the discharges by sponging with tepid water and then rub throat and sides of head with a mixture of equal parts vinegar and alcohol two or three times a day. Let us know the result. Some ten years ago we treated a cat having similar symptoms with this mixture, which resulted in a complete cure.

Rifle and Trap Shooting.

RANGE AND GALLERY.

MASSACHUSETTS RIFLE ASSOCIATION.

ALL the prize matches of the Massachusetts Rifle Association for 1890 have closed, after one of the most successful and interesting years of this noted rifle club. Below will be found the scores and names of the prize winners:

Match No. 1—Special Prizes.

An elegant gold medal, awarded to the shooter making during the year the highest score of 10 shots in any 200yds. match, either at off-hand or at rest, on standard American target, or with Springfield military rifle on Creedmoor target, or with pistol at 50yds. on standard American target.

Off-Hand.

C F Bartow	10	10	9	10	9	10	10	7	8	9—92

At Rest.

W P Thompson	12	12	12	11	12	12	11	12	12	12	12—118

Military.

Lieut W G Hussey	5	5	5	5	5	4	4	5	5	5	5—49

Pistol.

H Severance	10	10	9	10	10	10	10	10	10	10	10—99

Match No. 2—Record Off-Hand.

Only one entry allowed each week, 200yds., standard American target, aggregate of best 10 scores to win. Prizes, five gold medals.

W Charles	82	84	81	81	90	81	86	83	87	82—837
J B Fellows	83	84	87	86	80	80	81	80	81	82—824
S C Sydney	85	80	87	80	84	81	80	80	82	80—817
C H Eastman	80	79	83	88	84	84	78	80	79	79—814
H Severance	82	79	80	84	80	78	80	80	80	83—806

Match No. 3.—Record Rest.

Only one entry allowed each week, 200yds., Standard American target, with rest bullseye, aggregate of best 10 scores to win: prizes, four gold medals:

J Francis	114	109	110	109	111	113	110	111	115	117—1119
W P Thompson	105	105	110	105	104	108	108	106	105	108—1065
S Wilder	105	104	108	108	106	107	105	104	106	105—1058
L R Avay	102	103	107	102	109	102	103	103	105	107—1048

Match No. 4.—Record Pistol.

Only one entry allowed each week, 50yds., S. A. target, aggregate of best ten scores to win, prizes, four medals:

H Severance	96	94	94	94	92	92	93	93	93	99—940
W Charles	91	89	90	92	89	89	88	88	89	91—896
J B Fellows	91	87	87	89	90	89	92	89	87	89—890
W G Hussey	91	87	90	87	89	87	91	88	87	86—883

Match No. 5.—Champion Off-Hand.

Only one entry allowed each shoot day, 200yds., S. A. target; prizes, six gold medals:

W Charles	89	87	85	87	84	90	84	86	84	90—866
H L Lee	81	84	84	83	84	88	81	84	88	85—842
J B Fellows	86	81	82	81	83	84	83	82	83	85—830
W G Hussey	81	82	84	81	81	84	79	81	83	81—817
H Severance	82	79	81	81	80	80	78	81	87	78—807
S C Sydney	83	75	77	83	82	76	83	82	80	77—801

Match No. 6—Champion Rest.

Only one entry allowed each week, 200yds., S. A. M., with rest bullseye. Prizes, three gold medals:

J Francis	109	115	107	108	106	114	111	113	107	114—1104
S Wilbur	107	109	107	108	108	108	109	110	113	108—1087
L R Avary	105	107	104	105	103	103	105	105	107	105—1049

Match No. 7—600-Shot Off-hand.

Aggregate of 60 10-shot scores to win (no re-entry allowed). Prizes, five gold medals:

W Charles	806	792	780	790	818	822—4808
W G Hussey	774	787	795	782	761	784—4683
H Severance	744	781	773	781	761	772—4617
S C Sydney	762	717	717	771	885	755—4507
J A Frye	756	745	772	742	721	717—4423

Match No. 8—500-Shot Rest.

Aggregate of 50 10-shot scores to win (no re-entries allowed). Prizes, three gold medals:

J Francis	1061	1087	1047	1088	1087—5361
F Daniels	1039	1060	1082	1021	1050—5501
S Wilder	1061	1010	1021	1043	1046—5151

Match No. 9—Directors' Gold Medal.

Open only to M. R. A. directors, 200yds. off-hand, standard

American target, one score of 10 shots and no re-entries allowed. Prize, one gold medal:

H Severance.....7 9 8 8 8 7 9 6 10 8—80

BOSTON, Jan. 3.—The Massachusetts Rifle Association opened its new matches to-day for rifle and pistol. The attendance of the shooters was good, but weather conditions were unfavorable for high scores, 9 to 12 o'clock wind. Following are the scores in detail, distance 200yds., Standard American target, re-entries allowed:

All-Comers' Rest Match.

W P Thompson	107	A B Loring	99
J Francis	104	F W Chester	97
F O Towne	100	M T Day	95
J B Bobbs	100	S B Langley	93
		A S Hunt	85

All-Comers' Off-Hand Match.

W Charles	88	A R Sharp	72
		D Martin	67
J B Fellows	77	S C Sydney	71
		J B Hobbs	66
I B Thomas	76	W C Prescott	71
		S B Langley	60
C Wilson	75	F S Ham	69

Pistol Match—50Yds.

W Charles	90	A C Stevens	88
		M T Day	83

INTER-STATE LEAGUE.—At the meeting of the Inter-State League of Riflemen this evening arrangements will be made for a series of tournament matches, and the teams will probably contain five men each. The Zettler, Our Own, Lakeside, Albig, Excelsior and Hudson rifle clubs have signified their intention of taking part in the tournament. Membership in the league is open to any club in the United States, and clubs affiliating are not obliged to enter teams in the tournament unless they choose to do so. All that clubs have to do to retain their membership is to pay the semi-annual dues of $3, and the prizes awarded for tournament shooting are paid for by the clubs which enter teams. The objects of the league which are shown by the following preamble to the constitution adopted at the last meeting: "Recognizing the value of a proficiency in the use of the rifle and the many advantages to be gained by bringing together for friendly competition the marksmen of different localities, we, the below mentioned clubs, have formed ourselves into an organization to be known as the Inter-State League of Riflemen, the objects of which shall be to foster and encourage the use of the rifle and to promote a friendly feeling among riflemen of the different cities by the arrangement of team and individual contests, tournaments, etc." The league will not confine itself to gallery work, but will arrange for both individual and team tournaments at diffefent ranges during the outside shooting season.

REVOLVER WORK.—The newly organized New York Revolver and Pistol Club held its first regular shoot at the range of the German-American Shooting Society, 12 St. Marks Place on Saturday evening, Jan. 3. As the new target constructed by C. G. Zettler and adopted by the club was not yet ready, the 25-ring target with the 2in. bullseye was used. The distance was 40ft., each man firing a string of 6 shots, possible 150 points. The scores: H. Oehl 138, M. Herrington 139, J. Zantzer 141, Dr. Chadbourn 128, all using the 38-cal. Smith and Wesson revolver; V. B. Daly scored 136 with a 44-cal., A. H. Isbell used a 32-cal. and scored 145 points, and M. Herrington with a 22-cal. Stevens pistol made 138. At the next shoot the club will use its new target.

The annual revolver match, open only to members of the Seventh Regiment Rifle Club, was decided on the armory rifle ranges on Saturday night, Jan. 3. This is one of the most interesting of the many matches in the club. The conditions are 5 shots at 5yds. at the word, and 5 shots at 10yds., deliberate aim. Misses at the word penalized two points. Three prizes. S. W. Merritt, F. S. Kennedy, A. Stein, H. L. Klock and R. Darling, winners of these matches in 1889-90, were handicapped two points. The three highest men, with their scores, were as follows:

	5Yds.	10Yds.	Total.
Priv A Stein, Company C	23	25	48
Priv W M Bavier, Company C	20	21	41
Corp G L Hoffman, Company H	18	15	33

A SCHUETZEN TELEGRAPH MATCH.—The California Schuetzen Club of San Francisco, of which the well-known marksman, Philo Jacobi, is president, adopted at a recent meeting a number of resolutions embodying a challenge to all *bona fide* rifle clubs in the United States. The California marksmen, who are always among the first in promoting the sport of rifle shooting, wish to arrange telegraph matches under the following conditions: Any club in the United States which has been in existence at least one year, members of the team to have been *bona fide* members of their association at least nine months, fifteen men to the team, fifty shots per man, to be fired on a date agreed upon by the presidents between 10 A. M. and 5 P. M., position strictly off hand, palm rest permitted, distance 200yds., rifle without restriction to weight and sight except telescopic sight, scores after starting to be completed without interruption, stakes $100 a side, a judge for each club to act as stakeholder, and, together with the president and secretary of the respective organizations, to forward in writing a detailed statement of the scores to the president of the competing club, German 25 ring target, ¾in. rings, with a 25 center of 1½in. diameter. This challenge will be acted upon at the next regular meeting of the Zettler Rifle Club, and there is no doubt that the old and well known Eastern organization of sharpshooters will accept it. President B. Walther is greatly in favor of shooting the match, but some of the conditions will have to be changed. The California club, which is at this time of the year greatly favored by the climatic conditions, can hardly expect an Eastern team to shoot now on a fixed date. The weather in San Francisco may be fine, while New York and vicinity may be blessed on the same day with a blizzard or a fog. One judge, who shall watch at the same time shooters and scorers, would be hardly sufficient, as he could not properly supervise the work of the markers, and it would need another judge to see that the men at the butts do their duty.

ANOTHER SMOKELESS POWDER.—Newport, R. I.—It has been learned that for several weeks several chemists have been engaged at the Torpedo Station in the manufacture of a new smokelsss powder, according to a formula received by Prof. Charles E. Munroe, the regular chemist of the station. Several experiments have already been made with it which indicate a superiority over other smokeless powders, and this in two particulars, absence of smoke and a high explosive force.

ENLARGING CREEDMOOR.—Albany, Dec. 24.—The Creedmoor Commission, at its session a few days ago, voted to take fifty acres additional land on the west and north of the range. The strip between the public road running back of the butts and the range is included in the land. The owners of the land want $100 an acre. This the commission deemed too high, and empowered Gen. Robbins to negotiate with them. If a satisfactory settlement cannot be reached proceedings by condemnation will be resorted to.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CHICAGO TRAPS.

CHICAGO, Ill., Dec. 27.—There was more interest taken in trap shooting here this season than at any time in the memory of man. That is to say, an interest in live-bird shooting; inanimates shooting has not yet a great hold upon this city. Doubtless much of this trap boom is due to the success of Chicago in the late Kansas City match. Since then every Chicago shooter has carried a perpetual chip on his shoulder, and the match making here has been something absolutely intense. Chicago nerve has been especially high strung ever since, at the close of Mr. Elliott's interview with Br'er Gawge and Br'er Abe, she sent down to Kansas City the memorable telegram, "Send us up a shooter, we have still a few more Kleinmans left." Chicago would probably stand behind some of the old Calumet family in case Mr. Elliott wanted some more trouble on any reasonable basis. But talk about backing oneself for seven hundred thousand dollars is still too high for Chicago. Elliott is off his form right now. It is likely that Charlie Budd could beat him this week, anywhere but on Kansas City grounds, and on good fast birds, such as were trapped here in the late matches. Whether Elliott will not soon recover and be again a hard customer, is another question. He certainly wants revenge, but he may well bear in mind the unintentional sarcasm of Mr. Low's remark to him, "I tell you, Jim, you make a mistake when you fool with the Kleinmans." There is truth in that. There is no family in the country which has shot so well, so steadily and so long. Their style is the same always, and they never have any "form." A shooter with a "form" often gets into trouble. If the Kleinman boys had money to go into the shooting business on a boom scale, and to back themselves on a grand hurrah principle, they could, if they cared to, soon acquire far more reputation than they ever had; but this they will never do. Meantime they have seen dozens of shooters rise and fall. They do not practice much. They do not shoot a dozen birds a week, perhaps. But to-day, prominent in the records of all Chicago shooters, is the picture of that Saturday night when champion Elliott saw Br'er Gawge and Br'er Abe get into a Calumet buggy, drawn by Br'er Gawge's fall-down horse, which is a dead ringer to Br'er Gawge's Prize Machine gun—50, 30 and 25 off—and start off for home at Irondale, down where the Calumet meandereth. They had Mr. Elliott's eagles in the old buggy, along with the Prize Machine gun of Br'er Gawge, and the eight-times-snapper of Br'er Abe. And neither they nor champion Elliott smiled as the homeward buggy-ride slowly progressed to Br'er Gawge's "G'lang there, blame you!"

In Capt. A. C. Anson and Mr. Geo. Hofmann we are having right now a case of shooters who are after each other. It has been chronicled earlier how Capt. Anson took Georgie's scalp on a 50 birds race, but this did not satisfy him. These two gentlemen got together again last Monday, and this time, as will appear in the Watson's Park scores below, George everlastingly got away with the base ball chieftain. The race was $100, 100 birds; score, Anson 64, Hofmann 77. The birds were screamers. But these two friends are not done yet. Each has a family, and each has backed his family to shoot more pigeons than the other fellow's family. This race will probably be shot soon. George, Al. and Val Hofmann are sure of their ability to get about all of them, and old Anse thinks that his father, the still older Anse, himself and his brother, can just about get away with the whole Hofmann clan. It is fun to hear them talk. Results later.

Geo. Hofmann has also posted forfeit to shoot J. L. Wilcox a race some time next week.

Geo. T. Farmer and Tony Dominico had a match arranged for last Tuesday. Mr. Farmer was on hand but Tony was absent. He is still in bed now, probably from nervous fright at his narrow escape from a shooting match.

The other evening, at the Possum Club, some gentlemen got to talking about their skill at live birds, and became inadvertently so tangled up that they had a shooting match agreed upon before they meant to do it. As a result of this a very exciting and pretty race was shot off to-day, as see the scores. Messrs. W. P. Mussey and Dr. J. M. Hutchinson ("Teal") vs. Messrs. Ben Dicks and Charlie Gammon. The latter won by a small majority, 86 to 84, out of 50 birds, $50 a corner. Mr. Mussey's 47 was creditable in the extreme, but Mr. Gammon was right at his heels with 45. The race was there. Ben Dicks was away below where he belonged, and it is thought his temperature was not normal; Doc. Hutch., however, displayed his ability to shoot a lower score than anybody, and his 37 out of 50 settled it.

On next Saturday, at Mak-saw-ba grounds, L. M. "Hamilton" and R. C. "Stevens" will try the favorite game of 50 birds, $50. Mr. "Stevens" is anxious for gore. He also shoots Mr. Mussey 100 birds, $100, probably on the same day or at some time near that, and on Jan. 17 he is booked again to shoot Mr. Mussey "50 and 50," use of one barrel only. Ben Dicks and Mr. Mussey are busy also, and they shoot next Saturday down at the club, 50 birds, $100. And Mr. Mussey and Mr. Stone, you know, must soon meet upon the bloody sands. We are all right in it now.

Roll Organ wins the live-bird medal of the Gun Club of Chicago for 1890. Percy Stone and Eddie Steck tied to-day on the target medal. The club shoot this afternoon was interesting. There were nine shooters in a sweepstakes, and all nine killed 9 birds out of 10.

Kansas City shooters may be interested to know that the boys of Chicago have chipped in and given Henry Kleinman an order on the Jenney & Graham Gun Co. for a $150 gun. They have requested him to buy a gun that will occasionally go off, and that will not shoot all over a forty-acre field. This is rather a clever thing of the boys, and shows the respect in which "Hank" is held here. It seemed due to Chicago's self-respect that there should be one good gun owned by the Kleinman family, and the boys themselves seem to be rather careless about that, not caring much what sort of guns they shoot.

Mr. J. A. R. Elliott says he is coming back to Chicago to live, and is going to start a live-bird park here on the most approved modern principles. He thinks there is money in this between now and World's Fair time.

While gathering a bird for his brother at Watson's Park, about three weeks ago, Charlie Willard slipped and fell, bruising his side and spraining his hand, from which latter injury he is very slow in recovering, the hand being still quite useless.

Jan. 2.—We have been having a sort of field day here in Chicago of shooters and those interested in shooting. During the week several gentlemen prominent in such matters have been in town, and there has been quite a little stir consequent therein. Harvey McMurchy blew in from Smithville early in the week, and has been in constant circulation here ever since, the scintillant gleam of his diamond being noticeable in all the main sporting goods places in the city. He left for Cincinnati and Fulton, N. Y., last night, after being nearly drowned in the clammy deluge which met the shooters who attended the big New Year's shoot at Lake George club grounds. The weather was abominable here yesterday. Mr. H. A. Penrose, manager of the Standard Keystone Co., also was on hand all the week, attending to business matters of importance. He joined Mr. McMurchy at the Lake George shoot, and shared his fate at that moist entertainment. Mr. Fred Kimble, of the Peoria Target Co., was also in town this week. Up at Billy Mussey's one evening the boys had the pleasure of meeting, at the same time, Mr. Kimble, Mr. McMurchy, Mr. Penrose, and Mr. W. B. Leffingwell, author of "Wild Fowl Shooting," as well as big Jim Stice, now with the Peoria folks, and J. W. Budd, of New Jersey, and dear knows who all else, twenty or thirty of them. By the way, Mr. Kimble goes to California for a trip soon after his arrival home this week. Mr. Leffingwell reports a quiet season in game matters in his country, but was handing out programmes of the Clinton Gun Club tournament, Feb. 3, 4, 5 and 6, which he says is going to be one of the finest, offering live birds and targets and a screaming good time. Mr. Leffingwell is looking well.

All Chicago, at least, though not all Dayton certainly, will be glad to know that Rolla Heikes is to come here to live, taking the Western office of the Standard-Keystone Co., with quarters at the Jenney & Graham Gun Co.'s. Rolla will move up next week, it is understood, and there will be plenty of friends here waiting to shake hands with the blonde gentleman from Ohier. Chicago gets the best.

While Mr. Penrose was here he made public for the first time to FOREST AND STREAM a bit of news which is as yet not fully formulated even, but which is certainly good news to the trap-shooting fraternity of the country. This is the organization of the Inter-State Manufacturers & Dealers' Association, an alliance whose object may be briefly stated to be the common sense encouragement of trap-shooting. This association will eventually contain about 15 subscribers; at present the only names ready for announcement are those of Henry Squires, of New York, W. Fred Quimby, of New York, the American Wood Powder Co., of New York, FOREST AND STREAM, of New York, the Hunter Arms Co., of Fulton, N. Y., the Jenny & Graham Gun Co., of Chicago. The quota of additional subscribers is fast being made up. The plan of this association will be to give a system of tournaments at inanimates, twelve and perhaps more in number, in conjunction with the local clubs. Each tournament will be practically a benefit performance for the club whose grounds are used. The subscribers will arrange a liberal system of guaranteed purses for the shooters. All purse surpluses will be either donated to the club or added the competition moneys. All the money made by the tournament, on targets, gate receipts, etc., will be given outright to the club, conditional upon its devotion to building club house or making improvements about the grounds, etc. Everybody knows that there is money in a well-conducted tournament and the liberality of the above arrangement is obvious.

The first tournament will be held in Detroit, next March, one will follow at New London, Conn., then one at Saratoga Springs, N. Y., then one at Elkhart, Ind. The circuit may go as far west as Kansas, and as far south as Georgia, plans as to this being still in abeyance. Each shoot will be a thoroughly systematic and well conducted tournament, the guarantee as to that lying in the fact that Mr. Penrose is to be in charge. It will be also as much as possible a pleasant, social event for shooters and their friends, and nothing will be lost that could tend to make it attractive and picturesque. Each subscriber is to have erected on the grounds a tent of his own, of whatever quaint design he may elect, and to be occupied whenever possible by a representative. The supervision of all arrangements of this kind will, as all Western men will be glad to know, be under the charge of John Parker, of Detroit, who will travel as advance agent and superintendent. System will rule every detail. Even those little valued but useful members of society, the reporters, will be remembered, and each night will have handed to them the complete scores of the day neatly copied out and tied with a pink ribbon. What a snap this would be for Fred Fodde, of the St. Louis *Republic!* He always did hate copying. This is the plan, at least for those legitimate papers that are on the inside. Some of them won't be in it. FOREST AND STREAM is right in it all the time. Now isn't all this perfectly lovely! And moreover, since it is to be conducted on a plain, practical, inexpensive basis, is it not already practically successful? The shooters of this country, especially the new shooters, the young shooters, have never before had offered to their attention anything more worthy of investigation at least.

The Inter-State people are of course confronted at once by the old specter of classification, and this they propose to unmask forthwith or ruin their cause in the attempt. The experts of this country are not only practically, but thoroughly, known to-day. At all the Inter-State tournaments the wolves will be separated from the lambs with whom they have heretofore mingled. The experts will be classified from their known reputation, and not from any temporary possibly made-to-order record. Once made, the classification will be adhered to. All experts will be obliged to shoot under the "expert rules," viz., unknown angles, unknown traps, no faults of gun or shooter to excuse, everything tough as possible. Under these conditions the experts can fight it out. The amateurs have the old rapid-firing rules. It would seem that a determined effort is to be made to prevent that alarming growth of "mechanical shooting" which seemed so threatening to the best interests of shooting last season. There is a peculiar satisfaction in the reflection that this journal was the first to raise its voice in the fearless condemnation of mechanical shooting at the trap, and it is doubtless much due to its efforts that the old system has been reconsidered in relation to these interesting preparations now before us for a practical, just and popular form of trap shooting, which is something long wanted but hitherto not found.

We still hear of wars and rumors of wars here. They do say that a purse is mysteriously formulating itself here, twice several hundred dollars large, to back Abe and George Kleinman in the invitation to one J. A. R. Elliott to come up and take "all or any part of it," as Jack Brewer or Dick Irwin would say. This ought to be easy work. George Kleinman's race with Elliott was the first 100-bird race he ever shot in his life. Abe Kleinman's race was the first of any consequence, if not the only one, he has shot in 15 years. These men don't talk at all. They don't have any "form." And the money behind them is a-growin'.

Harvey McMurchy while here tried hard to get a live-bird or combination match with any Chicago man against Charlie Budd, but he couldn't do it. Charlie is too well known in Chicago, and is rated high enough to pass the ambitions of Chicago's most ambitious. Sometimes I think the shooter who can shoot and win without altering the size of his hat, who can talk without bluff or bluster, who can lose without explanations and be a gentleman all the time, is the man who ought to be called champion of America. I do not love some sorts of champions, who are lovely only in their ability to shoot, and not always in that. In Chicago Charlie Budd was always very popular, and Chicago never forgot how he was forced to lose what after all is only the empty title of "champion." The more abiding title, the win-or-lose championship, is something they cannot take away from him. And anyhow, Harvey will have to go further before he gets a race.

What Messrs. Organ and Mussey call a piece of robbery is the match lately concluded in which Charlie Gammon has backed these two gentlemen again, the deficit missed to him by Mr. W. H. Haskell on behalf of himself and Mr. R. A. Turtle. This will be 50 or 100 birds, $50 or $100 a corner.

There is a sort of a prospect that Mr. C. E. Willard and Mr. P. F. Stone will shoot a similar race with Mr. C. B. Dicks and Mr. W. P. Mussey. This community is becoming dead game in the extreme, and the man who hasn't a match on can claim no status at all in Chicago shootingdom.

I believe I said not long ago that Washington Park Club never allowed a score or notice of a match to be published. Well, Mr. Chas. Lester and Mr. Walter Dupee, of the Washington Park Club, have just been having another little go, 10 live birds, $20, and this time Mr. Lester beat Walter, who found too late that the ammunition he had ordered was not on hand.

But about that Lake George shoot on New Year's day. The boys had a terrible time of it. About a dozen of them spent the night previous at the club house. Sleep was a thing not dreamed of. Mr. L. M. Hamlin, better known as "Ham," had provided himself with a number of giant fire crackers, each as large as one's arm, and these at spasmodic intervals he delighted to ignite, terrifying the occupants of the frail shanty by the announcement each time that he had done so. The jar of the cannon crackers nearly set the house off its foundations and made a panic among the tenants of the not too large abode. After the crackers were gone, Mr. Hamline celebrated till morning with a shotgun. The early train brought down other shooters, about 25 in all being present, and in spite of the dismal weather quite a lot of shooting was done, 590 birds in all being shot, two individual races, Malcolm—Sheehan and Holden—Pfeffer, were shot, each at 25 birds, $25. The former resulted in a tie, and the latter was nearly so. Fred Pfeffer, however, lost three out of his last four birds, and this gave the result to "Husky George." In the sweeps McMurchy got all his birds straight. Frank Place and Charlie Willard also were in good shape. Following are scores:

Malcolm—Sheehan.

O P Malcolm	1110222122022112122012020—21
J H Sheehan	1120122022111111002121211—21

Holden—Pfeffer.

Geo Holden	1122122101021021222101202—20
Fred Pfeffer	1021121212100212212220100—19

Sweep, 10 live birds:

Cox	1110222121— 9	Patterson	1111112222—10

McMurchy won first, Holden, Willard, Place and Malcolm div. second, Wadsworth third.

Quite a party leaves for Mak-saw-ba grounds at Davis, Ind., to-morrow, to witness or participate in the live-bird matches of interest there. E. HOUGH.

MISS ANNIE OAKLEY.

MANY kind words of pleasant reminiscence and many sincere expressions of regret met the announcement published in our last issue of the death of Miss Annie Oakley in a South American city. The report reached us through the regular press channels, but prompt denial of the report followed its publication, and it now appears that some annoying blunder has occurred in connection with the announcement. Our correspondent "Picus," from Ellicott City, Md., writes:

Editor Forest and Stream:

In your issue of Jan. 1, I notice the report of Miss Annie Oakley's death at Buenos Ayres. This is, I presume, the city in South America, and may not mean the well-known lady who was with Buffalo Bill's Wild West, and I truly hope it is not the wonderful "Little Sure Shot." In connection with this, and as a counter report, I wish to say that I had a letter from Mr. Butler, dated Dec. 12, in which he said that his wife (Miss Oakley) had definite engagements for shooting upon private game preserves in the neighborhood of London, which would keep them busy until after the New Year, and I send you with this a clipping from the *Kentish Express and Ashford News*, which shows Miss Oakley's whereabouts as late as Dec. 17. All who know Miss Oakley will join me in hoping the report of her death untrue. PICUS.

The clipping referred to is as follows: "Marvelous Shooting.—At the Royal Oak Hotel starling shoot on Wednesday [Dec. 17] the company, which included some of the best shots in the south of England, were unexpectedly gratified by having the opportunity of witnessing some of the wonderful shooting feats of Miss Annie Oakley (Mrs. Frank B. Butler). This lady, the 'Little Sure Shot' of Buffalo Bill's troupe, which is now at Strasburg, is on a vacation visit for a few weeks to Mr. and Mrs. Graham, of the Royal Oak, they being old American friends, Mr. Graham having shot four or five matches with her during his sojourn in the States. Gentlemen will have the opportunity of seeing her performances at the next few meetings, and of taking part against her at her own game at the traps. The feats she performed on the ground seem scarcely credible. Thus, it Mr. Butler or Mr. Graham held out in their hands a visiting card edgeways to her, at a distance of from 10 to 20 paces, she invariably hit the edge of the card with a bullet from a pistol. With a Holland 3-20 bore double rifle she hit successively with bullets two marbles thrown in the air; and with a 10-shot repeating rifle she split at the first shot a piece of lead as it was thrown up, and then knocked to pieces the second shot one of the fragments as it descended. Half-pence and coins the size of a sixpence were also struck with bullets in the same way. Thirteen competitors came out for the handicap, and it was won by Mr. Frank Tanton, of Great Chart, 25yds., who killed 7 birds out of 9. Mr. Tanton's win was a feat for a local sportsman, inasmuch as he beat two of the best shots in England—Ben Read, of Nottingham, and Robert Patch, of London. Mr. Tanton's brother also holds a trump card in the handicap. Over a dozen sweepstakes were subsequently shot off, and a pleasant dinner party afterward sat down at the Royal Oak."

C. R. SHELTON.—Clark R. Shelton died Monday, Dec. 29, at his home in Newtown, Conn. He was the inventor of the auxiliary rifle which was manufactured by the Winchester Arms Company. He first proposed the use of the rubber butt to rifles for the purpose of preventing the recoil, and was the originator of the outside elevator for fire-escapes, which is constructed on the same principle as those used inside of buildings.

CONNECTICUT TOURNAMENT.

HARTFORD, Conn., Dec. 29.—On Christmas Day the Connecticut Trap Shooters' League held a tournament at the grounds of the Colt Hammerless Gun Club of this city. The day was what is called East a "snorter," cold and a high wind. On account of the blustering day only fair scores were made. Among the shooters we had the pleasure of meeting the popular out-of-town sportsmen, John H. Pitt and the genial "Tom" Bill of Middletown, E. O. Goodwin of East Hartford, Joel W. Webb of Willimantic, C. L. Hotchkiss of Forestville, N. D. Folsom, C. B. Bristol and George H. Saunders of New Haven. Messrs. Sterry and Root of Tolland are market-shooters—they can shoot at the traps as well as in the brush. Mr. Saunders was handicapped by an injured finger. Below the scores:

Event 1, 10 bluerocks, 50 cents entry, 8 entries:

T P Bill	1101111111—9	G H Saunders	1011100110—6
J R Pitt	0101101100—5	E I Root	1011111111—9
E O Goodwin	0111010110—6	C B Bristol	1110011111—9
N D Folsom	0001110011—5	"Snipe"	1111000111—7

Bill, Root and Bristol div. first money, "Snipe" took second. Goodwin and Saunders third, Folsom and Pitt fourth.

Event 2, 9 bluerocks, unknown angles, entrance 75cts., 10 entries:

T P Bill	101111011—7	G H Saunders	111011110—7
J R Pitt	000100011—3	E I Root	111111111—9
C B Bristol	101011111—7	A Willey	101111101—7
E O Goodwin	011110000—4	C Viberts	001111011—6
N D Folsom	101111111—8	C H Burbridge	111111111—9

Burbridge and Root div. first, N. D. Folsom took second, Bill, Bristol, Saunders and Willey third, Viberts fourth.

Event 3, 15 singles, entrance $1.25, 10 entries:

N D Folsom	110111101111111—12	G H Saunders	000100111110000— 6
C B Bristol	010111111101111—12	B O Goodwin	000011011001001— 6
A Willey	011111111011110—12	E I Root	011101111111111—13
C H Burbridge	011111101111110—12	T P Bill	111110010110001— 9
J Alger	110010010111110— 9	J R Pitt	011111100111000— 9

Root took first, Folsom, Bristol, Willey and Burbridge div. second, Alger, Bill and Pitt third, Saunders and Goodwin fourth.

Event 4, 10 singles, 3 angles, entrance 75 cents; 14 entries:

C B Bristol	1111111111—10	Allen Willey	1110111011— 8
C Viberts	1111111111—10	Joel W Webb	1110110101— 7
E I Root	0111111111— 9	C Sterry	0000110111— 6
C H Burbridge	1101111111— 9	John R Pitt	1000001111— 5
T P Bill	1110111111— 9	E O Goodwin	1000110000— 3
John Alger	1101111111— 9	Snipe	1001001000— 3
G H Saunders	1111110101— 8	N D Folsom	1111000001— 5

Bristol and Viberts divided first money; Root, Burbridge, Bill and Alger second; Saunders and Willey third, and Webb took fourth.

Event 5, 20 singles, three angles, entrance $1.50; $2 for best score; 12 entries:

C B Bristol	11111111111111111111—20	C Viberts	11111111111011110111—18
N Folsom	11010111111111111111—18	Burbridge	11111011110111110110—17
Saunders	11110111111111011111—18	A Willey	10111111011111101111—17
J W Webb	01111011111111111111—18	J R Pitt	11110011111011111111—16
E I Root	10111101111111110111—18	T P Bill	11111010111100111111—16
C Sterry	01110111111111111111—18	J Alger	11011101011011001101—14

C. B. Bristol took first money and prize, $2; Folsom, Saunders, Root, Webb, Viberts and Sterry divided second money; Willey and Burbridge third money; Pitts and Bill fourth.

Event 6, 10 singles and 5 pairs, entrance $1; 12 entries:

Thos P Bill	1111111110	11 11 11 11 11—19	
Chas Sterry	1101111111	11 11 11 11 11—19	
C B Bristol	1111111111	11 11 00 11 11—18	
E J Root	0111111111	01 10 11 01 11—16	
Fred Risley	1000111110	11 11 01 11 10—15	
Allen Willey	1111111101	00 11 11 10 10—15	
J W Webb	1111000011	11 11 01 11 10—14	
G H Saunders	1110101110	10 11 11 11 00—14	
Chas Viberts	1101001101	11 01 10 11 01—13	
N D Folsom	1111101011	00 00 00 10 00—10	
C H Burbridge	1101111111	00 00 10 00 00—10	
John R Pitt	1001111111	10 00 10 00 00—10	

Sterry and Bill divided first money; Bristol took second; Root took third; and Risley and Willey divided fourth.

Event 7, 10 singles, 3 angles, entrance 75 cents, 14 entries:

C Sterry	1111011111—9	G G Lyman	0111110111—8
E I Root	1111111011—9	C B Bristol	1011111011—8

Slayback	1011111111— 9	Bolle	0100100100—3

Brower first, Slayback second, Dobbins third.

FOUNTAIN GUNNERS.—The annual meeting of the Fountain Gun Club was held Jan. 5 at the club house, 449 Flatbush avenue, Brooklyn. This shooting organization is one of the oldest on Long Island, and is also one of the most prosperous, having in its ranks some of the best wing shots in the country. The principal event of the meeting was the presentation of the prizes won by the several members during the past year. Abel Crook, the President of the club, made the presentation speech and awarded the prizes. The winners were as follows: Class A, C. W. Wingert, the Parker hammerless gun donated by R. Wells and the Seddons gold medal, Dr. Wynn, gold watch, chain and charm, donated by the late Gov. Crook. Class B, H. W. Blattmacher, $20 gold piece presented by W. R. Selover; W. A. Stuart, hand-painted "Bierstadt" gold scarf pin presented by C. W. Wingert. Class C, Walter T. Duryea, $20 gold piece presented by Dr. Wynn; W. N. Boetcher, $20 gold piece by A. Eddy. The election of officers then took place and the following were elected: Abel Crook, President; Robert Wells, Vice-President; John A. Carney, Secretary, and H. W. Blattmacher, Treasurer. Trustees—C. W. Wingert, Chairman; A. W. Phelps, John Beacham, W. H. Loomis and F. A. Maacy. At the close of the meeting the members and invited guests sat down to the annual club dinner, covers being laid for about sixty.

ST. LOUIS, Mo., Jan. 2.—The weather in this part of the country on New Year's Day was not by any means of the best for out-of-door sport. A stiff cold wind from the west made its way over this city and the shoot held by the Riverside Gun Club was not so numerously attended as it would have been had the elements been more favorable. A 50-bird shoot with an entrance of $5 was announced to take place, but owing to the small crowd of enthusiasts it was called off, and sweepstakes with a nominal entry were shot. Bluerock targets were used for all events, governed by the rules of the now defunct A. S. A. Following are the scores, ties div.:

Ten bluerocks, 3 moneys:

Haggerty	10	G Pendergast	8	Meade	10
Henry	7	Charles Weber	6	Kling	10
E Pendergast	8	Phil Weber	7	Seltzer	7

Ten bluerocks, 3 moneys:

Haggerty	10	C Weber	6	Kling	8
Henry	7	P Weber	8	Eade	9
E Pendergast	7	G Pendergast	5	Seltzer	7

Ten bluerocks, 3 moneys:

Haggerty	9	Meade	6	Seltzer	7
Henry	8	Phil Weber	6	Bauer	7
E Pendergast	7	G Pendergast	6	Manne	8

Meade	11		
Steffen	7		
Horst	5		

UNSER FRITZ.

COUNTRY CLUB.—*Editor Forest and Stream:* On Christmas Day at the Country Club, Westchester, in the handicap live pigeon shooting contests, for the club cups, miss and out, Mr. Arthur Duane won two cups, shooting at 29yds. rise for one and 30yds. rise for the other, killing 12 and 5 straight respectively. On New Year's Day, at the same club, Mr. Duane killed 63 pigeons out of 64 shot at by him and won three cups, killing his first 47 birds straight and making a total score of 80 pigeons killed out of 81 shot at for the two shoots, the missed bird, the 48th, falling dead just behind the score. All this shooting was done under Hurlingham rules, 5 traps, 40yds. boundary, Mr. Duane shooting a Purdy gun.

NEWARK, N. J., Jan. 1.—The bad weather of to-day kept some of the regulars away from John Erb's grounds, but still enough shooters were on hand to keep the trappers busy. The birds were flyers. The events were all "Jersey sweeps" at 4 birds each, $3 entry, with Hurlingham rules (modified) to govern.

On the South Side grounds the members of the South Side and Woodside gun clubs combined their forces and broke clay and bluerock targets from 9 A. M. until dark. Twenty-two events were disposed of and these necessitated the trapping of about 2,000 targets. Quite a number of out-of town shooters took part in the contest, among them being G. W. and A. B. Gladwin, of Leonia; R. and T. Dukes, East Orange; R. Stringer, Rahway; I. Warren Smith, Orange, and D. H. Terrill, New York.

The members of the Mutual Gun Club held forth in Fischer's woods, and filled in the time by shooting at live birds and artificial targets.

New Year's Day was celebrated by the members of the East Side Gun Club by a shoot at Weidenmayer's woods, both live and artificial targets being used.

The first shoot of the Lone Door Gun Club was held on Thursday on the club grounds, at 25 artificial birds each. The result was as follows: J. Metzler 20, B. Eckert 19, T. Vetter 22, J. Sonnenberg 22, B. Manger 9, P. McKeon 18, J. Goff 17, P. Gerring 16, L. Hubert 12, H. Manderschied 18.

At the New Year's Day shoot of the Roseville Gun Club artificial targets were used, the conditions being 5 birds per man, $1 entry. The Whatton brothers captured the bulk of the money, Alfred Whatton securing first money five times, second money twice, Albert Whatton won first money three times, second money four times. R. Gillott won first money once, second money twice and third money once. B. A. Rist won first money once and third money once.

Alfred and Albert Whatton shot a match at 10 pairs of clay-pigeons each, Alfred breaking 15 and Albert 14. The stake was for $10 a side.

WELLINGTON, Mass., Jan. 3.—The Wellington Gun Club held one of its old-time shoots to-day, the attendance being larger than at any Saturday shoot since the cold set in. The weather was just right for the sport, and several good scores was the result. In the regular cup match to-day Perry was again the winner, by breaking 24 out of 25 standards. The other scores were: Bradbury, Cowee, Dill and Bond, 21; Swift, 20; Stanton and Moore, 19; Leslie, 18; Hooper, Herrick, Archibald, Stone, Lee and Bradstreet, 16. In the contested cup match, won by Perry, Bradbury won by breaking 22 out of 25 standards. The other scores were: Perry, 21; Leslie, Stone and Wheeler, 20; Hooper, Archibald, Dill, Bond and Stanton, 19; Cowee, 18. Thirteen sweepstake events followed.

PHILADELPHIA, Dec. 31.—This afternoon Wm. H. Wolstencroft, James Wolstencroft, Albert Rust, A. Lawrence, Samuel Richards, Nathaniel Swope, J. Rotherger, Dr. R. Howe, W. Wilson and Capt. Wm. H. Pack had a match at live crows across the river on New Jersey soil, Hurlingham rules governed the contest, which was at 15 birds per man. All the marksmen did remarkably well, but the honors were won by W. H. Wolstencroft and Albert Rush, each of whom made a clean score of 15 killed.

WATERTOWN, N. Y., Jan. 1.—South Side Gun Club's weekly shoot for badges. Winning member in each class to be handicapped one bird at next shoot. Match at kingbirds, kingbird traps, 16 and 18yds. rise, 5 traps, unknown angles, gun-below:

Class "A."

Smith (24 birds)	111111101111101111111 —22
Tallett (22 birds)	1111011111111111110 —21
Scott (25 birds)	1111111111111011111110010—21
Whitney (24 birds)	1101111011010111111011 —19

Class "B."

O'Connor (25 birds)	0010111101011111011111—19
Ayers (24 birds)	1111011101110011111110 —19
Taylor (24 birds)	1111111110111100111010 —18
Kingsley (22 birds)	1010011010101010111 —12

Ties on 19 for Class "B" badge, 5 birds, 16 and 18yds.:

Ayers	11100	01110	11001	01011—16
O'Connor	01110	10110	01111	11100 01011—16

Tie on Class "B" badge postponed one week on account of darkness.—DUSTEM.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

A CORINTHIAN CRUISE ON PACIFIC WATERS.

THE Cyretta is a small yacht in every sense of the word. Most people when one speaks of a yacht picture a large, commodious vessel, with a sailing master, steward and crew; and when a person mentions that his yacht is but 21ft. long, his friends are likely to look at him in a queer way, as if wondering how he can find enjoyment in so small a craft. But so long as the boat is large enough to live on, my motto is, the smaller the boat the better the sport. The Cyretta is but 21ft. long, 7ft. beam and about 3ft. draft in cruising trim. She has an iron keel of 1,000lbs. and a hollow iron centerboard filled with lead, weighing 500lbs. in all, so that no inside ballast is needed. She is sloop-rigged and completely equipped for racing, with jibtopsail, sprittopsail, spinaker and water sail; and while holding her own as a racer, I take especial pride in her as a cruiser. As far as I have seen, there is not one of her size among her companions that is fitted up more completely for this branch of yachting.

Having no inside ballast, there are lockers on every hand, so that no matter how large a quantity of stores is carried, nothing is ever found lying about the cabin or deck, in the way of every one, but all is snugly stowed away. The cockpit is entirely separate from the cabin, with scuppers that make it self-bailing, the floor being above the deadline. Under the cockpit seats are lockers opening into the cabin, and aft are two small hatches opening into the space in the counter, so that every inch of room is available. For a tender I have a small 8ft. skiff, which I find is much handier than a round-bottomed yawl, drawing less water and being always on an even keel. For cooking we use a Florence oil stove with three wicks, and find it as good as anything we know of, though a properly designed gasoline stove might be better. The cooking utensils, all of granite ware, stow aft under the cockpit, where are also the water tanks, holding thirty gallons, filling from the cockpit and with pipes into the cabin. The chinaware is kept in a plate locker forward of the centerboard trunk, while the blankets and bedding are hung in nettings below the side decks, all being hidden by curtains. Each transom makes a bed, while room for a third person can be made by means of a crossbar and some slats between the transoms, making a very good bed. The walls of the little cabin are embellished with clock, barometer, pictures and binoculars, while on the ceiling are flag and glass racks. All bulky stores are stowed forward, and the small articles in the lockers.

The Cyretta had been in commission about half the season of 1890, participating in all the races and short club cruises, before the time came when I could think of taking my summer vacation. At last I was ready, and Will, my regular sailing companion, had so arranged his business as to get away with me; so we completed our plans for the cruise. I had long wanted to cruise along the shores of San Francisco, San Pablo, and Suisun Bays, and up the rivers emptying into them, but every year something had prevented; this time, however, I saw some hopes of a realization of my desires. We decided to stock the yacht with everything necessary for the cruise, so as to be independent of the towns and stopping places, and able to go where we pleased without any fixed course other than working along the north shore.

The boat was fully equipped already, and all that remained was to lay in the provisions, consisting of canned goods, ham, bacon, potatoes, eggs, rice, coffee, lard, coal oil, crackers and numerous small stores in the way of matches, lamp wicks, salt, pepper, etc. For drinkables we had six dozen quarts of beer, and one dozen of California white wine. Three of us made up the party, Ceice, a mutual friend, Will, before mentioned, and myself. We made out a list of articles needed and had all shipped over to the Corinthian Y. C. house at Point Tiburon, the club beneath whose flag Cyretta sails. When I first saw the pile of provisions I wondered where we were going to put them all, there seemed to be plenty to fit out a general country store and still leave enough for the boat, but as the list had been made very carefully, we knew that if the order had been properly filled it all belonged to us, and was not too much, so Ceice and I turned to and stow cargo.

After two hours' work there was not a sign of anything aboard the boat except the empty boxes, that were soon hove over the side. Where all the stuff had gone was a mystery to the club members who had seen the pile and inquired what we were going to do with it. To be a success, a cruise requires good food and served often, for it matters not how much you may enjoy yourself in other ways, if you are always hungry or forced to eat poorly cooked grub, you are in no condition to enjoy yourself, and soon tire of the sport. Many old cruisers make the mistake of starting with the idea that on a cruise they can get along with anything; failing to realize that the hardships which seem so heroic in books are no what they are accustomed to; consequently, after a few meals on sea-soaked crackers, they retire with the remark that roughing it is a delusion and a fraud.

After everything was shipshape, the blue peter was run up, and Ceice and I waited for Will, who was to come over from San Francisco on the 6:15 P. M. boat. We spent the time in putting finishing touches here and there, filing side-lights, riding-light and cabin lamps, and other small jobs. At last the boat arrived, and Will came staggering along under a gun, violin, and numerous bundles and packages. Ceice had his rifle and a guitar already on board, and as I had also my shotgun and voice, we were well equipped either to charm with sweet music the natives we might meet, or to protect ourselves should our music prove other than soothing. While Ceice went in the small boat for Will, I got up the anchor, up went the jib, and at 6:30 P. M. we were under way.

The wind was light, and we made our way slowly among the yachts off the club house at their moorings, finally clearing them and heading up Raccoon Straits. The tide was ebbing so fast that while the wind was aft we made little headway; so we set the sprittopsail and jibtopsails. The evening was a perfect one; and as the twilight deepened into darkness we lolled about the deck and cockpit, enjoying the delightful freedom from business and worldly cares for two weeks to come. After stemming the current for a while and making very little headway Will mentioned that he was hungry, and though I had not thought of it before, I immediately discovered that I was famished. Ceice said that he was still worse than that; so we edged our way over to the Angel Island shore, where we got into a current that insisted in taking us down the bay instead of up, the way we wished to go. There was no help for it, so Ceice took the yawl ahead and "cayuhawked" *i. e.*, towed the boat into Chinese Cove, where we dropped anchor. In a short time there were sounds of revelry by night, and an appetizing odor of beefsteak and onions, hot coffee, etc., was wafted on the summer zephyr.

After dining we felt so much revived that a new start was decided on; and the tide now being favorable we set our side lights and stood up the bay with a light west wind on our beam. While sailing we arranged our programme as to work and play: as to watches, none were required, we did not intend to do any more night sailing than was necessary, being desirous of seeing all the country as we passed, and of taking in all the inlets and cut-offs. As to work, I was captain and cook, Will and Ceice had charge of dishes and cabin, and it was mutually agreed that at any time when either of us saw a thing that should be done he would do it at once and each was to do all possible with a will. As to play, we were to stick together as much as possible, and when there were any side trips to make we would lock up the boat and all go along, thus there could be no feeling of being left behind or slighted. These arrangements worked all through the cruise, and I cannot now recall an instance of any break in the harmony of the trip.

Yachting or camping is a severe ordeal to some people; it takes a peculiar organization to stand the little trials and hardships that are to be met with on a trip afloat or ashore, and if there is any taint of selfishness in one's make-up it is likely to crop out and cause unpleasantness all around, and any show of overbearing will cause a small rebellion. In going off on a pleasure trip one should use some judgment in selecting his companions, as a friend who may be a jolly good fellow at home is often apt to turn out a grumbling, disobliging bore after a few days afloat or in camp. My crew was well chosen, as a more willing and good-natured couple than Will and Ceice could not be found. Will had been sailing with me for a year or more, and knew all about the yacht and her gear, while Ceice was a quick and active yachtsman, always willing and even-tempered. As for myself, I tried to do all things possible to make the cruise enjoyable, so taking it altogether we made a very good combination.

We sailed along the Marin county shore, passing California City and the State prison, at St. Quintin, all aglow with electric lights. The night was fine, too much so from a yachtsman's point of view, the further up the bay we went the lighter the wind fell, until off the Marin Islands it was scarce an air, and then dropped to a dead calm off the Sisters. We drifted past these lonesome rocks and finally dropped anchor off McMears Landing at the entrance to San Pablo Bay at 1:30 A.M., Will and myself having had two hours each at the tiller. Ceice had meanwhile made up the berths, and after we had furled the sails and set the riding light we turned in, well tired out with a day's work and a night's sail.

We turned out bright and early in the morning and washed down decks, then Ceice and Will took the skiff and went ashore to dig some clams where they saw some Chinese at work digging them; while I stayed aboard and cooked breakfast. The boys took a small spade and caused great fun among the Chinamen by trying to get clams with it, the mud being too soft to dig holes in. They soon found the right way from the Chinamen, which was to run the arm a yard or so in the blue mud and haul his clamship up. They found clams plenty and blue mud in still greater abundance, being covered from head to foot. When breakfast was ready I blew the bugle, and they were not long in getting aboard, but first they had to sponge and scrape each other, to get rid of the elegant coat of blue mud.

At 9 A. M., after a good breakfast, we were under way, with a parting salute from our gun to our Chinese instructors in clam fishing, which, however, they did not seem to appreciate. Our brass breech-loading yacht gun was our chief pride, and we never lost a chance of saluting with it, but it was always a great nuisance, requiring constant polishing to keep it in presentable condition. We skirted along the shore for some miles and then squared away for Petaluma Creek channel and picked up the beacons, which had to be passed close aboard. After sailing for a

few hours we sighted Sonoma Landing and the mouth of Petaluma Creek, and soon made the creek and passed through the bridge at 11:15, the draw being opened at our approach without the usual horn tooting. The day was a perfect one, and we slowly ran before the wind up the river, enjoying every moment. We touched bottom occasionally, but kept the board half down, so we always got off without sticking. At Lakeville the wind died out, so we dropped anchor and had a lunch. A schooner scow, loaded with a high deck load of hay, and with a wheel elevated so that the helmsman could see ahead, lay near by. Will had been used to speaking of our tiller, and said something about the schooner scow having a high tiller. The captain of the scow, overhearing him, observed with lofty contempt: "Dot vos a veel, don't it?"

In about an hour the wind came up dead ahead, necessitating a beat for the rest of the way. As we wished to see Petaluma we kept on, the creek being now deep up to the banks. As we were nearing the second drawbridge, about ten miles from Petaluma, I went below to start the dinner. Although the stove wicks had worked all right thus far they were too small, and when I lighted them and was about to put the kettle on, such a flame shot up from the stove that for a moment I thought that it had exploded. The flame caught me on the right side of the face, singeing my mustache and eyebrow and blistering my cheek, the pain being so intense that at first I thought that I was severely burned, and pictured to myself our having to return and abandon the cruise, as had happened the year before when I crushed my finger in the centerboard chain. The feeling of disappointment must have driven away the pain, for after waiting a moment I went on deck to see how much I was burned. Will was forward, passing a tow line to Ceice, who was in the skiff, and I went up to him and asked him how I looked. He turned and saw me and commenced to laugh, Ceice doing the same. I could not see where the joke came in, and told them so, but they thought my lop-sided appearance very funny, so I finally took their view of it and made the best of it. Fortunately the damage to my countenance looked and felt worse than it really was, and with the aid of some vaseline it soon disappeared.

When we neared the second drawbridge the keeper was not in sight, and we blew the horn until all hands were black in the face. At last, after having run the boat up to the bank and taken a line ashore, the keeper made his appearance and leisurely set to work to open the draw. First he surveyed us, then he walked across and planted a danger flag, and then came back and planted another, then slowly toyed with some of the fastenings about the end of the bridge. For a time it appeared as though the bridge would not be opened before dark, but finally I became disgusted and, mounting on top of the cabin, made a few off-hand remarks about drawbridges and their keepers in general, and this one in particular. The effect was magical, in an incredibly short space of time the bridge was opened and we passed through, the keeper apologizing most politely for his delay. I could not imagine what could have produced such activity and change of manners on his part, as the effect of my eloquent remarks had been to give me relief rather than to have much effect on him; and it was not until we passed the same bridge again on our homeward cruise that the mystery was fathomed.

After passing this bridge, the creek narrows, and the wind being still ahead it was constant tacking all the way to the town. As the Cyretta is very quick in stays we made very good progress nevertheless, reaching the town at 5:20 P. M., and tying up to the wharf after passing through another drawbridge. After supper we went out to see the sights. Petaluma is a very pretty place, and apparently a thriving one, the streets being neatly laid out and well-paved and lighted by electric lamps. We made a few purchases and returned to the yacht to find the usual crowd of idlers staring at her as if she was a novelty in the place. A real live yachtsman seems to be a curiosity in most country towns, and as we passed along the streets we met the "admiring" gaze of the residents, while Will and Ceice seemed to think that every pretty girl was dying for an introduction, I rather think that they took us for strange specimens, and wondered why we were allowed to roam at large. We met a young man on the wharf who seemed to take a great interest in yachting; so we invited him on board and had a light lunch of sardine sandwiches and wine. Our rural friend was quite infatuated with yachting, it being something new to him. We spent a very pleasant evening, Ceice singing and playing his guitar. With regrets our new friend took his leave, after promising to drive over to Napa to see us when we arrived there three days later, as we told him we expected to do. This was the last we saw of him, however, as he did not keep his promise.

I was awakened at 4 A. M. by the keeper of the drawbridge, who wanted to know whether we were going down the stream on that tide. We were, but did not wish to start so early; so after telling us that he was going home, having been up most of the night letting schooner scows through, and that if we wanted to get out we would have to open the draw ourselves, he departed, and we tried to get a few hours more rest. In spite of all efforts we could not get to sleep again, so finally gave up the attempt and turned out. As there was no wind, the prospects of sailing down the creek were very doubtful, but we decided to start with one hand in the skiff towing the yacht; and with the aid of the tide we hoped to make fair headway.

The boys got the yacht under way, while I went ashore to play bridge tender. A drawbridge was a new thing for me to manipulate, and while it always seemed simple enough as the man walked around with the windlass and the ponderous bridge swung slowly open, you soon reached the conclusion, when compelled to do the windlass act yourself, that draw tending is not entirely the nice easy job that it seems, and you know the reason why the bridge tender never smiles on you as you pass through after opening the bridge and having to close it again. I threw back two lock bolts that were in sight, and then tried to work the lever; but the old bridge would not budge, and while I grunted and strained the boys on the boat thought it great fun and did all in their power to make it enjoyable by offering suggestions. At last I discovered another 2in. lock bolt that I had not drawn and had been trying to break with but small success. After this was loosened the work was easier, but at its best swinging a drawbridge is not a holiday recreation. Finally, however, I got it open far enough to pass the boat through, and then amused myself by shutting it again; but all things have an end, and after forming a long procession of wagons on each side of the river, I finished the job and departed with the blessing of the delayed teamsters.

The voyage down the creek was not thrilling, but finally we arrived at the second drawbridge, which much to our surprise was wide open, the Hibernian keeper, as we passed through, taking off his hat and wishing us good morning, saying, "Och! 'tis proud I am to see the old flag again," pointing to the C.Y.C. flag hanging limp at the masthead, "sure an' it is many a time I fought under that flag." This was startling, as, though the club flag had seen many a hard-fought race under it, we were certain that such an old fossil as he had never been in them, and were at a loss to know what he meant. After passing through the draw, Ceice's curiosity got the better of him, and he suggested that he should go back in the skiff, bearing a bottle of beer as a gift to the Patriarch, and endeavor to find out what he was driving at. In a short time he returned and explained all. The man from Ireland thought that we were coast survey officers, seeing our blue jackets. When I made a few remarks on the way up, causing such added haste to his movements, he had taken it for granted that we had only to report him and his job was gone. He had not slept all night, waiting for us to return so as to be prompt to have the draw in readiness. He thought he would try to conciliate us by being unusually civil and praising our flag, mistaking it for the American ensign. Ceice told him that we would not mention his conduct this time, but he must not be so slow again, and added to his delight by presenting him with the beer. When we left our frightened friend was drinking the health of the Navy at large, and he still retains the impression that he had a very close call.

After leaving Lakeville we had very light winds, and only emerged from the creek at 3 P. M. It was now the young flood, so we took advantage of it to run to Sonoma Creek, along the Sonoma shore, arriving at 4 P. M. Soon after entering Sonoma Creek we passed into Napa Slough, a place that I had some doubts about, having no charts and having been told that it was not navigable; it proved, however, to be a fine stream, with deep water up to the banks. Most of the way was before wind, with an occasional hitch close hauled. On nearing the mouth we passed a number of boats belonging to the market-hunters, the place being a great resort for wildfowl. At 7 P. M. we entered the Napa River, celebrating the event by running on the mud. We kedged off and started up stream for the town of Napa, and over an hour's run came to a drawbridge, which was opened promptly at the blast of the horn. This bridge is where the fleet of the Corinthian Y. C. met with an accident the year before in trying to tow through the draw with a dozen yachts in a string. The first two passed through in safety, but at about the middle of the string the tide swept the boats against the draw, and a general smashup was the result; since then the captains prefer to sail through singly.

We ran up the river until within a mile of Luscol, where we anchored for the night, being undisturbed save by a steamer which passed in the middle of the night and caused a general shaking up by her swash. We got under way next morning at 9, and beat up to Lone Tree Point, where we ran hard and fast aground. Try as we might, we could not budge her, so we made the best of it, putting in our time swimming and washing our rather soiled duck suits, until the tide rose high enough to float us, and we resumed our course, and after a pleasant sail, reached Napa at 12:30 P. M., shooting a few birds on the way up. We anchored at the bridge at Third street and took in the town. Napa is like most country towns, but a little more select, being the county seat. After seeing and being seen, with a balance in favor of being seen, we returned to the boat and had supper, after which we took the small boat and made a trip to the head of the creek. It was just dark and the scenery was most delightful, especially after the amount of marshy land we had lately passed through. Above Napa the creek is thickly wooded until the head of navigation is reached, about four miles up, where the trees are so dense that they meet overhead. At this time of the evening the views down the long reaches, with the dark green foliage, make a picture that is not soon forgotten. We looked to find our Petaluma enthusiast on our return to the yacht, but he did not appear, so we turned in after a time.

We got under way at 6:30 A. M., slowly working our way down the river to the first bridge below Luscol, then the tide turned, and as we had no wind we anchored and had dinner. We again got under way, but after making across the river and not gaining at all we anchored again and waited for the ebb, putting in our time in vocal and instrumental efforts. At last, at 7 P. M., the ebb tide came and we made our slow way to Vallejo, anchoring off North Vallejo at 10 P. M. so thoroughly used up by drifting under a hot sun all day that we were not long in getting things snugged down and turning in. In the morning we made an inland cruise through Vallajo, mailing letters and purchasing ice and provisions. There was not much to see, and after walking about the town for a while we went aboard and got under way.

There was not a breath of wind, but, a strong ebb tide favoring us, we drifted down through the Straits, passed Mare Island Navy Yard and the old receiving ship Independence, and into the bay at the mouth of Carquinez Straits; where we anchored in the slack water, as the tide rushes through the Straits at a five-knot speed and we did not wish to drift down into San Pablo Bay. We went in swimming and amused ourselves as we could until the tide seemed to have run itself out, so we got our hook and made up the Straits, passing Starr's Flour Mills and Port Costa with its mammoth grain sheds. It is here that the huge ferry steamer Solano crosses from Benicia, carrying the overland passenger trains. On a former cruise, in the beginning of the season, we ran under her stern as she passed. We had fresh provisions on the forward deck, between the mast and the house, and as we saw the roller coming one dove for the forward hatch to close it and another made a break for the provisions, but too late; the surge was too quick for him, and broke over the house; when the decks were free from water not a vestige of our supplies were in sight, and we had to eat that night at Martinez; paying 75 cents for a meal that the natives got for 25 cents, the hotel not catching wealthy yachtsmen every day. An hour later we passed Benicia and the United States Arsenal, soon after entering Suisun Bay. Flattening sheets a little, we skirted the north shore, heading for Suisun Creek and passing a naphtha launch under steam and sail.

HARRY L. JONES.

[TO BE CONCLUDED.]

THE LOSS OF THE NYANZA.

THE above well known schooner yacht, the property of Capt. Cumming Dewar, which was making a cruise around the world, became a total loss on the Island of Ponapie, Caroline Group, Western Pacific, on July 29 last. The following are brief particulars of her voyage and wreck. Leaving Plymouth on July 21, 1887, she called at the following ports, viz.: St. Michael's, Azores; Palma, Canary Islands; St. Vincent, Cape de Verde Islands; Fernando Noronha, Trinidad, Rio de Janeiro, Montevideo, Neuvo Gulf, Falkland Islands, thence via Magellan's Straits and Smyth's Channel to the Pacific, Juan Fernandez, Mollendo, Callao, Easter Island, islands of Fatou-Niva, Hiva-oa, and Nuka-Niva, in the Marquesas group; Tahiti, Pango Pango and Apia, Samoa; Tongatabu, Fiji, New Carolina, islands of Erromango, Vate, Mallicollo, and Espiritu Santo in the New Hebrides; the Banks group, Santa Cruz, Honolulu, San Francisco, Esquimalt (B. C.), Labaina, Sandwich Islands, the Marianas, Bonin Islands, Kobe (Japan), Petropaulovski, Kamaschatka, Legieg, and Jaluit in the Marshal Archipelago. From there she sailed for Kusaie, in the Caroline group, the last port she was fated to reach, as a week later, on July 29, 1890, at 1:10 A. M., she struck on the barrier reef of the island of Ponapie, and became a total wreck. The night was fine, with a light wind, the ship making about three knots.

After striking, the swell and surf forced her higher and higher on the reef, until in about twenty minutes she fell over on her beam ends. The boats were lowered and all hands embarked, the sailing master and majority of the crew proceeded to the Spanish settlement sixteen miles distant, the owner and five hands remaining by the vessel, which was boarded at daylight, and an attempt made to save as much property as possible, though efforts in this direction were much frustrated by the natives, who began to collect in large numbers, and commenced all they could to lay their hands upon. In the afternoon assistance arrived in the shape of four armed man of-war's boats, who took what had been saved, and those of the crew who had not already gone, to the colony, where they were most kindly and hospitably received by the officers of the Spanish Government transport Manila. Work on the yacht was carried on for the next three days, but, owing to the authorities being unable to leave a guard at night, it was not of much avail, as every evening crowds of armed natives went on board to plunder. All hands remained at Ponapie until Oct. 1, when they were taken to Manila, and thence to Hong Kong, where a court of inquiry was held into the loss, and which censured the sailing master, Capt. John Carrington, for not taking means to verify his position on the afternoon of the 28th, and for making no effort to get the vessel off when she first struck. Up to the date of the wreck, the Nyanza had sailed 42,784 nautical miles, at an average speed of 104.09 knots per day. Her three best runs were respectively 270, 252, and 252 knots. She had proved herself to be a most excellent and able sea boat, and her loss is much to be regretted.—*Field.*

A BIT OF YACHTING EXPERIENCE.

THE graphic yarn of Com. Center in our last issue showed that yachting is not all fun and fair weather. The following story called forth by the recent loss of the yawl Urania, which we copy from the *Field*, narrates a similar experience in the historic gale of July, 1875, on the Irish coast. It reads as follows:

In the comments in the *Field* of last week on the late disaster to the Urania I notice a reference to the gale which drove the racing fleet out of Bangor Bay in 1875, which arouses so many memories of that eventful night that possibly the description of the writer's experience may not be uninteresting, written at the time as I have no doubt the unfortunate Urania was caught under similar circumstances. Our crew consisted of two paid hands and three amateurs, and while we were forced to take such a berth as we did by the crowded state of the bay, the Urania had the whole place to herself, and had therefore plenty of sea room had she only cleared out in time; but she appears to have been simply left to drive ashore. We were in one of the old 10-tonners, of which there were some half dozen during the usual round of the regattas. The Lily was another 10. The Britannia mentioned is the old 40, and she rode out the gale perforce, as her crew were ashore in the gig and were capsized trying to bring off the owner, whose wife, however, was on board and one of the crew, so could not get under way.

ONE OF THE NAIADS.

"We had the Copelands abeam at 2 A. M., and after a very wet passage entered Bangor Bay an hour later, where we found a good fleet already arrived, and picking out a berth not too far from shore, we let go. The Lily shortly followed us, and let go just in shore of us, and, after hailing her crew a 'good night' we were glad to turn into our warm blankets.

"We had slept our hardest for but an hour, when the ever-watchful skipper, who had kept on the alert, aroused us about five o'clock with the information that we had best get out of the bay as soon as possible, and on slipping on a few things and coming on deck, we found the need of an immediate flight only too necessary; for oh! such confusion met our half-awakened gaze.

"The wind had piped up to the strength of a gale, which blew straight in from the open sea, we were dipping sea under to the bitts, and shoveling masses of solid water along the decks until everything was awash. Around us the fleet were in various stages of confused endeavors to spread canvas and get underway, while two or three lucky ones were already disappearing under just a shred of canvas round the point, for the shelter of Carrickfergus.

"On board our neighbors the anxious looking crews were in a state of excited animation, struggling with spars and sails which had broken adrift, the seas continually drenching over them. On board Britannia, on our quarter and nearer the shore, a solitary figure was clinging with terror-stricken face to the mast, and the yacht had already dragged so near the breakers that we expected every moment to see her go ashore. We could not get under way ourselves on either tack, as we had the Lily to starboard and a cruising yawl to port, which effectually barred our passage, so we were compelled to look on until one or the other had cleared out, which the former was preparing to do with all speed; but on board the yawl there were only visible an elderly gentleman and a young lady, and they appeared to be looking on unconcernedly at the frantic efforts of those on board the other vessels to get away.

"Meanwhile it was with the greatest difficulty we were able to get the storm jib on the outhaul, as it took us all we knew occasionally to hold on and prevent ourselves being washed overboard; but at last we managed this, and to get the trysail close reefed and ready for hoisting.

"The Lily had by this time succeeded in heaving short her anchor, and was on the point of making a start, and we watched her anxiously. She was but a few yards inshore of us, and as we barred her passage on the one hand, she was compelled to make a short board toward the rocks, having but 20yds. to gather way in; any mistake in coming about must have been fatal. Having succeeded in getting her anchor (she had only one on board, or would have slipped, as we did), she paid off toward the breakers for a few yards, just gathering sufficient way for coming about; then her helm was put down, and with just enough way to bring her round she came up to the wind, when at the critical moment a sea struck her and threw her off again toward the rocks, and we thought for a moment she was gone, but recovering from the shock she came up again, and, shaking for a moment in the wind, gradually paid off again and filled on the other tack, and after a narrow squeak hung up to windward and out of danger; another board, and she was making good way, and at last weathered the point and was away after the others for the shelter of Carrickfergus.

"It was our turn now, and careful of every inch of water we sailed her well up to the spring which we had attached to the cable, intending to slip it, then let go the spring and held on a few yards toward the rocks, over the same course as Lily had taken, and when within a few yards of the breakers, with just enough way on to bring us well round, we put the helm down, and with our hearts in our mouths waited to see the good little ship shoot up into the wind for the pinch; but there was doubt only for a moment longer, and we fell away on the other tack and were safe, as we could weather the yawl easily, and the way the Naiad clawed out to windward through the heavy seas was truly a marvel. Two or three short boards enabled us to weather the point, and with the water drenching over us in smothering showers we reached away after the Lily. Another hour found us riding in welcome shelter at last, and after a good breakfast we felt none the worse for our hardships."

A VERACIOUS CHRONICLE.

THE following is a translation of an article on the America's Cup, contributed by Ahmed Mithad Effendi to the *Terjiman i Hakikat* of Constantinople. Though not quite in accordance with the truth, it is hardly more absurd than some of the stories from sources both American and British, which should be better informed. The progress of nautical science cannot be secured as long as our police continue to arrest people who go out in sail-boats and get upset. It is by being upset that men learn not to be upset. By one man's being drowned a thousand learn not to be drowned. The hope of naval progress is in the growth of love of the sea among the upper classes. This is shown by the history of the America Cup. Wealthy men in England and America form yacht clubs and sail their own yachts. Fifty years ago a race of the English yachts was arranged at which the prize was the Queen's Cup, made of gold, and worth five hundred pounds. To compete for this prize the New York Y. C. sent over the America. There were fourteen yachts from all Europe, and the America was the fifteenth. Nine of the yachts were English, and hundreds of thousands of people went to see the race.

"As the yachts came in sight the first one was the America. No one has the right to demand of me a description of the anger and disappointment of the English at this result of the race. As to the Americans they made the universe tremble with the noise of their rejoicings. When the America returned to New York with her prize, the yacht was taken bodily into the museum of the Yacht Club where she remains.

"It appears that the Americans had, out of sight of all, a movable keel, which enabled the America to carry twice as much canvas as other yachts of her size. Of course, the English demanded the right to try and win back the prize, and in the struggle great improvements in models and rig have been wrought out, which have benefited the navy and merchant marine of both countries.

"The Americans let the English try again, but insisted that as the America had won the cup against nine English competitors, the English champion must be opposed by nine American yachts. All nine of the Americans came in ahead of the poor Englishman. In half a century the English have competed eight times in vain, in their efforts to recover that cup. At last, having made such improvements in sh p-building as assured their winning the cup, they found the Americans putting new conditions on the competition. The Americans said, that as the English had been beaten in eight separate trials, they may not have the cup, unless they can win it in eight consecutive races.

"There is obstinacy in such a long contest; but under the auspices of such obstinacy these two countries have built up their navies."

INTERNATIONAL RACING.

A NEW impetus has been given to the usual midwinter gossip over challenges and big boats by the arrival in New York on Dec. 30 of Lieut. Henn, owner of Galatea and challenger for the America's Cup in 1886. Lieut. Henn, who is, of course, accompanied by Mrs. Henn, came over on the Umbria, his destination being Florida, where he wintered in 1886-7. There he will charter a centerboard sloop and cruise about the coast, fishing and hunting. Mrs. Henn's special object on the expedition will be to capture another coon as docile and intelligent as the late lamented Seminole Sam, familiar to all visitors aboard the Galatea, in 1887. Galatea is now laid up at Plymouth, with Captain Bradford still in charge. After a pleasant week in New York, during which they were entertained by many yachtsmen, Mr. and Mrs. Henn sailed on Monday for Florida, to return in April.

Lieut. Henn will always be welcome in America, but in the present case he has brought news that alone would have insured a hearty reception. He states that when it was learned that he proposed to visit New York, he was requested by some British yachtsmen to state to the New York Y. C. that if the objectionable dimension clause was dropped from the new deed of gift a challenge would at once be sent; and to confer with the club over the matter. Of course all this is purely informal, but just at present a challenge would be most acceptable, and the matter has been carefully discussed between Lieut. Henn and the officers of the New York Y. C.

The famous "dimension clause" is the principal as well as the worst feature of the new deed, and although only three years ago it was considered by the committee of revision as a masterpiece, an opinion then shared by many yachtsmen as well as the daily press, it has since come in for general condemnation. There are a few to-day, but a very few, who still defend it, and oppose any alteration of the deed as it stands; but the great majority are only too ready to hurry it over the side if any convenient pretext can be found for doing so.

In view of the definite statement of Lieut. Henn, that if this clause be removed a challenge will come at once, there is a general search for some means of remedying the blunder which ensued from the hasty and secret methods by which the new deed was made to replace the old. The long neglected "mutual agreement" clause has been brought out and dusted off, and a vague scheme is proposed, by which the dimension clause may be "waived" by "mutual agreement."

Assuming that the new deed is legal, and that the New York Y. C. cannot and will not alter its provisions, it is not plain how any one of these provisions can be permanently nullified, without affecting the whole deed. The New York Y. C. has the power under the new deed to waive any demands, or to enter into a mutual agreement for one race; but it is absolutely powerless to make any agreement which shall be permanently binding on all future holders of the cup; or to exact from any future holder a guarantee that he in turn will give up any of the advantages secured to him by the new deed. The final clause of that noted document is a cash item, calling for covenants and instruments from a winner before the Cup will be delivered to him, in which he binds himself to observe all the provisions of the deed. It would look well, after the labor which has been expended in tying a matter of sport into the closest possible legal knot, to exact from a winner supplementary covenants binding him not to exercise certain of the privileges accorded him in the main document.

The New York Y. C. has now the power to offer the most liberal terms to a challenger for one race, waiving any or all of the conditions, but in the event of a victory on the part of the challenger it must turn the cup over to be held solely under the letter of the new deed of gift. Even now yachtsmen have begun to realize that the conditions of that admirable document will sound very different when read to them by a Scotch or British holder of the Cup; that there are two sides to the "dimensions" and "no time allowance" clauses, a fact which we pointed out three years since.

So far as an immediate race is concerned a British challenger would be granted almost anything he might ask and the New York Y. C. would no doubt readily enter into negotiations for a

mutual agreement. At the same time it is not yet prepared to throw over the new deed and, until it is compelled to do so by the continued absence of a challenge, there can be no hope for the permanent revival of races for the America's Cup upon a fair and satisfactory basis. No definite action can be taken over Lieut. Henn's proposition, but should he write to his friends that there is a probability of a challenge without other dimensions than waterline length, and with less than 10 months' notice being recognized by the club, one is likely to be forthcoming very soon.

NEW YACHTS.

WHILE there is a certain amount of activity in the smaller sizes, yacht building in the medium sizes and in the racing classes is by no means active, and comparatively few additions to the racing fleet are thus far promised. Mr. Burgess has the four 46-footers for Messrs. Belmont, C. Vanderbilt, Bayard Thayer and J. B. Turner, who has just sold Milicete; three 30-footers are also credited to him, in addition to a 60ft. schooner for A. C. Wheelright, of Boston, an 80ft. composite steam yacht and a 78ft. steamer for the L. S. & M. S. R. R. Mr. A. Cary Smith has been busy during the winter, but with little yacht work, his time being given to several commercial steamers. He has designed several open boats, one for Montreal. Mr. Gardner has spent a great deal of time over several designs for the new 25ft. corrected length racers, and in the one now building for Mr. C. W. Wetmore he has produced a design that is far ahead of Liris and Kathleen in beauty. This yacht, which is now building by Wood at City Island, will be about 25ft. l.w.l., 7ft. beam and 6ft. draft, a modern cutter of the usual type, but with far less power than Liris or Kathleen, and a very strong infusion of Fife in her model. The sheer is less crooked, especially aft, than in the older boats, while the after overhang is also reduced. The rake of sternpost and rise of keel are similar to Minerva and Yama, but a very novel feature has been introduced, which is likely to work an important change in boats of this type. The rig will probably be similar to that of the Southampton 2½-raters, a short pole mast, short bowsprit, lug mainsail and jib, the gear and rigging being simplified as far as possible.

Another sister boat of nearly the same dimensions, but a little wider, is building by Webber, at New Rochelle, for Mr. L. J. Boury, of the Atlantic Y. C. She will be rigged with pole mast, boom and gaff mainsail, and jib. Besides these boats, Mr. Gardner has a 30ft. cruiser under way for Mr. George Bullock, of Cincinnati; another of the same length for Mr. C. T. Lowndes, of Charleston, S. C., building by Wood; and three catboats, one of 27ft. for Mr. Louis Lorillard, of Newport; one of 22ft. 6in. for Mr. Otis, of Brooklyn, to be built by Wm. Force at Keyport; and one of 20ft. for Mr. F. W. Mecker, former owner of the fast open boat Chemamn. Mr. Gardner has also a new model for a keel 70 and has kept his designs up to date in the 90ft. class, in case of a challenge for the America Cup. In steam yachts he has turned out a shoal draft twin screw craft for Mr. Rutherford Stuyvesant, owner of Palmer, for use in Florida; a double-skin hull built by Wintringham. She is now awaiting her engines at Johnson's shops, in Harlem. Another steamer 65ft. l.w.l., for H. B. Cogswell, of Syracuse, will be commenced very soon, the design being completed.

The remote prospects of a challenge which have appeared with the advent of Lieut. Henn have served to set afloat numerous rumors of new 90-footers, one of the leading men credited with symptoms of the 90ft. fever being Mr. E. D. Morgan, who has lately turned his steam yacht Catarina to the underwriters in consequence of her damage in grounding on Matinnicock Point. Mr. Morgan is now yachtless as far as the 115ft. Constellation, the 40ft. Moccasin, the steam launch Daisy, two new Herreshoff cat yawls and various small craft; so he is likely to build something soon. Another candidate for 90ft. honors is R. S. Palmer, owner of Marguerite, schooners, who wishes to sell her and build a single-sticker of Gardner design. Still another is Mr. W. H. Langley, owner of the old Comet, schooner, who would have a model from Mr. Philip Ellsworth if he should build. There is now sufficient rivalry between New York and Boston to make it probable that in the event of a challenge New York would have two or three yachts in the trial races, while Boston would not be left out entirely, but would build again, in addition to Volunteer.

Thus far New York has shown no ambition to own any 46ft. yachts, though rumor has credited one to Admiral C. H. Tweed, of the Corinthian Y. C., to be built by Mr. Fife and sailed by Capt. John Barr.

At Wintringham's work is progressing on the 30ft. cruising cutter designed by Mr. Gielow, and the double-ender Harlequin has been hauled out for a new counter stern and a cutter rig. At Piepgrass's but little is doing. Liris is being fitted with a wheel and cockpit, and will be used solely for cruising next year. In steam yachts three are under way from designs by Mr. J. Beavor Webb, one of 225ft., one of 180ft. and one of 70ft., the two larger being built by Neafie & Levey, Philadelphia. Mr. Burgess has also an order for an 80ft. composite steam yacht for Mr. C. O'D. Iselin, to be built by Lawley.

THE RIGHT OF WAY AT MARKBOATS.

Editor Forest and Stream:

Permit me to enter into the very interesting discussion of the markboat question in your paper of Dec. 18 and Jan. 1. As the race in question was between boats belonging to the Seawanhaka Corinthian Y. C. the question appears to me to be defining the meaning of Art. XXXIV., Sec. 13 of the S. C. Y. C. rules, which reads: "If an overlap exists between two yachts when both of them, without tacking, are about to pass a mark on the required side, then the outside yacht must give the inside yacht room to pass clear of the mark." Does Sec. 13 mean, when the inside yacht B is abreast of the mark or when she is drawing up near it just before being abreast of it? I should take the section to mean, that if any part of the hull or spars of the inside yacht B were overlapping the markboat, then B would have a perfect right to luff, in order to clear the markboat and compel A to luff also, that B might have room to round without fouling the markboat or fouling A, this being a rule which is recognized in all yacht races. But supposing that any part of the hull or spars of B do not overlap to windward of the markboat, which is the case as I understand it (as A allows that B could have luffed around if A had also luffed), therefore B had no right to luff.

Take for comparison A and B a mile away and heading for the markboat, the same rule would follow that should in this case; both were heading for the markboat on the same tack, neither one had reached it, A to windward with B overlapping A, but to leeward, and so near that there was not room for B to luff without fouling A. According to marine laws, if B wished to luff to windward more she could do so only by standing on far enough ahead (if she was the faster boat) of A, so that she could luff out to windward, or if A was the faster of the two, by letting A reach far enough ahead so that B could luff up astern of A.

According to the position of the two boats, and as they have neither one reached the markboat, although very close to it undoubtedly, yet B has no right to luff and foul A. A has the right to hold her course, while B must wear around and let A get clear of her before proceeding to round the markboat. Section 12 of the same rule strikes the point, when it says, "When two yachts, both closehauled on the same tack, are converging by reason of the leeward yacht holding a better wind, and neither can claim the rights of a yacht overtaken, then the yacht to leeward shall keep clear."

Section 12 covers the whole thing in a nutshell. As the two yachts have not reached the markboat the leeward yacht, B, is bound to keep clear of the windward one, A, and must not foul her, no matter how they are sailing, whether one yacht is sailing faster than the other, or whether they are closehauled or running free, as long as they are on the same tack B cannot luff so as to foul A unless part of the hull or spars of B are abreast of the markboat. OSBORNE.

BOSTON, Jan. 2.

[In Sec. 13, as quoted above by our correspondent, the words are "about to pass," which are certainly not synonymous with "passing," and may fairly be taken to imply a prior condition to the actual passing by the mark. The case of the two boats a mile from the mark is not supposable, as they cannot be considered 'about to pass" when they will not complete the passing for five or ten minutes. A boat may be said to be "passing" a mark when the mark bears at right angles from any part of her hull and equipment, and similarly she is "about to pass" when she is so close to the mark that her helmsman must take some immediate measures to avoid fouling the mark or other yachts. Our correspondent assumes that neither boat has actually reached the mark, but the question is the same in a case where A, the leading boat, is abreast the mark, though B is not. Racing rules may be divided into two classes, the general rules which cover sailing in the open, without regard to marks or obstructions, such as meeting on opposite tacks, overtaking, etc.; the other class of special rules, if we may term them so, cover all cases of obstructions to sea room, rounding and passing marks, and starting and finishing races. In some cases these special rules take the place for the time being of the general rule, as in Sec. 15, when two yachts are approaching a shore or shoal, which plainly takes the place, for the time being, of sections 12 and 6. Under both of these sections, A, supposing her to be the windward and at the same time the overtaken leading yacht, has a number of privileges secured to her, but at the same time she has no right to force B aground. As long as there is ample sea room she is secure in certain rights, and has the advantage in every way; but as soon as the two are in proximity to, and not necessarily abreast of or passing, an obstruction to sea room, all of A's rights disappear, she must give way to B, even though by so doing she loses a "racing advantage." We are aware that the rules make a wide distinction between a mark of the course and an obstruction to sea room, but we claim that Sec. 13 acts as Sec. 15, to suspend for the time Sections 6-12, etc.; and further that the operation of Sec. 13, like Sec. 15, begins before the leeward yacht is actually abreast of the mark. As the subject seems to have created a lively interest, we hope to hear further from both sides.]

QUAKER CITY Y. C.—This active club has lately made a most important move in the purchase of the fine property of the Tinicum Fishing Club on Darby Creek at its junction with the Delaware River. The location is within twenty minutes' ride by rail from the center of the city, being about ten miles down the Delaware; while the club house is but three minutes' walk from the station. The land has a frontage of 600ft. on Darby Creek and 2,800ft. on the Delaware, making twenty-eight acres in all, with an excellent harbor. There is on the ground a club house, kitchen, barns, etc.; but these as well as the harbor will be improved and added to until the club has one of the finest stations in the country. An effort is now being made to unite all the yachtsmen of Philadelphia in the club, and in accordance with this idea an application has been made to the courts for permission to change the name to Philadelphia Y. C.

MASSACHUSETTS Y. C.—On Jan. 2 the annual meeting was held, the following officers being elected: Com., John C. Soley, sch. Diana; Vice-Com., Wm. T. Lambert, sl. Action; Rear Com., W. G. Titcomb, st. Edgewater; Sec'y, Wm. B. McClellan; Treas, Arthur L. Jacobs; Meas., Hartford Davenport; Ass't Meas., Charles H. Dodd. Directors, the commodore, *ex-officio*, Henry W. Savage, Charles H. Nute, Erastus Willard and L. Stewart Jordan. Race Committee, Louis M. Clark, Wm. O. Gay, Wm. T. Mann, Harry B. Torrey and C. Humphrey Guild. Committee on Admission, E. H. R. Revere, Jesse S. Wiley, Frederic Gray, Stephen H. Bennett, Charles L. Perrin, E. L. Dillingham and Henry B. Callender. House Committee, Arthur J. Clark, Francis Gray, W. S. Crosby, Payson T. Lowell and Charles L. Haskell.

CORINTHIAN Y. C. OF MARBLEHEAD.—This active and prosperous young club has completed arrangements for important additions to its new house on Marblehead Neck. Under the direction of Mr. Zerrahn, the original architect, an addition 26ft. 6in.× 28ft. will be made on the northeast end, making the front 86ft. in all. The interior arrangements will be altered so as to give a large parlor on the first floor, with a dining-room above, the third floor being used for a kitchen and servants' quarters. A laundry, elevator and other improvements will also be added. It is proposed to furnish good plain meals at as low a cost as practicable. A club and club house on the plan of the Corinthian, but situated on Long Island Sound within an hour of New York, is one of the imperative needs of local yachting. A well-managed club with moderate charges and plenty of racing would attract a very large and important class of the younger yachtsmen about New York.

PAVONIA Y. C.—The annual dinner was held on Jan. 1 at the club house, Communipaw, N. J. The officers for 1891 are: Com., D. W. Kohn; Vice-Com., W. A. Smith; Fleet Captain, Otto Rau; Meas., Wm. Chester; Treas., L. Mittlesdorf; Fin. Sec., B. H. McClain; Cor. Sec., F. H. Whitney; Fleet Surgeon, J. H. Van Mater.

A CHANCE TO GET A STEAM LAUNCH.—The Davis Boat and Oar Co., of Detroit, have offered a handsome steam launch, 18ft. 6in. long, 3ft. beam, ready to run, to the one of their cash customers who guesses nearest to the weight of the launch prior to July 1, 1891.

STELLA.—The compromise centerboard Stella, designed by Mr. A. Cary Smith and built by H. Bernard, of Amsterdam, Holland, is illustrated in the *Wassersport* of Dec. 18.

HULL Y. C.—The annual dinner of the Hull Y. C. was held at Young's Hotel on Jan. 3, a large number being present.

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

Officers:

VICE-COM.: C.V.Winne, Albany, N.Y.
REAR-COM.: T. P. Gaddis, Dayton, O.
PURSER: Howard Brown, Albany, NY
EX. COM.: J. K. Bakewell and H. M. Stewart.

NORTHERN DIVISION.

Officers:

VICE-COM.: W. H. Cotton, Kingston.
REAR-COM.: J. C. Edwards, Lindsay.
PURSER:
EX. COM.: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION.

Officers:

VICE-COM.: J. W. Cartwright, Jr.
REAR-COM.: G. L. Parmele, Hartford.
PURSER: R. Appleonio, Winchester.
EX. COM.: Paul Butler, E. S. Towne and Sidney Bishop.

ATLANTIC DIVISION.

Officers:

VICE-COM.: I. V. Dorland, Arlington
REAR-COM: E. D. Anderson, Trenton
PURSER: Rich'd Hobart, Newark, N.J.
EX. COM.: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

AUGUST.

6-27. A. C. A. Meet, Lake Champlain.

THE A. C. A. MEET OF 1890.—VI.

IT would be foolish to conclude that canoe designing has reached a degree of perfection where further progress is impossible, but at the same time it is a fact most plainly evident at the meets of 1889 and 1890 that practically no advance has been made in either year over 1888. In that year at Lake George the two notable canoes were Eclipse and Fly, both new and both superior in model and construction to the previous work of their respective designers and builders. In each of the following years, though many new canoes were present, there were none that in either model or build showed any marked advance over these two typical boats. This year the racing fleet of Captain Ruggles was one of the features of the meet, including some of the finest specimens of canoe building yet produced. Uno and Beta having raced through the whole season were pretty well known before the meet and also attracted considerable attention by their performance. Their sister canoes, Seabright, Teaser and Truant, were of a little later build, and though all less prominent in the year's racing they were in build even superior to the two first mentioned. All of these boats, with others, such as Wraith, are but refinements of the Eclipse model, being lengthened to the full 16ft. in place of 15ft. 8in. and altered in details, but with no radical change from the original Eclipse. The construction is also the same, save that continued experiment and practice has brought some minor improvement in this feature as well as the design. The work on Seabright, Truant, and especially Teaser, is very fine and in keeping with the modelling. The latter boat is the lightest of the lot, about 60lbs. for the hull and board. The construction we have described before, strakes of white cedar, in some cases of the beautiful California variety, with square seams caulked with lampwick; timbers about 6in. apart and no inside batten. The decks are mostly of mahogany.

The Vesper boats also showed an improvement in details, but no marked advance on the old Fly. Mr. Butler sailed the Wasp, Dr. Gage the Owl, Mr. Gray the Fly, Mr. Taylor, the Vesper novice, the Drift, all substantially the same in model. The only new boat was Ellida No. 2, owned by Mr. Brazer, also built by Mr. W. F. Stevens, of Lowell, but of a different model from the older Vesper canoes. The midship section shows a decided deadrise and a strong bilge, in place of the easy round from keel to gunwale of the others; the bow is moderately sharp, the two ends well balanced, and all lines are fair and easy. The boat looks to be the equal of the older ones, but her owner brought her to camp without previous trial and was unable to do justice to her in the races. With proper working up she should show good speed. Nearly all of these canoes now have the crowned deck devised by Mr. Butler, the coaming being very low, caused by the deck from a short distance outside the coaming being turned up quite quickly, thus adding to the buoyancy when the canoe is on her beam ends. The decks are mostly of a white wood, which, though cooler than mahogany, makes a curious contrast to the high sides of dark Spanish cedar, giving altogether a bulky appearance to the boats.

The construction has also been described in detail in the FOREST AND STREAM; planking of Spanish cedar about ⅛in. thick, in three wide strakes to each side. The ribs are about ⅝×⅜in., spaced 6in., with a small batten on the inside of each seam. A peculiarity of these boats is the lightness of the planking and the small size of every part, but the builder has brought into play his experience in shell boat work, and the hull is strenghtened by light braces from keel to deck, very small but each proportioned to the strain it must bear. To the casual observer the boats appear light and fragile in build when it is considered that they are subjected to a very severe strain with a heavy man on a long sliding seat and a rig of 150ft. or more; but experience has proved that they are amply strong enough for the hard work of match sailing, while some have stood a deal of careless usage without damage. Of course no one would select this build and material for beaching and rough cruising, and at such work the light planking would probably soon be worn through or badly torn; but for ordinary sailing use the boats not only have a surface that is unequaled, but they kept it and also their shape, the thin planking showing no signs of warping.

While Fly and her fellows have held their own well for three years against all new comers it is evident that Mr. Butler is by no means satisfied to rest where he now is, and this fall he has started in on a new line with a very different model. The round section of the old boats has been replaced by deadrise and bilge, the bow has been greatly lengthened and the run shortened and filled out, the whole model being new. The boat has been tried late in the fall and with good success against the old fleet, but it is too soon to say whether she will ultimately lead to an abandonment of the old model. In most of the Vesper canoes the well has assumed the rudimentary barh tub form, not so extreme as some at the meet, but still of small size, completely stayed in and with a large centerboard and trunk down the center, so that it is useless for all purposes, save a place for the feet in sailing. In some cases there is room for a man to sit if the deck seat be removed, but practically the well has become purely subsidiary to the racing.

A notice of the Vesper canoes would not be complete without some allusion to the old Blanche, Mr. Butler's first canoe, in which he entered the A. C. A. races in 1886. She is a lapstrake craft, built by Stevens, and is 15ft. long by 31in. beam, quite antiquated in model, dimensions and build compared with the present racing craft. This year she was sailed by Mr. R. S. Goddard, and sailed so well as to merit special mention. Though not on the list of prize winners, Mr. Goddard handled this old canoe in a way that kept him ahead of many of the new cracks, and his work, including the skillful manner in which he carried a large rig, and the quickness with which he recovered from a capsize, shows him to be one of the best all-around sailors in the Association. It is impossible to notice in detail the work of the many who entered in the races, there were too many good sailors and paddlers, and it would be hard to give a just estimate of their merits; but in passing we must notice the excellent sailing of the Vesper novice, Mr. Taylor, the very graceful paddling of Mr. Harry MacKendrick, the skillful balancing of Messrs. Schieffelin and Will MacKendrick in sailing their canoes while standing erect on the sliding seat, and the pluck and muscle of Mr. Knappe, who entered the trophy paddling race in a heavy sailing canoe against a fleet of 40lbs. paddling racers, finishing fourth at the end of the mile race.

One of the Canadian sailing canoes, Canuck, has been very fully described in the FOREST AND STREAM, and needs no further mention; but this year was a sort of "double first" for Canada, and in addition to the sailing trophy and the paddling trophy, she laid hands on a goodly lot of sailing and other prizes. The sailing of Mr. Jones and the paddling of the whole MacKendrick family were the principal factors in this prize winning, but at the same time the two MacKendricks, Will and Harry, helped it in their sailing canoes. The former was second on the record, second in the combined race, fourth in the Pecowsic cup race and first in the sailing upset. Mr. Harry MacKendrick was third on the record, fifth in the open paddling, fourth in the combined and first in the trophy paddling. Both used for the sailing 16×30 canoes, built by Mr. Wm. English, of Peterboro; boats of very good model, but not equal in lightness and finish to the Ruggles or Stevens craft. Strongly and rather heavily built, with large wells and heavy fittings, they were cruising rather than racing craft, and suffered a handicap in consequence when matched against the other racers. The masts were very large and heavy, 3½in. at the deck, and square at that. Neither boat showed the care in fitting and preparing that was evident in Wasp and Canuck.

This year the St. Lawrence River Skiff, Canoe and Steam Launch Company was represented by a fleet of new canoes, mostly hailing from the Passaic River, and all of them built as general purpose canoes rather than for match sailing. At the same time one, Passaic, of the firm's new "Ahdeek" model, in the skillful hands of Mr. Geo. F. Douglas won the record prize, with third place in the combined, sixth in the unlimited sailing, second in the tandem paddling and second in the Shimcocock cup paddling. Passaic is a smooth built canoe, with strakes about 5in. wide and a square seam without an inside batten. She is strongly built, being intended for general use, and in design as well as construction is a cruiser rather than a racer. Her fitting are so arranged as to give good room for the crew and also for stowage. The other two canoes, Bat and Meda, were built from a design by Mr. W. P. Stephens, which we hope soon to publish, while a third, Idlemere, was from the same moulds but with 1½in. depth added, giving more internal room, as she was built solely for cruising about Long Island Sound. These canoes are powerful craft, with a moderate deadrise and a strong bilge, while they have sufficient displacement to carry a heavy cruising load. Meda did not race, and Bat, through lack of preparation, made a poor showing at the meet, but throughout the season these boats and Passaic have done sufficiently well to prove the practicability of the general purpose canoe as a boat for general use and at the same time fast enough for ordinary match sailing in the club races and such special races as may be made for the new class at the meets. The two, Bat and Meda, were very ingeniously arranged, the board being well forward in each, the well being quite long enough for sleeping or an extra passenger, but with a hatch over the after part when used for one. In racing, a shifting mast tube was used, fitting across the well at the fore end of this hatch in a movable beam, so that a large mizen could be carried; but in cruising or ordinary sailing a smaller mizen was used.

Of the New York C. C. canoes Mr. Vaux had a very nice looking smooth skin Everson boat, an improvement on his older Bo-Peep and Atom. Mr. Nadal had a copy of the Lieda built by MacWhirter, a smooth skin ribband-carvel, while Mr. Howard had a boat of the same build from a modification by himself of the design of the Bat. This canoe, built specially for racing, had a cockpit as small as one can be made, with the board, a very large one, just in the center of the canoe. The board was fitted to drop from both ends, and was so arranged that it could not be raised after the sliding seat was in place. In making a landing it was necessary to first remove the sliding seat while in deep water, then to lift out the board and drop it overboard, when the canoe could be beached; the owner afterward wading out and fishing up the board. By this simple and ingenious arrangement the board could be placed exactly where it was needed for sailing, and at the same time there was no room for water in the boat in case of a capsize.

Of the two Joyner boats at the meet, one was fitted with a still more extreme cockpit than Toltec's, an ordinary tin footbath was fixed in the center of the canoe, giving room for the feet, there being no place for the canoeist save on deck. This canoe, the Imp, was of a peculiar model, with very fine ends, and fitted with a huge rig. Owing to her owner's illness during the meet she was, unfortunately, not raced. The other Joyner canoe, Dimple No. 4, was owned by Mr. Forrest, and was a great departure from his previous boats in model. The hull was handsomely built of Spanish cedar, in 2in. strakes, its chief peculiarity being a perfectly square forefoot, a right angle, the stem being lined away so much that the angle had to be made of sheet brass. The boat was fitted with a small well, but with bulkheads and two large compartments with circular metal-edged hatches in the decks, so that the well could be changed into a larger one if it was desired at any time to convert her into a cruising boat. To do this it would be necessary to remove the present trunk, as it was so located

that the board came abaft the body of the canoeist as he sat on deck. The appearance of the boat in the paddling race was very peculiar, the canoe having a large board projecting upward immediately behind the canoeist.

The new paddling trophy, with the 40lb. limit of weight, brought out several special racing canoes this year, the best of the lot, from all appearances, being the one in which the trophy was won. Three out of the eight starters in the trophy race used the ordinary decked canoe, but the remaining five were equipped with purely paddling canoes. Mr. MacKendrick's canoe was designed and built by Mr. Wm. English, the well-known builder of the open Canadian canoes; but she differed in model from the latter, being sharper in her waterlines and with less of a round, spoon-shaped bottom. The stem and stern were nearly plumb, while the quick sheer of the Canadian canoe was entirely missing, the sheer being fair and easy from stem to stern. The planking was light, ribband carvel with ribs close together. About one-third of the boat at each end was decked with oiled linen, leaving a well 5 to 6ft. long, crossed by one thwart, for paddling in the usual single-blade posture, on both knees. In racing, however, Mr. MacKendrick knelt on but one knee, the other leg and foot being thrown forward, a very graceful position, and one that gave a long sweep. In spite of the light weight the material was so placed as to make a very serviceable boat for ordinary paddling, and, of course, for racing.

Two of the Canadians, Messrs. Carnegie and Tilley, who were first and second respectively in the unlimited paddling, and third and second to Mr. MacKendrick in the trophy race, used canoes of the ordinary open Canadian model, undecked, but of light build, very nice looking boats, but not up to the model of the winner. The fourth Canadian, Mr. Levs, had a specially built paddling boat, but of such light construction that the waterline was discernible on the inside through the thin planking, while in order to bring up the weight to the 40lb. limit, very thick and heavy ash floor boards were necessary. This method of saving weight was hardly a success, the hull being too light to stand any great amount of racing or even ordinary paddling for pleasure or practice.

The only special racing canoe of American build was that paddled by Mr. Perry, a handsomely built Spanish cedar craft by Blakie, the noted shell boat builder of Boston. In this, his first venture in canoe building we believe, the builder has followed to a certain extent the old Rob Roy, and the shape is not one that promises great speed in racing. The workmanship is neat and well finished, as might be expected from a skillful shell boat builder, but the boat showed a very marked bunch amidships. She was decked completely, with the small oval well of the Rob Roy, the deck being of thin Spanish cedar.

As far as the paddling trophy and the races at the meets are concerned, the new 40lb. limit for paddling canoes seems entirely satisfactory, as a very fast and yet sufficiently strong and serviceable canoe can be built under it, a boat at once light under paddle and yet strong enough for racing, training and ordinary practice paddling. At the same time, this class of special racing canoe is not likely to appear in sufficient numbers in local and club races and at the Division meets to make a successful and well-filled class. In races of this kind the most of the paddling is done in the ordinary open Canadian canoe, such as was described in the FOREST AND STREAM of Dec. 4. These boats, with many other good qualities, are fast enough under paddle to make excellent racing, and they are found in large numbers not only at every Canadian regatta, but at many in the States. They are used by men who would readily enter them in a race, but who would not build a special 40lb racer. These canoes weigh from 50 to 65lbs., and even when in ordinarily good condition are no match for the special racer with a polished racing bottom. While, as we said, the racers are not likely to turn up in large numbers at the smaller regattas, at the same time they may, if present, claim the right to start in any race held under A. C. A. rules; and the presence of but one such boat would keep out the usual service canoes. The matter can perhaps be remedied by the committees making classes for canoes of 40lbs. and under, and for all over 40lbs., but some measure of this kind is very much needed if the canoes which have raced so much in the past are to be still retained in the racing.

Taking all things together, the fleet has improved in finish and preparation more than in model, build or fittings; the best of the new boats were little or no better than some that have been seen before, but there was a very large number of boats finely finished and well prepared for the racing, a point which we have frequently criticised in the past. Light construction has come in canoes as in yachts, and within reasonable limits is a good thing, but many of the canoes at the Meet were obviously not strong enough to carry a heavy man on a sliding seat. The hulls as a rule have been built without regard to the seat, in many cases the canoeist did not use a sliding seat when he ordered his boat, and when he adopted the new invention, placing it in the weakest part of the whole boat, and probably using seat and boat much more severely than a man who is thoroughly familiar with the slider, the result was soon apparent in split decks and sprung coamings, if not in more serious injury. We noticed one boat in which the side knee, placed to support a part of the strain of the seat, had forced a plank off from the turn of the bilge and signs of similar strains were evident in other boats. It is clearly evident that if the long sliding seat and large sail plan are to go on a light canoe the hull must be constructed first of all to carry the seat, other structural requirements being subordinate to this prime one. This need not be difficult, but it will require a little care on the part of the builder in bracing the center of the boat. The bathtub well offers an easy method of doing this, as the deck and the bottom are firmly tied together just where the seat crosses.

Of fitting there is little to be said this year, the parts of a racing canoe have been fined down to a few simple elements, hull proper, two sails, small well, quite or nearly closed, large plate board, drop rudder, deck tiller and two travelers. All of these details, such as boards and rudders, we have fully described within the past year or two, and there is nothing new to add to the list. The deck tiller, which is becoming of greater importance each year, is of two kinds, which may be truthfully classed as good and bad. The former is the straight thwartship tiller, the natural complement of the sliding seat, and like it, invented by Mr. Butler, and used on all the Vesper canoes. The latter is the jointed deck tiller, which has gradually come into use as men have seated themselves further out of the boat, and such as is now used on Canuck, shown in the FOREST AND STREAM of Oct. 16, and on the Ruggles boat.

The small thwartship deck yoke and short fore and aft tiller, first applied by Mr. Vaux to the old Dot nearly a dozen years ago, answered its purpose well for a long time, but as men learned to sit further out some means of reaching the tiller was necessary, and a second handle, jointed to the first, was added. This same gear has been used on the majority of canoes, even with the sliding seat, but it is defective in two points. It is so weak in construction as to be very easily broken, and also from its weakness and the fact that it swings freely it is of no aid to the man in regaining his position after hiking out. The thwartship tiller on the contrary, with its strong bar firmly fixed to the deck or mast-tube, within easy reach of the hand on either side, is little liable to damage and is a most important aid to the canoeist, offering him an additional means of support and enabling him to get aboard very quickly. The mishaps to the old tiller in the races at the meet probably settled its fate, and the new one will supplant it entirely wherever the sliding seat is used. Of the seat itself there is little to say in addition to Mr. Forrest's very full description published two weeks since. Many seats now in use are strong enough and work satisfactorily, and further improvements in details are likely to be made as more become interested in the subject.

THE "MAIL AND EXPRESS CANOEIST."—On Dec. 31 a reception was given at the office of the *Mail and Express* to the returned traveler who claims to have made a 6 000 mile canoe cruise. Although invitations were sent out to a large number of canoeists, we find the names of only three among the "scores of persons" who are reported as present. We have yet seen no detailed account of the waters traveled *in the canoe*. Although in all the accounts of this wonderful journey it was intimated that it was made entirely in the small canoe in which it was begun, it is plain that but a small part was made in the canoe, the main dependence being on canal boats, express trains, river steamers and large boats. The statement is made that "the entire distance by water from New York to Astoria is 6,280 miles, and all this can be navigated in a canoe with the exception of a single carry across the Rocky Mountains and a canyon at the mouth of the Pend d'Oreille River." At the same time it is admitted that this carry was not made, and after ascending the Missouri by steamer the canoe was transported over the mountains. Among other exploits, the "*Mail and Express* Canoeist" has discovered a new lake which is to bear his name, a still closer link between him and the renowned Glazier. The following is a list of prizes offered by the paper and those won by its canoeist: First—The greatest number of miles ever made in a canoe of record, $100. Second—The fastest recorded mile ever paddled in a canoe, $50. Third—Win any canoe race in which there shall be at least three entries, $50. Fourth—Make the first recorded "carry" on the necessary carry at the mouth of the Pend d'Oreille River, $50. Fifth—Cross the continent with the least amount of "carry" in miles ever known in the aggregate, $100. Sixth—Not lose a day's travel from sickness, $50. Seventh—For every scalp which he may be compelled to take to save his own life, $50. Eighth—For each unmapped water course he may discover and map, $10. Ninth—For any new bird he may discover, $10. Tenth—For any new kind of fish he may discover, $10. Eleventh—For any other kind of animal, $10. Of these Mr. Rappleye won the first, fourth, fifth, sixth and eighth, amounting to $310, and we think he is fairly entitled to the ninth for his discovery of a bird so foolish as to furnish the golden egg for his useless and ridiculous pleasure trip.

CRESCENT C. C.—This winter has been a hard one for canoe clubs; the Red Dragons have lost a new house by fire, the New York floating house was lately damaged to the extent of several hundred dollars by a heavy storm, the Rondout house was on fire last week, though little damage was done; and now the Crescent C. C. is the sufferer, its house at Greenville, N. J., on Newark Bay, having been burned on Jan. 4. The loss is partly covered by insurance and the house will be rebuilt by spring.

NORTHERN DIVISION.—Col. Cotton, vice-com., has notified Com. Lawson that Mr. Porteus has withdrawn his resignation and will serve as purser during the year.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

T. S., Charleston, W. Va.—We cannot undertake to say who has the best cocker spaniels. Consult our advertising columns.

W. H., Lebanon, Ind.—It would be invidious on our part to mention the name of any one breeder or to decide as to who has the best stock. You had better advertise for what you want.

W. W., Newark, N. J.—Would you please let me know through your paper how to get the rust off a gun? Ans. Rub with emery paste, made from 3 parts cosmoline or oil and 1 part emery. Then apply wire scratch brush, and wash clean with hot water.

U. T. R., Westerly, R. I.—Will you please let me know in the next paper, if the grizzly bears are as plentiful as they were thirty or forty years ago, and where is the best place to hunt them in the United States? Ans. Not as plentiful as formerly, but still to be found in many places in the main range of the Rocky Mountains. Central Wyoming and southern Montana are good localities.

W. E. N., Salem, Mass.—Can you kindly inform me, through the columns of your paper, as to the proper markings of a fox-terrier, and oblige. Ans. White should predominate. Brindle, fallow, liver or red markings are objectionable. A fox-terrier with a black and tan marked head and ears, and a black spot or two on the body is the one most sought after, though many good dogs are almost or quite pure white.

S. T., Philadelphia.—In looking in your paper this morning for my answer, I saw the Pennsylvania deer season closed last Monday. This is not exactly what I wanted. I know the season; but what I wanted was, where are deer the most plentiful within 200 miles or so of Philadelphia, and can you shoot them in that State next season? Ans. We would advise you to try the Pike county hunting grounds, starting out from Milford.

RICE LAKE, Ottawa.—What do you consider the best way of removing lead from the interior of gun barrels? Do you think that metal polishes, such as Putz-pomade, etc., would injure the interior of barrels if applied for the above purpose? I have found Putz-pomade to answer in a manner, though in a very indifferent manner. Ans. 1 Warm the barrels slightly and anoint with mercurial ointment; this will form an amalgam with the lead. Then wipe out clean. 2. We know nothing of Putz-pomade.

J. A. C., Oil City, Pa.—In looking over the *Book of the Game Laws* for our State we find that deer can be killed from the first day of October to the fifteenth day of December next following; and then it says no person shall have in his or her possession any venison, save only from the first day of October to the thirtieth day of November next following. Is it not a mistake? Ans. The law reads as it is given in the *Book of the Game Laws*. There is certainly a blunder in the statute, but this is in the original.

G. B. F., Brooklyn, N. Y.—I am the owner of a pointer puppy, and I write you asking if you would kindly let me know what he is worth, as I had some offers for him. He is 8mos. old and very fine proportioned, liver and white, very quick at learning and never forgets a lesson. He is very healthy and never had a disease in his life. 2. Will you kindly let me know how much it costs to have a dog broken for quail? Ans. You ask a rather difficult question; so much depends on breeding. If well bred, by and out of known dogs, he ought to be worth from $35 to $50. 2. From $100 to $150.

W. H. GORDON, Ellenburgh, N. Y.—It seems to me that it is within the province of your best of all sporting newspapers that the uninformed may ask the advice of those who know. I am going to buy a bird dog to hunt woodcock and partridge. Am not a wing shot. I don't want to hunt just for killing them, but when I go would like to know somewhere near where a bird is. Our cover is brush and heavy timber, and there are plenty of grouse, but they go up with a roar that scares a fellow out of his boots, right from under his feet. I was out the other day and stopped to light my pipe; had just lit a match when with a roar and a rush of wings a big grouse got up from under my feet, flew over my head and away. What breed is best, pointer or spaniel? In accordance with your advice will buy a pup, a book on training, and have a bird dog. Ans. For heavy cover you will find a Clumber very useful. Between a pointer and a setter it is a mere matter of opinion. A setter would perhaps suit your work better.

AHMEEK, Buffalo, N. Y.—Not being a good rifle shot, and near-sightedness with the resulting eye-glasses further embarrassing me, I put Lyman sights on my Winchester .45-90 300 last fall, and found a great improvement in my shooting at once. But the thorn in this rose is the large black eye given me by the rear sight about four times out of five. The recoil of the piece is considerable, and although the folding sight is as far up on the neck of the stock as it can be and not be struck by the breech-bolt, it still manages to rap me hard enough to enlarge my right optic, besides keeping me constantly in fear of having my glasses broken and the eye put out. If it were not so constructed as to allow of its folding partly forward I could not use it at all. With plenty of time to aim, and using the larger circle, I can avoid getting hurt, but if I throw the gun up hastily I involuntarily place my eye close to the sight, and then there is trouble. Ans. You may find benefit by changing this model, which has a short stock, for another model which has a longer stock.

TARPON FISHING.

Anglers contemplating a trip to Florida this coming season will find it to their advantage to inspect our celebrated

Tarpon Rods, Reels and Lines.

The largest tarpon (184 lbs.) ever killed on a rod and reel was taken with one of our Nolbwood Tarpon Rods. They are pronouuced **"PERFECT"** by all who have used them.

OUR NEW **SOFT LINEN TARPON SNELL** IS THE BEST.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Killdeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
DAVIES & CO., 1 Finch Lane, Cornhill.

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms

EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

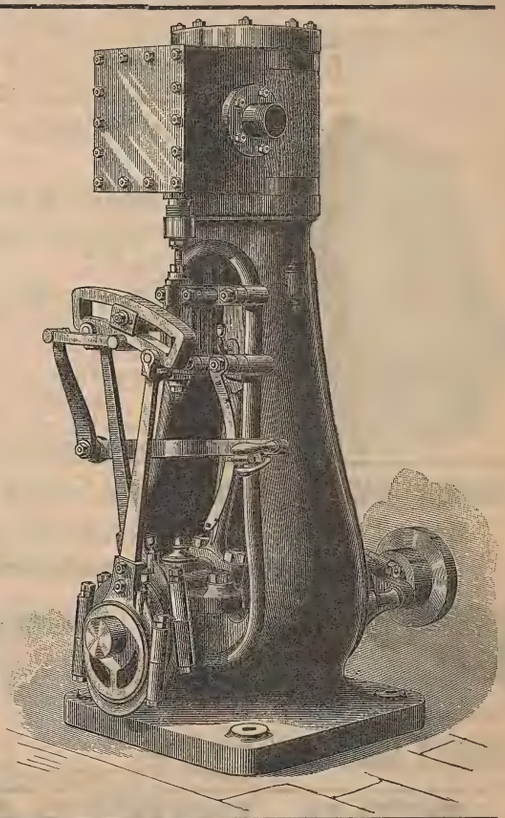
Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest improvements——Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel,** carefully inspected for workmanship and stock, and GUARANTEED. Do not be deceived by IMITATIONS largely manufactured of **malleable cast iron,** and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

SMITH & WESSON,

SPRINGFIELD, MASS.



Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

Theory of the Steam Engine, Boiler Efficiency, Boiler Mountings, The Engine and its Parts, The Screw, Laws Applicable to Steam Yachts, Extracts from Lloyd's Rules, Racing Steam Yachts, Management and Care of Machinery, Principal Types of Yacht Machinery, The Design of Hulls, Addenda; Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

FOREST & STREAM PUB. CO, 40 Park Row, New York.

The Spaniel and its Training.

By F. H. F. MERCER.

A complete manual of the care, management and training of the Spaniel by a practical sportsman and an enthusiast on this breed. The volume is illustrated by admirable portraits of all the more important breeds of spaniels, and contains the standards adopted by the English and American Spaniel Clubs. The work is highly praised by the sporting press generally, and is indispensable to every owner.

PRICE, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

DAVIES & CO., London, England.

Audubon Bird Portraits.

Twenty-three of the famous plates by J. J. Audubon, reproduced by the half-tone process, carefully printed on fine paper, size of plate 10 by 6½ inches, are contained in the *Audubon Magazine*, the full set of 23 numbers will be sent postpaid on receipt of $1. There are but a few complete sets left. The subjects are as follows: Baltimore Oriole and nest. Chimney Swift. Great Auk. Cedar Bird. Purple Martin. Golden-Winged Woodpecker. Wood Thrush. Spotted Sandpiper. Brown Thrasher. Nighthawk. Cliff Swallow. European Magpie. European Coot. Tufted Titmouse. Kingbird. Fish-Tailed Flycatcher. Towhee Bunting. Pileated Woodpecker. Crow. Black and White Warbler. Night Heron. Mocking Bird. Rusty Grackle. Green Wodpecker. Hermit Thrush.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 15, 1891.

VOL. XXXV.—No. 26. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

AN EXTRAORDINARY DECISION.

A DECISION has just been rendered by the Supreme Court of Pennsylvania, which is a surprise to all who are familiar with game legislation and previous rulings of the courts. The Pennsylvania law, act of June 3, 1878, as amended April 25, 1889, prescribes: "No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any quail or Virginia partridge, between the fifteenth day of December in any year and the first day of November next following, under a penalty of ten dollars for each bird so killed, exposed for sale or had in possession."

This has been held to mean that no quail could lawfully be had in possession in the prohibited period without regard to whether the birds have been killed in the State or without. Under this law, in the Allegheny county case of the Commonwealth against Wilkinson, for having quail in his possession and offering them for sale out of season, the defendant was found guilty, the jury, however, finding in a special verdict that the quail which had been offered for sale had been killed in another State and at a time when it was lawful to kill them. The case was carried to the Supreme Court, and it has just delivered an opinion reversing the finding of the lower court, on the ground that the law applies only to game killed within the State. The Chief Justice says: "The law was not intended to have any extra territorial effect, or, if it was, it would be nugatory. After prohibiting the killing of quail the act further provides 'or have in his or her possession after the same has been killed.' The word 'same' clearly refers to the antecedent game, the killing of which is already prohibited. The meaning of the act, as we view it, is that no quail shall be killed in this State between the dates specified. The construction claimed for the act by the Commonwealth would render any one a criminal who lawfully killed game in another State and brought it with him for his own use."

The intent of the Legislature was unquestionably to prohibit the entire sale of quail in the close season, whether the game was killed in Pennsylvania or elsewhere. The wording of the statute is similar to the texts of the laws of other States, where it has uniformly been held that sale is absolutely prohibited without regard to the source of supply. As a matter of fact, this decision is, we believe, quite novel in its contention that a State law cannot apply to game removed from beyond its territorial limits. Game laws would not be effective if a close season did not mean close for all game, wherever it comes from.

Just as we go to press we are in receipt of the following from the Duquesne Kennel Club, of Pittsburgh:

At a meeting of the Duquesne Kennel Club, Monday, the 12th inst., the following resolutions were unanimously adopted:

Whereas, Under the decision of the Supreme Court, in the case of The Commonwealth vs. Wilkinson, the existing laws are declared to prohibit only the possession and sale of game killed within this State; and

Whereas, It is believed that it was the intention and purpose of the promoter of the passage of said acts to absolutely prevent the killing of game in this State within the time specified; and

Whereas, The construction of said acts permitting the possession and sale of game shipped from other States gives such opportunity for evasion as to render said State acts futile; it is

Resolved, That the Duquesne Kennel Club use every honorable means in their power to procure the passage of such laws as will fully protect all game within this State.

A special resolution was unanimously passed by the club commending John W. Hague, Esq., for his zeal and efficacy in enforcing the game laws.

S. L. BOGGS, Pres. D.K.C.
W. E. LITTELL, Sec'y D.K.C.

ANOTHER TRAP-SHOOTING STIMULATOR.

IT cannot be said that the American Shooting Association has done all that its projectors anticipated for it. This combination of manufacturers and dealers set out to stimulate the sport of trap-shooting by providing uniformity of rules, classification of shooters, and competent management of tournaments. While it has done a good work in classifying shooters according to their skill, and thus providing some chance for amateur shots to participate in tournaments and yet not sacrifice everything to the experts, the expenses of operation have been out of proportion to the benefits gained by the men who put up the money. We have had no formal notice that the association is dead, but the probabilities are that it will not be heard of in the future as a potent factor in trap-shooting interests.

A new scheme is being put through by Mr. Penrose of the Keystones. His plan is to form an association of manufacturers, dealers and others who may be interested, the association to guarantee certain sums to be distributed as prizes at semi-monthly tournaments, to provide a manager to conduct the tournaments, to assume the financial responsibility of the meetings, pocket the losses, or turn over any profits to the clubs for whose benefit the shoots are given. The operation of this plan will call for a less expenditure than was required under the American Association plan, and one thing in its favor is that local clubs will have a chance to make a profit out of their meetings—something they could not do under the other control.

SNAP SHOTS.

THE death of Captain Wallace and of Lieut. Casey of the army, both of whom were killed by Sioux not far from Pine Ridge, Dakota, will carry a feeling of sadness to the heart of every army officer and of the many friends of these two brave and good soldiers. It was our good fortune to have known them both intimately, and not since the Custer massacre have any deaths occurred in Indian fighting which appeared to us so melancholy. Both men were fine fellows and good soldiers. Each was just entering the summer of his life and had reached that point when they could do a man's best work, both had served long on the plains and were familiar with the ordinary dangers of Indian war.

Mr. Casey was appointed to the U. S. Military Academy in 1869, and after graduating went out on the plains where he saw almost continuous service for many years. He was a good scout and prairie man, his capabilities in this direction being testified to by many officers, Indians and scouts. About a year ago he undertook the task of organizing a company of Cheyenne scouts from those at the Tongue River Agency, and his energy, enthusiasm and knowledge of Indian character were such that he soon made this organization a body of well drilled, soldierly and hard working Indians. Last summer they cut and hauled logs for their own barracks, and built a set of comfortable quarters of which white men might have been proud. It is but a few months since we spent several days in the camp of Mr. Casey's scouts, and were deeply interested in the important work that he had accomplished.

We first knew Captain Wallace as a second lieutenant in the Seventh Cavalry in the year 1874, during the expedition to the Black Hills, then an unknown region. On this expedition he had charge of a large body of Indian scouts, which served with the troops, and he managed these men with good judgment. The death in 1876 of a large number of the officers of the Seventh Cavalry rendered his promotion more rapid than is usually the case in the army, and some years ago he attained his captaincy. No feature of these so-called Indian uprisings is more deplorable than the fact that men like Casey and Wallace must be sacrificed to the irresponsibility of Congress and the bad system of the Indian Department.

What should be the end of the Drew affair has now been reached. At their meeting last Thursday, the Commissioners dismissed that officer from the service for neglect of duty. We understand that the new fish and game protector for the Tenth District will be Edward Hawn, who as a deputy warden, in the employ of the Onondaga Anglers' Association of Syracuse, has made an excellent record. In our issue of Dec. 4 we quoted from the Syracuse *Times* a report of the work accomplished by the Onondaga Association in their fight against the illegal netters of Oneida Lake. From that report, as well as from letters we have received from Syracuse anglers, it is learned that to Mr. Hawn is chiefly due the credit for the success of the campaign. He is the man who has done most of the work; and with him in active service have been associated Deputies Crownheart and Shackleton. For what they have done Protector Drew had the credit, simply because he assumed it. There is reason to believe that the Commissioners have in the past been deceived with respect to Chief Protector Drew; they have been led by his official reports to believe that he was doing work in which, as a matter of fact, he had no active part. If there is any proof that Protector Drew ever put his hand to a net in Oneida Lake, or actually engaged in a raid on those waters, it would make reading only less interesting than Mr. John D. Collins's carefully concealed proof to sustain his recent charges against the Commissioners.

Capt. Healy, of the United States revenue cutter Bear, has proposed a game importation scheme for Alaska. The Esquimaux natives of the northwestern part of that Territory depend very largely upon the deer for their winter food; but the deer supply has been decreased to such an extent that the natives' supply of meat has been seriously affected. The project of Capt. Healy is this, that the Government shall import some of the tame reindeer of Siberia, which are there herded by "deer men," and shall put them out in regions of Alaska where the character of the country and the food conditions will be favorable. He also suggests bringing to Alaska some of the Siberian herders, to teach the Esquimaux how to care for the game. Such an undertaking might very well be put through at slight cost, and Capt. Healy's suggestions are worthy of careful consideration.

We are quite at a loss to understand why Jonathan Darling should attempt to deny that he was fined for deer hounding in Maine, as stated in the *Book of the Game Laws*, when the Maine Supreme Court records are against such a denial.

They have great wildfowl shooting on the northwest coast; and we have some interesting descriptions of days with the ducks and geese from the pen of a Washington contributor. The first one will be given next week.

We would be glad to have information about desirable shooting resorts in North Carolina and that part of the South, a section of country to which many gunners look for winter shooting.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal the name of that friend.

The Sportsman Tourist.

IN THE REGION ROUND NICATOWIS.

I.—IN TRANSITU.

WE ran away this fall. In fleeing the telegraph, the post-office, the door bells, and all our many masters, we experienced a sweet, if guilty satisfaction, which more than compensated the unpropitious skies that followed us, though it was not until we were safe at Nicatowis, where officers of the law no longer go, that we felt quite secure from pursuit and recall. And this is the chronicle of the trip.

We were my father, myself and "Jot;" the trip was up the Passadumkeag waters and to the Machias Lakes. Father was guide and head of the expedition; to Jot fell most of the hard work; I wrote the journal and did the admiring. It will be seen that Father and I, by effecting a combination, managed to secure the offices, mine indeed a sinecure, as became my abilities, but his *pro meritis;* for, though Jot knew a large part of the country, Father was easily chief by virtue of the six trips which he had made through it previous to this one—once in 1867, when he and Louis Ketchum came up the Machias and found their way across to and down the Passadumkeag without guide or guide book; twice with big Sebattis Mitchell, in 1873 and 1874, on the former occasion returning by the St. Croix and the sea, and so up the Penobscot; once with Alonzo Spearen, and twice with John Spearen, his brother, with whom he made the circuit by way of the Dobsies and Fourth Lake, Machias to Gassobeeis. In our lenten days on the West Branch last year, when it was uncertain after the kettle had been emptied what would fill it next, Father had told me of the flesh pots of Gassobeeis and Fourth Lake, and even then had planned the trip in expectation of plenty.

We got up at a preposterously early hour one Monday morning, perhaps to balance sitting up so late Saturday night, and took the early train from Bangor. At the Enfield station Gilman's express was waiting to haul us and our baggage in to Nicatowis, it being shorter, cheaper and easier to haul than it is to work up stream against the current and to carry past Grand and Nicatowis Falls. It was a superb day, dappled in the early morning and threatening rain, but coming out so fair and fine when once we are on our way that our spirits were light as the breeze. Such blackberries by the roadside, such little brooks—running away, too—hills so inspiring and hollows so delightful—nothing which we saw was passed by unappreciated. At Wakefield Corner a shoe must be reset, and while we waited we watched two fish hawks wheeling above the mill pond on the—Escutassis of the maps, Scootahzin of the people. At Burlington we stopped again, and I dimly remember—do not, in fact, remember, but know it must be true—that a ledge outcrops there which was of slate and shows glacial scratches; I distinctly remember that a gentleman came up, and after examining the canoe critically inquired whether it would hold a man if he didn't put a weight in the bottom. Beyond Burlington we crossed the Madagascal, a beautiful stream, "smart as lightning," Jot said. From the hilltops further on Spawnook Lake was revealed, with Passadumkeag Mountain rising behind it in wooded swells, no finer than as we see it from home lying along the northeast horizon like a long blue cloud, but still very satisfactory. Thence up hill and down and through pine barrens until the main road left us and we passed through the fences of Stickney, the last settler, into the woods road that leads to Nicatowis.

Crossing the Passadumkeag at Grand Falls, and keeping it on our left from this time forward, we came by noon to a little shanty in the midst of a large field. One man stays here to look out for the farm, which is kept up in order to raise supplies for the lumbermen. Here we got dinner, and in the afternoon hauled in to the head of Nicatowis Falls, about four miles beyond, over a road not without stones and stumps, but still good enough for light wagons. At the end of the carry past the falls the load was unpacked and sorted, and all provisions which we thought would not be needed before we returned to this place were hidden in the woods; for it is against father's principles to carry about any unnecessary impedimenta. Then, judging that there was not enough water for all three of us to go up in the canoe, Father and I walked through to the lake while Jot brought up the load.

One does not see much of a lake from the outlet, only a wooded, rocky shore on the right, and on the left a burned point overgrown with bracken and strewn with granite boulders. A few small islands shut off the outward view. At the left of the road by which we reached the lake are the outlet and its dam, newly rebuilt; and also a little house for the use of river drivers and others. The wing of the old dam still extends along the shore for several hundred feet, decayed, broken and growing up to alders, but not needed now that the low land behind has grown up to trees, so that there is no longer any danger of the lake cutting another outlet for itself.

We crossed the dam, which is just at the head of a pretty little rapid where the stream takes a whirl or two among mossy granites before settling quietly into the round pool below, just as Jot arrived with the canoe; and, the afternoon being now in the decline, prepared to camp at this place. Though it is true that in the woods one has all the room there is for camping, any one who knows nothing of this kind of a life, would be astonished to see how hard it sometimes is to find a smooth, dry place large enough to pitch even a small tent. In the present instance we were obliged to pitch ours just below the end of the dam and exactly in the middle of the carry, in an ill-smelling spot, but the best there was. While the others were making ready the tent and campwood, I took up my old occupation of making the bed; and, in the absence of boughs of any kind, cut a great bed of sweet-fern and buckhorn brakes, as the bracken is called here, which partially atoned for the ill savor of the place. Our housekeeping arrangements were soon completed. An empty box which we found near by was seized on as treasure and became our principal article of furniture. A few blueberries and one little trout, which were all the land and water afforded that night, were laid by toward the next day's needs; but as our home luncheon, though small, was no more likely to fail than the widow's meal and oil—why is it that "store food" always lasts so long in the woods?—no anxieties for the morrow disturbed our enjoyment of the night, no premonition warned us how we should yet be fed.

II.—NICATOWIS RAVENS.

It is not often that the event of the day transpires after the blankets have been tucked in. We certainly were all asleep and we must have waked at the same moment, though no one spoke immediately; for at the first word all had agreed that, though very faint, the noise we heard was an awkward bowman rapping his paddle against the gunwale at every stroke. It was most improbable that any one would be coming down the lake so late at night to camp in the dark or to walk out seven miles to the Gilman House, and we heard no voices; but when Jot turned out a little after the noise ceased, he found two men walking quietly along the shore end of the dam. They accepted his invitation and came down to the tent. One was stout and florid with a red, horseshoe moustache and a slouch hat—a very ruddy man. Ruddy was spokesman and sat on our box before the fire, his paddle in the hollow of his right arm as he lifted the tent with his left and peered inside to catechise the sleepy. The other, who was slender, brown, and evidently a woodsman, stood behind the fire leaning on his paddle as he talked with Jot. Conversation did not flow at first; we were sleepy and Ruddy seemed distraught. To find strangers encamped in that carry with no possible way of getting past except by the path between the tent and the fire was undeniably awkward. And they were going down stream that night, so they said. "When did we come and how?" So we told them how we hauled in with Gilman that day and how near we had been to coming with so-and-so, who was to be in at such a time. "I know that," said Ruddy, and straightway unbent a little. Then he volunteered the information that they had just come from the head of the lake. More questions from Ruddy, who seemed inquisitive. Thereat Father sat up and told all the news, as a good woodsman should; where this guide was and where that one, who were with them, of the party that had just gone in to Lonz's camp on Pistol, and all the matters on which he thought our visitors would be already informed; for three to one, a strange woodsman cares less to hear the news than to know who you are that tell these things and whether you tell truth.

"Were we going to Darling's?" No, we were not out for game. Ruddy froze at once, and evidently set us down as suspicious characters and possibly as wardens. Again he spoke of going down stream and that they must be going, but made no move himself. Again he put his questions with a delicate indirectness. The talk wandered to the past, and old experiences, old acquaintances, how places looked ten, twenty, thirty years ago. The fire shining on Ruddy made him redder and cast his shadow on the tent in massive bulk, and all the while in the pauses of the talk came his refrain that he never would lug past Nicatowis Falls again, catch him lugging on that carry again. It was evident that he was as near it as he cared to be that night. Then said Father plainly: "If you have any meat with you we would like to buy a few pounds." "That isn't our business," replied Ruddy briefly and with dignity. After a pause: "What may your name be?" "Hardy." "Brewer?" "Yes." And then he knew all that he wanted to know.

Having discovered who we were, his frostiness thawed completely. Before they left they told us (what we knew already) that they had no intention of carrying past, but were going to stay at the house at the other side of the dam; that it was not the head of the lake but the narrows which they had come from; that they had seen something on the shore and shot it as it stood there—a slip of the tongue which another day's acquaintance served to correct; and, finally, that they would be happy to give us all the meat we wanted out of "the prettiest long-eared fellow we ever looked at"—which is calling no names. *Exeunt.*

So the ravens fed us the first day; but the story is intended to teach that the Nicatowis raven is a discerning bird and one which does not drop its bounty before strangers who come unrecommended. And the corallary is this: the tale would not now be told if I remembered either the names or the faces of any of the principals of this party; but—so quickly do we forget our benefactors—were we to meet to-morrow I should not be able to identify one of them, not even Brown and Ruddy. "Ah, man," says Alan Breck, who might well have been a native of Maine, "but I have a grand memory for forgetting."

III.—THE DAY OF SMALL THINGS.

The next day it rained; but as we were up at 4 in the morning, we had a chance before the rain began to see the day break, the white-footed mice that live in the cedar by the "taking out place," the red squirrel which was clipping "cedar buds," as we call the fruit of the arbor vitæ, and all our neighbors save the ravens, who were not early birds.

The white-footed mouse is so strictly nocturnal that, although I have felt it hop over me in its nightly explorations through the tent, I had never before seen it alive. It is a dainty little creature, slender in shape, clear gray above and pure white below even to the inner sides of the legs and the under side of its long tail. One which drowned itself in our wash basin last year at Ripogenus measured 7¼in., of which the tail was 3⅝in. These had a little house in the heart of the cedar which had been laid open by some one removing a chip, opening a crack just wide enough for them and leaving a little balcony in front of their door. Here they sat gazing at me through the morning dusk like little gray shadows, until they took alarm and scudded up the tree. Apparently they were living on the cedar buds; but I could not prove it.

The day passed quietly. The men got into their rubber coats and fished, more for occupation than in any hope of success. Father performed his great box-splitting feat to a small but select audience; Jot enticed a colony of shiners which lived under the rocks at the end of the carry to come and nibble his fingers; I wrote up the journal, in which I find it noted that Jot brought me two kinds of everlasting (*G. decurrens* and *G. polycephalum*), explaining that the former is excellent for colds, while the latter has no medicinal value. It was one of the facts which are often of prime importance to the woodsman. Rock polypod, we learned later, is good for diarrhœa; yellow ash bark to produce sweating; and Father once saved his own life by compounding a medicine of pine bark, the inner bark of wild cherry and lungwort (the rough lichen which grows on swamp maples), steeped together and sweetened with honey. I myself can testify to the many virtues and the bad taste of the last compound.

Trout were not abundant at the dam and, though the place was faithfully fished both up stream and down, only three were caught for the day. The largest of these, a fine 14in. fish, was given us by our ravens whose kindness is remembered even though their names are not. In the afternoon two salmon about 13 and 14in. in length took their fly and a large one broke their rigging. These differed in color from all the young salmon I had ever seen, being of a fine green bronze with silvery bellies and with dark, almost black, spots on the sides, so mottled that at a little distance they resembled mackerel more than trout. Salmon appear to be abundant in Nicatowis, whether sea salmon or landlocked I do not know, though I am informed that the sea salmon introduced by the Game Commissioners have become landlocked, refusing to migrate. While Father was fishing just above the sluice a great blue heron lighted on the gate not 10ft. away, looking "for all the world," so those who saw him say, like a great mosquito as he settled with long legs outstretched and his neck bent down almost between them.

These are the events of the day, so few and unimportant that it seems time lost to chronicle them, and yet of what are most of our days made up? We had pleasant company; enough to eat of the best there was, though it was given us; more to see than ordinarily falls into one day's limits, for besides the mice, squirrels, shiners, trout, salmon and heron, various small birds sought the tent and gossipped with us—chicadees, Maryland yellow-throats and a beautiful black and white creeper; the place was pretty, too, with the tall pine and big, mossy granites behind, the carry path fringed with alders leading down to the pool and clear sky over the hill in front; it had, moreover, pleasant associations for Father, who, sixteen years or more ago, cut out the present carry, shortening the old carrying place by about one-half and thereby benefitting all who have followed; with all these aids to contentment, and with minds that were free from worries for a time and willing to rest from labor, it is no wonder that the time passed pleasantly. If the next one who goes there finds it forlorn and uncomfortable, sees nothing praiseworthy, that, too, need not be wondered at; for it is the small things which make the difference in our days.

FANNIE P. HARDY.

ANTOINE BISSETTE'S LETTERS.—V.

DANVIT, Decemb. 28, 1890.—*M'sieu Fores Strim:* Mos' all every Saturday naght, Ah 'll go where M'sieu Mumson he 'll be board for hear it read you papier an' Ah 'll tek grea' deal satisfy of it.

Ah tol' you it mek me laft, sometam on mah inside of it, sometam on mah face, sometam all over, for hear what some smart feller wrote what he know 'baout ev'rytting.

One ting was haow hwoodcock mek hees nowse wid hees nose or wid hees wing. Dat mek me laft, an' Ah 'll tol' M'sieu Mumson haow dat was foolish for say hwoodcock wheestle wid hees wing of it.

Day maght jes well said hwoodchuck wheestle wid hees tail. You b'lieve he do, prob'ly, hein?

"No," M'sieu Mumson say, "Ah 'll ant b'lieve dat, hwoodchuck wheestle wid hees mout' an' spat hees hoof sem lak you w'en you dance jeeg for you hown music, but hwoodcock was be differance; he was birds."

Ah 'll say yas, Ah know dat, but Ah tol you more. Hwoodcock ant wheestle 'tall, wid hees nose or hees wing. W'en he gallop on de air, hees wing jes go *frip! frip!* an' w'en he 'll lit on tree he 'll holler *Keeyak! keeyak! keeyak!*" so you could hear it more as mile. Den he paound de tree wid hees nose, an' mek de cheep flew mos' lak Ah do w'en Ah 'll chawp.

M'sieu Mumson he 'll looked at me wid hees heye verea peel, den he 'll beegin laft mos' lak hee 'll split all open.

Bombye w'en he can spoke, he 'll say, "Antoine, dat ant be hwoodcock! Dat was pill-eatin' hwoodpecker! He 'll black, ant it, wid red on top hees head of it?"

Yas, Ah 'll said, but he 'll was be hwoodcock, dat was hees name of it, Ah always hear, an' he 'll ant heat pill. What you call it hwoodcock den?

He 'll say, hwoodcock ant never lit on tree, never. He stay on de graoun' all de tam, 'cept wen her flew, which he do very spry an' say *twit-twit-twit-twit* fas', mos' sem lak chimbley swaller. An' he stuk hees nose in de sof' graoun' for ketch worm, not in hol' dead tree.

Den Ah 'll say, me, Oh bah gosh! Ah 'll know what you 'll meant. It was bline snipe, Ah 'll see it 'long Beav' Meddy Brook, an' in cornfiel' las' hoein', an' wen Ah 'll was cut up in de fall. Dat was bline snipe, an' he was mos' so good for heat as cheekin, honly he ant so beeg nough. Naow dat was more foolish as Ah hear yet, for call bird dat always stay on de graoun' hwoodcock! It jes moch sense for call patteraige mud hen, bah gosh! An' den go for call de reality hwoodcock dat always leeve in de hwood, pill heatin' hwoodpeckit. He heat mud pill, prob'ly, hein?

M'sieu Mumson say he can' help it, dat was de nem of it bose.

Dat settle it, Ah 'll say, sem lak de man was holler "hot pie! hot pie!" an' dey was freeze. Wen de peop' was buy an' broke hees toof on de freeze pie, an' ast what he call it hot for, he say dat was de name of it! An' dey can' say noting honly, *Sacré ton sac!*

Wal, let dem smart feller call it hwoodcock 'f he wan' to. Ah don' care for me, an' let some of it say he wheestle of hees nose, he wheestle jes' de sem he always was ant it?

Ah 'll mek notion we let it wheestle jes' miu' to; he jes good for heat an' jes moch fun for shoot one way as t'odder, Ah b'lieve. It look awful foolishly for be quarly of it jes de sem was grea' deal of dis sportsman beesiness.

Dar was de mans dat ketch traout wid fedder fly, he bruise ev'ybody dat ketch it wid worm an' grasshoppit, an' wan' keel it. Ant it bose feeshin' for git de traout?

Dar was one mans call me mean hol' cuss for shoot one patteraige sit on tree, jes' honly one, an' he keel ten on de flew, so he say, but Ah 'll bet you head he keel it some on de sit 'f he 'll gat shoot of it so. Anyhaow, who mek de mos' scarce of patteraige in hwood, dat mans or me?

Dar was de science mans dat shoot forty bobolink for set up in glass box; he wan keel de mans dat gat forty bobolink for steek on gals' bunnet 'cause bunnet so small you can' see it 'less he gat sometings steek on for show where it was.

Ah 'll weesh, me, bose dat mans was keel, for Ah 'll

drudder hear bobolink sing in de strawberree lot, as see it skin wid long nem in glass box or see it steek on gals' head dat ant gat no brain of it. Some posy was more pooty as dead bird for gal's bunnet, an' mek de feller lak it better, Ah tol' you.

Wal, Ah s'pose it ant mek no differance probly all Ah 'll said, dey goin' keel off all de bird for sometings.

Wal, bombye Ah'll goin' to be dead mahsef, den Ah'll gat no differance probly, honly Ah 'll b'lieve Ah 'll lak it for have some leetly feller sing over de daisy w'en dey grow top of ANTOINE BISSETTE.

Scrippos.—We havin' hol' fashion Vermon' winter, all de tam col' an' snow very high. Ah 'll ant mean he ant cheap, for you can get more as you want every tam you ant ask for it. But Ah lak dose kan o' winter.

Dey was mos' sem lak Ah 'll was raise on, in Canada. Dey mek it a feller tough as ten bear if dey ant keel it.

Dis was de kan o' wedder Ah 'll lak for go on de hwood an' chawp. Dar it was comfortably, no win' blow, honly in taup of de tree. You can't feel it, honly see an' hear heem sing.

Mos' every day, Ah 'll can' hear not'ing, honly ma hown nowse, "chick, chock" of de haxe, an' bombye de hol' tree go "whoof!" daown on de snow, lak on fedder bed, after he 'll stan' up for honded year, prob'ly feefty, saxty, Ah do' know.

Dis leetly Frenchmans put great many of dat hol' tall praoud tree to hees las' bed. Dat mek me feel kan o' plump, every tam.

Bombye, dere was come beeg t'aw, Janawary t'aw was be de nem of it, but he come w'en he'll got ready, mebby in March.

Den de coon start off hees sleep tree or holes for see hees gal or visit long to hees neighbor an' Ah 'll have it some funs. Ah 'll tol' you baout w'en Ah 'll had it.

Ah b'lieve all de feller ant tol' you dat kan o' way for coon huntin'. Dat was de mos' fun all winter 'cep' New Year, an' Ah 'll ast you save leetly corner of your papier for publick mah story.—A. B.

Natural History.

THE WOODCOCK'S WHISTLE.

Editor Forest and Stream:

Now that the interest in the habits and life history of the woodcock is coming to a white heat in your columns, may I be permitted to point out a few of the problems, that seem to me to require especial attention in the solution of the question at issue. In the first place, allow me to present the usual credentials. I have hunted this bird at different times during the last twenty-five years; I have studied its habits under many circumstances; held slightly wounded ones in my hand, suspending them in the air by the bill or feet, and noted the sounds that came from the bird during such times; I have examined its anatomy. At the present writing I hardly feel prepared to fully commit myself on the question of the production of its various notes, though I am free to say that my observations lead me to believe that the wings play little or no part in the creation of the majority of them.

Now, in the first place, may we ask in reference to the (1) curving upward of the superior mandible—is the act a voluntary or an involuntary one?

(2) All such functions or powers, as the power to curve the bill in such a manner, are subservient to the contraction of some organized tissue. Is this act due to the contraction of some muscle, or to some other contractile tissue?

(3) Were we to pull out the three attenuate primaries from both the wings of a sound and healthy woodcock, and then submit the bird to being held suspended in the air by the bill or feet, would it give vent to any notes whatever, and what would their character be? (What does Mr. Trumbull think in regard to such an experiment as this?)

(4) Were we momentarily but to thoroughly plug the external nostrils and mouth cavity of a sound and healthy woodcock (one in perfect plumage), and then submit the bird to being held suspended in the air by the bill or feet, would it have the power of emitting any of its usual "squeals," "twitterings" or "piping alarm notes," and under such circumstances would they be the same as those emitted by the flushed bird?

(Experiments 3 and 4 should be made upon birds of both sexes, and at times of the year when woodcocks are in full plumage and give vent to all their "notes" in nature, especially in March and April and October and November.)

(5) Other birds have attenuate primaries in their wings besides woodcock; what is their behavior when submitted to either of the foregoing experiments? (Hummingbirds have many well-known notes on the wing and when alarmed. The broad-tailed hummingbird has attenuate primaries in its wings. I have a shot great many broad-tailed hummingbirds (*T. platycercus*), and they have a varied note. Several times I have held suspended in the air by the bill one of this species, when it was slightly wounded, and no sound came from it when the wings were in violent action other than the "fanning sound" given off by the latter.)

(6) Does the peculiar wing of the white-fronted dove (*Eugyptila*) give rise to any peculiar sounds during the flight of that species?

(7) What purpose do the emarginations in the primaries of the wings in many of the *Tyrannidæ* and *Accipitres* subserve?

(8) Is the "whistling" of certain ducks during rapid flight due to the character of that flight or to some peculiar modification of the primaries of their wings?

(9) In the case of the woodcock in August, when flushed, is his completely noiseless flight at that time due to the fact that the bird is "out of song," "out of plumage," or both? It may be only "out of song." (What does Mr. Aldrich think?)

In the opinion of the writer, Mr. Gurdon Trumbull's experiments with the woodcock were conducted in a perfectly scientific manner, and it is only to be regretted that he did not push them far enough. I can well appreciate, however, how the goodness of his heart got the best of him, in the case of such a winning little pet. Nevertheless, after he had educated his bird up to giving its natural notes, he certainly should have gently pulled out all of its attenuated primaries, and see then could the same notes be given after this had been done. On the other hand, it seems to me that the methods proposed by Mr. Aldrich to solve this mooted question (FOREST AND STREAM, Jan. 1, p. 472) are eminently unscientific, and remind me very much of a certain military surgeon that I once knew, who became so skilled in his diagnoses of heart disease that he could detect any form of it in a person walking at a distance simply "by the character of his gait." R. W. SHUFELDT.

TAKOMA, D. C., Jan. 5.

Editor Forest and Stream:

It was with the greatest of pleasure I read in your last week's issue Mr. Wm. Brewster's very able and practical article on the woodcock's whistle. The only way I can account for the great difference of opinion, as to whether, when he is flushed, the woodcock whistles with his wings or voice, is that the men setting forth their opinions that the noise is vocal do so more by theory than by practice, and are men that either have not the good fortune to reside in a locality where woodcock are plentiful, or else having this good fortune, are indifferent wing shots, and kill but few woodcock each season. I have interviewed, at different periods, upon this topic, several men whom I know to be woodcock shooters, men that are in the habit annually of killing their 100 and 200 birds each, as to how the woodcock makes the whistling noise when flushed, and each one replied, without the slightest hesitation, he does it with his wings. I am acquainted with men living in this neighborhood that talk most learnedly upon the woodcock and his habits, men that I meet again and again in the woods, but do not remember to have ever seen a brace of woodcock in their possession.

An ounce of practice is worth a pound of theory any day. Surely no one would contend that the golden-eye, or whistle-wing duck, makes the whistle with tts voice and not with his wings. The whistle that this duck makes when in flight is very similar to the whistle made by the woodcock, the only difference being that the duck's whistle is the loudest, that is natural, he being much the largest bird of the two.

Woodcock make but two noises, the whistle when flushed, and the twitter that he makes when drumming in the spring. The latter is an amorous manifestation, the birds rising perpendicularly into the air with a twittering noise, and when up quite a distance let themselves drop down through the air on to the ground, with the quills of their wings set edgewise, making a loud rushing noise. Woodcock drum immediately before dusk or about dusk. The twitter he makes when drumming is very different from the whistle he makes when flushed. I think every sportsman is agreed that the snipe when flushed scaipes with his voice and not with his wings. A snipe when winged and you go to pick him up generally springs into the air with *scaipe, scaipe,* making exactly the same noise as when he is flushed.

If the woodcock whistles with his voice, why does he not whistle when winged and you go to pick him up? as his brother the snipe scaipes under similar circumstances. The woodcock when winged springs into the air exactly as the snipe does when winged, but does so perfectly mute. Why do not woodcock whistle during the moulting season? Because they have lost the attenuated primary feathers of their wings, and therefore cannot. Why does an October woodcock whistle so much louder and stronger than a July bird? Because his plumage is more perfect in October than in July. Does it not strike those gentlemen of the voice theory as rather strange that when a wounded woodcock is picked up he has to get his wings going like a windmill before he can find voice, and is obliged to put the brakes to his wings before he can shut off his voice again?

Writers on the woodcock, his ways and habits, I think have taken it too much for granted that this bird's conduct is the same in confinement as when at large. It is quite possible that his ways and habits when at large may be quite at variance with his ways and habits when in confinement. During the past fall I found a covert with a number of flight woodcock in it, the ground in said covert was as hard and dry as a bone, so much so that I had trouble in pushing the blade of a strong jack-knife into the ground. I found the feeding ground of these birds in two or three fall wheatfields one mile from their day home. These birds must have of necessity fasted at least fourteen hours out of the twenty-four.

Mr. Trumbull writes that he noticed, much to his surprise, in a live woodcock given him by a gentleman that it had the power of raising or curving the upper mandible. I beg to refer Mr. Trumbull to a letter of mine which appeared in the issue of FOREST AND STREAM for Nov. 6, 1890, in which letter I write that the woodcock has this power, and does curve his upper mandible, why he does this and how he does it.

One of the gentlemen writing in FOREST AND STREAM Dec. 25, says: "I have had but little opportunity for studying the woodcock, never having lived in a section where the bird is more than a casual visitor, etc.," ending his letter with, "As to the sound made by the woodcock when in flight, I do not believe in the wing theory any more than I believe that the skeep of the snipe is made by the wings." Theory, theory; no good. Let us hear from some practical sportsmen. Men killing at least 80 or 90 woodcock annually. (No theorists). HENRY B. NICOL.

COOKSTOWN, Can., Dec. 31.

Editor Forest and Stream:

Some of the natural history notes of FOREST AND STREAM I find very interesting, but some are simply incredible. Mr. W. L. Bishop's story in your issue of Dec. 4, about the grouse hiding in the water to escape a hawk is too much for me. I should want at least two iron-clad affidavits to back it up before I could accept it. How did the bird keep itself submerged? Did it have a brickbat attached to its tail or lead soles to its feet?

About the whistle of the woodcock, there is no more doubt but that it makes a whistling sound with its wings, than that it has wings. What other sound it make with its beak I am not prepared to say. JOHN BURROUGHS.

WEST PARK, N. Y., Jan. 12.

[We have several communications on the woodcock's whistle, which will follow in our next issue].

MOCKINGBIRDS BREEDING IN MASSACHUSETTS.—Springfield, Mass., Jan. 9.—*Editor Forest and Stream:* About a year ago I wrote you about the mockingbirds breeding in West Springfield. They came again last year to the same locality, making the third or fourth successive year they have returned. A gentleman in Quincy, holding one of our permits to take birds, killed what he supposed to be a shrike, Dec. 1 last, in a strip of woods near the shore, but it proved to be a fine mockingbird. These birds have been known to breed in the eastern part of Massachusetts before, but so rarely that this is the only one that has come to my personal knowledge. The bird was in full plumage and healthy, and why he should remain on our cold eastern coast until Dec. 1, after the severe weather of the fortnight preceding that date, is a mystery.—E. H. LATHROP.

IVORY-BILLS.—Orlando, Florida.—In the Dec. 18 number of FOREST AND STREAM I noticed the article by R. W. Shufeldt on "A Skeleton of the Ivory-Bill," and the rarity of that bird. If any of your readers would like to get a few specimens of the ivory-bill, either male or female, I think I can put them in the way of doing so. I don't know as to the skeletons, but if there is any way of preserving the bird whole I could have them sent in that way. The skins I could send flat in good condition for mounting. Small game, quail, snipe and ducks are quite plenty, but deer and turkeys have to be looked for fifteen or twenty miles back in the country.—W. E. HUDSON.

PERTH AMBOY, N. J.—During the recent cold snap an Arctic owl (*Nyctea nivea*), of the kind observed this winter on Long Island, was seen in this neighborhood, and several specimens of Brunnich's murre (*Uria lomvia*) have been shot near the town. The latter are seldom seen inside of Sandy Hook, and only when the weather is very severe at the north do they seek this latitude, our oldest gunners having never observed them before.—J. L. K.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

MEMORIES OF NORTH CAROLINA.

THITHER nature sports a jewel-tinted splendor on bright summer mornings. There are emeralds on the throbbing wings of libellules, and flashing garnets on those of redwings; Pactolian sparks follow the flight of orioles, and a huge fainter than lapis-lazuli reveals the billing and chirping couples of bluebirds that have chosen an old snake fence for a lover's trysting. Still greater than these are the kingly purple of distant forests, and the decided hues of nearer balmy woods, and the brighter greens of broad-leafed trees and the marvellous blending of a thousand contrasting shades. The myriad flowering magnolias throw a regal mantle over the roadsides, where hard by are green fields of cotton, whose many flowers are white in the morning, and change to a delicate mauve ere the sun goes down. And there is an ecstasy of music in the air; the song of mockingbirds and thrushes, and the buzzing of hummingbirds innumerable; the shrill cry of the ruby-crested woodpecker and the call of the yellowhammer. Quail are perched on fence tops everywhere, and joyously call Bob White. But in the shooting season there are left but the sombre tints of evergreens, and the cotton fields are brown in color and flecked with the white of open cotton pods, and the birds sing not as lustily. The rattlesnakes have sought their winter lairs and the moccasins no longer stretch their black-brown coils by the side of ditches and juniper swamps. The standing cornstalks show long rows of fading gold, and the long grasses are matted and sunken and seem to be dying with the old year. And yet it is the cheeriest time of all with he that loves the gun and the old dog, who are companions of his hunting joys.

And so on the first day of my arrival in the eastern sporting grounds of North Carolina, my friend W. and I started afield amid joyous barks from setter Jack and pointer Jim, who longed for the chase after the lengthy confinement of baggage car and steamboat. We are told that quail are plenty in a field adjoining the house, and on our way thither a woodcock rises from a bit of grassy swamp land with his well-known cry, and being distant falls winged at the crack of a left choked barrel, and is proudly brought me by Jack, he of Gordon parentage. We enter a cornfield and disturb a family of razor-back hogs, the mother of which immediately pursues the dogs, who in fear and astonishment at such proceedings fly to us with tails between their legs, not having been trained to hunt living bacon. This alarm over, the dogs start in to range, and soon the setter stiffens out to a strong scent and the pointer backs him nobly. With guns ready to the elbow we advance a few steps, and there is the welcome whirr of many hurried wings, and we pick out our birds and shoot and mark the fleeing bevy. We pick up three birds, but conclude not to follow the covey, as they have taken to an inaccessible swamp near at hand; and so we start again; and soon another bevy rises again and pays tribute, and is then marked down in an old rice field, and being there scattered gives plenty of sport to us and much pointing and retrieving to Jack and Jim. And so with varying chances goes on a successful day's quail shooting, with game pockets growing heavy and cartridges less ponderous. Setter Jack is full of burrs and pointer Jim growing a bit sore, and so we turn toward home. But as the dusk is coming we hear the peculiar night song of the woodcock, a queer chirruping as the bird rises from the swamp and rises in the air, his voice diminishing in the gathering darkness until all is silent. Then we hear him again, and the chirruping grows nearer and nearer untill the bird comes down again. The birds are hard to see at such times, but now and then a dark, flitting spot is seen against the luminous haze that is in the west, and a quick snap shot sometimes brings a bird to swell the game bag. And when the darkness grows too deep for this we return to our host's house, and there are made much of and treated in so kindly a manner that we vow another winter shall see us there again.

And so on for eight or ten days we tramp the fields and travel through the swamps, where lurk pools of water stained to a sherry hue by the roots of the juniper trees. We see the track of bears along the woods, and in soft, oozy places mark the slot of a many-pronged deer.

An invitation to a deer hunt finds us ready one morning early. Outside the house are a troop of men with

dogs galore. Some of the latter are effective-looking, strongly-built lanky hounds of ancient lineage, with no bar sinister to their genealogy. But others look more or less like disreputable sheepdogs or snarly farm watchers of much-involved descendance, and others still are of no classifiable kind. The guns in the hands of the hunters are a stranger lot still; muskets from the days of the long strife, and muzzleloaders of venerable age, with muzzles grown thin as paper at the end and barrels cunningly fastened to the stocks with many and ingenious twistings of rawhide. The party was divided into several smaller ones, each going in a different direction, to finally converge and guard all likely places. Within a short time a deep baying announces that the game is started, and my friend and I are posted in two of what are considered as the very best places, out of the kindly courtesy to visitors and strangers I have always met with in the South. But the deer seems to know what is in store for him, and persistently runs in a wrong direction, and finally escapes into such thick and dismal swamps that the dogs are fain to abandon the chase. Soon after another volley of bayings occurs, but this time a coon has been started, and his lease of life proves a short one, for as he runs up a tree the dogs are after him, and a shot from one of the hunters brings him to the ground. So the deer shoot is a meager success, but still holds amusement and interest enough with it to repay us well for our trouble.

It is all too soon when our avocations compel us to start North again, with another fund of pleasant reminiscences to add to the many that a lifetime of shooting and fishing enthusiasm has caused us to accumulate at many times and in many lands. G. V. S.

MAINE DEER.

BOSTON, Mass., Jan. 2.—The number of Maine deer coming into the Boston market is by far too great. It is greater, in fact, than for several seasons. It is plain that the non-export law is being evaded to an alarming extent. My attention was called to several saddles of venison Saturday that lay in front of a commission house, and in the afternoon a friend, a sportsman himself, told me that he saw the deer drawn from barrels. Again on Monday there were three more in front of another commission house. I asked a salesman if they were from Maine and he told me that they were. He was not at liberty to give me the shipper's name, but he said that they came with a lot of butchers' hides. This is a new way of smuggling the deer into this market. It is very easy to bury the saddles of venison under the hides, and they would scarcely attract attention, done up in the deer skins, as they generally are. The legs are always cut, so that they are easily folded in with the hide.

The same salesman, who showed me the deer, also said that he had a hide that he wanted me to see. He unfolded an enormous skin—long-haired and very dark. It was the skin of a cow moose that weighed over 600lbs. This moose hide also came in with the venison, buried under the cattle hides in the car. The skin would make a handsome sleigh robe, and will doubtless be sold for that purpose. The owners wrote the commission dealer that they thought they ought to realize $7 for it. The late heavy snow storm was also heavy in Maine, and the danger is that killing moose and deer in the yards will be so far started that the coming of the close time will not stop it. Last winter there was so little snow that the yard hunting amounted to nothing, the snow not being in sufficient volume to confine the animals to their yards when the hunters came up. SPECIAL.

MAINE GAME INTERESTS.

THE Maine Legislature has again assembled, and the fate of the game in that vast forest region is virtually in its hands. It is possible that the greater part of the members of that body realize the importance of proper legislation on this question, but it is also well known that a part of the members—let us hope that they are in a very small minority—are adverse to any protection of game whatever. As near as I can learn, a movement will be made to repeal all fish and game protective laws. This movement will come from the lumber interest, and it is to be hoped that it will acquire no force. But there is feeling that all fish and game protective legislation in Maine is detrimental to the lumber interest. Prominent men, owning extensive tracts of timber, have this fall expressed themselves in the light that they wished that there was no game in the woods of Maine, and that there were no fish in her waters. They claim that the presence of hunters, drawn thither by the increase of game in the woods and the many reports of game that are published in the papers, in the interest of hotels and transportation companies, endanger their valuable timber lands to an increasing and alarming extent. They fear the fires of the hunters, and they would be glad of any legislation, or lack of legislation, that would tend to keep these hunters off their lands. These same lumber owners defeated the proposition two years ago to extend the open season on moose, deer and caribou, so that September might be included, and now the same question is to come before the present Legislature, with added features to strengthen the existing game laws. The result will be anxiously watched.

The same lumber interest is inimical to the inland fishery interest, for the reason that the owners of dams and waterpowers are compelled by statute to maintain fishways. This is a statute that has never yet been thoroughly enforced in that State. The Union Waterpower Company, controlling all the great dams in the Rangeley region, has never fully obeyed the letter or spirit of the law in regard to fishways. The past season the company was notified that the dam at Rangeley outlet must be supplied with a fishway. The company has quibbled for a while over the situation and finally threatened to abandon the dam altogether if compelled to maintain a fishway. This alarmed the cottage owners on the borders of Rangeley Lake. The abandonment of the dam and drawing off of the flowage would ruin the beautiful shores of the lake. Finally the matter has been settled, I believe, by several gentlemen interested purchasing the dam and right of flowage from the company. These gentlemen will doubtless supply the needed fishway and keep the dam.

Another feature these lumber people fear is legislation that shall prevent their turning their deadly chemicals into the streams above Bangor, on the tributaries of the Penobscot. It is a fixed fact, in the minds of the Fish Commissioners, that the salmon of the Penobscot are doomed, if this turning of chemicals from the numerous pulp mills, built and to be built, is to be continued. It makes no difference to these lumber people if the Penobscot is the last hold of the *Salmo salar* on the Atlantic coast. They are interested in pulp mills only, and any legislation that shall compel them to desist from turning chemicals from these mills directly into the streams will be fought tooth and nail.

But again Governor Burleigh has come out squarely in favor of needed fish and game protective legislation in his inaugural address to the Legislature. He says: "The valuable and interesting reports of the Commissioners of Fisheries and Game will be laid before you, and I earnestly commend the recommendations therein made to your careful attention. Everything possible should be done to sustain the Commissioners in enforcing the laws against those who wantonly violate them. Whatever the Legislature may be able to do to secure the better protection of fish and game will advance the material interests of the State and merit the just approval of all its citizens."

Gov. Burleigh, though a heavy owner of timber lands, is, I believe, an earnest advocate of proper fish and game protective legislation, and the only fault that can be laid at his door is that he has not employed the forces of the State at his command to better enforce the already stringent laws during the past two years. He must have been aware that packs of hounds were being employed to run deer in and out of season the past summer and autumn, and that the commissioners were powerless to stop them from lack of means. Why, it is a fact that a pack of hounds, owned by one at the Magalloway settlements—several times mentioned by me in the FOREST AND STREAM—commenced to run deer early in the autumn of 1889, and that no steps have yet been taken to stop them. The other day these same dogs ran four deer into the Kenebago region. The poor creatures were seen by loggers as they fled before the terrible dogs with protruding tongues. Indeed the poor beasts seemed to take to the loggers for protection, and the men say that they might easily have killed them with their axes, but they did not desire venison obtained in that way. Report says that they tried to destroy the dogs, but did not succeed. But the State of Maine, knowing almost the very house where these hounds are kept, has not, to my knowledge, taken any steps to destroy them or to punish their owner. If some men were Gov. Burleigh, officers of the law would visit the Magalloway region and those hounds would be stopped. It is claimed by some hunters, however, that the dogs are not owned in Maine, that they come over from New Hampshire. It is possible that this is true, but they have made some very long runs to the east and over into Maine, fully 20 miles.

But if there was but one pack of hounds that was owned in Maine, or but one pack was ever let loose upon deer in the wide expanse of the State, the matter would be an easy one to settle. Such is not the case, as I have already explained in the FOREST AND STREAM. Hounds have been taken into the State this fall by more than one dozen, and now it remains to be seen what action the Legislature of the State will take toward putting the means into the hands of the Commissioners to effectually stop deer-hounding. Why, the number of deer killed the past season, in the western section of the Rangeley region alone, has been numbered by the Phillips *Phonograph* at 74, a number unheard of before. Now I happen to be positive that a part of these deer have been taken by the aid of dogs, and that some of them were killed in the close season. And this is but a small section of a great State, and is only mentioned as an example of what has been going on. Shooting and dogging operations in other sections of the State have been just as bad.

If the inhabitants of the State desire the utter destruction of noble game in their forests, then the Legislature has but to leave matters as they are, and a season or two will do the work. Stop hounding effectually; make the open season for otherwise hunting moose, deer and caribou what it should be, and give the present efficient Commissioners the means wherewith to enforce the laws, and deer at least will go on increasing till every honest hunter will stand a reasonable chance of success who is willing to visit Maine in the proper open season and hunt deer as any humane and respectable lover of the gun would desire to hunt. SPECIAL.

Editor Forest and Stream:

The close season for nearly all kinds of game is now on, and a brief notice of the past season and some of the needs for the future may prove of interest to the readers of your unequalled paper.

The hunting and fishing during the season now ended has been the most successful for many years. In fact, it is doubtful if at any previous season sportsmen have enjoyed such uniform good luck.

Visitors from others States have come to Maine and returned to their homes more than ever satisfied that Maine is in very truth the sportsman's paradise. Nor have local hunters met with less success. Parties of two or three, or more, have gone from the cities and towns in the southern portion of the State into the woods of the northern section and brought back big supplies of game to divide among their admiring friends.

All this is on the bright side. But there are ugly facts connected with the season's sport. Not satisfied with an abundance of game that ought to satisfy the most ardent sportsman the hunters have, in many cases, obtained their game by methods both unsportsmanlike, contrary to the laws of the State and dangerous to the future of the now flourishing supply.

If every returning hunter were compelled to state honestly and exactly how he secured his big stock of venison there would be, in a great many cases, little room for pride on his part over his achievements. Men who are posted on the manner in which much of the hunting has been done know that hounding has been employed and water shooting in the most reckless fashion. The hunters have displayed the three or even four carcasses of deer brought back with them with much pride, but questioned closely as to the manner of the killing they are exceedingly reticent. All this points to one fact, and that is, that everything has been sacrificed to success in obtaining a big supply of game, and laws of decency and of the commonwealth have alike been disregarded.

Now, what can be done to do away with this state of things, and insure for Maine a system which shall secure the continuance of a game supply that is even now adequate to supply all demands of legitimate sport? The vast extent of the Maine hunting grounds and the vicious disposition of some of the lawbreakers make this a difficult problem to solve. The report of the Game Commissioners of the State declares that last year one Frenchman killed forty moose for their hides, leaving their bodies to rot upon the snow. There are plenty of natives who were engaged in the same deadly work of extermination. But one course is open. It is for the this winter's Legislature to awake to the importance of fish and game protection, pass better and stronger laws, and what would be still more desirable, provide an appropriation approximately sufficient to secure the enforcement of the laws and the punishment of offenders. It is going to cost something—a good deal of money—to keep the State what she now is, the resort of sportsmen from all over the country. But there can be no question about the wisdom of such outlay. The visitors pay annually a sum of money to the railroads, the hotels, the guides, and indirectly to many others in the State, far greater than the cost of the needed protection. It all rests with the disposition of the individual members of the legislative body, and it is sincerely to be hoped by all true sportsmen that they may view the situation in its true light, and make wise provisions and much-needed appropriations. E. T. W.

WATERVILLE, Me.

A NEW SYSTEM OF BORING SHOTGUNS.

IT is only too well known that chokebore guns lose their concentrated pattern after a certain amount of service. This is caused by an expansion of the constricted muzzle, slightly from attrition, mainly from the severe shocks attendant upon altering the form and direction of the swift-traveling shot charge.

When this effect is produced the gun is said to be "shot out," and the only remedy is reboring.

This is accomplished by gradually enlarging the original bore, commencing say 15 or 20in. from the breech. As the muzzle is approached this bore is quite abruptly constricted.

The defects of such a method are self-evident. No gunsmith would think of so boring a new gun. The divergence of shot toward a common center is secured in so short a space that the angles of inclination are unduly great. Experience has taught the gunsmith the requisite form necessary to concentrate the shot at 40yds., the standard distance, but trial of such a gun at 30, 40, 50 and 60yds. will exhibit its weakness. There is also a material loss in penetration. The wads adapted to the shell and to the barrel fail to fill the cavity or recess produced in reboring. This is plainly shown by the "caking" of such guns toward the muzzle, as the wads do not so closely touch walls of barrel in this recess as to remove the deposit from the burning powder charge. Therefore, in penetration we must depend upon the first 15in., say, of the barrel; in pattern, we are restricted to the last 15in.; in effect we are shooting a gun with barrels only 15in. long.

It is conceded that the most satisfactory results, in penetration, in pattern at long and short distances, with large and small shot and with black and nitropowders, are secured by using a taper choke. There are many forms given to this taper, longer or shorter, but all agree in their avoidance of an enlargement of the natural bore.

Therefore, the only unobjectionable plan of reboring is one that will restore the original form. This can be done in but one way; by treating the "shot-out" gun as a new work, and reboring every particle of the barrel from breech to muzzle, This, of course, involves a change of gauge, and the increase from a 12 to a 10-bore is too great. Hence we should have two new sizes of shells, 9 and 11 gauges. The increase of only one number in gauge is so slight as not to seriously impair the strength of any gun worth reboring. Possibly it will not require an enlargement of an entire number in caliber; one-half or three-fourths of a gauge might suffice. The experienced reborers could decide as to exact size of new shells that would cover the needs of the major part of "shot-out" guns.

An incidental advantage of this plan is that your new 9 or 11-bore gun would retain its choke longer than the old one. The tendency of iron to resist expansion is progressive, and the natural "stretch" of the metal has now been largely exhausted.

The new sizes, 9 and 11, in shells would also supply a present need. Many guns, notably the Parker, do their best work with wadding one size larger than the nominal bore. For such guns manufacturers of ammunition load No. 9 wads in a 10-gauge shell, etc. This is but a poor makeshift. The compressed wad is no longer a No. 9 but, say, a No. 9½—neither hay nor grass. All such large bored guns, and there are many thousands in use doing their best work with brass shells and large wadding, would be rechambered to take the new sizes, Nos. 9 or 11, leaving barrel untouched if satisfactory. The result would be to combine the efficiency of the brass shell with the convenience of the paper shell.

I can think of but two objections that may be raised to this plan of re-boring, or rather re-making a gun, and neither is vital:

First—As to shells being difficult to obtain. It is a sufficient answer to say that a demand always finds a supply. It may be doubted if there will be as many 10 and 12-bores in use, say three years from now, as there are of 9 and 11-bores. This may sound extravagant, but consider the proportionate number of unsatisfactory, old or "shot out" guns, as compared with those comparatively new and free from fault in shooting qualities.

Second—The present rules of trap-shooting contests bar all 9-bores and in many cases make a 12-bore the standard Now, this increase of only one gauge, if a whole gauge should be found necessary in the new shell, is not sufficient to justly outclass a gun. There should be no material difference between the shooting of the best 11s and 12s. Probably the 11-gauge would have slightly the advantage. If so found, it should be admitted in all contests now restricted to 12-gauge, or smaller, guns and penalized fairly, say one half a yard. In matches where a 10-gauge is standard the 11-gauge should be intermediate between that and the 12-gauge, and the 9-gauge similarly proportioned beyond the 10-gauge. Managers of tournaments are only too glad to secure attendance and will brush away ficticious difficulties if occasion demands. Rules are flexible creations and can readily be enlarged one bore.

I would invite the careful consideration of gunsmiths and sportsmen to the many advantages these new sizes

of shells would offer, and would urge them to advise the manufacturers of such goods, both through FOREST AND STREAM and by mail, of their desire to use them. If there is a demand for these sizes the manufacturers will promptly supply them and thereafter, I will warrant, the present method of reboring will have become a thing of the past. A. T. L.

CHICAGO, Ill.

A MOOSE HUNT IN KIBBY VALLEY.

FOR two seasons I have not only explored, but made many inquiries, and corresponded not a little with sportsmen in different parts of this country upon the subject of moose and caribou. Generally I received favorable answers from every point, which is often the case; but the game is seldom realized at the season of year I wish to hunt. Last summer while on a fishing trip, but principally on the lookout for moose signs, I was convinced that I had at last found my hunting ground, as well as guides and teamsters, who knew the country and game to be found in it probably as well or better than any one else at the present day. Before leaving for home I had made all arrangements with my guides for a still hunt as soon as there should be snow enough, they to send for me and have everything in readiness on my arrival, so as to save time, as at that season of year it was inconvenient to leave business for any length of time. Packing a few things as hurriedly as possible, for the word had arrived to come by first train, we leave New York by Fall River line in the evening and Boston at 8:30 the next morning by Maine Central, arriving at Kingsfield, Maine, at seven in the evening, this being the terminus of railroad travel. The next morning we are flying along behind a pair of bays, the merry jingle of the bells keeping time with the rushing waters of the Carrabassett, along whose bank we ride for fifteen miles with constantly changing mountain scenery on either side. A change of horses here and we are off again, and in two hours arrive in Eustis some twenty-eight miles from the start. Here we find a typical Maine frontier village, the jumping-off place, as it were, of civilization, for the public road ends at the sawmill. The residents numbering between fifty and sixty, and most all were born and reared there, and depend principally on logging in winter, hunting, trapping and guiding sportsmen in season. Eustis is the last of civilization we see, for the forest begins here. At this place I was met by my guides, Gus Douglass and Otis Witham, Gus being the son of the famous old moose and bear hunter, Andrew Douglass, who took the boy Gus into the woods hunting and trapping when he was only eight years of age. He is never so tired when night comes, and the company is sitting around the camp-fire, but what he is always ready with a song or a good story.

In starting from Eustis we cross the Dead River; and up in the mountains for ten miles, one-half the way through burnt timber, which now affords splendid feeding ground for moose and deer, the unmistakable signs of deer were seen, as the ground was covered with snow. We could tell every few minutes where one or more had crossed or fed around among the bushes that were now growing up since the fire.

Three hours' time brings us to the Kibby Stream Camps, built by my guides, a favorite resort for fishermen, and a hunter's paradise. Here it was we made ready for the hunt, each one provided with a good heavy blanket, and provisions calculated to last from six to eight days. The cooking utensils were composed of one four-quart pail for tea and coffee, one frying pan, and a drinking cup for each. A small tin plate and spoon were provided for me, that I might better indulge with the luxuries. One great feature of a trip of this kind is to reduce the camp kit and provisions to a minimum, as it must all be carried on the back, and the lightest of packs gets heavy enough before night. Our provisions comprised prepared flour, rice, pork, tea, coffee, butter and sugar, and nearly every day we shot a partridge or two, which made our larder quite complete. In starting out we found the snow about two feet deep, and as we had to go on snowshoes, it was no easy task for me to keep pace with my guides the first day, as they were following my instructions, to push along as fast as possible. As several yards of moose had been located before I arrived, we lost no time in going direct to where the hunt was to commence. We stopped to camp for the night about half a mile from a certain yard, so as not to frighten them by the noise of the ax, or smoke from the camp-fire. After supper we were soon rolled up in our blankets before a good fire, and had a very comfortable night's rest considering the weather, as it was storming hard and had been all the day before.

Breakfast was soon disposed of, and while waiting for daylight to appear our pipes were smoked and plans all talked over, even estimating the spread of the antlers we should have hanging up before sunset. As soon as it was light enough we were off, going right up the mountain, for the yard was on the very top, reaching over and down on the north side, for the supposed reason that experience or instinct has taught the crafty animals that snow warmed by southern exposure soon forms a crust, in which they cannot easily "work" or protect themselves by escape, as in the softer snow lying on the colder side.

A yard is where moose or deer congregate in early winter, among the firs and spruces, where there is a plentiful supply of small growth and moose wood, the bark and tender branches of which they feed on while there is deep snow. A yard may cover over fifty or a hundred acres, possibly more, according to the number of animals herding together, and is covered with paths running in every direction where the game feeds from bush to bush. If not molested, and their feed holds out, they will remain all winter. In about an hour or so we came upon signs of moose, the principal indications being places where the bushes and small trees had been browsed and girdled, looking as though it had been done a day or so before. But we knew it was longer than that as there were no tracks in the snow. However, the guides were satisfied that the game was not far away; and it was here that the hunt began in earnest. The direction of wind was noticed and we kept to the leeward of the signs (for it must be remembered that the moose is the keenest scented animal of the forest), for fear they would get our scent, and that would end all chances of getting a shot in the yard.

Continuing on, we soon saw signs in the snow, although covered with about six or eight inches of light snow of the day and night before. This was at once brushed away, that the tracks might be examined to learn the direction the moose were going, as we wished to do the surprising instead of being the ones surprised. We had not gone far when a peculiar hiss from one of the guides gave us the warning, and instantly we were like statues. Looking directly in front of us, we saw a fine cow moose (much to our surprise) coming in our direction, browsing as she passed slowly along, retracing the steps of the day before. What was to be done? passed through the minds of each of us. We dare not move nor shoot, as it was a bull moose or nothing that I wanted. Presently she saw us, and painful were the few moments that passed while she was looking, not knowing really whether we were stumps or human beings, as she could not at first get our scent; but when she did, she gave the alarm that was unmistakable, a sound similar to that of the deer, only ten times as loud. As one of the guides expressed it, "The jig is up now, for every moose within half a mile is on the run."

Now, the first thing to do was to pick out the track of a bull, if there was one in this yard. So we proceeded, for a short distance only, when the experienced eyes of my guides detected what they thought to be the track of a bull. We found that two had left the yard together, one of them supposed to be a bull on account of the large size of tracks and long strides, showing it to be an animal of unusual size. We went but a short distance, when it was discovered that one of them had gone through a thicket and the other had gone around. This looked encouraging, so we took the larger track that went around, only to find that the other had joined company a little further on. The story was told for certain when they came to another thicket, where both were obliged to go through, thus betraying the bull and spread of his antlers by marks on his trees. Now began our work in earnest, for we must walk him down, which usually takes from four to six days of steady walking from daylight until dark, stopping to cook dinner and camping on his track wherever night overtakes us.

As a rule when a moose is followed he never eats; but keeps steadily plodding along until he is completely exhausted, then lies down to rest. The moose has slept only, with nothing to eat, while we have had a good breakfast. But before we found his bed he had heard us and gone. The second day was about the repetition of the first. The third day we found where he had stopped occasionally, and rested a few moments, and at the same time listening to hear us if possible. The fourth and fifth days the guides could easily read the condition of the old fellow by the number of times he would lie down to rest, and on the fifth especially, when he began some of his sharp practice on us, by traveling in circles trying to get to the leeward and behind us, thinking, I suppose, we would go on and leave him. But on the morning of the sixth day the old monarch of the forest decided that he would go no further, and as he arose from his bed, about 50yds. away, with mane standing straight up, and looking the picture of defiance, Gus remarked that it was just about the right time to do the work, and in one minute two balls from my Winchester had told the story. His weight as he fell was estimated, and has since proved quite correct, to have been over 1,100lbs. His head and antlers weighed 102lbs., and spreading a little over 4ft. 8in. The blades of the horns are 12½in. wide; the horns are evenly balanced, each containing eleven perfect prongs. It is considered a very fine specimen, and pronounced by very good authority to be as large as any on record. Feeling very well satisfied with the work done in Maine, I shall leave the rest of it to the well-known taxidermist, Mr. Akhurst, of this city. C. B. PARKER.

BROOKLYN, N. Y.

ADIRONDACK DEER.

Editor Forest and Stream:

The reply given you by Messrs. Knapp and Van Nostrand in Jan. 1st number on the New York Game Laws, coincides so completely with the views entertained by many of our sportsmen, as regards the season and manner in which deer are now killed, that it gives me an excuse for alluding to the subject. When game dealers express their opinions so decidedly and join those of the still-hunter, should all this cumulative testimony be set aside in the framing of just game laws?

Hear what they say: "No dealer cares to handle New York State venison, for it is as a rule thin and dark colored. The fine deer meat does not commence to arrive from Minnesota until Dec. 1. The market-hunters have fifteen days to kill in; they hang the deer up and freeze them, and ship them at that time."

Yes, they don't care to handle it, and why? As a rule it is thin and dark colored. Why thin and dark colored? can any of the hounding fraternity give us a reason for this? Will any of them come forward before the Codifying Committee and state that Adirondack deer at their best, furnish thin and dark colored meat, and of such an inferior quality that our dealers do not care to handle it? Is such the fact? I think not. Adirondack deer have an abundance of fine food, and if left to run until the latter part of November as are those shipped from Minnesota, the venison would compare favorably with that sent from the West. In fact the saddles would be completely enveloped with a thick covering of tallow like a carcass of fat mutton. What more could one ask?

But while this running of deer with dogs into water during the warm weather of September or October continues; killing them before they have time to lay on a winter's store of fat, and after a heating up by running before the dogs, and a plunge into cold water, may I ask while this continues, is it any wonder to hear that our venison is thin, dark in color, and in fact extremely unsalable if not unwholesome?

And they also add that "they would be pleased if the killing of deer in New York State was prohibited entirely, and only meat allowed to be sold that was proved to be lawfully killed in the West from Nov. 1 to March 1." Why do they wish meat only sold that was proved lawfully killed within those dates?

I wish to speak regarding our other nuisance that is being perpetrated all through this part of the State, every fall by a class of professional bloodsuckers, with dogs trained to either tree or set our ruffed grouse, who make a business all through the time limited, to bag every covey for miles around, shipping them by the barrel, while the ordinary hunter may roam the woods for days and not succeed in securing even one pair during the open season. Why not limit the number of ruffed grouse to be killed as well as of deer to be lawfully taken by one person, can any one give a reasonable answer? CAP-LOCK.

ROCHESTER AND VICINITY.

Editor Forest and Stream:

The Monroe Sportsman's Association (the "County" has been dropped) has contracted for 5,000 quail and expects the birds to begin to arrive in about ten days. Special crates are being built here and will be shipped early this week. Quarters are being prepared where the birds will be confined until spring.

At the meeting held last Friday a communication from the Connecticut State Association was read, explaining their methods; also one of their circulars which they send to land-owners. The idea was voted a good one, and a similar letter is being prepared for circulation in this section. A postal card is to be inclosed, by signing which the party becomes a full member of the association without expense, and also binds himself not to allow others than members of the association to fish or hunt on his premises. A copy of the circular and card will be sent to this journal as soon as printed.

Numerous applications for quail have been made by land owners in answer to an advertisement in the daily papers by the Association.

In addition to the quail it is also expected that several streams will be stocked with brown trout, there are hints also of grouse to be brought here and liberated.

By its action thus far this new association has earned the approval and coöperation of every sportsman in the State, and it is hoped that the membership may reach the thousand mark the first year. The central location of this city gives the Association an opportunity to reach out all over the State, and with the wealth, energy and enterprise now identified with it shows that it means business.

There will be a stated reward offered for information leading to the punishment of violators of the game laws. Any man who has felt the blood tingle in him as he landed a two-pound trout, or grassed his October woodcock, or made a double on quail, or, equally as hard, his single on ruffed grouse in the brush, or downed his buck, two-pronged or six, must feel a thrill of gladness on learning that the cause is to have such a champion.

We hope to get news enough each week so that the editor will feel disposed to grant us part of a column headed "Rochester and Vicinity," or something better at his discretion. OSCEOLA.

JAN. 12.

THE NEW YORK GAME LAW.

ALBANY, Jan. 12.—About the 15th of the present month the special Commission appointed by Gov. Hill to thoroughly examine the fish and game laws and codify the same will make its report to the Legislature. The report is not yet ready to be made public; but some general points have been learned by your correspondent which will be of interest.

The Commission consists of Hon. Robert B. Roosevelt, of New York; Hon. Richard U. Sherman, of Utica; and E. G. Whittaker, Deputy Attorney-General. The Commission has examined several hundred game laws; but more particularly the amendments to the general game law of 1879. The result of their work is a comparatively short bill which is very systematically arranged under such headings as to make it of convenient reference. For instance, under the head "animals," deer, rabbits and other four-footed animals are so placed that any one can turn to them in a moment.

The report of the Commission will be accompanied by the new bill, noted above. Under its provisions as much uniformity is enacted all through the State as is consistent with the many and divers interests and climates that are represented. In Suffolk county, for instance, the salt-water fishing, and no other, has been placed in the hands of the supervisors. The supervisors themselves wished to control all kinds of fishing, but this was not allowed. In regard to game birds, the season for woodcock, partridge and quail is to commence Nov. 1. No changes are made in the season for geese; but the season for ducks is to commence one month later in the spring, because so many of the ducks have been shot when breeding. The shooting of does and jack-hunting are both prohibited. The season for hounding will commence about Sept. 1; but it has been shortened 10 days from what it is now.

DAYTON, O., Jan. 12.—Flocks of wild geese fly back and forth over the reservoirs of western Ohio in greater numbers than is usual so late in the winter. When Lake Erie gets too rough or cold, the geese come down to the reservoirs to rest and feed. A flock of ninety geese came from the north to Lewiston reservoir one evening last week. During the day flocks of thirty to fifty geese are seen flying. The ducks have mostly gone south long ago, but fair weather and no wind for a day or two brings them back. A dozen pair of quail are being kept through the winter here to be sent in April to Dr. Wm. F. Egry, in Obernkirchen, Germany, to stock his estates. The doctor, who is now 76 years of age, served in the American army during the Mexican war, and lived in Dayton for many years. Ten years ago he and Mrs. Egry returned to Germany to live, and after visiting here last year he took a brace of red Irish setters home with him. Now his friends desire to stock his farm with Ohio quail so that the doctor can enjoy his old-time fall shooting.—BROWN.

A NORTH CAROLINA GAME RESORT.—Stoneville, N. C.—I am not a regular reader of your most interesting journal, but occasionally see it while Mr. D. B. Hempstead, of Loudon county, is here at this place on his regular hunting tour. Mr. Hempstead is an old fisher and shooter, and now in his sixty-ninth year can do more tramping after quail (partridges we call them) than many not half his age. He has been coming to our place for twelve years, and each visit is pleasanter than the preceding. He and Dr. Stoddard of Rochester, New York, spent several days at this place in November and bagged quite a nice lot of birds. We have very few native hunters, and Mr. Hempstead knows where the best sport is and gives this portion of his hunting rambles as long a time as he can spare. Dr. Baily of New York, Mr. Sharpless of Delaware, and Mr. Boss of Connecticut, have been to our town and vicinity, and all claim that there are more birds here to the square inch than any place they ever struck. The game laws of our State are not "out" until the 15th of March.—J. R. S.

THE POWDER TESTS.—New York, Jan. 8.—*Editor Forest and Stream:* We have been interested readers of your reports of the comparative powder tests in the last issues of your paper, and indorse all you say regarding the importance of proper wadding for all nitro as well as other powders. American manufacturers of shotguns will learn that making 10-bore guns with 12-bore chambers in these days of paper shells and nitro or fine-grain black powders is not the correct thing, whatever advantage this manner of boring might have had fifteen years ago, during the days of brass shells and heavy loads of coarse grain black powders. We have never seen the gun with which you made the tests in question, but if the same is so wide in the barrel that a 12-bore wad will not be tight fitting everywhere from chamber to the muzzle, then we will guarantee to be able to load cartridges which will still do better work with Schultze and "E C" powders than those you have put to the test, because all of them were loaded with only No. 12-gauge wads.—VON LENGERKE & DETMOLD.

THE POSSUM CLUB.—Chicago, Ill., Jan. 9.—Mr. Wm. Werner extended his first annual royal complimentary game dinner to the members of the Possum Club last night. Report later.—E. HOUGH.

CONCERNING "FOREST AND STREAM."

I never saw so much interesting and valuable reading matter crowded into a sportsman's paper, and it's no special number, but every issue. I have heard any number of people mention it.—C. H. M.

MANCHESTER, N. H.—Although on the shady side of 60, I get a good string of trout for this section, and once in a while an old cock grouse on the wing; and the next best for long winter evenings is FOREST AND STREAM. I follow the stream and wood with each outer, and enjoy his good luck and know how to sympathize when a blank is drawn.—J. H.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

THE WOLF OF THE WATERS—II.

[*Continued from Page 478.*]

TOWARD the close of the second week matters began to look serious and the prospects for realizing our pleasant anticipations as to the big fish were certainly discouraging. In view of these depressing circumstances we determined to hold a council of war and decide upon plans for future action, so that night we drew up to the rough board table inside the closed tent and concentrated our thoughts upon the problem before us. A neighboring settler from whom we had been renting our boats and who kept a log hotel for the accommodation of transient fishermen, was called in, but as it was clearly to his interest to have us remain where we were, we of course utterly failed to elicit any satisfactory information from that source. A day or two before we had received information that led us to believe that we could find what we were after in Plum Lake, about eight miles distant, and we determined to push on further north, feeling very confident that the chances of success would not thereby be lessened, to say the least. Prompt arrangements were made with the teamster who brought us out, and before daylight next morning, with a small stock of provisions and a light canvas tent, we started forth.

Plum Lake was reached about noon, and we immediately set to work putting up our little V-shaped house, trimming boughs for our beds and preparing something to satisfy the cravings of the inner man. We also secured the services of a guide whom another small party had left here the day before, as we firmly believed that we had trusted to our own judgment about long enough. Up to this time the weather had been fair and warm and the sun had daily traveled across the wide, blue expanse with hardly a cloud to obscure its ardent glance. But a change now took place. It became colder, with a drizzling sleet falling all day long, being driven hither and thither by the sharp north wind. The lake we were on was a beautiful piece of water. It was long and narrow with many thickly wooded islands dotting its surface at almost regular intervals, affording pleasant relief to the eye. About a quarter of a mile from its north end lay Star Lake, so named on account of its pe-

[illegible] informed us

[illegible] added

[illegible]ing an

[illegible] dinner

[illegible]on after

[illegible] numerous

islands that lay in our course. Arriving at the end of the lake our route lay over an old trail, the exact location of which it was difficult to discover from the boat, but the guide had been here often before, and he directed us to row up to where, above the bushes that lined the shore, could be seen the smooth white surface of a single birch that served as a mark for our landing place.

We secured the boat and set out briskly over the rough and very indistinct pathway, which at times became so faint that it was barely noticeable. From the top of a small hill, down between the moss-covered trunks of some old hemlocks, we caught a glimpse of the lake showing a silvery white in contrast with the dark shadows of the forest. We struck the shore at the extreme point of one of the curious symmetrical inlets or bays and sat down for a moment to enjoy the untamed wildness of the scene. The wind was blowing at a lively rate, breaking the blue water up into short, choppy waves, with here and there an occasional whitecap lifting its snowy crest above the deeper colors beneath.

It was still drizzling and sleeting and the atmosphere presented such a dull, leaden, dreary-looking appearance and the air was so chill and damp, that to any but the enthusiastic angler, conscious of the proximity of a long-sought prize, the day would have seemed disagreeable indeed. But not so to him. He feels a strange and thoroughly enjoyable sense of satisfaction and comfort steal over him as he enconces himself snugly between the roots of a great spreading tree and, drawing his rubber coat about him, defies the cutting wind and the benumbing rain. It is a feeling that comes only to the true sportsman and lover of nature in its untainted wildness, for while to his more matter-of-fact companions he may, under these circumstances, seem a most miserable and dejected piece of humanity, he is, in reality, enjoying to the utmost one of those happy moments that come so seldom in his busy life. He is in complete sympathy with the elements in all their infinite moods. He laughs with them in the bright sunshine to the hopeful notes of joyous birds, and when nature takes on an earnest mein, clad in the white purifying robes of icy winter or in the dark mantle of the summer storm cloud, he also becomes serious and thoughtful, but not gloomy.

His deeper, subtler, nobler thoughts find vent and encouragement and strange, sweet fancies, for which he can find no adequate symbols, well up within him as he watches the ceaseless play of foaming waters or listens dreamily to the moaning of the invisible wind as it hurries by, carrying the rain drops in misty sheets past the friendly shelter of his snug retreat.

There was but one boat on Star Lake, and it had been toted over the crooked, torturous trail only at a great outlay of labor. It was large enough to accommodate but three conveniently, including the guide, who, of course, handled the oars.

About 100yds. from the shore a small sandy bar, covered with a few stunted pine trees and as many patches of brown, dead grass, rose to the height of a few feet above water level. Our guide said we would strike this point first, as there was an excellent stretch of feeding ground along the north side where the pebbly bottom, hidden here and there with wide strips of grass and weeds, descended gradually from the shore. He also informed us that he rarely pulled from one end to the other without making a catch. As before stated, neither of us had ever caught a muskallonge, and, in fact, had never seen one either dead or alive, and now that we felt assured that we were really in the home of the royal fish, with great probability of establishing intimate relations with them, it was no wonder that we experienced a pleasurable thrill of anticipation. Our oarsman appeared cool and collected, as though it was an every-day business with him, and we envied him his calm indifference. We sat facing the stern, and on nearing the point of sand let out about 25yds. of line with a No. 8 Skinner hook attached by means of two strands of annealed copper wire, and nervously awaited developments.

We pulled to the upper end of the island and back without getting a strike, and were just making the turn at the lower point for another trip, when Bob, who was fishing next to the shore, was seen to suddenly give his pole a violent jerk and then grasp it energetically with both hands as though his life depended on keeping possession of it. He gasped out something that sounded very much like "By Jinks! I've got him, boys!" but owing to the strain under which his nerves were plainly laboring his articulation was exceedingly indistinct, and it might have been something else—possibly worse.

Sure enough he had hooked something, for his rod was bent in a half circle, and the taut quivering line, which was now cutting through the water to the left, indicated to a dead certainty that it was alive and not, as frequently happened, a bunch of heavy, soggy weeds. The guide immediately turned the boat out into deeper water, never for a moment relaxing his speed, while I reeled up my own line as fast as possible in order to give my companion a clear field and to avoid the danger of having our tackle inextricably tangled up. Bob had a goodly number of wary game fish to his credit, but never before had he fastened on to anything that exhibited so much strength and agility as the one that now claimed his undivided attention. "Reel him in slowly and don't give him a bit of slack," cried Sully, the guide, as he applied himself vigorously to the oars. Poor Bob was doing his utmost to follow these instructions, but strain as he might the handle of his reel would not budge an inch; so he soon desisted from this vain effort and devoted his energies to retaining possession of the pliant rod that with every twist and turn seemed liable to be wrenched from him.

It is perhaps needless to say that we were both considerably excited, and I added much superfluous advice to that of Sully's in the way of disjointed and spasmodic entreaties to "Hold on to him, Bob!" "Don't let him break the rod," etc., etc. We had not caught sight of him yet, but just at this point the water was lashed into a white foam a short distance back, and the huge, shining form of a savage muskallonge shot perpendicularly into the air, clearing its native element at least four inches. What a magnificent sight, and what a magnificent fish! Its mouth was wide open; its muscular, symmetrical body rested for a brief instant in a beautiful curve, and as it dashed its head wildly from side to side in the mad endeavor to free itself, we could plainly hear the spoon rattle between its sharp, wolfish teeth. It remained in view but a short moment before it fell back with a loud splash, and through our excited vision it appeared to our bewildered minds a veritable shark in size and ferocity. Well named, indeed, was this "wolf of the waters."

The rush was so sudden and so entirely unexpected that, combined with Sully's shrill warning to slack his line, it was little wonder that Beb lost what little sense he still retained and became to all appearances temporarily insane. His actions, at least, justified this assumption, for he now dropped his rod, and, grasping the bare line just above the reel, commenced hauling in hand over hand as fast as the struggling monster at the other end would allow.

The effect of this move was disastrous, as the line which he deposited indiscriminately over the bottom of the boat in his crazy haste, became so closely identified with various other articles therein that further use of the reel was out of the question. Once again the muskallonge broke water and then started due south with so much vindictive energy and at such a terrific rate of speed that the line fairly hummed through the fingers of my now paralized companion. He again attempted to manipulate the reel with sore fingers, but a bunch of badly tangled line refused stubbornly to be wound, and with a smothered imprecation on reels in general, and this one in particular, he grasped the rapidly receding line, determined to do or die, and to me, making these observations in a state of semi-lunacy, the outcome of the struggle seemed shrouded in doubt. By this time Sully had abandoned all hope of seeing his oft-repeated instructions obeyed and had settled down to a study stroke, confident that nothing but a streak of good luck would bring our game to bag. But Bob's strong, steady pull was slowly but surely telling on the strength of "Old Musky," and his frantic, powerful rushes from side to side and straight down became less frequent and vigorous.

We were now well out from the shore, in deeper water, and these tactics had been kept up so long that we felt sure our fish must certainly be very much exhausted, but a look at Bob's protruding eyes and anxious face was enough to convince us that the end was not yet.

A few minutes more of rushing and tugging on the part of the captive and of labored breathing and irregular exertion on the part of our resolute fisherman, when suddenly, within twenty feet of the boat, the water commenced to boil, and in the midst of the spray we caught another glimpse of the wide-open mouth with its awe-inspiring display of needle-like teeth. "Shoot him, H.!" cried Bob, in desperation as a broad, finny back, propelled by an enormously wide tail, disappeared bottomward, leaving in its wake a rapidly widening circle of dancing waves. I had with me a Winchester repeater, .22cal., that I had brought along for just such an emergency, and the next time the muskallonge came to the surface for another brief look at his inexperienced but determined foes, I intended to try the soothing effects of a small lump of lead upon his fierce, fiery nature. An interval of one minute, during which, no doubt, our prey, away down in the depths, was cogitating over the increasing seriousness of his position—and then, a little nearer than before, the glistening head and staring eyes again appeared to view. A quick sight over the white bead, a sharp report, a mass of spray, another plunge, and the braided silk line went out yard after yard over the boat's edge, while our friend sat down on what was left of it to get his second wind and straighten out his stiffened, aching fingers. A downward motion of the lever, and another little dose was in readiness for the big fish. The line, which at first went straight down, was seen to move slowly outward, and this gave us an idea as to about where the next rise would be.

This time he rose more gently, as though his ardor and interest in the fight had abated considerably, but at the next shot away he went with apparently undiminished resources of strength. Sully urged us to bring him up close enough to enable him to use the gaff, but as we had a curiosity to know just how much lead Mr. Musky could carry and still appear as lively as ever, we determined to try one more shot. The small line was creating sad havoc with Bob's hands, and he advised us, between breaths, to get him this time some way or other or he would not be responsible for the consequences. He took another turn around it as it gradually assumed a horizontal position, and our eyes following it down at length rested upon the weary and all but exhausted fish. He had evidently made his last struggle, for he was lying quite still, with stiffened fin and the top of his pointed nose just out of the water. This time more deliberate aim was taken at its eye, and as the little rifle cracked sharply it could be seen to give a convulsive shudder and roll slowly over on its side. The tiny bullet had done its work and it was an easy matter to haul in and deposit the dripping form in the bottom of the boat. It was a splendid specimen, a plump twenty-pounder, and was so beautiful to look at as it lay stretched out at our feet that we could hardly take our eyes from it. The "wolf" had made a noble fight, but superior power and intelligence had won and the victory was ours.

All three shots had taken effect, one going through the fleshy part of the back near the head, which the second shot creased along the top, leaving a broad white mark, while the third went true to its aim and pierced the right eye. When the difficulty of shooting and of aiming steadily from a badly rocking boat is considered, none of these shots will seem so bad. As we had surmised, the hook was very firmly fastened in the sides of the horny mouth, otherwise in the wild struggles it would have been ejected during Bob's eccentric maneuvering with his rod and reel.

We had been just twenty minutes landing our prize, and during this time the wind had risen so rapidly and was sweeping across the lake with such violence that the guide advised making for the shore until the squall was over. We reached our landing place with much difficulty, for it was hard rowing against the combined forces of wind and waves, and it required all the skill of an experienced oarsman to prevent the boat from being capsized. These small northern lakes seem to be peculiarly sensitive to any changes in weather conditions, as their waters are lashed by the capricious wind into dangerous white-capped waves in a remarkably short time, and one hardly knows at what moment he will be compelled to fight his way ashore. Oftentimes these squalls came up so quickly that, even while fishing but a few hundred feet out, we could not reach shelter in time to avoid them entirely.

We dried our damp clothes by the side of a roaring fire, and after the gale had abated somewhat we retraced our steps over the trail to where we had left the boat on Plum Lake and were soon back at camp and busy preparing supper. We remained here a week, enjoying such fishing as we little dreamed would fall to our lot in the earlier part of the trip. On the days that we did not go over to Star Lake we would leisurely troll around near camp and it was seldom, indeed, that we returned empty handed.

The greediness and voracity of muskallonge are proverbial, and his confidence in his prowess and capacity for digestion seems unlimited. They will seize and swallow other fish fully half their own weight, and it would be interesting to know the different varieties of animals and fish they prey upon or to what extreme they would go in cases where they had been for some time without a sufficient supply of food. The little red squirrels that abound in these woods barely make a bite, and one could be hidden from sight in a corner of their huge, cavern-like mouths.

One day, while idly rowing around in a small bay near camp, our attention was attracted by a white-looking object floating on top of the water a short distance away and in near the shore. Further investigation disclosed the fact that it was a huge muskallonge that had evidently been dead for some time, as its body was shrunken and thin. We towed it ashore and were surprised to find a large, black-looking object protruding from its enormous jaws. A hard pull and a strong pull and out popped the body of a full-grown muskrat that had been firmly fastened in the fish's throat. This incident puzzled us a great deal. We were in doubt as to whether it had choked to death through simple inability to swallow this

delicate morsel, or whether the muskrat, in his desperate struggles for life, had in some way fatally injured it. At any rate, there was no question as to the cause of his demise, and the fact impressed itself upon us as being one instance where the "wolf" had seriously erred in estimating his masticating abilities. This fish had a massive head, was of unusual length, and in good condition would probably have weighed 30 to 35lbs. What an ignoble death for such a wild, untamed, majestic fish.

One evening, as we were sitting by our comfortable fire, Sully informed us that there was a small lake about five miles to the southwest which was literally alive with muskallonge, and told us in his characteristic way of some big fellows that he had assisted in killing after a hard fight. It was difficult of access and nothing on it to fish from except a leaky old Indian canoe made of birch bark; but he thought the sport there would more than outweigh these considerations, and before we slept that night we determined to make the trip.

Next morning, leaving Sully in charge of the tent, we climbed in the boat and pulled silently through the gray fog that covered the lake. Following our directions closely for about two miles we easily found the trail that led off from a little narrow inlet, and soon had our boat tied fast to an overhanging bough of maple.

Our route lay through some of the most characteristic stretches of a Wisconsin forest and we enjoyed every moment of our three-mile tramp. In some places our trail lay distinct and sharply defined before us and was easily kept. Then again it would fade away and become so dim and so nearly invisible that once or twice we thought we had lost it. Now we would descend the side of a steep hill into a narrow, crooked valley, and anon we would pass through a strip of Norway pine, where the ground was as level as a floor and as soft under foot as the most luxurious carpet. Here we would enter an almost impenetrable thicket of young hemlock and birch, where the range of vision was limited to a couple of feet on either side, and after fighting our way through this tangled, scraggy mass we would suddenly emerge into a forest of sweeping hemlock, whose wide-spreading branches, at times almost touching the ground, shut out the bright light of day and surrounded us with a deep, sombre gloom.

At times we moved along the high ridges of a succession of hills whose wooded sides sloped grandly off to the left and right, and many a wild, picturesque spot appealed so strongly to our sense of the beautiful that we could not resist reclining on some gnarled root or weather-beaten log and giving ourselves wholly up to the seductive witchery of the scenes. To the lover of nature, untouched by the hand of man, some of these views were simply enchanting.

Down at the foot of a long, gently rolling hill we came upon the little lake in all the glory of its hidden beauty. A strong wind was blowing and the waves were dashing themselves into a white foam upon the sandy shore, and when we pictured ourselves dancing up and down on those rough waters with no support but a cranky old canoe we inwardly decided that we would not fish very far from land. We hauled the old craft out from its hiding place in the bushes, and cut a few armloads of hemlock boughs which we placed in either end to sit upon. The canoe was about 12ft. long by 3ft. wide, and was lightly though strongly built. There was one weak spot in it, however, and we had not been afloat five minutes before we became painfully aware of the fact that the thing leaked badly, and every little while we were compelled to land and tip it up to let the water run out. One of us sat in the bow, as far out of reach as possible of the little pool in the center, which gradually rose higher and higher, while the other took up a position in the stern and furnished the propelling power through the medium of a short, unwieldy paddle with which we would make a few strokes on one side and then on the other. With the wind blowing so fiercely we could make but little headway, and it required continued exertion to keep the spoon revolving. A more experienced canoeist would probably have kept a straight course, however slowly, but in spite of our most persistent efforts the point would veer around from one side to the other so that the one handling the rod would have to keep it moving back and forth to take advantage of these numerous tacks and to prevent the spoon from sinking to the bottom.

A cold, drizzling rain was falling, but to this we were completely indifferent, as our whole time and attention were occupied in struggling with the frisky canoe and in keeping the line free. Bob took first turn at the rod while I paddled around close to the south shore, being careful not to snag any more holes in the thin bark covering on one of the many sharp, dangerous looking logs and broken limbs that sometimes lay far out in the water with their points just below the surface as though waiting to wreck the unwary fisherman.

In a little cove, partly sheltered from the wind, Bob had the first strike, and the slender rod trembled as the fish made a rush for the open water. It was necessary to adopt different tactics while fishing from a rolling, leaky canoe, that made one feel as though he was balancing on a tight rope, and instead of making for the deeper water I kept in near the shore, where in case of accident we stood some chance of wading out. Bob worked manfully at the reel, and after a lusty fight of some ten minutes, during which he was compelled to use all his strength and skill against the mad rushes and sudden leaps, he drew the still struggling musky up alongside, and the gaff, neatly placed under his shining body, laid him flopping and floundering in the puddle between us—a fine 16-pounder. We emptied the boat on the bank, shook the surplus water from our drenched garments, and started out for another turn around the point. We caught two more in a short time, both beauties, each of which afforded fine sport in the capture, and then we again landed to build a fire by which we could dry and devour our lunch at the same time. Nearly everything was soaked by the rain, but we succeeded in finding some partly dry birch bark, and, by the aid of this highly inflammable material, soon had a roaring fire started in a little hollow formed by the upturned roots of a huge fallen tree. Our simple repast was eaten with a relish, and refreshed us wonderfully, for we had the ravenous appetites that come only to those who breathe day after day and night after night the invigorating, bracing air of the pine woods.

A few minutes' delicious rest, while enjoying the soothing effects of a good cigar, and we again dropped down on the wet hemlock quite ready for another skirmish with the "wolf." It was my turn to handle the rod, and after a few minutes' experience I found that it was no child's play, for Bob had never before been called upon to propel and steer such a flimsy craft under such adverse circumstances, and he made such poor headway, if such the zigzag, almost imperceptible motion could be called, that considerable maneuvering was necessary to prevent the hooks from catching fast to the bottom on some sunken log or bunch of weeds. In the course of the afternoon three more good-sized muskies were added to the list, and we began to think of returning to our first landing place at the trail, for we were somewhat tired and very hungry and wet.

There was one particular place along the edge of a thin strip of land that extended out into the lake that we felt sure must contain some huge specimens, as it was the most likely looking spot that we had yet seen. It was getting late and we were not quite sure that we could follow the trail back in the dusk, but we determined to give it a trial, and accordingly Bob took up the paddle and the little canoe once more began its tortuous course through the drizzling rain and choppy waves. We had enjoyed the sport to our hearts' content that afternoon and were not particularly anxious in regard to the success of our last attempt, but, when about half way to the end of the peninsula, the rod suddenly plunged backward and threatened to jump out of my hands, all our apathy vanished like smoke before the breeze and we were again on the tiptoe of expectancy.

At the same instant the strike was felt the rod was given a short quick jerk or twist, but alas, the hook failed to catch and the heavy weight at the other end suddenly ceased. But the fish was undoubtedly hungry and determined to capture the glittering decoy at whatever cost, and we had not gone three yards before it struck again and this time a sharp turn of the arm sank the barbed steel firmly into the horny mouth, and the fight began. From the great strain on the rod I knew that we had fastened on to an unusually big fellow and shouted to Bob to run the canoe in to the shore, for I had no desire to participate in a lengthy struggle, such as I was assured this would be, over deep water with nothing under us but a cranky, unwieldly canoe that already contained three inches of water.

Bob managed to turn the head around and applied all his strength to the paddle, but in spite of his strenuous effort we barely moved. Just then we heard a loud splash, and, looking up, saw the broad tail and thick, dark back of the angry muskallonge lashing the water into a white foam in its rage. It tugged furiously at the line and the strain on the reel was so great that it was only by exerting all my strength that the crank could be moved a particle, and before I had reeled him in 20ft. my fingers were raw and bleeding where they had come in contact with the sharp edges of the reel.

Away he rushed from side to side, now down and then up, and time and again his dripping form rose clear of the water in frantic endeavors to expel the merciless hook. Each time it appeared to view it would shake its head savagely as though in angry menace, then down again to the bottom it would plunge for another start. It was hard work to hold him in check, but we knew that the tension must not for a moment be relaxed, for the very instant he felt the line slacken he would have thrown the spoon from his mouth and our prize would have been lost. After playing him for some fifteen minutes, now from one side of the canoe and then from the other, all the time reeling as rapidly as possible, I got him up to within 20ft. of us, and by this time, after a heroic effort, Bob had paddled up quite close to the shore. We could feel the cold water gradually rising up around us and knew that it was only a question of a short time when we would be compelled to abandon our excuse for a boat and continue the fight from dry land, but as this would place all the advantages on the side of the wily muskallonge, we determined to stand by our colors to the last. As the pebbly bottom of the lake immediately under us descended very abruptly, we found it possible to hug the friendly shore quite closely and at the same time be in easy reach of enough water to accommodate the highly eccentric movements of our unwilling captive. It would not do to allow him to get into very shallow water as the hook might accidentally be dislodged by striking against some sharp-pointed rock.

Knowing that we could not retain possession of our craft much longer unless we chose to descend with it to the bottom, and having, thanks to the penetrating rain and the leak hole under us, absorbed about as much moisture as could be comfortably endured, I determined to force the fight to a speedy issue. In pursuance of this firm resolve I exerted myself to the utmost in the endeavor to reel in more rapidly, but it was without avail, for the stubborn, sturdy monster obstinately contested every inch of ground, and after a few turns my cramped fingers refused to act. There was nothing to do but let him have his way for the present and give him plenty of time and room in which to exhaust himself.

There was no tree or even a stout bush near the waterline that we could tie to, and Bob, in the absence of any other expedient, was obliged to exercise himself vigorously over his paddle to prevent our being bodily dragged out into deeper water, a misfortune which we, under the circumstances, earnestly desired to avoid. Not much force is required to move a light canoe, especially when the wind is favorable, and if musky had been allowed to follow unrestrained the dictates of his own sweet will there is no telling where he would have piloted us.

A sudden swish of the line to the left and we were again greeted with the vision of a huge, sinewy, wiry body describing a half circle through the air, from which the light drops flew in every direction. No sooner had the water again closed over the glistening form than away it darted in an opposite direction with such lightning-like rapidity that I loosened my grip a little on the reel for fear that a too sudden check would snap the line. Slowly, but surely, I wound him in nearer and nearer, and it now seemed as though he realized that his chances for escape were growing alarmingly slender, for his struggles became fast and furious.

It was oftener on top of the water now than under it, and the way it would shoot along the surface, throwing the spray to either side like the bow of a swift boat, was calculated to distract the most experienced, and, although we had become somewhat accustomed to their strange freaks, when our eyes encountered those terrible trap-like jaws surmounted by a pair of hard, glittering eyes, now so close, we could not suppress the cold chills that glided up and down our already half-frozen spines in quick succession.

There was something in the appearance of that muskallonge that harmonized strangely with the wild solitude of the surroundings, and this feeling was noticed almost unconsciously as I worked with sore fingers and shortened breath on the almost unmanageable reel. By this time the many lively rushes and high leaps combined with the unceasing strain were beginning to tell on him, and his twistings and turnings were growing less and less energetic. Believing that I could now reel him in more easily and rapidly, I told Bob to make ready with the gaff and to let the boat drift. He laid his paddle in the bottom, and then such a look of consternation spread over his features that I asked him anxiously what was wrong. There was nothing in particular wrong with him, but he was sorry to say that we had stupidly left the gaff hook at our last tipping up place, and he would like very much to know how we were going to get that whale out. He did not speak as kindly as these words imply, but embellished his remarks with a few choice and highly appropriate phrases that seemed to act as a safety valve on my own feelings. It was with deep dismay that I received this information, for I was at a complete loss to know how we were going to manage our captive that now seemed like a small elephant on our hands. We did not have much time to think, for the line had been getting shorter and shorter, so I shouted to Bob that he would have to lay him out in some way with the paddle. Bob ran his hand down into the water covered bottom to fish out this useful article, but when it came forth again it was grasping, not the little pine propeller, but a flat, heavy mallet, with a good strong handle, that had evidently been made to take the place of the cruel gaff. We had noticed it lying there, but in the excitement of the moment had completely forgotten it.

This find cheered us up considerably, and I now made a strong effort to haul the heavy fish up close enough to come within easy reach of Bob's long arms and the death-dealing mallet. I sat facing him in the end nearest the shore and not fifteen feet from it, and I did not have much trouble in guiding the nearly exhausted musky up within a yard of the canoe. Bob raised his weapon—splash, zip—and down went the frightened fish like a flash directly under us. I soon checked him in his rapid retreat, and again he was approaching the waiting executioner, too much worn out to offer any but slight resistance. Bob had his arms raised in readiness, and when the savage head was within a foot of the boat down came the sharp edge of the hard wood with a crack square between its eyes. At the same instant I released my hold upon the reel, so that the force of the blow, which drove it several feet under the surface, might not tear out the hook. It was a fatal stroke, and the noble fellow hardly moved as we ran the canoe ashore and laid him gently out upon the clean yellow sand. Its back was 5 or 6in. thick and it was the most trimly-built fish that we had yet seen. It looked every inch of it to be just what it was, a hard, strong, gamy fighter. We weighed it it on our return to camp and it tipped the beam at exactly 30lbs. Little wonder that we were nearly played out landing such a specimen, but when we strung our six fish upon a stout pole, with the big fellow dangling in the middle and started back over the trail we felt that the day had been well spent indeed.

The killing of a muskallonge does not require much special knowledge or skill in the use of the rod, but it does imply a certain amount of judgment, coolness and perseverance. Almost any one, with a stout hand line and a guide to pull him about, find the fish for him and land them safely in the boat, can make a good record if they are at all plenty. But muskallonge fishing is very much like other kinds of sport in that there are many methods of pursuing it. All fishermen are not alike in their tastes and standards, and while some would be more than content to haul them in as they would draw water from a well, the nature of others demands that they resort to higher methods. The degree of pleasure rests upon the sensibilities of the angler and the character of the means employed. To render the sport as pleasurable as possible one should use a medium weight rod some 10ft. in length. Split bamboo is the most serviceable, and anything longer than this or with less elasticity would prove awkward and hard to manage. It must be remembered that but little of the strain comes on the rod, and it should be light and springy, capable of taking on almost any desired curve without breaking. This allows an easy flow of line from the reel and at the same time exerts considerable resisting power. The reel should be an unusually large one, capable of containing easily 50yds. of braided silk line, with large powerful handle and other parts correspondingly strong. This is the most important part of the outfit, for if it be too small or liable to get out of order, much disappointment and annoyance will be caused, no matter how fine the line, rod or hooks may be. A medium weight braided silk line answers the purpose admirably and is plenty strong enough if properly handled and cared for.

The spoon hook must be very strong and well made, and have on a long, stout wire connection with the line, otherwise it may suddenly disappear to be seen no more, and at a time, too, when such disappearance would occasion the keenest regret. Many a strong steel hook has been bent out of shape and rendered useless by this iron-jawed fish, and the heavy spoon frequently comes back to the boat dented up so badly as to be scarcely recognizable. A No. 8 spoon is considered the best size for this purpose, although a No. 7 is occasionally used with good effect. Sizes larger than these cannot be employed with much success.

Various plans are pursued to secure or kill the muskallonge after it has been hooked, worn out and reeled in close to hand. About the best and most effectual way to finish them is to play them until exhausted and then slowly move them up close to the other end of the boat where the guide or companion is in waiting with a small .22cal. revolver. As the fish comes up the muzzle of this is slowly lowered in such a way as not to startle it, and when immediately over the head and between the eyes the trigger is touched and over rolls musky as dead as a mackerel. Some object to this, claiming that the report is likely to scare away other fish that may be in the neighborhood; but as far as my experience goes, such objections are not sustained by the facts. Another method, and the one generally made use of where a guide is employed, is that known as gaffing. A strong steel hook with a point

like a needle and a 3-foot handle is the weapon, and some of the professional guides, from long and constant practice, become very expert in its use. With a quick, downward motion, before musky has time to think what it is all about, the sharp point is darted under his body and the next instant he is struggling vainly in the bottom of the boat. This is less humane than shooting them, but for some reason or other it seems to be preferred by many.

If not immediately killed by a bullet through the brain a sharp-pointed knife is inserted right back of the head and the spine severed, for if this is not done it is likely to flop about for a long time and cause a great deal of trouble.

The third method, which is only resorted to where no other is available, is the one that Bob and I once had a rather peculiar experience with. We were trolling for pike from a treacherous dugout canoe that was barely wide enough to sit down in, and which seemed forever to be on the verge of rolling over and completely reversing the natural order of things. While passing over a bed of weeds Bob hooked on to a monster pike which for about ten minutes occupied all the attention we could safely spare from the management of our hollow log. Immediately after striking the actions of a pike are similar to those of a maskallonge. It dives down and gives a series of lusty, angry tugs which seem to indicate quite a vindictive spirit. But here the resemblance ceases, for the pike is not much of a fighter and soon comes up as though thoroughly tired out. The one Bob caught finally came in with hardly a struggle. Having no rifle, revolver, gaff or any other instrument wherewith to demolish it I determined to try the simple plan of lifting it out bodily by hand.

Accordingly, as it lay just beneath the surface, slowly opening and closing its capacious mouth, I ran my hand gently along its back, and with a quick movement clutched it in the hollow places formed by the eyes and dropped it in the canoe. If a second thought had been taken it would not have been released quite so soon, but it was now too late to regain my hold, and as a result of this oversight we were treated to an exhibition of fish gymnastics that we had seldom seen equalled. A pike coming in with meek and lowly mien is certainly quite a different thing from that same pike when lying in the dry bottom of a canoe, as we were not long in discovering. No sooner was he released than he made a couple of vigorous flops that threatened to take him back in the water and, not seeming satisfied with this, he commenced a series of twistings, turnings and other eccentric gyrations that were almost bewildering. Bob and I moved cautiously toward the center and sat down with as much dignity as the situation would permit on either end of the restless fish.

This quieted him for a moment, and Bob, taking advantage of the calm, fished out a chunk of wood, about a foot long, and rained blow after blow upon the head of the defenseless captive. Its body quivered a little and then dropped back limp and lifeless, as it appeared to us. Thinking all was over, we drew back to our respective ends, but were not more than fairly seated before that tenacious pike, with a couple of spasmodic leaps, almost threw himself out again. Back we scrambled and once more deposited ourselves upon its slippery, squirming length. This treatment it seemed to regard as an insult, for it commenced struggling furiously, and to such good effect that it slipped like an eel from under our feet and legs and through our hands, and with a final flirt vanished like a streak over the side of the clumsy old craft. We did not then, and do not now, understand how that pike escaped after being sat down on twice and thoroughly mauled with a hard piece of wood, but the fact that he did so escape nevertheless remains. However, we did not lose it, for a few moments after we discovered it floating on its side a short distance away almost dead. It measured just 36in. in length. This little incident served to impress upon us the importance of killing these big fish as soon as possible after being caught, and there is no better way than to sever the spine back of the head with a sharp knife. One would hesitate a long time before attempting to lift a muskallonge out with the bare hand, for those long, sharp fangs present anything but an inviting appearance. Some use a small hardwood mallet, and when the fish is close enough, stun it with a sharp blow between the eyes. In the absence of a small-caliber revolver, this weapon is much better and far less cruel than the merciless gaff hook, as the latter sometimes fails to take a good hold, and, instead of lifting the fish out, tears a ragged hole in its side.

Muskallonge are generally caught in shoal water from 3 to 8ft. in depth, as their favorite feeding grounds are along close to the shore or along the edge of a sand bar that rises in the middle of a lake. Like the pike they love to lie around in the grass and weeds, where the small fish that form the bulk of their food resort.

They never seem to know when they have enough, and I have known of them after being caught on one hook to make a rush for another trailing along some eight feet away and attempt to swallow that. Two of my friends who were fishing out of opposite sides of a boat once had strikes almost at the same instant, and their surprise can better be imagined than described, when they finally reeled in and found that they had both hooked one and the same fish. Evidently one of the spoons tasted so good to it that it concluded another would not be so bad. Sometimes when two are trolling from the boat they will run across a pair of muskallonge lying together and two spoons will be taken almost simultaneously. Bob and I caught two in this way, and it was no easy matter to get them safely in the boat, for it is rather difficult to time the fish and allow one to come in before the other. In this case we were compelled to draw them in about the same time, but Bob's was a short distance in advance, and when the guide jerked it in with the gaff the one I was engaged with made a dive for the bottom and ran out about 15yds. of my line before it could be checked. For a few minutes it was very exciting, but superior strength prevailed, and two 16lbs. muskies soon lay before us permanently disabled.

Some of the guides have a way of turning away from the shore and rowing out into deeper water immediately after a fish is struck. They do this for two reasons. In the first place, this gives the muskallonge plenty of room for his wild rushes and powerful leaps and avoids the danger of having the hook dislodged by some pointed rock or permanently tangled up in some tough bunch of weeds or grass. In the next place, it keeps a taut line on the fish, and, although it is sometimes of great assistance in this respect, it renders the work of reeling in much more difficult.

To the tyro in these matters a guide is almost a necessary adjunct, and is at all times a great help. He rows your boat for you, takes you to where you will be most likely to meet with success, gaffs or shoots your fish, gives you a good deal of practical advice, and, in fact, makes himself quite useful in many ways. But after he has had a little experience and becomes better posted in regard to the more prominent phases of the sport, a guide is regarded as a useless incumberance and seems more or less in the way.

We made one more trip to Muskallonge Lake before we left, and the second time made a record of ten inside of three hours, but they were all of medium weight and none approached, either in size or ferocity, the big fellow we took a few days before. We enjoyed paddling around in the old leaky canoe far more than we did having Sully pull us about in the heavy wooden boat. Occasionally we would run across fresh deer signs, and one day as we were walking along an old deserted lumber road with no other weapon than a .22cal. repeating rifle, a graceful young doe leaped up from almost under our feet and loped away over a low hill in plain sight while the tiny bullets flew after her in rapid succession.

There were plenty of wolves about, but as usual these wary beasts took good care not to show themselves. We could hear them howling about in the night, and what is more mournful and lonely than these sounds breaking through the deep hush of the dense, dark forests.

It was late in October when we packed up our tents and took a last farewell look at the camping ground and the lake beyond, as the old wagon again commenced its creaking, bumping, jolting journey through the woods. Everything, even the old stump near the shore, had become pleasantly familiar to us, and it was with deep regret that we turned our faces from the spot where we had known naught but deep content, to take up once more the burden of a busy, uneventful life. H. LYNDE.

MY FIRST BLACK BASS.

IT was one of the beautiful mornings of the last of May. The flower-perfumed breezes were blowing through my office window, and all nature out of doors was bursting forth in the wild delight of spring. Judge Woodbury, our veteran lawyer and sportsman, came into my office animated from crown to sole with the fever to go bass fishing. After laying plans for getting bait that would tempt the largest bass we decided to start for Irving, at the mouth of the Cattaraugus Creek. At 12 o'clock sharp the old Hambletonian was hitched to the old open buggy and our outfits, consisting of the Judge's three-joint reed rod, 18ft. long, weighing something less than 10lbs., two 9oz. lancewood rods, 9 and 11ft. long, of my own, a tackle box containing hooks, flies, reels, lines, etc., a basket of soft-shell crabs and a milk pail half-full of water containlive minnows, were packed into the buggy, and we started filled to the brim with the joy of anticipation. Irving is 14 miles from Gowanda, our starting point, and the road, not one of the best to travel over, goes through the Seneca Indian Reservation nearly all the way.

Now, if you want to see us as we looked, you can picture a rather tall genial-faced gentleman, with iron-gray hair and beard, driving the horse—that is the Judge—and you can picture your humble servant as a small man of about 30 years, with a red mustache, slightly humped over on the other end of the seat, carrying the milk-pail of minnows, to keep the water from slopping, and mentally wishing minnows would grow on bushes at the mouth of the creek, or that the milk-pail would spring a leak. But after all, two happier faces are seldom seen than ours were that day. We had left our business and its cares at home and were enjoying the outing thoroughly. The breezes were laden with perfume from the wild flowers growing among the scrub-oak bushes on the Reservation. The spring had been late and the apple trees looked like huge balls and banks of snow tinted with rose and carmine, and all nature was rejoicing with us.

We told stories all the way. The Judge told how he had tracked a deer in his boyhood all day, and near night, when almost exhausted, he at last got a shot at the deer, the old smooth-bore flashed in the pan and the deer disappeared. The only deer he ever had a chance to shoot at. And I told how I had fished for trout in boyhood, and one day when I thought I had the acme of perfection in a rod for casting a long line (a bamboo 8ft. long), and was standing in the water up to my knees casting about 20ft. of line into an extra good point in a mill pond, a stranger who proved to be H. M. Barry, the best fly caster in Erie county, came quietly up behind me, and, with a rod that then looked to me like a buggy whip, cast about fifty feet of line out beyond my hook and picked a fine trout from under my very nose. Of course, I inspected the rod, and seeing its good qualities, bought one like it, and that is my reason for using these light rods. "Wall," said the judge, "you may be able to catch a six-inch trout all right with them rods of yours, but when you get hold of a two-pound bass he'll snap it quicker'n lightning." "Well, if I can get a bass to bite I'll try my lancewood against your rod and we'll see which is the stouter."

At about 4 o'clock we arrived at Irving. The Judge went on ahead while I was putting out the horse. I had never caught a bass, and on the way down I met a boy with a large string of bass, and, to make a sure thing of having some to take home, I bought them and sent them back to mine host's ice box, and pumped the boy in regard to the bait he had used, and found he caught them in a net.

The creek from Irving to its mouth is still and not very clear, and there are numerous deep pools filled with old logs, just the place for black bass. I soon found the Judge intently fishing in one of these pools for a black bass that would show himself every few minutes with a splurge that would make your blood boil, and I soon found a place near him where another was going through with the same antics. I tried to tempt him with worms and with crabs, and then began casting flies, but all to no purpose; he didn't want that kind and wouldn't be tempted. By and by I heard the Judge's cane pole begin to creak and looking up beheld the Judge, with an indescribably bland smile covering his face, trying to tow the big bass to shore. It was a sight worth seeing. The fish chassed and promenaded, and the Judge tugged and smiled, and finally called on me to land him, and we soon had him landed safe for inspection; he was a small-mouth of about 2lbs. and a beauty.

We continued fishing till dark, but could not persuade another fish to bite, so we went back to the hotel, got our suppers and went to bed. The morning soon came and the day came in with a fog. We procured a boat and rowed and fished all the day to the mouth of the creek without success, and gave it up and started back discouraged. On the way back we came to a very promising looking pool of great reputation, and noticed several swirls near an old log, and concluded to try once more. I saw a big swirl just above us, and concluded to try a new scheme on that bass, so I went to the milk pail and got a good lively minnow and got out of the boat and carefully approached the pool where I saw the swirl, and my minnow hadn't fairly sunk before swish went my line through the water and I had hooked my first bass, and business began. The old bass was doing his best and I was too intent on the struggle to notice surroundings. The little lancewood rod would bend and hang to it like a rubber cord until Mr. Bass finally gave up and I landed him. He was equal to the Judge's in all respects and my rod was not broken, and the Judge was surprised. I put on another minnow and went back and almost instantly hooked another. This time I was cooler and took in the fun all around. The Judge was standing in the boat looking on, intent as a cat after a mouse, and I sat down on the bank and began to enjoy myself and to hum dance tunes and call off for the fish to dance, balance on the corner, and he would balance, chassee back and forth, swing in the center, all promenade, seat your partners, and the fish was mine, the biggest yet caught.

The Judge left the boat and began like this, "Ahem, 'hem, five to my one; I must begin to do somethin'. Let me see that pole of yours. That'll break next time. They ain't nothin' to it. It's all chance catching such fish with such a pole." In the meantime I was getting on another minnow. The Judge shouldered his rod after putting on a crab (crayfish) and went just above me, but before he could get the 18ft. of cane pole in position I had hooked another and got him out safe. The Judge had lugged off the pail of minnows so I put on a worm and tried a deeper place. My hook had no sooner sunk than it began to walk off, and I supposed I had a bass and began to sing, "Bass number four, balance on the corner." Then the Judge's old cane pole began to crack and squeak, and he began on one of those indescribable smiles, and I got one eye on him and the other on my fish and discovered I had a catfish of 20lbs., more or less, and I continued to call off, "Right and left, circle all," when the Judge called out, "Doc, for gosh sake come and help me land this fish, he'll break my pole." "I can't," said I, "I've got a 20lbs. catfish here." "Let your catfish go to thunder, this bass is worth more'n all the catfish in the creek and he'll break my pole." "I can't." "Promenade down the hall." "Snap went my fiddle string of a line and my catfish escaped, and I cussed the old line and went and landed a three-pound bass for the Judge.

On examining my line for the first time in six weeks, I found it was so weak that had I known it I would not have trusted it on a six-inch trout; but the little limber lancewood rod had done the work and saved the line until the big catfish straightened on it, by my not giving him line enough, and snapped the rotten thing. I broke off the poor part of the line and caught only one more bass, and we had enjoyed the participation as thoroughly as the anticipation this time. I had learned how to catch bass, and the Judge had learned the value of a lancewood rod so well that the next time he went he took one of my rods.

The bass graced our own and our neighboring sportsmen's dinner table long ago, but the experience of that day is one of the bright spots in life to look back upon in the dull winter days, and its memory grows brighter every year. JOHN V. COLE.

GOWANDA, N. Y.

TROLLING FOR WALL-EYED PIKE.

THE art of taking this fish by trolling with the rod, line and spoon was unknown to, or at least unpracticed by, the local fishermen of this place until the season of 1886.

One evening early in September of the same year, as I went to my work at Columbia, I met a friend, Mr. John Rote, of Harrisburg, who had been fishing during that day at Mud Island and had succeeded in taking a very fine string of our so-called salmon. Having been somewhat of a fisherman myself these fish excited my deepest admiration, and led me to inquire of him his mode of catching them. He then showed me his tackle, which consisted of a rod, reel, line, spoon and hooks, and also explained the manner in which the rig should be manipulated. I then and there resolved to test that way of fishing myself. I requested him to sell me one of his spoons, which he did, and after I got home next morning I secured a long non-sectional bamboo rod, on which I fastened three line guides made of wire; the next step was to get a long piece of the ordinary "net twine" for a line, and of course some hooks. The aforesaid articles made up the whole of our original trolling outfit, and crude indeed it was, The next morning about 7:30 my friend, Mr. W. A. Charles, of this place, and I went out in a canoe (which we propelled with a paddle, and I might add, in justice to my friend, that he did the paddling because I did not understand how to do it well, or at least was not very anxious to) to try the new tackle and with the resolve to fish or die.

On the way to the fishing grounds we had to search for bait; we succeeded in getting only seven lamprey eels, and with these we proceeded to fish. Now for the fun: We had scarcely cast our line, for the first time, when the fish immediately began to bite. When the first one struck we at first thought our hook had become fastened to a snag or a piece of sunken wood, but on drawing the line (which was done by hand, owing to our having no reel) we were much surprised and gratified to find a 1lb. "salmon" fast to the hook. Encouraged by this we cast again, when almost instantly jerk went the line, and on hauling in we secured our second fish. And so we continued until our bait was all taken; then we went to shore for the purpose of getting a new supply; in that we were not very fortunate, for two solitary helgramites were the only bait we could get. With these we resumed our sport; the fish continued to bite vigorously, and with our last helgramite we caught four "salmon," one bass and one perch; the latter individual completely annihilating our effective little friend the "ho jack."

On looking over our catch we found that we had, as the result of four hours' fishing with our hastily-con-

structed tackle and with the above mentioned number of bait, thirty-seven "salmon," one bass and one perch. The average weight was about 1lb. Thus ended our first day's experiment of taking fish by trolling, and so elated were we with the success and so much did we enjoy the sport that we unanimously agreed to try it again the following morning.

The next morning we started out for the second time with the same tackle; the first important thing was to get a supply of lampreys, which at that time were difficult for us to get on account of our not understanding their nature and habitat. However, we secured about twenty of this killing bait, and with these we proceeded to the scene of yesterday's sport. We found the fish as ready to bite as we were to fish, and in two and one-half hours we took forty-two fish, one individual weighing 4lbs., and the balance averaging about 1lb.

We were now fully convinced that this mode of taking fish was practical and successful, and we at once concluded to secure improved tackle, to make a pair of oars for the canoe and go to fishing in dead earnest.

These things we accomplished, and with our new rigging we tried a third time and succeeded in taking upward of fifty, many of which weighed from 2½ to 3lbs.

About this time the local fishermen, together with many others from a distance, learning of our remarkable success, all took to fishing by the same mode we had used and all were generally very successful. This wonderful taking of fish lasted but a short time, when it seemed as if this prolific body of water had been completely depopulated of its late numerous residents by the fishermen, but after the next rise of water we again tried it and found fish as plentiful as they were before.

Since that time (1886) high water has, with one exception during the season of 1888, up to the present time, interfered with the taking of fish. The past season has not been remarkable for the number taken, but for the high average in point of size.

The black bass, considered here as the best game fish, seem to have almost entirely deserted the waters of this locality. The true cause of their leaving is as yet a matter of doubt if not a mystery. It is asserted by some to be due to the scarcity of small fish upon which they feed, and by others that the pollution of the waters, caused by the gas and coal refuse from the mines, etc., situated along the river, is responsible for their disappearance.

For fishing in our locality the lamprey has proved itself to be the prince of baits. Stone catfish, small sunfish and helgramites are also used, but with indifferent success.

C. H. SANGREY.

WASHINGTON BOROUGH, Pa., Jan. 1.

ANGLING NOTES.

THERE are two famous trout streams, dearly beloved by anglers, and within easy reach of New York city, that have been thoroughly fished for many years. One is the Beaverkill and the other the Neversink. When Uncle Thad. Norris and Dr. Bethune used to fish these waters the trout were large and plenty, but the constant whipping by the crowds of anglers that of late years frequented these favorite streams, reduced them to such an extent that lately they have hardly been worth visiting.

We are glad to hear from some of the veterans who have for many years made it a point to fish in these brooks, that last season's catch showed a very marked improvement over the previous year as that did over the one of 1888, both in size and number.

This happy state of affairs has been partially brought about by the liberal stocking of these waters by the wise management of the Ontario & Western R. R., but there is another cause which has helped the brooks, and that is the headwaters of the two streams are controlled by clubs and private parties who limit the fish caught both in size and numbers, and absolutely prohibit fishing in the little side streams where the fingerlings seek shelter from their larger brethren, thus assuring a constant source of supply. Reasonable people begin to see the advantages of having parts of streams controlled in this way, as it certainly improves the whole of the waters. They cannot lock up their fish, and they naturally will drop down stream, particularly as they grow large.

One young man, boarding at one of the summer hotels on the banks of the Neversink, took a 2¼lb. trout fairly on the fly last summer. And we heard of a number of others, but this instance we have proof of.

Broadhead's Creek, another classic trout water made famous in Norris's book, has been more closely preserved of late years aed furnished very fair fishing last season. This is an early stream and much frequented by anglers from New York and Philadelphia. The East Branch, being more difficult of access, furnishes the best sport.

Probably more would be heard about the taking of salmon during winter months were it not against the law. We were told within a few days that quite a number are taken in salmon rivers whenever the season permits it; that is, when the river was open. The gentleman informing us said that he has taken them on a fly when his line would be frozen like wire, he standing on the ice at the time.

Trout will undoubtedly take a fly in winter when the water is sufficiently open, but they will not rise when snow water is running, and it may be the same with salmon.

SCARLET-IBIS.

CHICAGO AND THE WEST.

CHICAGO, Jan. 6.—The annual meeting of the Fox River Fish and Game Association will be held next Wednesday afternoon at the Sherman House and it will be an interesting occasion. Matters of the greatest interest to all Chicago anglers and all anglers resident in this section of the country will be discussed. This is the one protective organization of this State which amounts to anything by way of results. Its work has been often mentioned in these columns, and it will be a pleasure to report the doings of this assembly, among which we shall be apt to find something practical.

Jan. 10.—Mr. J. E. Harvey, of Lake Mills, Wis., yesterday sent down to Spaldings' one of the finest specimens of the large-mouth bass ever seen in this city. Its weight was 7¼lbs. and it was a very clean built and symmetrical fish. It was caught Jan. 8, doubtless through the ice. Doesn't somebody say the large-mouth bass hibernates, "burrows in the mud?" They don't all of them hibernate out here, by a large majority. They would be better off if they did.

E. HOUGH.

BLACK RIVER ASSOCIATION.—The third annual meeting of the Black River Fish and Game Protective Association was held in Holland Patent last week. The annual report of Secretary W. E. Wolcott showed the association to be in a prosperous condition and doing good work. The petitions asking the Legislature to take prompt and decided action for the preservation of the Adirondack wilderness for the benefit of the people of the State, which the association had printed and widely circulated, were sent to the State Forest Commission last spring. The commissioners had the petition and the thousands of names attached thereto published in pamphlet form, and copies distributed wherever they thought they would do the most good. A meeting of the board of directors of the association was held in Remsen, March 25, and several new members were admitted. On Nov. 1 a special meeting of the directors was held in Holland Patent. Resolutions of regret were adopted on the resignation of General R. U. Sherman as a member of the State Fish Commission. A resolution was also adopted deprecating the state of affairs existing in the Adirondacks, and urging all friends of forest protection to co-operate with the State Forest Commission in an effort to secure a permanent park in the wilderness. President H. A. Pride was appointed to represent the association at the meeting of the State Forest Commission held in New York city Nov. 5. The president attended the meeting, and at a special meeting of the directors of the association, held Nov. 15, presented an extended and very encouraging report regarding his visit. William L. Fowler and F. C. Wolcott represented the Association at the hearing before the State Commission on the codification and revision of the game laws in Albany, Nov. 18-19. The State Forest Commission has prepared a report to be submitted to the Legislature containing recommendations regarding an Adirondack park, which are fully in accord with the views of this association. The game law codification commission has also prepared a report which will no doubt meet the approval of the majority of sportsmen. It is to be hoped that the Senate and Assembly will take action for the passage of the measures recommended by both commissions at an early date. The following officers were elected for 1891: President, H. A. Pride, Holland Patent; directors, J. W. Hicks, Oriskany; F. X. Salzman, Forestport; F. C. Wolcott, Trenton; B. H. Kent, Friend Bristol, Ramsen; S. R. Fuller, G. G. Chassell, Holland Patent. At a subsequent meeting of the directors, the following additional officers were chosen: Vice-President, Fred B. Spriggs, Utica; Secretary, W. E. Wolcott, Utica. Treasurer, G. G. Chassell, Holland Patent.

A SMALL BOY'S CONUNDRUM.—Albany, N. Y., Jan. 6.—*Editor Forest and Stream:* Now that you have practically settled the questions that the woodcock makes a noise both with his wings and throat, and that trout culture does pay, and that a threebarrel gun is good enough and will kill all and more than any one man ought to kill, I should like to have the following solution answered: When George was a little fellow of five, one still, fine evening in August I was rowing him and his mother along the shores of Quaker Smith's Point on Lake Champlain. I think he was holding the trolling line; at any rate, he kept watching the blades of the oars dip into the water for some time, when suddenly he looked me in the face and asked, "Papa, where does the water go to when you put your oar in?" This has been more of a puzzle to me than the habits of the black bass. Perhaps some of the boys can tell, and so relieve the mind of—DEXTER.

FISH FROZEN IN THE ICE.—Dayton, Ohio, Jan. 12.—The State Fish Commissioners, a few years ago, stocked Indian Lake, in the Lewiston reservoir, with eels that were brought from New York. Eels are now caught from 2 to 3ft. long. A ton of fish were shipped from the bulkhead last week, making 50,000lbs. shipped in the past year. A recent freeze over the reservoir created a strange winter scene; thousands of fish were frozen in the clear ice and the view was like that of a vast kaleidescope.—BROWN.

THE JENNY-LIND AND OTHER FLIES.—*Editor Forest and Stream:* Will some of your contributors be kind enough to give the name of the originator of the fly known as the Jenny-Lind, and state whether it was first dressed with pale blue or lavender wings, or any other facts connected with the history of this fly? I would also like to know who mounted and named the following flies: Allerton, Cahill, Esmeralda, Caldwell, Van Patton, blackprince, dauphin, Wappinger and moose.—INQUIRER.

CAPON SPRINGS, W. Va.—The little mountain streams tributary to the Capon River and lake, in this State, a few years ago contained a plentiful supply of brook trout, but now the fish are very scarce and an effort is to be made to restock the streams in which the trout are native. Residents of Berryville, Va., are desirous, also, of obtaining an additional stock of black bass for the Shenandoah River, where this fine game fish is highly prized.—M. G.

NEW NAME FOR MASCALONGE.—The Baltimore *Sun* recently published a brief note on fishing in the vicinity of that city many years ago, in which reference is made to the mascalonge under the name of horse salmon. We do not know where this designation is current for the species and would be glad to have information from any of your readers who have heard it.

NEW YORK.—The Assembly Committee on Fisheries and Game is as follows: Messrs. Gould of Lewis, Croak of Richmond, Townsend of Queens, O'Connor of Kings, Byrne of New York, Smith of Erie, Stephens of Franklin, Gardinier of Columbia, Selleck of Oswego.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Fishculture.

FISHES RECENTLY ACCLIMATED IN FRANCE.

BY EMILE BERTRAND.

POMOTIS VULGARIS.—This pretty fish, which reproduced for me for the first time in 1887, multiplies annually in great abundance from May until toward the end of September. As I have said elsewhere*, it builds a nest and watches the eggs until they hatch. The male is readily distinguished from the female, at the age of one or two years, by a very pronounced red vermilion spot on the margin of the opercle. The female never has this red spot; sometimes she has a spot of a golden yellow tint. The young are regularly marked with spots disposed in vertical bands, this regularity disappearing with age.

This fish is very good to eat, its only defect being that its skin is somewhat thick. It takes a hook very readily, is very hardy and well adapted to aquarium life.

As to size it reaches with me a length of 6in., a depth of 2 2-5in. and a weight of about 2⅗oz. In the United States it appears to reach a larger size; it will probably do the same in France if the fish finds better conditions as to space and food. I have never given my fish anything to eat, and they have reproduced so abundantly that they are probably too numerous to thrive in the small space which I have devoted to them.

I have obtained their eggs in May, when the temperature of the water was 66deg. Fahrenheit, and also in a very small space containing only about 60 litres of water in the hot sun of June and July, when the thermometer, immersed in the water, marked 86deg. Fahrenheit. In winter, under a thick covering of ice, not a fish perished. It will be seen that the acclimatization of this fish presents no difficulty, and even if the size is not very large its fertility will recommend it, especially for stagnant waters. Its beautiful colors make it an attractive fish.

I have also had each year since 1887 another United States fish to produce, which, I believe, is the *Enneacanthus obesus*. It is remarkable for its beautiful colors and the rounded form of its body and fins; but, on account of its small size, it has no value as a food fish. It is very pretty for the aquarium. In my establishment it has not exceeded 3 3-5in. in length and 2 2-5in. in height, including the fins.

The large-mouthed black bass (*Micropterus salmoides*) has spawned for me for the first time toward the end of May, 1890. This fish, which is much esteemed in the United States, is too well known to require me to enter into long details concerning it. The reader may consult the very complete work of Dr. Henshall and that of Max von dem Borne, who acclimated the black bass in Germany some years ago.

The fishes which have spawned for me were born in 1888. They were given to me by M. Jeunet in February, 1889. They were, therefore, two years old when they reproduced. They had then reached a length of about 10in. and weighed nearly 1lb.

Their mode of reproduction is entirely similar to that of the *Pomotis vulgaris;* the male makes a nest and exercises continual watchfulness over the eggs until they are hatched. The young bass congregate in schools of several hundreds and do not separate until they have reached a size of several centimeters.

I have again secured the reproduction of a little fish about 4in. long, which I believe to be the *Fundulus heteroclitus*. This fish, which was given me by M. de Lautreppe, is very freely used, I believe, in the United States as a bait in fishing for the black bass. It has reproduced for me at the age of one year.

Finally, I will say a few words about a fish of which I wrote last year, the *Poisson mosaïque*, known in Germany under the name of *Mosaikfisch* (mosaic fish) or *Moorelritze* (swamp minnow). I designated it, in the note above referred to, as the *Phoxinus umbrosus*, after a catalogue by M. Geyer, a fishculturist of Ratisbonne; but I have not found this name in any ichthyological work, and I cannot say whether it is the correct scientific name of the fish. It is very prolific, and the spawning season continues from April to September and October, even in stagnant waters of small area. It is, therefore, a valuable fish, especially as food for other species, like the black bass, for example. It is not to be despised as an edible fish, as it reaches 5 to 6in. in length and a weight of 1 3-5oz. Young fishes, born in May of this year, grew to a length of 2 2-5in. in September, and the females had eggs developed; this species, then, is able to reproduce at the age of four months.—*Bulletin de la Société Centrale d'Aquiculture de France*, 1890, vol. II., No. 5, pp. 141-143 (translated by T. H. Bean).

[In FOREST AND STREAM of March 21, 1889, p. 177, we published a translation of an article on the calico bass in France, descriptive of its nest building habits. It appears now that M. Bertraud's observations related entirely to the common sunfish of the United States, called *Pomotis vulgaris* in the above paper and better known in American books under the name *Lepomis gibbosus*. There is scarcely any doubt, however, that M. Bertrand had calico bass (*Pomoxys sparoides*) in company with the sunfish, for some of his fish, at the age of three years, were nearly 8in. long and 2¾in. deep. Be this as it may, the confusion of the two species threatens to produce serious results, for the sunfish has already been forwarded to Germany as calico bass, and has begun a prolific career, which bodes evil for pond culture in that country. In America the species is a veritable pest because of its extreme fertility and hardiness and its causeless destruction of eggs and young fish. Nothing is more discouraging to pond culture in general than the presence of the sunfish, since the species has little or no value as a food fish and can seldom be exterminated after it once obtains a foothold. No fishculturist should allow so dangerous a species to enter ponds or open waters, in whose welfare he feels any interest.]

* See Bulletin of the Society of Acclimatization, No. 1, Jan. 4, 1888; No. 23, Dec. 5, 1888; No. 24, Dec. 28, 1888, and No. 1, Jan. 5, 1889, where this fish is erroneously designated as the *Pomoxys sparoides*, or calico bass.

CONNECTICUT SHAD.

Editor Forest and Stream:

The report of the Connecticut Fish Commissioners (Messrs. James A. Bill and Robert T. Chalker) for 1890 is out. The catch of shad for 1890 is reported as 34,318. This shows a falling off of 8,107 shad from the 1889 catch, which was 42,325, or in other words a loss of nearly 20 per cent. The catch of shad in the State for the past twelve years may be interesting and instructive. Here it is:

1879	436,981
1880	269,618
1881	351,678
1882	272,903
1883	177,808
1884	150,045
1885	190,809
1886	117,950
1887	80,359
1888	68,450
1889	42,325
1890	34,318

Six years ago the catch of shad was over 190,000; now it is a little over 34,000. The following letter fully explains the position:

"Good old fishing days. Pound fishermen destroying shad along the Sound. Old Saybrook letter (Dec. 27) to New York *World:* There is every indication that there is going

to be a vigorous attempt made in the coming session of the General Assembly to curtail the privileges now enjoyed by the Sound fishermen. From the breakwater at the mouth of the Connecticut as far to the westward as Guilford the shore is a perfect maze of great nets, which stretch their capacious maws many hundreds of feet out into the Sound. As the shad in running up the Sound always follow the north shore, the consequence is that very few escape the trap set for them, and where thousands only a few years ago annually deposited their spawn in the shallows up near the source of the river, now only a comparatively small number succeed in getting as far as Saybrook bar. The evil has become a very prominent one and, unless remedial legislation is soon enacted and vigorously carried into practice, the famous Connecticut shad, the delight of the epicure, will be a memory only. The pound owners will make a strong fight against any measures that tend to detract from the profitableness of the monopoly they enjoy."

It will be remembered that Dr. Wm. M. Hudson, of this city, resigned from the Commission last spring. Dr. Hudson was a wide-awake Commissioner and thoroughly alive to the wants of the inland fishermen, but the other two granted certain "pound" owners the privilege of using fine mesh nets in their "pounds." Dr. Hudson entered a strong protest against granting such permits. He was out-voted and then he resigned. The Doctor claimed these fine mesh nets meant the destruction of many small shad. The other Commissioners didn't think so. The Doctor was right.

HARTFORD, Conn., Jan. 6. A. C. COLLINS.

WYOMING FISHCULTURE.

THE report of Louis Miller, Esq., the State Fish Commissioner of Wyoming, for the year ending Sept. 30, 1890, shows a gratifying condition of affairs in that State. The Commissioner reports a rapid development of public sentiment in favor of fishculture and protection, due to the fact that many streams, which contained no trout, have by artificial means been fully stocked with brook trout and other fishes of the salmon family. There has been a great increase of trout in the Laramie, North Platte, Green and Bear rivers.

Associations for the protection and propagation of fish in various parts of the State are increasing in number, and their influence is constantly widening. The Laramie Sportsmen's Association has especially given aid and encouragement to the Commissioner of Fisheries and heartily coöperated with him in distributing fish and in their protection. Mr. Miller is fully in accord with the policy of the U. S. Commissioner in the recent method of stocking trout streams by introducing fish that are at least one year old. He finds that good results are obtained much more speedily and surely than by the old system of planting helpless fry.

The number of eggs taken at the State hatchery from Nov. 10, 1889, to Feb. 5, 1890, is pronounced by Col. McDonald to have been exceeded by only one or two of the oldest hatcheries in the United States. The yield was as follows: 820,000 eastern brook trout, 240,000 rainbow trout, 135,000 Colorado trout.

This will serve to show that our eastern *fontinalis* is admirably adapted for many western streams. The State also received from the U. S. Fish Commission 200,000 lake trout eggs and 12,000 eggs of the rainbow trout. The total loss of eggs during hatching and the period of sac absorption was only about 15 per cent. The distribution of young trout amounted to about 1,000,000.

Success has followed the efforts to stock some of the Wyoming ponds with the black bass, and the fish is gradually growing in popular favor. Six hundred and seventy-five small-mouthed bass were placed in a lake in Wyoming county in 1889, and some of these were caught during the past season which weighed 1¼lbs. Mr. Miller finds that the rainbow trout is not so prolific as the brook trout, averaging about one-third fewer eggs than the later. The rainbow has made gratifying progress in Wyoming when planted in streams of uniform temperature. Specimens have been taken from the Big Laramie River during the past season ranging in weight from ⅓ to 1½lbs. Mr. Miller says that the rainbow trout requires water as cold as that adapted to the brook trout or colder.

The ponds at the State hatchery now contain 5,500 breeding brook trout, 1,000 of the rainbow, 500 of the native black-spotted trout and 500 lake trout, besides 200 landlocked salmon. In the season of 1888 14,000 trout, one and two years old, were taken out of a single pond at the hatchery and transferred to the Big Laramie River. From 1885 to 1890 the product of the hatchery was nearly 2,000,000 fish, including brook trout, lake trout, rainbow trout and whitefish.

Mr. Miller recommends that the open season for trout end Oct. 15, instead of Dec. 1, as the trout commence spawning in November. He finds the protective law defied by a class of men who either openly or secretly kill fish by seining, dynamiting or trapping, and the apprehension and prosecution of these violators of the law is rendered extremely difficult for the want of coöperation on the part of respectable citizens, who fear to have their names coupled with such prosecution. For this reason the Commission hails with joy the increase in the number of protective associations, whose effective assistance has already accomplished great good.

NEW YORK COMMISSION.

AT the regular meeting of the Commission last Tuesday Messrs. Blackford, Bowman, Burden and Huntington were present, Mr. Joline being absent. It was resolved by the vote of all present to remove Fred. P. Drew from office as Protector of the Tenth District. Commissioner Bowman reported that the committee of fishculturists in charge of the proposed exhibit at the World's Fair had prepared a memorial asking the National Government to build an aquarium, which might be used for national and State exhibits. President Blackford was empowered to sign this memorial for the New York Commission.

A communication was received from Frank J. Amsden of Rochester relative to a memorial addressed to the Legislature asking the State to undertake on a large scale the stocking of Lake Ontario; and Clerk Doyle was directed to reply that the Commissioners heartily approve of the movement. It was thought, however, that the first important step was to secure uniformity of laws with Canada with respect to the whitefish fishery of Lake Ontario.

The New York Commission is now engaged in stocking these waters so far as its means will permit. The Lake Ontario output for this season will be 9,000,000 whitefish (to which the U. S Commission will add 4,000,000), 4,000,000 ciscoes and between 8,000,000 and 10,000,000 wall-eyed pike.

A letter was read from the United States Commissioner of Fisheries promising the early delivery within this State of fish eggs, as follows: 500,000 lake trout, 20,000 Loch Leven trout, 35,000 Von Behr trout, 5,000,000 whitefish, and 50,000 landlocked salmon. The whitefish will go to Lake Ontario, the salmon to the Adirondacks and another hatchery, and the rest of the consignment to Cold Spring.

Commissioners Burden and Blackford were empowered to contract for the new car for fish distribution. While the funds available for the purpose are insufficient to provide a fully-equipped car, it was deemed best to have the car ready for the spring distribution.

STOCKING PENNSYLVANIA STREAMS.—We are informed by the Hon. H. C. Ford, president of the Pennsylvania Fish Commission, that a consignment of living fish from Illinois was received recently and deposited in the upper Delaware, Schuylkill, Lehigh and Susquehanna rivers. It included about 1,500 fish, consisting of crappies, yellow bass, rock bass, etc.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

QUESTIONS, BY CHAS. H. MASON.

"Dr. J. S. Niven has recently stated in these columns that 'one decision of many judges I could never swallow, that was putting Jerry in the first flight; and the critics, even 'C. M.' went wild over him.' As I do not remember having said Jerry was typical or first class, I must ask Dr. Niven for proof in support of his statement."—FOREST AND STREAM, *Dec. 25.*

"It is, I believe, untrue that I 'repeatedly' said prize money would be at Doc's mercy if the dog were in good condition. Therefore I call on Mr. F. H. F. Mercer to produce evidence to show that I 'repeatedly' said anything of the sort."—FOREST AND STREAM, *Dec. 25.*

"I now summon 'Gothamite' to prove to the readers of FOREST AND STREAM that I either started or assisted in starting the 'long and low' craze in cocker spaniels."—FOREST AND STREAM, *Nov. 27.*

ANSWERS, BY TWO SPANIEL MEN.

Dr. Niven's proof:

O

Mr. F. H. F. Mercer's evidence:

"I think it was in a report of one of the spring shows in '88 that I observed the remark by Mr. Mason on Doc. I have the paper somewhere among hundreds of others, and when I can find time shall look it up. For the rest, 'hearsay' is all I have to go upon."

"Gothamite's" proof:

O

It is now in order for Messrs. Niven and Mercer to read and carefully consider the opening statements from my letter in your issue of Jan. 1, to the effect that a person who wilfully or otherwise makes a statement which he cannot substantiate, and who upon being shown that he is in error, should retract and apologize.

In regard to Mr. Mercer's dogs Johnnie and Drake, they really have nothing whatever to do with the case under discussion, and were introduced merely as a part of my evidence to show that, as "Gothamite" and Mr. Mercer had had but little experience with high class dogs, they were not qualified to express a correct opinion about cockers. Neither Mr. Mercer nor any other man can, by evidence, prove the following statements untrue: 1. Severe criticisms in this paper and in "Our Prize Dogs" resulted in the withdrawal of Johnnie and Drake from the show bench. 2. Johnnie and Drake have not "been winning prizes ever since" "Our Prize Dogs" was published. 3. Neither Johnnie nor Drake ever was the size of a good dog. 4. Mr. Mercer never bred a good dog. 5. Previous to 1890 Mr. Mercer never owned a good dog. 6. Until recently (1889 or 1890) Mr. Mercer had never seen a good Clumber spaniel, because there were no good Clumbers to be seen.

Mr. Mercer's statement that "probably Mr. Mason's next move will be to claim credit for the importation of Boss III.," etc., is easily answered. I claim just what belongs to me and nothing more. As the credit of importing these dogs belongs in a large measure to me, I claim most of it. Had I stated, as a certain would-be judge and critic did state, that Johnnie could easily beat the Crystal Palace winners, then Boss III. and Bromine would, I have an idea, never have been imported. They were brought over to beat Mr. Mercer's dogs, and it was because Mr. Mercer placed such implicit confidence in my judgment that he kept his dogs at home, instead of pitting them against the new comers. Over the *nom de plume* of "Dog Whip" he praised the judges (?) who knew no better than to praise his dogs, and denounced the one that told him the truth. Yet while this was being done he, by not exhibiting against the imported dogs, tacitly admitted that the advice he had had from FOREST AND STREAM and "Our Prize Dogs" was sound. His conduct in this as in the cocker spaniel case is deserving of the severest kind of censure, but in justice to the man I must say that I have in my possession conclusive proof (just received) of his uprightness and manliness in another. He must, however, know that one right cannot justify two wrongs. In your issue of Jan. 8 Mr. F. H. F. Mercer says:

It grieves me sorely that Mr. Mason should be put to so great a strain in the matter of keeping "Gothamite" and "Mercer" apart. He is not the first to make this remarkable discovery (?), but I am so used now to the accusation of being "Espan," "Peregrine," and a host of other unidentified anonymes, that if it pleases him he may continue in his belief. It gratifies him and it certainly does not hurt me. Perhaps, though, he had better "guess again."

To guard against possible pitfalls he had best keep "Mercer," "Dogwhip" and "Clumber," in his discussion, apart from "Gothamite."

Now I can quite fully understand why Mr. Mercer should not wish to have his identity with "Gothamite" proven. For one thing, if he were to be identified as "Gothamite" it would be shown that as Mercer he had said one thing and as "Gothamite" something quite opposite. Now of two opposite statements, both cannot be true and the man who makes them cannot in both cases then be telling the truth.

The question before the house is this: Is F. H. F. Mercer "Gothamite?" If F. H. F. Mercer is "Gothamite," or any part of "Gothamite," then this discussion was started, not with the pure and commendable object of improving the cockers, but for the interested and selfish reasons named in my reply to "Gothamite;" and it follows that FOREST AND STREAM will not permit their columns to be used for any such purpose. I say that F. H. F. Mercer is "Gothamite." The writings of the two contain abundant internal evidence to prove it.

If Mr. F. H. F. Mercer will deny that he is "Gothamite," and will substantiate that denial by calling upon the editor of FOREST AND STREAM to confirm it, and the editor does confirm it, I will give to the American Spaniel Club $500 in cash, to be by the club divided into prizes to be distributed at the dog shows of 1891, for the encouragement and improvement of cocker spaniels.

Meanwhile, until Mr. F. H. F. Mercer shall make such denial and give such proof and until he shall retract or substantiate certain statements he has made, it is not worth my while to reply to his communications.

Writers who are genuinely interested in dogs do not work to the concealment of a pseudonym to publish what they dare not over their own names. CHARLES H. MASON.

Editor Forest and Stream:

I am pleased to read your remark in "Dog Chat," in which you call a halt on the drift of the present controversy on the "Cocker Spaniels of 1890" toward personalities. Sundry gentlemen have made very free use of my name in this matter, and, following the lead of Mr. C. H. Mason, leave the topic under dispute entirely out of the question and strive to emulate one another in slighting remarks against myself. As a public writer I cannot, and do not, resent this unwarranted conduct on their part; but I would suggest that a far better end would be served by their confining themselves to a rational consideration of an interesting subject rather than to that of so humble an individual as myself. Had they taken different ground I should probably have satisfied them as to the identity of "Gothamite;" I know who he is, but now they must unearth him for themselves—if they can.

There is not much to be said in answer to Messrs. Willey, Nelles and Mason on the question of the cocker type. Our views of what a cocker spaniel should be differ so entirely. If Jersey, as Mr. Willey states, is the "most typical cocker spaniel now being shown," heaven help the breed! Is he "a well-built, graceful and active dog," showing strength without heaviness or clumsiness (*vide* A. S. C. Standard of Points)? Is his body "short in the coupling"? Is he able to more than waddle around? I trow not. I do not know whether Mr. Willey is a practical sportsman, and is aware of what is required of a spaniel afield. If he is a sportsman and shoots over dogs of the Jersey type, he surely must hunt over his own tennis lawn! Mr. Watson knows what is required of spaniels afield. He indorses the Velda type. That type can work. Mr. Willey states that he and Mr. Mason are considered our best spaniel judges. Thus he loses one of his hoped-for supporters.

Messrs. Willey and Mason may persist in upholding such a dog (cocker I cannot call him) as Jersey, but assuredly they will find their mistake in due course. Last year Mr. Mason judged spaniels at one show, Mr. Willey at none.

A cocker spaniel is supposed to be an eminently active and lively little dog for his inches, able to work from sun to sun without experiencing distress. Can Messrs. Willey and Mason say that Jersey is fitted for this? Can Jersey work in bad marsh land or through "second growth" timber? He cannot and they know it. Should Jersey be the correct type, then indeed I plead guilty to knowing nothing whatever of cocker spaniels.

Mr. Willey appears to forget entirely that I am entitled to my opinion on cocker spaniels as well as on any other question, even though I may be altogether ignorant of the subject. It is a right with which he is endowed, to exercise or not as he wills. Hence I must stigmatize Mr. Willey's unsought "advice" as to my procedure in the future as an unwarranted piece of impertinence. He would do service to the fraternity in showing, if he can, in what way Jersey is entitled to be called a "most typical cocker."

I do not uphold Doc as a "sample" of what a working cocker should be, and Mr. Willey may ascertain this by referring to my first letter on this question. I think him the sort of dog to breed workers from, being cobby, with strong back and loin and well set up. Had he been reared with a view to utilization in the field I am convinced he would have been able to work a bit in medium country, having had ocular proof that he can run quite fast and jump as well when he bestirs himself.

Where on earth is the use of all these personalities? They prevent men whose views would be invaluable from presenting them in the public press. Many do not like being called "sneaks," "cowards," "liars," etc., etc. At first it irritates, but soon the attacked one learns to value such darts according to their source. This done, most of them glint harmlessly against his head. F. H. F. MERCER.

OTTAWA, Canada.

Editor Forest and Stream:

Oh my! but ain't the spaniel men having a good time? Something has dropped among these usually peacable and quiet men, and it seems to have come down "with both feet." What's it all about, any way? Let us see.

First in comes Br'er "Gothamite," and he says, says he, that the two "sons," Br'er Mason and Br'er Watson, started the fashion for the oblong-solong spaniel. Then Br'er Mason he says Br'er "Gothamite" he don't tell the truth, and he piles into Br'er Mercer and tells all he knows about dogs he don't like, and something about other people he don't like.

Then Br'er Mercer comes out and says he don't care a darn for Br'er Mason; that his dogs are the best in the world, and he knows it, and he tells us all about them, and gives us their names all over again for the hundredth time, and finally winds up with his book.

Br'er Fellows, he can't keep still (he never could), and so he sings his little song (the old, old song), and Br'er Nelles and Br'er Willey each tell us that their dogs are the best. What are we going to do about it, if we believe all we hear? If the two or three remaining spaniel men will come out and say something, "sassy" too, then we will have a circus. It is hard to understand now what the discussion is all about, any way.

If personalities and recriminations were left out entirely the meat could be got at. Then we could hark back to the original theme, which has been buried out of sight, and perhaps learn something. Yours for peace, SLY DOG.

Editor Forest and Stream:

In addition to my remarks of last week (which were too late for publication) regarding the ownership of Doc, I would like to say that it is a pity this controversy has taken the turn that it has, when a free and extensive interchange of views of breeders, old and young, throughout the country, might eventually have resulted in eliciting so much valuable information in connection with our favorite breed of dogs, which all would have appreciated. Personalities should be eliminated strictly from a discussion of this nature, and a calm and non-combative series of communications on the cocker would be widely read and productive of much good to one and all.

Let us have peace. A. CLINTON WILMERDING.

NEW YORK.

Editor Forest and Stream:

It is always refreshing to read one of Mr. C. H. Mason's letters, more especially when he is giving somebody a slight roasting, and more especially still when you are not the person roasted. His letter in your issue of the 1st inst. called my attention to a letter signed by "Gothamite" in your issue

of Nov. 20, and which I had not read. If not too late to attend the funeral, will you permit me space in your columns to answer "Gothamite," so far as his letter refers to me, and to his criticisms of my judging at Toronto. He remarks, "I never saw spaniels judged so badly as at Toronto by Mr. Oldham," and then goes on, "His worst of all very bad mistakes was putting Bambo first in any other color dogs, and sending out unnoticed a very good, though oversized dog, Rufus." This is, indeed, kind of "Gothamite," defending my decision in that class. He also approves of my placing of Idea, praising her as a beautiful-bodied bitch. Again he says, "A hardly used dog at Toronto was Brock, a dog pretty close to the limit in weight, etc.; that had he been in decent condition, should have been first or second." "Gothamite" does not say what he should have got, shown in such bad condition. And so it goes on, not knowing exactly what he is writing about, having a grievance against somebody and not knowing how to take it out of them. Poor fellow, under Mason's attack he may well wish he had been more master of his subject before attempting to teach men like Mason, Watson, etc., who have forgotten more about spaniels than he ever knew.

I myself have shown quite a number of dogs during the last few years. I never knew any of the men who are on the Spaniel Club list of judges to favor the long and low cocker. A judge has, to a certain extent, to favor a dog who, though a little too long in body, has a typical head or some other good point; but I am certain Messrs. Mason, Wilmerding, Watson and many others would no more think of putting Miss Obo II. over a similarly constructed cocker with a shorter body, than would a Clumber spaniel judge think of putting Johnnie over Bromine.

In conclusion, I have to thank those friends and exhibitors who so warmly supported me by their entries at Toronto, and I can assure "Gothamite" that when such men as Bush, Laidlaw, Nelles, Kirk and other well-known spaniel men thought sufficiently well of my judging to congratulate me on my *début*, I am not likely to bother much over any criticisms from the pen of one ashamed to sign his name, but covering his tracks by a *nom de plume*.

E. M. OLDHAM.

NEW YORK, Jan. 6.

Editor Forest and Stream:

Under the above caption Mr. Mason states in last week's issue that champion Doc is now owned by Mr. F. H. F. Mercer. Also that Doc was not for competition at the last New York show, as "he was afraid of Jersey," etc. Now I wish to state plainly, first, that Doc is not, never was, and probably never will be, owned by Mr. Mercer. He is my personal property and will continue so, unless I am offered a much larger figure that was ever before paid for spaniel flesh. Second, the reason he did not compete at New York last spring was, because it is against all ethics of dog judging for a judge to permit his own dogs to come before him in competition. This is the sole reason of his not competing. I officiated at New York, and the dog in consequence was for exhibition only.

He will go the rounds this spring, however, and will take in the large shows as they come. How Mr. Mason could have fallen into this error in regard to the ownership of Doc I cannot see, unless it was from hearing that Mr. Mercer had made me an offer for the dog, which was refused.

A. CLINTON WILMERDING.

THE FLOUR CITY KENNELS.

Editor Forest and Stream:

A short article in the *Democrat and Chronicle*, of this city, some weeks since, announcing the establishment of the Flower City Kennels and giving some notes on dogs, led me to look the kennels up and inspect the dogs. So the other day, accompanied by a physician well known in the city, who aspires to become a member of "dogdom"—as H. W. L. aptly puts it—we visited the kennels, which are located on the flats, east of State street, reached from the vicinity of the R. W. and O. depot. On coming in sight of the buildings we discerned a mastiff looking between the palings from one of the exercise yards, and a pointer and Irish setter disporting themselves near the house where the genial keeper "Abe" Geis resides. Almost before we had an opportunity to knock, Mr. Geis appeared at the door, accompanied by two Irish setters and a pointer bitch; we inquired if we might inspect the kennels. The favor was readily granted. We first looked over the dogs which had come out when "Abe" opened the door, also another pointer bitch which Mr. Geis called out when he went into the house to get his coat.

The pointers were Lady Cora, a lemon and white, who was evidently well bred, and was said to be of Sensation stock, and Fly, a liver and white, we were informed is from Dick Swiveller stock; she is not so fine as Cora, but has more style.

The Irish boys were Belford, imported last June, whose pedigree we did not learn, but whose color and carriage, to say nothing of his other good points, proclaimed him to be a good one; and Shot, who comes from the Elcho strain, while not so fine as Belford, is a rich dark mahogany in color, looks like an all-day worker in the field, which "Abe" declares he is, and is fit for very good company.

We then saw a fairish looking pointer pup, about eight months old, but neglected to note his name or pedigree.

We were met at the gate to the kennels proper by the mastiff bitch Lady Caution; she is certainly a good one, but we do not care to pose as a judge of this breed, so will pass to the next gate, where we were met by a mastiff bitch whose peculiar markings made us, as we caught a glimpse of her stern through the fence, take her for a great Dane; she is a dark brindle in color and very massive in proportions, but in spite of her off color "Abe" says her pups are always the regulation color. Her name is Princess. Through the next fence looked two mastiff faces, although the wrinkle in the oldest was markedly wanting. They were Faix and Black Sall, the latter a seven months pup of some promise. Faix is a very light fawn in color, with almost entire absence of dark markings, she is a very rangy beast and looked powerful and agile.

We then went into the building and from one of the stalls Abe brought Lady Pamelia, who he said was a daughter of Minting, and Judge, who we were informed is by a son of Beaufort. We had the pleasure of meeting Minting on the bench and must say that in our humble opinion Lady Pamelia shows many good points, yea, is even worthy of her sire, and Judge is a mastiff clear through. The keeper then showed us two more Irish boys, Mink and Rover, both Elcho stock and both very good ones.

Abe now told us to stand close to the wall, and he opened a door at one end of the reception room—which is also the kitchen—when out rushed a number of pointers and a brace of cocker pups. We tried to count the pointers, but they moved in such a lively manner that we had to give it up and gladly accepted Abe's word for it that there were three dogs and five bitches out of Lady Cora by Hayden's Dan, one dog named Spring, sired by Kildeer, winner of second in this city at the last bench show, as Abe informed us. The pups were all lemon and white in color and were little beauties. Spring is that peculiar buff in color with white markings, and undoubtedly has the making in him of a very fine dog.

The cockers were a bitch and dog, ten and six months old respectively, black in color; they were of the working type, not long and low. Abe again failed to recall a pedigree, although he assured us that that they had one, and we are prepared to believe that it is not to be sneezed at. Mr. Geis informed us that the kennels are owned by James Whitney, of this city, and that he intends to have as good stock of the breeds he is interested in as there is to be found before he is done with it, and we are sure that he will succeed if he follows the line so far laid down.

The building is about forty by twenty-five feet, and contains twelve stalls and the kitchen. Ample exercising yards are conveniently attached, and everything is as clean and neat as it well can be, not only in appearance but the absence of any odor was remarked on. The disinfectant used is Sanitas.

The food for the dogs is varied occasionally by Spratts biscuit, but usually consists of meat, cabbage, celery, bread and middlings, which is all cooked, in the well-appointed kitchen, in the form of a stew. "Abe" said that any one need not be afraid to try a dish of the soup made for the dogs.

The bathing tub is also in the kitchen near the stove. A word for "Abe," as he told us to call him, and we are done. He loves his dogs and they know it, he combines painstaking care with a thorough knowledge of the business.

Courteous and affable with a pardonable pride in his charges, he only needs a more extended English vocabulary in order to be able to explain pedigrees more lucidly, to be about right, but as he is imported himself—a German—this can hardly be said to count against him, and we hope to see him and the dogs in his charge, as well as the owner of the kennels, become well-known in "dogdom" through their successes.

OSCEOLA.

[Since the above was written Mr. Whitney has purchased from Mr. E. H. Moore the mastiffs Ilford Chancellor, Lady Coleus, Caution's Daughter, Lady Dorothy and Miss Caution, and with this grand array of blood this kennel ought soon to take a foremost position in the mastiff ranks.]

MR. BRAILSFORD REVIEWS THE FIELD TRIALS.

Editor Forest and Stream:

Taking advantage of a lull in these Atlantic storms, which have prevailed for the last few days on my homeward voyage, I now undertake the fulfilment of a promise, to express by letter some thoughts and opinions on the recent field trial competitions in Canada and the United States, in which, with the team of pointers and setters sent over in my charge by Mr. Heywood-Lonsdale, it has been my pleasure to engage.

And first let me say with regard to the merits of the dogs of the States and Canada against which we competed, some of which were native born and some imported, how much gratification it afforded me to witness the great natural development, fine ranging qualities, and staying powers of the majority.

The character of your country is so widely different from our British shooting grounds, and the habits of those charming little game birds—quail, so diverse from the habits of our British partridges and grouse, that, as a matter of course, the work at your field trial competitions differs considerably in some important particulars from that to which we are accustomed in England. As a natural consequence our English dogs were considerably handicapped; still I venture to say they were not by any means nonplussed or out of the running.

For the International Field Trials held near Chatham, Ont., early in November, our dogs were fairly acclimatized, and prepared to enter the lists against the native dogs on as equal terms as possible by a month's work in the locality, and, as results proved, Mr. Heywood-Lonsdale's kennel was singularly successful, winning with its representatives three out of four prizes in the Derby Stake, and clearing the board of the whole of the prizes, four in number, in the All-Aged Stake.

We met at the Chatham trials some very good dogs, of which Mingo II., bred and broken by Mr. W. B. Wells and owned by the worthy Sheriff of Chatham, was unquestionably the best young setter I saw on your side of the Atlantic. I had seen enough of his work previous to the trials to form a wholesome idea that we had all our work cut out to beat him, and I cannot now consider it was anything more than a slice of luck that we were enabled to do so by the aid of the young pointer Ightfield Tyke, who was just then in excellent form and condition. Of the other dogs at these trials, there were some splendid rangers and of great merit as game finders, but they were almost without exception decidedly deficient as to finished breaking. And here, once and for all, and as applying equally to the dogs we met in the United States, let me give you my decided opinion that the neglect to steady and drop your dogs after birds are flushed from a point, encourages unsteadiness and rushing, faults which put out the winning chances of many of the competing dogs at Chatham, and also of some of those whose work I witnessed at the other trials in the States. The argument as to retrieving being a necessity, and that the dog pointing must watch his bird, only goes to prove when put into practice, that it unsteadies him and makes him too impatient when on point and too eager to make a hasty movement the moment game is put up. It was this hastiness and unsteadiness on the part of our rivals at Chatham, which could be so clearly seen in the open country there, that gave our more perfectly broken dogs a great advantage, and helped them, in no small measure, to win as they did at that meeting.

On the termination of this pleasant Chatham gathering a somewhat long journey, according to our English ideas, was undertaken to Otterburn Springs, Virginia, the locality fixed for the Eastern Field trial meeting. Arriving there on Nov. 9 we obtained permission to work our dogs on grounds situated a few miles distant from Otterburn Springs Hotel, and on two different occasions were most hospitably entertained by Mr. Clarke, a kindly disposed English gentleman hailing from Devonshire, who is farming somewhat largely there. The owners, handlers and dogs engaged at this Eastern meeting had mostly arrived at head quarters on Nov. 14, when it was announced that a change in the scene of operations was necessary, owing to the fact that quail were scarce on the grounds selected for the competition. Consequently on the following day, a general move was made to High Point, North Carolina, the old hunting grounds of the Eastern Field Trial Club, some eighty miles distant, and the commencement of the trials delayed until Nov. 18.

The country around High Point is so densely wooded, and the grass and weeds so high in the open spaces, that comparatively little of the work of the competing dogs could be seen; indeed, the impression forced upon me, after trying in vain to get to the front to see the work of some of those first put down, was that the whole proceedings was more like drawing for a fox than working a brace of pointers or setters to kill game. Is it to be wondered at that, carried out under such conditions, the general results of the Eastern Field Trial Club's meeting were unsatisfactory?

The rules for conducting the trials held under the auspices of this club are good, and the perusal of a copy of them was one of the chief inducements to Mr. Heywood-Lonsdale to send his dogs from England to compete. The manner, however, in which they were interpreted at High Point, as shown by results, was, to say the least, somewhat of an astonishment. Experience there proved once again how directly contrary to their plain and literal sense rules may be read and acted upon. For instance, under the heading, "Obedience and Disposition," one rule runs thus: "The judges are requested to give great credit to the dog that works promptly without noise or severity, and is obedient, prompt, cheerful, and easily handled." Another declares that "all dogs must be thoroughly broken as a matter of course," and further that "the range of a dog shall be an intelligent one."

One would imagine that rules worded in such a manner could scarcely bear a double interpretation, the plain and literal sense of those quoted manifestly being that a dog should be thoroughly under control, should range his ground within measurable distance of the man who works or handles him, and search or hunt that ground well. The awards, however, went to show that an interpretation very different to this was placed upon these rules, for it is a matter of fact that the wildest hunting dogs, even those that bolted and had to be searched for by judges and handlers, were selected as the winners at this meeting. This was very marked in the case of Daisy Hope and Duke of Hessen, placed first and second in the All Aged Stake. Daisy bolted time after time, and the dog running with her had to be kept back until she was found, while in the case of Duke, his wildness when he ran past Shot, on point on a bevy in the open, and wilfully flushed without any attempt at acknowledgment, should have put an end to his further chance in the stake. And in general, dogs which had no range at all, but rambled about, followed their natural instincts, and found game without any regard to good breaking, were the animals most favored at the Eastern field trials.

At the Central meeting which succeeded on more open ground, the work could be seen much better, and the judges here very properly insisted on the competing dogs being so handled as to work more in their sight. This more sportsmanlike method resulted in the more perfectly broken dogs regaining their proper positions in the prize list, and in the bolters being discarded.

Many were the complaints made by some of the principal handlers with whom I conversed, that, owing to the widely different opinions held by the judges at the Eastern and Central meetings, it was impossible to know how to prepare a dog to compete for both. Surely, however, at each and every field trial the object should be to encourage such work, and only such as can be enjoyed in private shooting

W. BRAILSFORD.

S. S. CITY OF BERLIN, Dec. 22.

NOTES AND NOTIONS.

WHAT a reflux there seems to be in the tides of "Fancy" just now? Who cannot remember when it was the correct thing that a mastiff's head could not be too short? When a collie's head could not be too long or narrow? or when a spaniel could not be too long and low? Yet how the tide was turned? Mr. T. W. Allen says in the English *Kennel Gazette* that the muzzle of Lord Stafford would please him better if longer. The London *Stock-Keeper* has said several times that collies' heads were entirely too needle-like, and the "long and low" in spaniels seems to be one of those things that nobody has the courage to admit that he was ever in favor of. It must not be supposed, however, that this revolution is a new thing; Crown Prince was as much of a horror to Mr. Nichols as Moonstone is to Mr. Fellows, Mr. Lowe, "Thames Tattler" or Dr. Boulton, while Hugh Dalziel held up his hands in contempt at the tapir collie, and from Mr. W. W. Thompson's expressed admiration of Marcus, as the best he ever owned, it would seem that he shared the opinions of Mr. Dalziel and Mr. Rawdon B. Lee.

Is there not a good deal of imagination about dog men being so contentious? We all know they wrangle not a little, but are they sinners above all others? I notice in skimming over the poultry part of some of our papers, that chicken men (and women) spit and snarl in a way that sounds very familiar to me. The "ever ready" Espan delineated how a goat show in England produced more hair pulling and squalling than the average dog man fight. The fights between Mr. J. H. Wallace, George Wilkes and Charley Foster, or between Wilkes and *Turf*, were out of sight of any wrangles ever seen in canine literature. So, while I freely admit that doggy men are contentious, they are by no means preëminent.

But the *Canine World* puts it about correctly that dog men do not "observe," they only "see." Just note; Dr. Romanes proposed some investigations on that mysterious endowment, the homing faculty in dogs, asking any one who had a cat or dog that showed this characteristic to lend it to him; but not a response did he get. The question as to whether properties engrafted on dogs by education were transmitted, or only those inherent, received only two or three replies. Whether puppies naturally "play fiddle" with a hindleg when the back is scratched shared the same fate, and so on *ad infinitum*. Yet let Smith say his dog is better than Jones's, and the air is darkened with the inky war that follows; yet who cares whether Jones and Smith and all their dogs were buried in the Antarctic Ocean? Yet the matters propounded by Dr. Romanes are really interesting; *i. e.*, they actually do interest ninety-nine out of a hundred readers. It certainly is not because doggy readers and writers lack intelligence that this peculiar state of things exists, for some of the very loudest-mouthed of our warriors come second to none in capacity to understand and expound such matters.

THE ONLOOKER.

PHILADELPHIA KENNEL CLUB MEETING.

Editor Forest and Stream:

The Philadelphia Kennel Club, at its meeting Jan. 6, elected the following officers for the year 1891: Francis S. Brown, President; Col. B. Ridgway, Vice-President; Chas. B. Connell, Secretary; Francis G. Taylor, Treasurer; and William H. Child, Delegate to the American Kennel Club. Also the following Board of Trustees: Cas. H. Winslow, S. Murray Mitchell, Dr. G. G. Davis, Ezra Comfort, Hildebrand Fitzgerald, Dr. Alex. Glass and Charles T. Thompson. The delegate to the American Kennel Club was directed to endeavor to have the awards at all of the field trials, held by members of the American Kennel Club, recognized at the bench shows held under their rules. It was also Resolved, That the Philadelphia Kennel Club tender their grateful thanks to Mr. Herbert Merriam and Mr. Washington A. Coster for their efficient services as judges in the field trials in 1890. The Philadelphia Kennel Club directed its field trial committee of 1891 to forthwith communicate with all of the field trial clubs of the country, for the purpose of securing, if possible, the adoption of uniform rules for such clubs.

The committee were also directed to bring to the attention of other clubs the advisability of having the same judges for all of the trials, so that there will be uniformity not only in the rules but in their enforcement, and in the judging of the dogs. This action was taken in view of the material differences between the rules of the several field trial clubs, which as at present construed and enforced require a special kind of breaking for each separate trial. Such a state of things of course produces unsatisfactory results, and unless there is some remedy owners of dogs will be compelled to restrict their entries to those clubs which have the same rules.

The club were also of the opinion that competent men should be selected to judge all of the field trials, for which they should receive proper compensation. This would secure uniformity in decision, and dog owners and breakers would then know the kind of work and the kind of breaking that would be required. As it is now, the whole matter is to a great extent speculative and indefinite. I inclose you some other memoranda of the action of the club at this meeting which I desire you to publish.

FRANCIS S. BROWN, President.

BENCH SHOWS AND JUDGING.

Editor Forest and Stream:

It is a well-known fact that bench shows are a powerful impetus to breeders of the thoroughbred dog to improve the species they raise, and that many visitors at the shows become dog fanciers and owners. For the encouragement of breeders to exhibit their dogs and of fanciers to buy, it is absolutely necessary for kennel clubs to employ competent and reliable judges. Of course, judges with an established reputation will demand a fair recompense for their arduous task, but if managers of shows do not engage them, the show should not be patronized. There are judges of indisputable ability and impartiality here, but, nevertheless, individuals not deserving confidence are sometimes acting as judges at shows in this country as well as in others. The natural consequence is that fanciers who buy dogs on their records as prize winners are sometimes deceived, and that persons owning inferior dogs, to which high prizes have been awarded, will consider them first-class and breed poor stock from them, while others will regard judges and judging with distrust.

On March 12, 1890, a long article appeared in the *Hunde-Sport*, of which the following is a translated epitome:

"Unhappily our German judging is badly exposed both in foreign countries and in Germany itself. The words: 'Give me the catalogue and I will tell you before the judging who will get the prizes,' or 'Why should I exhibit; with the best dogs I win no prizes,' can be heard too often. Unfortunately it is true, that very often in awarding prizes only the personality of the owner decides. In FOREST AND STREAM the judges of German dogges were severely censured several months ago, and as a principal reason it was mentioned that in Germany, according to the catalogue, the dog with the most prizes will get first, the next second prize, and that the judges will make an exception only to favor a friend. Germany's honor has been badly injured among German and foreign dog fanciers, and unfortunately occasion has been given for it too often. You may just notice the judges at shows constantly searching in the catalogue before they note a prize. * * * Let nobody say that our reproaches are groundless. There is no meaner beast than the dachshund bitch Götterdämmerung, owner His Excellency Count Waldersee, Lieutenant-General, General-Quartermaster and Adjutant to His Majesty the German Emperor, chairman of the 'Delegirten-commission;' breeder Emil Meyer, secretary-general to the Delegirten-commission. This beast received first prize in Berlin, 1883, while a number of better dogs had to stand back. * * * To restore the badly damaged reputation of the German judges should be the principal effort of the judges at the next show, etc."

The show alluded to was the International dog show at Berlin, and what do we read about it? Among other predicted probabilities the above mentioned journal has in its issue of May 14, 1890: "Among the rough-coated St. Bernards comes the old Young Barry, whom Dr. Künzli brings again, although advised to the contrary by many of his friends. What shall the judge, Dr. Siegmund, do? Place the younger, more imposing Bello over the oft-preferred Young Barry? Switzerland would never forgive him that. And on May 28, after first prize had been awarded to Young Barry, we find in the report of the Berlin show: "We would rather pass over in silence the judging of roughcoats, and it may have been more than painful to Dr. Siegmund, especially since the spectators manifested their dissatisfaction by exclamations, 'Bello is the best, that's an injustice,' etc. Young Barry has neither become younger nor better in loins, nor was he in better condition than on previous occasions. Bello was in finer condition than ever; he showed himself splendidly, but had to be content with second prize on account of the consequences, as was to be expected."

Already on Oct. 9, 1889, the same paper had the following criticism about the Cannstatt show: "The greatest mistake with Young Barry is that he came to the show aged, that the judges out of pity to Young Barry and his highly esteemed owner did not dare to prefer better dogs." And in the same issue: "Mr. Broadbeck's Pormann received the prize of honor. This dog, that in a bad class at Esslingen got only a diploma, though he was in very good condition, must have improved very much, since he could get first prize in Cologne in hot competition. May be it is not entirely without influence that formerly he belonged to a small saloon keeper in Rothenburg and now to a member of the 'presidium.' His hindlegs are still as bad as formerly; his tail is a little thick, etc."

That Hanno, who suffered with an incurable disease for a long time and was in a miserable condition long before Mr. Ulrich exhibited him in Brussels, received there second prize a month, and first prize at Apolda a week, before he was shipped to me, and that I sent him back to Germany, will be remembered by dog fanciers in Europe and in this country.

I could cite many more similar incidents at dog shows in Germany but the above may suffice to illustrate how much dependence may be placed on the prizes awarded in that country. It is a pity that such transactions take place there and in other countries.

"Mephisto" relates in FOREST AND STREAM, of Oct. 23, 1890, a funny decision: "The nearest approach to a 'Meersbrook Maiden Comedy' I ever knew of in England was recently, when Captain Miller judged Irish setters. Here is how he did it: Open class—Yerker, third prize; Drinnagh, hc. Novice—Valentine, second prize; Drinnagh, third; Yerker, vhc. Puppies—Drinnagh, third; Yerker, vhc., Valentine, hc. Cup for the best Irish setter in open classes, Cloyne II. Now Cloyne II. only got a c. card in the open class, yet she was awarded the cup. * * * *Et tu*, Brittle! I thought you would be the one to keep the laugh and grow fat' ball a rolling, and you have gone and done it. Only a month or so ago (Sept. 13), in a Philadelphia paper, you told us that at Wilmington show Blemton Rubicon's skull had fined down tremendously since you last saw him at Boston and he looked more like his dam than ever. * * * I know you have recently stated that a man who did not know on which side his bread is buttered is a fool. * * * For your own sake, don't tell us that fox-terrier 'skulls' fine down tremendously with advancing years. Did you ever know a child's skull to grow less as the child grew older? I have known skulls to grow thicker, but fine down tremendously, oh, never!"

This Mr. "Brittle" judged some classes at the above-mentioned Wilmington show, and it may be of interest to dog fanciers if I mention a few of his adjudications. There was a dog classified as a Newfoundland that got second prize, about which Mr. H. W. Lacy remarked in *Turf, Field and Farm* of Sept. 5, 1890: "A sort of a black, curly-coated great Dane showed up as the only entry in this class, and we really pitied the judge in having to so rudely upset his owner's fond hopes by wishing to withhold the prize. As a peace offering a second prize was awarded, but disdainfully refused. * * * Great Danes. * * * The bitch class was quite a good one, and the result of the shaking up was a defeat for the New York winner Irene. She ought not to have been shown in her condition, and if owners will persist in sending dogs in such shape they deserve the consequences. Weisrod and Hess's Flora is by no means a crack, besides a curly tail, her faulty muzzle, open feet and throatiness, will put her back in good company; she has a nice coat. Mr. Maenner's Minca Mia, third, might have changed places, as she is better headed, though a trifle lippy, and has better bone." Mr. James Mortimer, who judged at the Baltimore show, describes Minca Mia in his report of March 29, 1890: "Minca Mia, winner of first prize, is a very good specimen, sound and active as a terrier, with good head, very clean throat, good legs and feet, strong, well-arched loin, and well developed hindquarters." And the *Hunde-Sport* of June 5, 1890, in its report of the show at Cologne, where 151 German dogges were entered, surpassing those of any previous show in quality: "Krehl's Minca Mia, vhc., a large bitch with a beautiful head, but her tail is not first-class, she does not carry it too high, but turns it a little to one side." The cause of her turning her tail may have been a temporary bodily injury, or her being in whelp by Hannibal at that time.

Now let us compare with the above criticisms Mr. R. F. Mayhew's report in the *Fanciers' Journal* of Sept. 6, 1890: "Minca Mica, third, is wide in skull and doglike in expression. She is also far too throaty, heavy in shoulders and wide in front." And about that mongrel entered as a Newfoundland he says: "Carlo, a black dog, with no pretension to type or character, got second, first being withheld."

In *Turf, Field and Farm* of Sept. 12, 1890, "Espan" makes this drastic remark: "Look here, Mr. Editor, that is a very delicate euphemism of yours to the effect that a dog show judge was never seen drunk 'in the ring' in this country. * * * I have seen some judging in my time, that it is a pity for the judge's reputation, as such that, he wasn't drunk, as the remaining alternative is that he was an ass." The above appearing the week after the Wilmington show, it may be assumed that Mr. Mayhew was one of the judges alluded to by "Espan." I saw Mr. Mayhew there, sober as a judge, but I will not express my opinion whether "he knew on which side his bread was buttered." Not having examined the thickness or width of his skull I will not positively assert whether "the remaining alternative" is applicable to him, although "doglike in expression" is an asslike expression. But one assertion I make: "I will never exhibit where Mr. Mayhew judges,"

In Philadelphia, Great Danes were judged in 1889 by somebody who told a gentleman, if he would buy a certain dog from him and exhibit the dog at that show, he would award first prize to him. This judge awarded highest prizes to the Great Danes which were also winners at Wilmington. Fanciers may therefore be induced to mistake those winners of Philadelphia and Wilmington for first-class specimens.

It is to be hoped that managers of dog shows will be careful to engage only competent, impartial judges, and none who will discredit shows and dogs by awarding high prizes to inferior specimens or mongrels "with no pretension to type or character," or who finds Minca Mia "far too throaty," while Mr. James Mortimer declares that she has "a very clean throat," which is the truth. Probably Mr. Mayhew's record as a judge is easily broken, because it is "brittle."

J. H. H. MAENNER.

BALTIMORE, Md., Jan. 3.

DOG CHAT.

AS a Christmas supplement, the English *Stock-Keeper* produced a very interesting account of the Prince of Wales's kennels at Sandringham, Norfolk. The photograph of the kennels shows a large range of buildings, built substantially of brick, of handsome design, and, as might be expected, everything is found in the kennels themselves that will conduce to the cleanliness and comfort of the dogs. The inmates of the kennels are of various breeds and nationalities, Chinese dogs, Samoyede sledge dogs, rough-haired Basset hounds, Lapland sledge doge, Norwegian dogs, etc., running with fox-terriers, retrievers, Clumbers, collies and deerhounds. In the description of the dogs we note that there are nine Clumbers in the kennels which are all workers and used extensively in the Royal covers. It is needless to say that the Prince is a most ardent sportsman. One of the Clumbers, we note, is by Boss III. out of Lady II. As a great many people think it somewhat of an honor to present His Highness with a dog, the kennels are naturally kept well filled, though most of them of course are specimens of rare and foreign breed. The supplement is in pamphlet form with an excellent photograph of the Prince on the cover, and is filled with pictures of the most noted dogs, taken by Mr. W. Dexter, a well-known spaniel breeder, with evidently considerable skill.

The annual meeting of the Cleveland Kennel Club was held Jan. 6, and the following officers were elected for the ensuing year: Frank De H. Robison, President; H. A. Bishop, Vice-President; W. R. Huntington, Treasurer; C. M. Munhall, Secretary, and also delegate to the American Kennel Club. The delegates are George W. Short, Frank De H. Robison, Joseph Perkins, W. R. Huntington, C. M. Munhall, A. Smithnight, John R. Chadwick, H. A. Bishop, Wilbur Parker. Arrangements were also made for the dog show, which takes place in April next. The gentlemen who have the affair in hand are full of energy in the matter and intend to do their utmost to make the venture a success. It was decided to offer $1,200 in prizes, as well as a number of valuable specials. Exhibitors will, we hope, bear in mind their recent courteous treatment of the New England Kennel Club in the clashing of dates and reward them when the time comes with a good entry.

The *Live Stock Journal* (Eng.) has issued another of their almanacs, which, as usual, is replete with valuable information and interesting articles on various breeds of farm stock. The kennel is not neglected either, for we find interesting articles on "The Sheepdog," by Frederick Gresham, and "Pointer Dogs," E. C. Norrish; with pictures of Great Alne Douglass and Metchley Wonder, the noted collies, and the pointers, Carlo and Carlist, in the field. Those with horsy inclinations will find a very readable article on "The Model Hunter," by Sir R. D. Green Price, Bart.

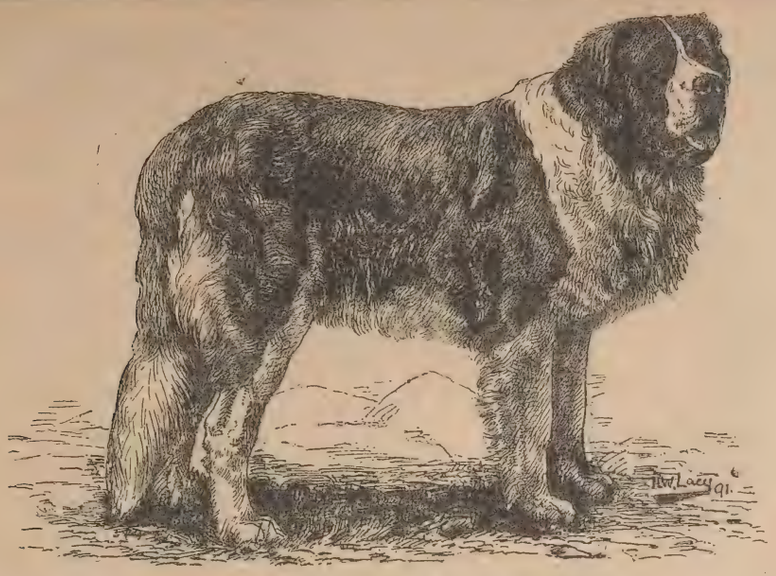
Speaking of a dog hospital in Chicago, the *New Orleans Picayune* strikes a good note when it says: "Diseases of animals receive more attention now than formerly, and the demand now is that the 'dog doctor' receive the respect due to a man who has been educated, and to his education adds the desire to ease the sufferings of dumb animals. That a veterinarian be educated is necessary, and that he be a gentleman is not incompatible with his calling." With this we quite agree, and if some of our many fledgling doctors who are struggling on, trying to make a living out of human pathology, would devote their talent to veterinary science as applied to-day, they would, no doubt, do good to themselves and the poor dogs which are unfortunately bereft of the faculty of making known their aches and pains, as is the case with their human friends.

The Costa Rica Indian dogs are peculiar from the fact that they can't bark naturally. These dogs are big, slouching, light-colored beasts and are evidently related to the coyotes, although as puppies these dogs soon learn to imitate the bark of other dogs, which are kept to teach them to bark, the same as one canary birds teaches another to sing, while the coyote domesticated never learns to bark until the third generation. These Costa Rican dogs would be of little service as watch dogs, even if they were wanted for that purpose, but it would go hard with any one who intruded on premises where these silent brutes run at large. Without warning he would be pounced upon immediately and torn to pieces. But these dogs are not kept for household protection, for few of their owners have much of a household to protect. They are used chiefly for hunting the puma and jaguar, the two fierce and destructive members of the tiger family, which are so numerous in the mountains and the reedy plains of Central America and especially in the southern province of Costa Rica.

There are a great many touching sights in a great city, but none much more so than to watch a lost dog. At first there is a look of startled surprise on his face when he loses the scent, quickly followed by a grim sort of humor, as though pretending his bewilderment is but a joke. He circles round and round, and his face grows thin and his eye almost human in its anxious pleading. He starts off in one direction, sure that he has found the trail; he is baffled, turned back. He looks in the face of all who pass as if questioning to know his way. He thinks he recognizes his master, and is off like a flash, only to return more anxious and eager than before. He gives himself no rest, but doubles, and pursues and turns back, until all hope is dead in his faithful canine breast, and he starts off with a long lope down the street. Then it is that some demoniac boy or some detestable man flings a stone at him, or kicks him as he flies by, and the cry is raised, "Mad dog! Kill him!" says a writer in the Chicago *Herald*. So the great host of idlers in ambush, who wait the opportunity for mischief as bees await the blossom of the buckwheat, are turned loose upon his track and his doom is sealed. From a lost dog to a hunted and dead cur is an easy transition. And visions of hydrophobia and Pasteur flash across the mind of the ordinary citizen.—*Boston Herald.*

Here is something that might be of use to Dr. Romanes in his researches about the homing instinct in dogs. In the *Asian* we find that a well known sportsman of Umballa when returning home from the Rawalpindi race meeting last spring, lost his equally well-known fox-terrier Tip when one or two stations out of Pindi. He telegraphed back to friends and the railway people to find and send on the dog; but all search proved fruitless, and the sporting dragoon gave up his dog as lost for good. A fortnight short of a day after the owner's arrival in Umballa, an emaciated, weary and dejected dog crawled into his house, and was effusive in its demonstrations of affection. It turned out to be Tip, but quite unlike Tip. The faithful and intelligent creature, on missing the train, had seen it bearing away its master, and then had set off following the railway line, and for thirteen days had traveled, passing railway crossings, through stations, over girder bridges, picking up such subsistence as it could on the way, unchecked by the onslaught of pariah dogs, and encountering goodness knows what other adventures by the way, and at length safely reached his home and master. If that dog could speak, what a story it could relate. Tip's constitution, however, is wrecked, and in all these months it has in no way gotten over the effects of that journey.

We hear that there will be no show at Buffalo this spring, but if a fair is held in that city in the fall, a dog show will in all probability be given in connection with that, falling into line with the Canadian circuit of shows.



Mr. James Mortimer, superintendent of the Westminster Kennel Club's show, writes us that the following judges have been appointed for the fifteenth annual show of dogs to be held at Madison Square Garden, Feb. 24-27, viz.: St. Bernards and pugs, Miss A. H. Whitney, Lancaster, Mass.; mastiffs, Chas. C. Marshall, New York; Great Danes, bloodhounds, Newfoundlands, toy spaniels and all terriers, except bull and fox-terriers, R. F. Mayhew, Brooklyn, N. Y.; Russian wolfhounds, deerhounds and greyhounds, H. W. Huntington, Brooklyn, N. Y.; pointers, J. M. Tracy, New York; English setters and American foxhounds, Major J. M. Taylor, New York; Irish setters, Max Wenzel, Hoboken, N. J.; Gordon setters, Dr. H. Clay Glover, New York; field, cocker, Clumber and Irish water spaniels, A. C. Wilmerding, New York; collies and sheepdogs, A. D. Lewis, Hempstead, L. I.; poodles, John G. Hecksher, New York; Chesapeake Bay dogs, Jas. F. Pearson, Baltimore, Md.; fox-terriers, Fred. Hoey, Long Branch, N. J.; bulldogs, bull-terriers, Basset hounds and dachshunde, E. Sheffield Porter, New Haven, Ct.; beagles, H. F. Schellhass, Brooklyn, N. Y. As will be seen from the above list, there is little change from those who officiated last year. Mr. H. W. Huntington, for greyhounds, is a good selection, and we shall be pleased to see this oldest greyhound fancier don the ermine. Mr. J. M. Tracy ought to know a pointer, and is a good selection, and Major J. M. Taylor will no doubt carry the suffrages of the English Setter Club men. Mr. Wenzel is a good choice for the Irish setters, for if every man's does not get first prize, the kickers will know that there is a man in the ring who has had about as much experience as any of them in this breed. Mr. A. D. Lewis is a new face, but through his connection with the Hempstead Farm Kennels he ought to know a good collie when he sees it. No doubt Chesapeakes will be safe in Mr. Pearson's hands. For the sake of the mastiff it is a pity that the list of judges is so limited. The other names on the list will no doubt command confidence among the exhibitors, and St. Bernard exhibitors will be pleased to meet Miss Whitney in the ring again, for, from all we hear, this clever judge will have no sinecure. Premium lists and entry forms can be obtained from Jas. Mortimer, Supt., 44 Broadway, New York. Entries close Feb. 9.

A correspondent writes us that he cannot understand how a supposed crack field trial dog should break down in a four-hour race. Mentioning as a reason for his query that he has a setter that is what is familiarly known "an all-day dog," which he worked for three weeks, excepting one rainy day and Sundays. Our correspondent must remember that a race such as this cannot be compared with an ordinary day's shooting. In such a heat the dogs are made to range fast and wide, each handler pushing his dog along for all he is worth, and as fast as horses can walk. No delay is allowed, and here is where the ordinary day's shooting dog has the advantage, any one familiar with both will know the difference. Out for pleasure, one does not walk as if for a wager, and the many little rests that the shooting of the bird, the filling of the pipe, the little loaf on the top of that handy fence, all serve to lighten the labors of the day. There is no such thing in the trials. There the nature of the ground must be taken into consideration, during those days it was very heavy and clinging, a light frost after heavy rain making a slight crust, which gave way under pressure, this and the creeping briers must have helped to fatigue the dogs considerably. Then again, neither of the two who gave out were in as hard a condition as they might have been, King's Mark especially. We think that from this our correspondent can form some idea of the work done.

We hear that inquiries for entry blanks of the National Greyhound Club's show are coming from Chicago, Toronto, Massachusetts, Maine and other States, so it is likely the entry will be considerable.

In view of the excitement among St. Bernard breeders which the purchase of Sir Bedivere by Mr. Sears has caused, it would be as well for our readers to form some idea of this grand dog. Our illustration is a *fac simile* of a photograph taken about eighteen months since, and is considered a good likeness of the dog. Full particulars as to pedigree and prize winnings were published in our last issue.

In speaking of the standing and improvement of the different breeds of dogs during the past year the *Canine World* says, that although the classes at some of the shows have not filled well never could they muster so many really grand pointers as at the present day. Naso of Upton, by all accounts, seems to be the best heavy dog. The outlook for English setters, in fact all setters, is not so good. Their prizes were not so liberal and the judges do not seem so popular as those selected for the pointers. Contrary to our custom, the setter prizes in most of the shows are hardly worth competing for, hence they have not maintained their

THE ST. BERNARD CHAMPION "SIR BEDIVERE."

Owned by Mr. E. B. Sears, Melrose, Mass.

position. Owing to dissensions and the appointment of judges unpopular or incompetent, the Irish setter classes have not been well filled, nor have they shown any advance in quality. Gordon setters are said to be at a standstill and the Gordon Setter Club is only occasionally heard from. It would seem therefore that with the crack English setters we now have that we can gain little from the other side. The same may be said of Irish setters. Mr. Chapman seems to have it all his own way at the English shows in Gordons. In this breed and pointers, no doubt, we could still import something better than we have at present.

Mr. Mercer wishes us to correct the statement in his last letter on "Cocker Spaniels of 1890." "No kennel in the world can compete" should read "No kennel in America."

Exhibitors should bear in mind that entries for New Orleans close to-day, and for Greenville, S. C., Jan. 20. At the latter show Spratts Patent will bench and feed.

Mr. Sears informed us the other day that he had applied for membership in the English St. Bernard Club, and that if he is admitted he will send a team to England's next St. Bernard club show and compete with Sir Bedivere for the Halsey trophy. If he is only as fortunate as the old America, who knows but that history may repeat itself, and like England's treasured yachting cup, this trophy may remain on this side of the pond. Sir Bedivere has already won it twice, but it must be won three times by a member before becoming his actual property.

Thursday last was a busy day at the A. K. C. rooms. The stud book committee was in session and seemed to attract several out-of-town dog men. We peeped into the inner office, where the auditing committee—Messrs. Taylor, who acted in place of Dr. Glover, La Rue and Wilmerding—were up to their ears in columns of figures; and even friend Peshall could not deny that they were evidently doing their duty and seemed to be well supplied with the "items" that go to make up the account of 1890.

Mr. Capers, secretary of the Greenville, S. C., dog show, writes us that they have arranged with Spratts Patent to bench and feed their coming show. Entries for this show close positively Jan. 20.

Notwithstanding all this talk about Sir Bedivere, it must be remembered that there is a dog in this country yet undefeated in the best company, and who has not yet met the champion; this is Alton. We are convinced that this dog will be found no mean competitor in the open rough dog class at New York. We are pleased to receive a letter from Mr. Moore, in which he says that, though he failed to get Sir Bedivere in time, he thinks none the worse of Alton; and that with Lady Livingston, Lady Melrose, Saffron, Altona, Lady Sneerwell, Ben Lomond, Lord Melrose and Alton he can and will give the best kennels a tussle for the money.

At the second bench show of the Massachusetts Kennel Club, Lynn, Mass , to be held March 24 to 27, the following medals will be offered by the St. Bernard Club of America: Silver medal for the best American-bred smooth-coated dog, silver medal for the best American-bred smooth-coated bitch, silver medal for the best American-bred rough-coated dog, silver medal for the best American-bred rough-coated bitch. The premium list will provide for 148 classes, and will be ready for distribution Feb. 1. Ten dollars will be offered as a prize for the agent or handler entering the most dogs. Spratts Co. will bench and feed.

The Automatic Weighing Machine: Mr. Rubicon (after dropping the nickel in the slot)—"Hallo! I weigh 2lbs. less than I did yesterday, how d'ye account for that, Brittle?" Brittle—"Getting finer in the skull, deah boy!"

Dogmen in London and vicinity have something to be thankful for this new year. The muzzling order has been rescinded and now the dogs must wear a collar with name and address of the owner engraved on it. The boys are even kicking at this. The only difference is, that it entails a little more trouble to the owner and a good deal less to the dog.

The Australian dog fanciers, despite the obnoxious quarantine law, are sending many orders for terriers, especially Irish, to England, the latest is a commission for collies that can beat anything in the Antipodes.

The premium lists of the Greyhound Club's first specialty show are out and may be had from H. W. Huntington, secretary, 148 South Eighth street, Brooklyn, N. Y. The show, as we have before stated, will be held Feb. 3 under A. K. C. rules. In the challenge classes for greyhounds and deerhounds the prizes are $10, with sexes divided. In open classes for the above named breeds and Russian greyhounds, $10 and $5 are given for each sex. Puppies in all breeds are provided with $5 and $3. The show will be held in the American Horse Exchange, 1,634 Broadway, New York. Judging will commence promptly at 11 A. M. and the show will close at 6 P. M. It must be borne in mind by intending exhibitors that no dogs can compete for the handsome specials given by the club unless they are registered in the National Greyhound Club Stud Book, blanks for which can be obtained from Mr. J. H. Watson, 79 Downing street, Brooklyn, N. Y. The fee is fifty cents. Entries close for this show Jan. 28, the fee being $3. An auction sale of greyhounds, deerhounds and Russian wolfhounds will be held at 3 P. M. of the day of the show. We hear that Mr. Hacke will make a large exhibit of Russian greyhounds, including his Zlooeem and the bitch he showed at Crystal Palace, England.

We understand that Mr. N. Q. Pope, of Brooklyn, has purchased from Mr. Huntington the greyhound dog champion Highland Chief. This dog is well known on the bench, and like the others in Mr. Huntington's kennel, is a big winner.

Mr. Harry Malcolm has applied for an injunction in Circuit Court No. 2, of Baltimore, Md., against Messrs. G. W. Massamore, Charles and W. Stewart Diffenderffer, James Thompson, N. C. Farber and the Maryland Kennel Club, as a corporation, and to declare the action of the board of governers null and void in expelling him from the position of president of the club and as a member, and that all action shall be deferred till the case of Mallon and others vs. Massamore and others, now pending in the courts, shall be decided, and also that they be restrained from electing any person in his place as such president until the hearing and determination of this case. He alleges in his complaint that the meeting of Jan. 1, 1891, was held on a legal holiday, and that no notice was given him of such meeting or of any charges against him. He says further that whether rightfully or wrongfully suspended by the A. K. C., there is no justification or reason for his removal from the office of president of the Md. K. C. or suspenshion from its membership. We have not space for the whole communication to the court, but this is about the sum total of it.

We regret to learn that Mr. John A. Logan has lost his pointer dog Royal Gift. He died Jan. 5, from complicated liver trouble. Mr. Logan speaks of him as the best dog he ever shot over.

To show that the advertising columns of FOREST AND STREAM are read by the right kind of people, one advertiser writes: "Blue Nellie was sold to the first man that I received a letter from, and since that letters, telegrams and orders have been pouring in by the hundred."

We learn from the Toronto *Globe* that a meeting of the executive committee of the Canadian Kennel Club was held in the Rossin House, Jan. 6. President J. Lorne Campbell, of Simcoe, occupied the chair, and there were present also Messrs. Geo. C. Taylor, Chas. A. Stone and H. B. Donovan, of Toronto, and Mr. S. F. Glass, of London, the secretary-treasurer. Ald. A. D. Stewart, of Hamilton, represented the Hamilton Kennel Club in several matters which that club desired to bring before the committee. One was the desirability of uniformity in the color of prize cards or ribbons, as confusion has been caused by the fact that at some shows the red card indicates a first-prize winner, while elsewhere that honor is indicated by the blue ticket. It was decided that at all shows held under C. K. C. rules the colors of the cards or ribbons should be blue for first prize, red for second and yellow for third. No action was taken on the suggestion to prohibit puppy classes at bench shows further than that it was the sense of the meeting that they be continued. The avoidance of clashing dates for shows was discussed, and it seemed to be the feeling that there was not much likelihood of a clash this year, but that a regular circuit would be fixed. The secretaries of clubs will be written to and urged to avoid conflicting dates. Messrs. Stone, Taylor and Donovan were appointed a committee to draft a petition to Parliament asking for the removal of duty on dogs. The petition will be circulated throughout the Province for signatures. Hitherto clubs holding shows have had the C. K. C. patronage gratis, but in future, by resolution passed at this meeting, clubs giving bench shows under C. K. C. rules and patronage must pay an affiliation fee of $10. It was decided to ask the American Kennel Club to require Canadian exhibitors to have their dogs registered with the C. K. C., and this request will be laid before the A. K. C. at New York next month. A grant of $50 was made to Mr. Stone, the former secretary, in consideration of his valuable services in organizing and assisting the club. Secretary Glass announced the receipt of a letter from Qu'Appelle stating that the Assiniboine Gun and Kennel Club had been formed there and asking for information as to affiliation. The Assiniboine club will hold a bench show or field trials next fall.

Those of our readers who took part in the late field trials, will no doubt be interested in Mr. Brailsford's letter this week. The voice of such a past master in field trials as this gentleman is, ought to carry weight, and, coming as it does at the same time that the suggestion is made by the Philadelphia Kennel Club, that the field trial rules should be made uniform and that the same style of trial work should be expected at all field trials, it would seem that it is now time for something to be done toward this uniformity, especially as this was the complaint of several handlers at Lexington. Such difference in the running rules and their interpretation must lead to the breaking up of the dogs. Take Daisy Hope, for instance, who was trained in the Eastern trials, but coming to the Central she was punished for that which placed her to the front two weeks previously. What is the dog to understand by that? It resolves itself into one of two things, either the rules must be uniform and judges selected who can be depended upon to interpret them in the same way, or owners and handlers must keep and train one lot of dogs for one trial and another for the other. It would be a benefit to all to get the opinion of our owners and handlers of field dogs on this subject, and from a full discussion the difficulty may be overcome in time for this fall's trials. In conversation with Mr. Tracy, he told us that steps would be taken during the year toward shortening the time of running of the Central trials. The four-hour race will not be done away with by any means, but the rules will be so altered that a fortnight only, at the outside, will be required to decide all the stakes. Thus it would seem this is a good time for the "uniformity rules" to be discussed and when the opinion of those most interested can be gained.

WITH THE BEAGLES.

THE dawn of Thanksgiving Day ushered in an ideal hunting morning. The hoar frost lay thick upon the ground and the air would have been perfectly still had not a light southerly breeze played through the pines.

The hunting party were astir at daybreak and after a hearty breakfast drove into the woods just as the sun rose. There was little room to spare in the double-seated wagon. On the seats were the hunters J., J., Jr., L. and B.; under the seats, but peering eagerly out at the sides, were the beagles Belle Ross, June Rose, Clyde, Grace and Baby Bunting. They are a part of the National Beagle Club pack and the two first named made records at the beagle trials; four of them are by that king of beagles, Frank Forrest, and he has no cause to be ashamed of them.

J.'s black horse carries the party quickly over the sandy road to the shore of Long Pond. Leaving the team the eager dogs are unchained and at once disappear in the thicket. The hunters walk down the road and in a few minutes hear Clyde and June working a cold track. The trail grows warmer and suddenly a burst of music tells that the first rabbit is started. At the same instant Belle starts a rabbit further down the pond. The pack is divided. The air is full of melody as both the rabbits make for the swamp. They enter it at the same time and the trails are lost in the water. The dogs are heard splashing about and for some minutes are at fault. Then Clyde drives one of them from the swamp. As bunny crosses the road B. attempts to shoot without pushing up the safety check of his hammerless and Mr. Cottontail keeps right on with the whole pack close behind him. He was a wise rabbit and made a bee-line for a large wet cedar swamp; there he is safe, the dogs are called off and the party follow the shore of the pond through the oaks.

Here no rabbits are found, but Belle digs out a flying squirrel's nest; three of the little fellows run to the top of an oak and sail gracefully off to a neighboring tree. J., separated a little from the rest of the party, has the good fortune to shoot a magnificent horned owl; handsomely mounted, it now looks down from a lofty perch in B.'s library. A swamp is soon found and all the dogs enter it. Whirr! goes a partridge; whirr! a flock of quail, and then two more partridges. At the same time Belle gives tongue, the others join, and a rabbit breaks into view, crosses the ridge, goes into a wet swamp and is at once lost. In disgust the party take the horse and leave this unfavorable region. A short drive lands them at a dry cedar swamp. Here June at once makes a start, the pack hark to her, and the first good run of the day begins. Under the heavy cedars the voices of the dogs echo and re-echo till one could believe the whole of the National Beagle Club pack were there. The rabbit circles in the swamp, on the upland, under the pines, but he cannot shake off the dogs, and after a twenty minutes run he is shot and goes into J.'s game pocket.

As the party start to leave the swamp, Clyde takes a cold track; the whole pack work it eagerly; now one and then another is in the lead, then all are at fault, but Clyde circles, strikes the rabbit and alone carries him off across the fields, which here are covered with a scattered growth of oak bushes. At first the pack do not hear Clyde, and B. standing on the ridge sees the whole run. The rabbit tries all his tricks, but the handsome little beagle never falters, and after some minutes brings him back within hearing of the pack. Then there is a wild rush, all the dogs are on and the rabbit flies through the swamp and over the plains. J., Jr., salutes him with both barrels, but on he goes without any acknowledgment of the courtesy shown him. Still on and on. He has run more than an hour and a half, when in the thick swamp he comes to L., armed with a new gun. Both barrels are fired, the dogs' voices cease, and L. goes to pick up his game, but it is not there. The beagles circle and cover every inch of the ground, but they find neither the rabbit nor his track. After a vain search the party decide unanimously that L.'s gun not only kills the game but annihilates it also.

It is now getting late, and a turn is made toward home; but it is decided to make one more start if possible. The dogs are put in on an abandoned cranberry bog at the shore of the Seine Pond. The bog is overgrown with bushes, small pines and weeds, and is a perfect paradise for rabbits. The dogs scatter, each working by itself. Clyde trails slowly along the side of the pond. The hotter the track gets the straighter the hair stands on his back, and at last he jumps the rabbit. Away goes the cottontail, with all the dogs on, out of the swamp and straight down the shore of the pond till the beagles' voices die out in the distance. He led off like a fox. The hunters hurry on after the dogs, and at last hear them coming back. Just here the pines are large and there is no underbrush. The view is unobstructed and 100yds. away the rabbit is seen coming at great speed. Not far behind are the beagles in full cry, well packed and straining every muscle. It is a picture to delight a sportsman. J. Jr. and L. see bunny come nearer and nearer, rushing on to certain death. Calmly and confidently they await him. Now he is within shooting distance; the guns leap to their shoulders, four reports ring out on the startled air; the smoke blows from the field of battle just in time to see the rabbit dodge into a thicket, pop out on the further side and disappear in his burrow.

That ends the sport. The Thanksgiving dinner is waiting and it is too late to stay longer; so the party drive slowly home. Though the game bag is light they agree that the hunt has been a success, and look with pity on four of their friends who have spent the morning working the woods and fields for quail and partridge without so much as the sight of a feather. If any one wants no end of fun and a jolly time let him get one or two couple of beagles and be happy.

BRADLEY.

CAPE COD, Mass.

SETTER LOST.—My Irish setter Glenmar strayed or was stolen from my place in Westchester on Thursday last. He is mahogany red in color with a white patch on his chest, and is turning gray about the muzzle. He has a slight lameness in his right shoulder and the hair is off in small patches about his hocks. He has a wonderfully clean neck, a well-domed skull and particularly well bent in stifles, and is almost devoid of feathering. If any of the many readers of FOREST AND STREAM should know of his whereabouts they would confer a favor on me by notifying me.—LOUIS CONTOIT (1995 Main street, West Farms, N. Y.).

BULLDOG CLUB SPECIALS.

Editor Forest and Stream:

Below I give a list of specials, solid silver cups and medals, that the Bulldog Club of America offer for competition, to members of the club only, at our first annual show, to be held in connection with that of the Westminster Kennel Club at New York, Feb. 24 to 27. Our charter membership list has been extended to Feb. 9 (day of closing of entries for New York show). Until that date $10 entitles to active membership, but afterward there will be a $15 initiation fee in addition to the $10 dues.

We want to make a big showing at this, our first annual, and trust that all those interested in this hitherto much neglected breed will take advantage of this charter membership extension and join with us before Feb. 9, and that each and every one owning one or more bulldogs will see that they are entered and shown at the New York show. There is no earthly reason why bulldogs should not have an entry of at least 50. Did ever an American specialty club offer such inducements as the following? 1. The Parke cup, value $250, for the best bulldog or bitch in the show; presented by Mr. T. L. Parke. 2. The Porter cup, value $100, for the best in show, opposite in sex to the one winning the Parke cup; presented by Mr. E. Sheffield Porter. 3. The Matthews cup, value $100, for the best American-bred junior (dog or bitch, between 6 and 15 months); presented by Mr. John H. Matthews. 4. The Sawyer cup, value $100, for the best novice (dog or bitch who has never won a prize previous to this show); presented by Mr. R. B. Sawyer. 5. The Bulldog Club's silver medal for the best American-bred dog. 6. The Bulldog Club's silver medal for the best American-bred bitch. 7. The Bulldog Club's silver medal for best dog or bitch in open class. 8. The Bulldog Club's silver medal for best puppy (under 12 months). 9. The Bulldog Club's silver medal for best stud dog, shown with two or more of his progeny. (These two or more of his progeny must be entered in their proper classes, but they need not be the property of one exhibitor. The merit of the stud dog himself, as an exhibit, will not be taken into consideration by the judge, but the prize will be awarded on the merits of the dog's progeny.) 10. The Bulldog Club's silver medal for brood bitch, shown with two or more of her progeny. (These two or more of her progeny must be entered in their proper classes, but they need not be the property of one exhibitor. The merit of the brood bitch herself, as an exhibit, will not be taken into consideration by the judge, but the prize will be awarded on the merits of the bitch's progeny.) (Entries for 9 and 10 must be made with the R. D. C.'s secretary, Chas. D. Cugle, prior to Feb. 12, 1891). 11. The Bulldog Club's silver medal for best brace. (Dog and bitch entered and owned by one exhibitor.) 12. The Bulldog Club's silver medal for best kennel of 4 (entered and owned by one exhibitor). 13. The Bulldog Club's silver medal for breeder of dog or bitch winning Special No. 3. 14 The Bulldog Club's silver medal for breeder of dog winning Special No. 5. 15. The Bulldog Club's silver medal for breeder of bitch winning Special No. 6.

CHAS. D. CUGLE,
Secretary Bulldog Club of America.

BALTIMORE, Md., Jan. 9.

JACKSON SHOW.

JACKSON, Mich., Jan. 10.—The inaugural show of the Central City Kennel Club opened here to-day under very good management. The show is held in Assembly Hall. There is an excellent quality of dogs for the number—133 catalogued, with 121 actually present. The pug, greyhound, mastiff and St. Bernard classes are especially good. Spratts Patent has charge, and is giving much satisfaction. The attendance to-day has been good. Of the two appointed judges only Major J. M. Taylor is here. He judged all classes except King Charles and Blenheims, which were placed by Harry Goodman. Mr. Hill was detained at home by sickness in his family. The awards were:

MASTIFFS.—*Dogs:* 1st and 2d, L. T. Kenney's Grover Cleveland and Plato. Very high com., Dr. E. Kimball's Elkson. High com., J. Gillies's Captain Nevison. *Bitches:* 1st withheld; 2d, J. H. Slifer & Son's Leo's Nell. *Puppies:* 1st, Dr. E. L. Kimball's Elkson.

ROUGH-COATED ST. BERNARDS.—*Dogs:* Peninsular Kennels' Casper; 2d, Acme Kennels' Valens. *Bitches:* 1st, A. W. Lee's Santa Rosa. *Puppies:* 1st, Peninsular Kennels' Colonel Phnn.

SMOOTH-COATED ST. BERNARDS.—*Dogs:* 1st, Mascot Kennels' Mascot Royal; 2d, Shoquoquon Kennels' Fridjof. Very high com., Peninsular Kennels' Dupont. Com., W. M. Bennett's Rex. *Bitches:* 1st, Peninsular Kennels' Daphne.

GREAT DANES.—*Dogs:* 1st, C. H. Ruhl's Paul; 2d withheld. *Bitches:* 1st withheld; 2d, C. H. Ruhl's Jessie R. *Puppies:* 1st, C. H. Ruhl's Paul.

DEERHOUNDS.—CHALLENGE—1st, C. E. Rowland's Thora III.

GREYHOUNDS.—CHALLENGE—1st, Rookwood-Landseer Kennels' Master Rich.—OPEN—*Dogs:* Rookwood-Landseer Kennels' Troubadour; 2d withheld. *Bitches:* 1st and high com., Rookwood-Landseer Kennels' Clipsetta and Allegretto; 2d, C. P. Litchfield's Florence. Very high com., T. E. Taylor's Cleo. High com., C. W. Jarvis's Lady Olivia. Com., L. O. Boler's Gyp. *Puppies:* 1st and 2d, C. W. Jarvis's Direct and Arrow.

POINTERS.—OVER 55LBS.—*Dogs:* 1st, Acme Kennels' Chief.—UNDER 55LBS.—*Dogs:* W. Byne's Wonderful Lad.

ENGLISH SETTERS.—CHALLENGE—J. E. Dager's Cincinnatus.—OPEN—*Dogs:* 1st, J. E. Dager's Toledo Blade; 2d, M. C. Byer's Diamond. *Bitches:* 1st, S. Francoise's Susie B. *Puppies:* 1st, G. W. Marsh's Nelly Dell.

IRISH SETTERS.—CHALLENGE—Killarney Kennels' champion Dick Swiveller.—OPEN—*Dogs:* 1st, Killarney Kennels' Red Rover Glencho; 2d, L. F. Whitman's Nelson II. Very high com., G. D. Bennett's Luzerne. High com., J. Tray's Sam, N. W. Burkhart's Dick. Com., L. G. Ransom's Starbuck. *Bitches:* 1st, J. H. Dunnigan's Duchess of Avondale; 2d and very high com., Killarney Kennels' Gladelia and Little Nell. High com., J. D. Kefuss's Queen Ann. *Puppies:* 1st, J. E. Winney's Molly Dawn.

GORDON SETTERS.—1st, Gen. W. H. Wythington's Buck.

IRISH WATER SPANIELS.—1st, Mrs. W. S. Cobb's Barney C.

FIELD SPANIELS.—1st, J. W. Wiltman's Kelsie.

FOXHOUNDS.—1st, W. S. Cobb's Daniel.

COCKER SPANIELS.—*Dogs:* 1st, Lake Shore Kennels' Brush W. Very high com., Lenawee Cocker Kennels' Pippo. *Bitches:* 1st, Lake Shore Kennels' Blackie Van; 2d and very high com., Lenawee Cocker Kennels' Beezie and Blackie II.—FIELD OR COCKER PUPPIES—1st, F. R. Curran's Jessie; 2d, Lewanee Cocker Kennels' Pippo.

BEAGLES.—*Dogs:* 1st, Middletonk's Princeps; 2d, C. B. Pierce's Prince Riot. *Bitches:* 1st, Middletonk's June M.; 2d, very high com. and high com., C. B. Pierce's Fannie, Trixie and Little Girl. Com., C. F. Hathaway's Julia.

DACHSHUNDE.—*Dogs:* Wm. Loeffler's Hundesport Bergmann.

BULLDOGS.—*Dogs:* 1st, Mohawk Kennels' Joker. *Bitches:* 1st, Woodward & Herrick's Duchess of Parma.

BULL-TERRIERS.—OVER 30LBS.—*Dogs:* 1st, W. J. Bryson's Dufferin; 2d, M. Wilson's Keno. *Bitches:* 1st, F. W. Moulton's Lady Melville.

SCOTCH TERRIERS.—1st, S. W. Skinner's Pepper.

FOX-TERRIERS.—OPEN—*Dogs:* 1st and 2d, Valens and La Logos. Very high com., E. T. Webb's Dandy. *Bitches:* 1st, 2d and com., Oriole Kennels' Hillside Gaudy, Oriole Verona and Blemton Rapture.

BLACK AND TAN TERRIERS.—1st, Blake & Herbertson's Sir Wallace; 2d, Lake Shore Kennels' Vangie W. High com., L. Sigel's K. Belle.

TOY TERRIERS.—1st, T. Phillips's Button; 2d, D. Boardman's Victorine. Very high com., Lake Shore Kennels' Nelly Vare.

PUGS.—CHALLENGE—*Dogs:* 1st, Acme Kennels' Lord Nelson. *Bitches:* 1st, Mohawk Kennels' champion Judy III.—OPEN—*Dogs:* 1st, Howard Bros.' Penrice; 2d, Eberhart Pug Kennels' Eberhart's Cashier. Very high com., Mohawk Kennels' Shugo. Com., Miss S. Gibson's Don. *Bitches:* 1st and very high com., Mohawk Kennels' Rustic Queen and Little Girl; 2d and very high com., Eberhart Pug Kennels' Mabel E. and Lady Thurman. Very high com., Howard Bros.' Sateen. *Puppies:* 1st, Eberhart Pug Kennels' Sara Bernhardt.

KING CHARLES SPANIELS.—*Dogs:* 1st, Acme Kennels' Duke; 2d, Calumet Kennels' Calumet Bend 'Or. *Bitches:* 1st, Calumet Kennels' Calumet Alice; 2d, Acme Kennels' Nell Gwynne II.

BLENHEIM SPANIELS.—1st and 2d, Calumet Kennels' Calumet Cromwell and Calumet Rose.

FRENCH POODLES.—1st, C. W. Jarvis's Dany.

ITALIAN GREYHOUNDS.—1st, Chas. Lawrence's Schallis; 2d, F. C. Wheeler's Jewell.

MISCELLANEOUS.—1st, Blake and Herbertson's Nellie Gray.

SPECIALS.—Homeliest dog in show, Duchess of Parma. Best dog entered by a gentleman, Cincinnatus. Best Irish water spaniel, Barney C. Best pug from Jackson county, Don. Handler of most dogs, Harry Goodman.

THE CHARLESTON SHOW.—[*Special to Forest and Stream.*]—Charleston, S. C., Jan. 14.—The Charleston dog show opened this morning with about 160 entries. The class of dogs is very good. Many noted kennels are represented. W. S. Diffenderfer has five St. Bernards, J. A. Logan ten fox-terriers. Ben Lewis and Fred Kirby are here with about sixty well known regulars, including Geo. Bush's spaniels, Dr. Foote's terriers, Dr. Cryer's pugs. Setters and pointers show up well. Judging commences at 12 M., and everything points to a successful show.—H. W. LACY.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Lottery. By F. Joy, Detroit, Mich., for liver, white and ticked pointer bitch, whelped July 5, 1890, by Wonderful Lad (champion Lad of Bow—Lady Bell) out of Devonshire Lit (Devonshire Sam—Lottie).

Joe Noble and Count Noble's Boy. By Joe Lewis, Canonsburg, Pa., for black, white and tan English setter dogs, whelped April 21, 1890, by Count Noble out of Lewis's Fanny.

Lillie Novice and Agnes Novice. By Joe Lewis, Canonsburg, Pa., for lemon and white English setter bitches, whelped July 5, 1890, by Redlight out of Lady Novice.

BRED.

☞ **Prepared Blanks sent free on application.**

Lady Eclipse—Berry. G. C. White's (Brinckerhoffville) collie bitch Lady Eclipse (Davy Lindsay—Phyllis) to Hon. L. P. Morton's Berry (Glen——), Oct. 16.

Lassie Bang—King of Kent. F. S. Webster's (Washington, D. C.) pointer bitch Lassie Bang (Bang Bang—Tellie Doc) to Charlottsville Field Trial Kennels' King of Kent (Priam—Kent Baby), Jan. 6.

Lass of Maine—Naso of Maine. F. Farnham's (Portland, Me.) pointer bitch Lass of Maine (Graphic—Litta) to C. H. Newell's Naso of Maine (Naso of Kippen—Dela), Jan. 4.

Monterey—King of Kent. E. Dexter's (Charlotteville, Va.) pointer bitch Monterey to his King of Kent, Nov. 18.

Lewis's Fanny—Paul Gladstone. Joe Lewis's (Canonsburg, Pa.) English setter bitch Lewis's Fanny to his Paul Gladstone, December, 1890.

Buffalo Lass—Buffalo General. A. W. Smith's (Buffalo, N. Y.) black and tan terrier bitch Buffalo Lass (Punch—Young Luce) to his Buffalo General (Halifax General—Lady Lottie), Dec. 18.

Harp—Henmore Shamrock. Wm. Wise's (Boston, Mass.) Irish setter bitch Harp (Sarsfield—Mona) to F. L. Cheney's Henmore Shamrock (Muskerry—Avoca), Dec. 29.

Peg II.—Onota Don. Dan Cowig's Irish setter bitch Peg II. (Snipe—Fan) to F. L. Cheney's Onota Don (Chief—Bizreena), Jan 2.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Daisy. F. L. Cheney's (Pittsfield, Mass.) Irish setter bitch Daisy (Chief—Leigh Doane), Jan. 2, eight (five dogs), by Henmore Shamrock (Muskerry—Avoca).

Lady Eclipse. G. C. White's (Brinckerhoffville) collie bitch Lady Eclipse, Dec. 13, eight (four dogs), by Hon. L. P. Morton's Berry (Glen——).

Rose Graphic. Chas. D. Roberts's (Dexter, Me.) pointer bitch Rose Graphic (champion Graphic—White Rose). Dec. 30, seven (five dogs), by Dr. H. K. Thatcher's Ben Adham (champion Rush—Ervia).

Topsy Nelles-Obo. R. J. Miller's (Md. Valley) cocker spaniel bitch Topsy Nelles-Obo (Black Obo—Jet Nelles), Dec. 21, eleven (three dogs), by his Black Joe II. (Jet—Bessie); three dead.

Fanny. Wm. A. Braggs's (Bangor, Me.) Yorkshire terrier bitch Fanny (champion Bradford Harry—Daisy), Dec. 20, two (one dog), by P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Prepared Blanks sent free on application.**

Ilford Chancellor. Fawn, with black points, mastiff dog, whelped May 15, 1895, by —— out of Brenda Secunda, by E. H. Moore, Melrose, Mass., to Jas. W. Whitney, Rochester, N. Y.

Caution's Own Daughter. Light fawn mastiff bitch, whelped May 5, 1889, by E. H. Moore, Melrose, Mass., to Jas. W. Whitney, Rochester, N. Y.

Lady Dorothy. Fawn mastiff bitch, by champion Orlando out of Wunna, by E. H. Moore, Melrose, Mass., to Jas. W. Whitney, Rochester, N. Y.

Lady Coleus. Fawn mastiff bitch, by —— out of Vistala, by E. H. Moore, Melrose, Mass., to Jas. W. Whitney, Rochester, N. Y.

Minna Minting. Fawn mastiff bitch, by E. H. Moore, Melrose, Mass., to Jas. W. Whitney, Rochester, N. Y.

Count Noble—Lewis's Fanny whelps. Black, white and tan English setter dog Joe and black and white bitch pup, whelped April 21, 1890, by Joe Lewis, Canonsburg, Pa., to J. O'H. Denny, Ligonier, Pa.

Chas. S. Banks, Manchester-by-the-Sea, Mass., to E. B. Conant, Lowell, Mass., the following fox-terriers: Nina (Mixture—Shame), Bones (Dusky Trap—Nina), Hillside Jaunty (Mixer—Jaunty), Bedlam (Mephisto—Trifle); two puppies, dog and bitch, by Blemton Brawler (Blemton Rubicon—Blemton Bedlam) out of Bedlam (Mephisto—Trifle), whelped Sept. 21, 1890; three puppies, one bitch and two dogs, by Blemton Brawler out of Hillside Jaunty (Mixer—Jaunty), whelped Sept. 7, 1890. To Geo. L. Hunness, Winchester, Mass., fox-terrier dog Scout, by Bones (Dusky Trap—Nina) out of Nina (Mixture—Shame), whelped June 13, 1890. To Jean Grosvenor, Beach Bluffs, Mass., one-third interest in one fox-terrier dog pup, by Blemton Brawler out of Hillside Jaunty, whelped Sept. 7, 1890.

KENNEL MANAGEMENT.

B. B., Wellsville, N. Y.—1. Please tell me, through the columns of your paper, of a wash or cure for eye of pointer pup which is sore, running matter a very little each day. 2. How good is the breeding of the English mastiff bitch Elnora Clothilde, A. K. C. S. B. 14224, sire Monarch (Major—Lady of Lyons) and dam Bridget of Florin (Dare—Florence). Is she any relation to Fred Grant's mastiffs? She was bred by G. K. Landers, Williamsport, Pa. Ans. 1. Apply with a camel's hair brush the following wash once a day:

Argent. nit	gr. ij.
Aqua distil.	℥ i

2. While not first class no doubt the breeding is all right; better write to W. Wade, Hulton, Pa.

Rifle and Tray Shooting.

RANGE AND GALLERY.

NATIONAL RIFLE ASSOCIATION.

THE annual meeting of the National Rifle Association was held Jan. 13 at the Seventh Regiment Armory, Sixty-seventh street and Park avenue. Gen. G. W. Wingate presided, and Capt. John S. Shepherd was secretary. The Secretary's and Treasurer's reports were read and approved, and ordered to be placed on file. On motion of Capt. John S. Shepherd it was proposed to change the date of the annual fall meeting from the second week of the month of September to the first week of the same month, as at nearly every one of the past meetings that has been held in the second week most unfavorable weather for shooting has prevailed. The motion was carried.

The board of directors, on a motion of Gen. Woodward, decided to abolish the 50cal. allowance on the Remington rifle as unnecessary.

The following were then elected officers for the ensuing year: Pres., Gen. G. W. Wingate; Vice-Pres., Gen. John B. Woodward; Sec'y, Capt. John S. Shepherd; Treas., Capt. Leslie C. Bruce. Gen. Charles F. Robbins and Mr. James Duane were elected as an Executive Committee.

The nominations for directors to serve for three years were: H. C. Brown, James Duane, George Shorkley, J. S. Shepherd and L. C. Bruce. To serve for two years: C. W. Duffy, Richard Oliver, George W. Rand and Walter G. Schuyler.

The Secretary's report was as follows:

NEW YORK, Jan. 13, 1891—*Mr. President and Life Members of the National Rifle Association:* The following report of the transactions of the Association for the past year is submitted by your secretary.

The annual meeting was called in January, but no business was transacted owing to the want of a quorum. At the regular meeting of the board of directors held the following month, Gen. Geo. W. Wingate was elected President; Capt. Leslie C. Bruce, Treasurer, and the Vice-President, Gen. John B. Woodward, and the Secretary were re-elected.

The range at Creedmoor was deeded to the State of New York and the charge of the same was assumed by the proper authorities on May 1, but as yet no work has been done toward making the repairs and improvements that are so much needed. The annual fall meeting was opened on Sept. 9, and in many respects it was a satisfactory one; particularly pleasing was the fact that not a protest was entered. The team representing the State of New York won the Inter-State match, and the Hilton trophy was carried off by the representatives of the District of Columbia, its team being the first one ever sent from that section. A strong team was sent by the State of New Jersey, and we have been informed that these two teams will enter again at the next meeting. The loss on the meeting was about $250, but that may be attributed entirely to the bad weather that prevailed during the last two days, and I would suggest that an earlier date be selected for future meetings, and also that hereafter no allowance should be given to the .50cal. Remington rifle, as it has been proven that it is not required, and also because for years this has created a feeling of discontent among the visiting riflemen of other States. The Qualification, Marksman's Badge and Sharpshooters' matches have been well patronized by members of the National Guard. The expense of conducting them has been increased, owing to the new system of qualification adopted by the State requiring a greater number of matches during the season. Undoubtedly a more liberal policy on the part of the State in supplying transportation and ammunition for the troops would increase the attendance at the range and at the same time benefit the Guard by rendering efficient men who perhaps knew little or nothing of the use of the weapon with which they are armed. I have to acknowledge the receipt of valuable prizes from Messrs. Tiffany & Co., Messrs. Benedict Bros., Mr. J. H. Steward of London, and the staff of the first and second brigades, also of the following named papers: the *American Field*, the *Army and Navy Journal*, the FOREST AND STREAM, the *Spirit of the Times*, *Shooting and Fishing*, *Turf, Field and Farm*, and the *Volunteer Service Gazette*.

The treasurer's report shows a balance on hand Jan. 1 of $1,078.40, with no outstanding debts, and we have in addition a just claim for $333.33 against the military fund of the State for the use of the range to May 1 and for money expended by the Association for labor and supplies prior to that date.

JOHN S. SHEPHERD, Sec'y.

BOSTON, Jan. 10.—The Massachusetts Rifle Association held its regular shoot to-day. A perfect winter day favored them with fine conditions, and high scores in all the matches was the result, especially Snyder's 90, off-hand, and Francis's 115, at rest. W. G. Hussey wins the bronze victory medal and the bronze and silver membership badges. Following are to-day's scores, distance 200yds., standard American target:

All-Comers' Off-Hand Match.

S C Snyder	90	M T Day	74	A Winchester	66
I B Thomas	75	F S Ham	73	J B Hobbs	64
W Hawley	74	D Martin	70	J C Brag	10

All-Comers' Rest Match.

A B Loring	108	A N Gunn	99	J French	92
M R Barter	104	M T Day	98	D Martin	92
A S Hunt	99	W Peters	96	J B Hobbs	82

Pistol Match—50Yds.

W Charles	87	S C Sydney	85

On next Tuesday, at 5:30 P. M., the association will hold its annual meeting at the Hotel Thorndike for election of officers, and at the close of the business meeting, at 6:30 P. M., the annual dinner will be served, and the prizes won during 1890 will be presented to the winners.

A REMINGTON PICTURE AT CONLIN'S.—Mr. G. C. Wright, the artist, has just completed a copy of one of Frederic Remington's most famous paintings. Mr. Remington is one of the foremost painters of frontier life, and in view of the present prominence given to Indian affairs, the picture referred to is of special interest. It represents a group of four men, one dead, the others wounded and in desperate straits. Standing on a mound, they have a rude barricade of their dead horses, and the Indians in the distadce are circled about them, probably making ready for another charge. It is on exhibition at Conlin's shooting gallery, northwest corner of Broadway and Thirty-first street, and can be seen daily between the hours of 10 A. M. and 12 P. M. In addition to this there are many objects of interest to the sportsman, including the best collection of records of shooting in America. A go-as-you-please rifle match will commence Jan. 12 and end Jan. 23, for elegant gold medal.—JAMES S. CONLIN.

NEW YORK RIFLE CLUB, Jan. 9.—The New York Rifle Club held a handicap club contest at their headquarters, 12 St. Mark's Place, this evening, fifty-eight entries being received altogether. Some very good scores were put up, and the results attained show that the handicaps, as allotted by the executive committee and based on last year's averages, will need but little correction for some time to come. The best score for each man, including his handicap, was as follows: T. J. Dolan, scratch, 242; T. J. Lloyd, 5 points, 241; J. Duane, 7 points, 239; Dr. E. R. Chadbourn, 7 points, 238; V. B. Daly, 7 points, 237; M. Herrington, 1 point, 236; C. E. Genesch, 2 points, 236; C. O. King, 6 points, 234; Dr. Cantrell, 12 points, 234; J. W. Dannefelser, 12 points, 230; E. B. Barker, 6 points, 227. The conditions were, any .22cal. rifle, 10 shots, off-hand, regular German ring target, 250 points. The off-hand match outdoors should have begun on Jan. 1 at Wissel's Cypress Hill Park, but the fog made shooting an impossibility. Twenty competitions will take place under the following conditions: Ten shots off-hand on a standard American target, reentries allowed, distance 200yds. The prizes will be bronze, silver and gold medals, to be won on ten scores of 75 or better, and of 85 or better, respectively. An extra prize will be awarded to the marksman making the highest score during the season.

ZETTLER EXPERTS.—Some excellent shooting was done on the range of the Zettler Rifle Club, 331 Bowery, on Tuesday evening, Jan. 5, by six of the club's members, in the regular medal and prize competition. Each man shot his full allowance of five targets, or 50 shots, and at the end of the contest it was discovered that not one of the 300 shots fired had hit outside of the 2in. bullseye, a performance which has never been equalled, either in the gallery or on the long range. The scores of the six marksmen were as follows:

J A Boyken	240	244	245	246	242	1,217	243.40
M Dorrler	245	248	245	246	246	1,225	245.00
L Flach	241	247	243	244	249	1,221	244.20
H Hares	245	239	242	240	242	1,208	241.60
B Zettler	233	237	239	242	240	1,191	238.20
C G Zettler	236	242	243	241	240	1,202	240.40

This gives a total of 7,264 out of a possible 7,500, an average of 242.13 to the score. The other results were: Record match for the championship medal—H. Becker 240, R. Busse 235, F. Fabarius 223, C. Fraenkle 232, G. Kleinbub 236, F. Lindkloster 243, F. Ross 231. At a meeting which followed it was decided to accept the challenge of the California Schuetzen Club. The club will enter two teams in the cup shoot of the Our Own Rifle Club of Newark.

REVOLVER SCORES.—The members of the New York Pistol and Revolver Club put up some good scores at their range at 12 St. Mark's place on Saturday evening, Jan. 10. The new Zettler amateur target for pistol and rifle shooting was used for the first time and found general favor. It is a 10-ring target, 8in. in diameter, with 2¼in. in center, 1⅝in. bullseye, and ¹³⁄₁₆in. rings, numbered 10 to 1 from center to circumference. In the revolver match the scores were as follows: Isbell, .32cal. S. & W., 51 out of the 60; A. Stein, .44cal. S. & W., 55; H. Pehl, .38cal. S. & W., 49; F. Hecking, .38cal. S. & W., 45; V. B. Daly, .44cal. S. & W., 46. In shooting with the pistol R. Busse scored 49 with a .22cal. Stevens of German make and M. Herrington 51 with a .22cal. Stevens, Gould model.

QUEENS, L. I., Jan. 7.—The continuous match at the range of the Queens Athletic Club, to test the 22cal. short cartridge at the distance of 115yds., has been started. The following scores have been made so far: H. Merrick 126, W. Losee 120, R. A. Kissam 111, T. Hamilton 77, I. S. Hendrickson 75.

SCHUETZEN OFFICERS.—The New York Schuetzen Corps held its annual meeting and election of officers at their headquarters, 94 Forsyth street, on Friday evening, Jan. 9. The reports of the secretary and treasurer showed that the corps had taken a lively interest in the sport of rifle shooting during the past year, and that the treasury is in a healty condition. The subsequent election of officers was in some instances very closely contested and resulted as follows: Captain, F. Cook; Sec'y, B. Knumm; Fin. Sec'y, A. J. Christen; Cor. Sec'y, M. von Dungelow; First Shooting Master, B. Zettler; Second Shooting Master, J. Tholke.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CHICAGO TRAP SHOOTERS.

WATSON'S PARK, Burnside, Ill., Dec. 18.—Score made to-day by Ft. Dearborn Gun Club, Illinois State rules:

G Kleinman	1021111021111010—11	J A R Elliott	1212121121111222—15

RAVELRIGG.

CHICAGO, Ill., Jan. 5.—Quite a nice little party met at Maksaw-ba grounds at Davis, Ind., last Saturday, and indulged in pigeon shooting. As announced earlier to occur, the Mussey-"Stevens" match was shot, 100 birds, $100, and a very close race it was, in view of the 6-birds handicap conceded by Mr. Mussey. The latter won, shooting in very clever style throughout. His gun was a 10-gauge Daly, Mr. "Stevens" shooting a 12-gauge Daly. The score:

R C Stevens	1221100122202221012212302021212022222222010201101		
	2021023021221202220012222021021222000020112222201—74		
	Handicap		6—80
W P Mussey	1221222221022110221221201112222222222222221202210		
	1222111c21o2101210022012111112102111221101021202211—		84

The birds were a strong lot.

During the same meeting Mr. Mussey and Mr. C. B. Dicks were to shoot off their tie, 50 birds, $50, and this was begun. At the 12th bird, however, Mr. Dicks's gun, a 10-gague Parker, lifter action, got out of order and he was obliged to use a strange gun. Not getting one that fitted him, he was at the 20th and 30th hole so badly off that Mr. Mussey very generously refused to go on with the match, which will be shot at a later day. E. HOUGH.

MERCER GUN CLUB.

GOTTEN up at short notice and without proper advertising the three days' tournament held at Trenton, N. J., last week, under the auspices of this club, was not the success that was hoped for by the management. The weather was delightful and the live birds furnished were of a superior quality, but the large number of shooters looked for failed to materialize. In no event were there over 15 entries and these were composed mostly of local talent. Among the contestants from other sections were "Dory" Pearson, of Clinton, N. J.; Milton Lindsley and his estimable wife, who shoots under the *nom de fusil* of "Wanda;" Dan Terry and "Tee Kay" Keller, of Plainfield; Lew Grant and Miles Johnson, of Robbinsville; Wm. Green, "Hollis," of Kearney, N. J.; and James Beebe, of Romulus, N. Y. The Mercer Club boasts of a large membership, but, as is the case invariably at a club tournament, few were found to lend a willing hand, and the work devolved on Messrs. Zwerlein, Updegrove, Fox and Williams, assisted by T. H. Keller. Live birds were used entirely on the last two days, the birds being retrieved by Mahlon Fox's Irish setter Nellie in a rapid and clever manner. Friday, the last day, opened with two events at live birds, the programme winding up with events at Standard-Keystone targets. A match at live birds was shot on Wednesday between Josh Collins, a veteran trapshot, and Chris Huber, both of Trenton, the old man winning the money, as the score below shows. The club intend to give a four days' tournament in the spring, which will be properly advertised, and they hope for better success.

First Day, Jan. 7.—Regular event No. 1, 4 live birds, $3 entrance, 2 moneys, modified Hurlingham rules governing: Tee Kay 4, C. Zwerlein 4, Joe Camp 4, Ed Updegrove 3, D. Terry 3, M. Fox 3, Theo. Pierson 1.

No. 2, same conditions, 3 moneys: Terry 4, A. Turford 4, M. Fox 3, T. Pierson 3, E. Updegrove 3, C. Zwerlein 3, L. Grant 3, Joe Camp 2, Miles Johnson 2, Tee Kay 2. Tie for second shot miss and out in next event and div. by Pierson and Zwerlein.

No. 3, same conditions: Joe Camp 4, Turford 4, Fox 3, Pierson 3, Tee Kay 3, Zwerlein 3, Johnson 3, Grant 3, Hill 3, Terry 2, Updegrove 1. Ties for second shot off miss and out in next event and div. by Fox, Zwerlein, Johnson and Hill.

No. 4, same conditions: Fox 4, Zwerlein 4, Johnson 4, Turford 4, Hill 4, Pierson 3, Updegrove 3, Tee Kay 3, Terry 3, Camp 2, Grant 2.

Match at 10 birds, $20 a side, 25yds. rise, one barrel, gun below the elbow: J. Collins 4, Chris Huber 3.

Regular event No. 5, 4 birds, $3 entrance, 3 moneys: Hill 4, D. Walton 4, Pierson 3, Updegrove 3, Zwerlein 3, Terry 2, Camp 2, B. Kuser 3, Fox 2. Third shot off miss and out and won by Terry, killing 6.

Regular No. 6, miss and out, $1 entrance: Turford 3, Zwerlein 2, Fox 2, Pierson 1.

Thursday, Jan. 8.—Regular No. 1, miss and out, $1: Joe Camp 5, Updegrove 5, Williams 4, Fox 1, Zwerlein 1.

Regular No. 2, 4 birds, $3 entrance, 3 moneys: Zwerlein 4, M. Johnson 4, Lindsley 3, Fox 3, Camp 3, Pierson 3, Huston 3, Wanda 2, Goeke 2, Tee Kay 1, Updegrove 1.

Regular No. 3, miss and out, $1: Zwerlein 5, Camp 5, Maddock 5, Goeke 5, M. Johnson 4, Tee Kay 3, Lindsley 2, Updegrove 1.

Regular No. 4, 6 birds, $5 entrance, 3 moneys: Lindsley 6, Zwerlein 6, C. Huston 6, Goeke 5, Joe Camp 5, Pierson 5, Fox 4, Johnson 4, Updegrove 3. Ties divided.

Regular No. 5, 6 birds, $5 entrance, 3 moneys: Zwerlein 6, Lindsley 5, Huston 5, Ed Hill 5, Pierson 4, Wanda 4, Goeke 4, M. Johnson 4, Fox 3.

Regular No. 6, 4 birds, $3 entrance, 2 moneys: Lindsley 4, Zwerlein 4, Camp 4, Hill 3, Fox 2, Pierson 1.

Regular No. 7, miss and out, $1: Zwerlein 9, Fox 8, Joe Camp 8, Pierson 7, Updegrove 4.

Friday, Jan. 9.—Regular No. 1, 4 live birds, $3 entrance, 2 money: Lindsley 4, Zwerlein 4, Tee Kay 3, Fox 3, Hollis 2, Pierson 2, Wanda 1.

Regular No. 2, same conditions: Zwerlein 4, Joe Camp 4, Lindsley 3, Tee Kay 3, Fox 3, Hollis 2, Wanda 2, Pierson 2.

Regular No. 3, 10 Keystones, 3 traps, unknown angles, A. S. A. rules, $1 entrance, 4 moneys: Ed Hill 8, J. B. Cleaver 8, Fox 7, J. W. Evans 7, J. A. Camp 6, C. L. Terry 6, Grant 6, J. Beebe 5, Tee Kay 5, Lindsley 4, Zwerlein 3, W. Elbert 3, T. Pierson 3. Ties div.

Regular No. 4, 10 Keystones, $1 entrance, 4 moneys, 3 traps, unknown angles: Tee Tay 10, Lindsley 9, Fox 9, Zwerlein 8, Miles Johnson 8, Cleaver 8, Hill 8, Evans 8, Camp 7, Elbert 7, Terry 7, Grant 6, Huston 5, Beebe 4.

Regular No. 5, 10 Keystones, $1 entrance, 4 moneys: Fox 10, Lindsley 9, Hill 9, M. Johnson 9, Tee Kay 8, Evans 8, Elbert 8, Geoke 8, Zwerlein 7, Cleaver 7, Terry 7, Camp 6, Howell 6, Grant 6.

Regular No. 6, 10 Keystones, $1 entrance, 3 moneys: Tee Kay 9, Lindsley 7, Cleaver 7, Evans 7, Howell 7, Fox 6, Elbert 6, Terry 6, Hill 5, Camp 5, Goeke 3.

Regular No. 7, 15 single Keystones, $1.50 entrance: Hill 14, Howell 12, Evans 12, Lindsley 11, Fox 11, Cleaver 11, Terry 9, Goeke 9, Beebe 9, Tee Kay 9. MERCER.

RIGGOTT—DAVENPORT.—The second match between Louis T. Davenport, of Brooklyn, and John Riggott, of Rockaway, N. J., took place on the 13th at Dexter Park, Long Island. Prominent sportsmen from all sections were there, and the spectators must have numbered 500. A more lovely day for such a contest could not have been asked for, the air was crisp and there was just enough of a breeze to carry smoke from the gun. The birds were a magnificent lot, especially the first 100. Of these Davenport got a shade the worst of it, with some hard luck to boot. Riggot did not appear to good advantage in the early part of the match, and shot in anything but his usual form. Some of the birds scored to him as lost should have been killed. However, the majority of the lost birds scored by either gentlemen would have been no disgrace to any one. At the twentieth round it looked very much as though Davenport was to have a walkover, as he then led by 4 birds and was shooting in grand form. On the 40th round he led by one bird only, and when on the 50th bird his favorite Lefever broke down he was tempted to forfeit the match.

After an intermission of 20 minutes the match was resumed, Davenport having borrowed a 12-gauge Smith that fitted him. He did good execution with it and worked hard to overcome Riggot's lead, but it was of no avail. Riggot had evidently warmed to his work, for he made a run of 30 straight, not missing until his 76th round. From then out the men were about even, the match ending on the 97th bird. There were many pretty kills made by both gentlemen that provoked rounds of applause, and the match from the firing of the first gun was highly interesting. The grounds at Dexter Park are perfect ones for live-bird shooting, the background being particularly good, and if they were more easy of access they would be largely patronized by New York and New Jersey shoots. Mr. J. Pentz refereed the match, T. H. Keller acting as scorer. Mr. Davenport being handled and advised by Dr. Wynn and Charles Wingate, Mr. Riggot being assisted by Frank Class; modified Hurlingham rules governing.

Davenport	1112020122222012222212002—20

Second barrel used 42 times for safety. Load used, first barrel, American wood loaded in Climax shells; second barrel, Ladin & Rand, FFFG in Climax shells.

SCOTCH PLAINS, N. J.—The little gun club that has been in existence for some years had its final shoot on Saturday afternoon, Jan. 10. The club grounds have been situated midway between the village of Scotch Plains and Fanwood, a station on the Central Railroad of New Jersey. Interest in the sport has been on the wane for some time past among the members, and as a number of enthusiasts have recently moved to the village of Fanwood and were desirous of starting a club, it was thought best to dissolve our little club and join hands with the new organization. The new grounds are to be located near the station and weekly shoots are to be held. It is hoped that the new club will prosper and have a long life. The following were the scores in total made made in four sweepstakes at 10 Keystone targets, thrown from one trap, at unknown angles:

J Beebe	8 9 8 7	G Voehl	6 6 7 ..
Tee Kay	8 7 9 ..	Moore	5 2 4 7
D Terry	8 6 8 6	W Darby	0 .. 9 4
L McIntosh	8 8	J Pentz	6 3
D Darby	7 9 8 7	Gibbs	0 .. .. ..
Robinson	6 3 9 6	Drake	6 4 .. ..
Trust	6 8 8 ..		CENTRAL.

NEWARK, N. J., Jan. 10.—The South Side Gun Club held their first weekly shoot of 1891, and as their regular programme had not been arranged they passed their time away by shooting sweeps, 10 bluerocks, $1, and a very poor showing they made to start the year with: No. 1: Hobart 7, Thomas 3, Orton 3, J. H. Terrill 5, Brientnall 9, Whitehead 7. No. 2: Hobart 9, Thomas 5, Orton 2, J. H. Terrill 4, Brientnall 6, Whitehead 6. No. 3: Hobart 8, Brientnall 4, Thomas 8. No. 4: Hobart 7, Brientnall 8, Thomas 6, Orton 3. No. 5: Brientnall 8, Thomas 3, Hobart 10, Whitehead 9, Orton 6, J. H. Terrill 5. No. 6: Brientnall 5, Thomas 7, Hobart 9, Whitehead 8, Orton 3. No. 7: Hobart 9, Brientnall 8, Thomas 9, Whitehead 8, Orton 6, J. H. Terrill 7. No. 8: Hobart 8, Brientnall 6, Thomas 7, Whitehead 7, J. H. Terrill 4. No. 9: Brientnall 9, Whitehead 8, Hobart 7, Thomas 8. No. 10: Brientnall 8, Whitehead 7, Thomas 7. If the South keep on making such scores they will have to have an electrician on their grounds.—HENRY MAX.

CLAREMONT SHOOTING GROUNDS, Jan. 10—Events at 10 bluerocks, 50 cents entry:

Sigler	9 9 9 10 8 10 9 10	Tatham	7 6 3 4 8 .. .. ..
Miller	8 10 9 10 10 10	Bishop	10 8 8 9 .. ..
Simpson	6 3 6 7 8 8	Hathaway	7 9 9 9 9 7
Lindsley	8 8 9 8 10 .. 7 9	Osterhout	9 7 8 9 7 4
Allan	9 8 8 4 6	Evans	9 6 7 5

Live birds, 4 birds, $3 entry:

Sigler	1022—3	Pierson	1211—4
Miller	1211—4	Allan	1012—3
Lindsley	2212—4	Hathaway	2020—2
Simpson	1121—4	Evans	2011—3

THE VETERANS.—Capt. A. H. Bogardus made an attempt at Elkhart, Tuesday, Jan. 6, to beat Dr. Carver's record of 1,000 targets in thirty-four minutes. His guns worked badly and he stopped after shooting 510 in seventeen minutes. He shot at 533 and missed 23. This beats Dr. Carver on the 500 record. Captain John L. Brewer, the wing shot, is anxious to meet J. A. R. Elliott, of Kansas City. Some seem impressed with the idea that Brewer insisted on shooting for gate money. This Brewer denies, and states that he never mentioned the subject of gate money to Elliott while he was here in the East. Brewer's original proposition was to shoot one or three matches at not less than 100 birds each match, the stakes to be $1,000 a side, with an outside wager of any amount up to $5,000. The only clause Brewer insisted on was that the matches were to take place on some ground within 100 miles of New York.

THE NEW TRAP ASSOCIATION.—Upon the ruins of the defunct American Shooting Association a number of prominent manufacturers and dealers in guns and trap-shooting paraphernalia are about to form an association to be known as the Inter-State Manufacturers and Dealers' Association. The object of the Association is to give an impetus to and foster the sport of trap-shooting throughout the country. It is proposed to hold one or more tournaments each month in different sections East and West. The Association will manage the meeting and give the proceeds of the affair to the local club for whose benefit it is held, and the club is expected to apply the same to the maintenance of a permanent shooting club. The American Shooting Association, which was dissolved recently, did much in the two years of its existence to encourage the sport by giving a number of tournaments, but devoted the profits to its own fund. The first tournament will probably be held at Detroit in March; the second at New London, Conn., in April; another at Washington in May, and in June at Saratoga Springs. Other tournaments will be held in the South and West.

MISS ANNIE OAKLEY.—*Editor Forest and Stream:* As everybody knows, the news of Miss Annie Oakley's death is a Parisian "fake," why started or how no one seems to know, and the load of gloom dumped into the hearts of her admirers and friends is now buried under a avalanche of joy. I could not believe that the little lady had been taken away, but when I got a letter from Frank Butler yesterday (Jan. 10), dated Dec. 30, which was given as the date of Miss Oakley's death, my fingers trembled while I broke the seal, fearful that the sad news might be true, but no, he says Miss Oakley is as well as possible, walking ten miles a day in search of game, with an appetite something like that of a starved Indian. They have been visiting Wm. Graham, the English trap shot, well known here, who keeps a hotel at Ashford, Kent. He also leases 1000 acres of shooting, over which he and his famous guests have been having grand sport. Mr. Butler tells me that Miss Oakley and himself have more invitations to shoot in company with the titled gentry than they could possibly accept, and are booked for enough visits to keep them busy until the season closes, when in all probability they will return to America.—PICUS (Ellicott City, Md.).

CLEVELAND, O., Jan. 8.—It was a genuine, old-fashioned case of snow blindness that affected the members of the Cleveland Gun Club this afternoon. The poor shooting couldn't be laid to the weather, for that was perfect. It certainly wasn't the fault of the wind, for there was no wind, and so it must have been the snow which dazzled the eyes of the marksmen and caused them to miss birds they were sure they had "a perfect line on." It was the first contest under the new rules, and Upson celebrated the event by everlastingly smashing all but one of his 25 into small bits. He met the targets in the center and did not win by chipping off a piece here and there, but by smashing the whole thing to flinders. Rudolph was next in order with a score of 18, and when the 17s finished L. O. Jones pulled out with the third badge. "Fritz" won the second. After the club shoot the members divided for a team shoot at 9 birds each. "Fritz" has the honor of breaking his 9 straight, while Upson and Tamblyn followed with 8 each. The following are the scores of the shoots:

Club Shoot.

Tamblyn	17	Coryell	11 Fritz 16
Elworthy	17	Harris	9 L O Jones 17
Upson	24	Williams	17 Flick 14
Alberts	12	Sards	11 Holt 13
Rudolph	18

J. A. HOFFMANN, Sec.

SOUTH SIDE GUN CLUB.—At the annual meeting of the South Side Gun Club, held Jan. 8, 1891, the following were elected officers of the club: E. L. Phillips, President; W. R. Hobart, Secretary-Treasurer; R. H. Brentnall, Asha Whitehead and Isaac H. Terrill, Governing Committee.—W. R. HOBART.

WELLINGTON, Mass., Jan. 10.—A large number of the "old timers" attended the weekly shoot of the Wellington Gun Club to-day, and the weather conditions were all they could desire, and as a consequence several good scores were made. In the cup match, at 14 singles and 5 pairs standards, Dill, Stanton and Wheeler tied with 22 each, and in the shoot off Stanton won. The other scores were: Leslie, Gore and Bowker 21; Black, Cowes and Bond 20; Bradbury, Perry and Melcher 19; Gale and Archibald 18; Sanborn 17; Herrick, Stone and Swift 16; Warren and Bradstreet 15. A special match was shot at 15 bluerocks, 15 unknown angles, and 5 pairs bluerocks, the purse being a silver mustard pot. In this match Bowker, Black and Leslie tied on 23 each, and in the shoot off Black won by breaking 14 out of 15, to 13 for Leslie and 12 for Bowker.

SPENCER SPORTSMEN'S CLUB, Lyons, N. Y.—Dates of meetings and shoots for the year 1891, contests for club trophies on these dates, all members may participate, strangers are always welcome: Jan. 2, 16, 30; Feb. 13, 27; March 13, 27; April 10, 24; May 8, 22; June 5, 19; July 3, 17, 31; Aug. 14, 28; Sep. 11, 25; Oct. 9, 23; Nov. 6, 20; Dec. 4, 18. Shoots begin at 1:30 P. M. Meetings called at 3 P. M.—R. J. PARSHALL, Sec'y pro tem.

PHILADELPHIA CLUBS.—The regular stated meeting of the Frankford Gun Club was held on the 8th inst. The following officers were elected to serve for the year 1891: President, D. D. Mercer; Vice-President, O. Mehrer; Secretary, Ed. Beck; Treasurer, A. Wingert; Field Captain, W. Dawson; Assistant Field Captain, H. Longstreet; Official Scorer, T. Riding; Trustees, H. Long, John Crouther and B. Bourne. The Frankford Rifle Club elected the following officers Jan. 9: President, A. Holf Gilmore; Vice-President, Charles L. Swope; Secretary, Jere McDonough; Treasurer, Joseph Shock. The Germantown Gun Club, of Germantown, at its recent annual meeting elected the following officers for the ensuing year: Thomas Ballentine, President; Emanuel Gilbert, Vice-President; C. Vogelsang, Secretary; James Royds, Treasurer; Harry Thurman, Field Captain; John W. Ericsson, Official Scorer; Benj. Royds, Horoas Lutz and John W. Ericsson, Executive Committee. The reports of the secretary and treasurer show that the club is out of debt and in good financial circumstances.

NEWARK, N. J., Jan. 6.—The Woodside Gun Club held its annual meeting this evening, and laid out a big programme for the year's shooting. Hereafter the regular members' badge shoot will be held on the first Tuesday of each month, and on the last Tuesday of each month there will be an open-to-all shoot, when visitors can either enter the sweeps or shoot practice scores, targets being charged for at the rate of two and one-half cents apiece. The club badges will be five in number and will be awarded for the best averages during the year. The following officers were elected for the ensuing year: Prest., Myer Fuerth; Sec.-Treas., Ernest O. Geoffrey; Governing Committee, Carl Von Lengerke, E. O. Geoffroy and Myer Fuerth. The initiation fee has been raised to $5.

RED BANK, N. J., Jan. 9.—The Riverside Gun Club held their annual meeting to-night, and Edmund W. Throckmorton was elected president, Timothy Davis vice-president, John Cooper secretary and treasurer, and Millard F. Cornwell captain. Arrangements were made to shoot a team shoot on Jan. 20 at Freehold under the following conditions: Teams of 14 men from the Freehold, New Brunswick, Dayton and Riverside clubs; each club has put up $10, and a suitable prize was purchased yesterday; said prize to be owned by the winner; each man to shoot at 20 bluerocks, American Shooting Association rules to govern the contest. The regular shoot of the Riverside Club was not held to-day on account of the death of David Belshaw, a member.

BROOKLYN, Jan. 7.—The members of the Fountain Gun Club held their first shoot of the season at Woodlawn Park, Gravesend, L. I., to-day, and some fine shooting was witnessed by the large crowd present. L. Davenport especially distinguished himself by killing 37 out of 38 birds shot at. In the regular club shoot 13 members entered and were handicapped according to their several classes; each man to shoot at 7 birds, modified Hurlingham rules to govern. Dr. Shields, C. Williams, R. Phister, Jr., C. B. Fisher and L. Davenport killed 7 each, which was a good commencement on their average for the year. As no special prize was offered for the winner, the ties were not shot off. The score of to-day's shoot was: Dr. Shields 7, C. Williams 7, W. Levens 6, R. Phister, Jr. 7, C. B. Fisher 7, J. E. Lake 5, H. W. Blattmacher 6, W. F. Boetcher 5, J. B. Voorhees 4, W. H. Loomis 6, L. T. Davenport 7, E. H. Garrison 4, W. A. Allen 6. In a sweepstake shoot that followed 10 entered, to shoot at 5 birds each, all ties miss and out: L. T. Davenport, Dr. Shields, E. H. Garrison, W. F. Boetcher and W. Levens killed all their birds and tied for first money. On shooting off Davenport and Shields killed 3 more each and divided first prize. C. B. Fisher took second money with 4 killed, and Dr. Van Sile took third prize with 3 killed out of 5.

Jan. 8.—The members of the Unknown Gun Club turned out at Dexter Park to-day for their first monthly shoot of the season. Twenty-one shooters went to the traps to compete for the club medal and extra prizes. The old rules of the Long Island Gun Club governed the contest. The veteran shooter, Brown, won the medal and first prize with a clean score of 10 straight. I. Hyde won second with 11 out of 12 shot at, and J. Rathjen took third money with 7 killed out of 9.

TORONTO, Jan. 6.—The annual meeting of the West Toronto Junction Gun Club was held this evening, the secretary and treasurer's reports showing the club to be in a good condition financially and otherwise, the membership being 64. The election of officers resulted as follows: Pres., D. Bies; Vice-Pres., D. C. Walton; Treas., A. Lascallas; Sec'y, P. Wakefield. Executive Committee, C. Hinton, J. Weidman and W. Davidge. The club is giving a handsome silver cup to be competed for as follows: Two shoots at sparrows, 15 birds each, and three shoots at blue-rocks, 20 birds each, the members to be handicapped, and the highest aggregate to win the cup. The first shoot will take place on Tuesday, Jan. 20, and will continue every alternate Tuesday.

HUDSON VS. EMPIRE.—The return match between the Hudson Rifle Club, of Jersey City, and the Empire Rifle Club, of New York, was shot on the latter organization's range, 12 St. Mark's place, on Tuesday evening, Jan. 6. The first match, shot at Marion in December, was won by the young New York team with 26 points. To-day they buried their adversaries. The scores were: Hudson Rifle Club—H. Hausen 201, H. Boddy 214, J. Rebhan 218, J. Bush 182, T. Reynolds 200. Total 1,013, average 202.60. Empire Rifle—W. Rosenbaum 227, J. Grimm 219, W. Miller 225, C. Zettler, Jr. 233, A. Stahl 216. Total 1,120, average 224. Referee, Col. M. L. Riggs, of the Zettler R. C.

CLAREMONT, N. J., Jan. 8.—The monthly live-bird competition among members of the Wauregan Gun Club took place this afternoon on the grounds of the New York Suburban Shooting Association at Claremont, N. J. The result follows: Houghton 9, Boenhoeft 8, Dr. W. S. Taylor 7, J. Fay 6, Brickner 4, M. Fay 4, Silberhorn 4, Miller 4 and Kramer 3. Impromptu sweeps at live birds were continued until darkness set in.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

A CORINTHIAN CRUISE ON PACIFIC WATERS.

[*Concluded from Page 504.*]

WE soon came to familiar scenes on the upper bays, the Italian fishermen's salmon boats and arks. We passed a colony of them at the mouth of Suisun Creek, which we entered and ran up with a leading wind, passing on the way Cordelia Slough, a famous hunting ground, also Shell Drake Hunting Ground, where are the headquarters of the Shell Drake Shooting Club. After a run of 25 miles we reached Suisun and anchored. As we were hanging out our riding light we were advised by the captain of schooner scow to shift, as there were schooners due, and they would be apt to foul us if we laid in midstream; so we shifted to avoid them. Not a vessel entered during our stay—all schooner captains seem to think that yachtsmen are hankering after advice, and they gratuitously give it, in great variety and abundance.

Next day was Sunday, and we took a look through the town. All was quiet, and from the large number of vehicles that were tied to the town hitching rails, that for 200yds. ran along the main street, the people of Suisun must be religiously disposed; all the neighboring country having come to church. We got the boat alongside the wharf and filled the watertanks, then made an excursion in the small boat to the head of the creek, to visit the old sloop Lively, the kindergarten boat of San Francisco yachtsmen. We finally got under way down the creek, the sail being rather tedious in a light breeze, with constant tacking, and often with not enough way to come about; but with a strong tide under us we made fair progress. Finally leaving the mouth of the creek and rounding a point of marsh land we squared away up Montezuma Creek. This is a fine stream, and we struck it just at the turn of the tide, we ran through it at a great rate; but still there seemed to be no end to it. With a good breeze and all sails set, we did not reach Collinsville outlet until 7 P. M., when we dropped our hook off Grizzly Island.

Next morning we started up the Sacremento River, passing Collinsville, which consists mostly of a salmon cannery and fishermen's houses and arks. This is the chief canning center on the river, and hundreds of fishermen set their nets and drift up and down the river every day. It is quite a trick to avoid their nets, and took all our skill in jibing and hauling on the wind and slacking sheets again; as no sooner had we passed one net than another appeared ahead, and so on for miles up the river. The law is that no net shall extend more than two-thirds across the river; but as one boat sets its net from the right bank and another sets from the left but a hundred feet above, so that the two overlap, there is lively work for the yachtsman. To run down a net means a loss to the fishermen, which no reasonable person would cause wantonly; though some who hire boats, having no consideration for others, pile through everything, and feel aggrieved when they hear the crack of a rifle and the whizz of a bullet close by as a slight remonstrance.

After rushing along at a lively rate, we reached Rio Vista, or as the captains name it, Wind's End, at 11 A. M., after a five-hours' run against a rapid current. From here the trees are closer on the banks and the wind becomes lighter all the way up, until the woods become so dense that, though it is blowing a stiff breeze overhead, in the river there is scarcely an air moving, as you often race with a post or stump on the bank for hours, the post getting the best of the race by the aid of the strong current. We stopped at Rio Vista and mailed letters, and thoughtfully discussed whether we would get shaved or not; Ceice had a black stubble about half an inch long, and looked like a wild man from Borneo; Will had a shaggy beard showing around his face, and as for myself, the others said that I looked like a farm hand who had had one side of his face trimmed with a lawn mower, thanks to that old stove. After a hot debate we decided to go unshaven through the whole cruise, regardless of the suspicious looks of the town constables.

After Ceice had tried to cultivate the acquaintance of a Chinese washerman, we went on board and set sail, standing up the river. We passed great gaps in the levees, where the raging waters had broken through in the previous winter, causing untold damage and ruining the labor of years, last winter being one of the worst ever experienced. Many islands, of thousands of acres in extent, were inundated and ruined for years to come. At last we came to where the river branches off, one branch being Steamboat Slough and the other Old River; they meet above again, Grand Island, one of the largest on the river, lying between them. We stood on up Old River, passing many orchards and occasionally getting at the houses of a ranch through the openings between the trees. Each farm has its own landing for the fruit boat, and on the bank is a shed, usually stacked with boxes, for the "Pumpkin Boat," as the natives call it, to be transported to San Francisco to market. We passed the "Pumpkin Boat" and received a salute from her whistle in response to our gun. Later on we passed the Apache, the mail and passenger boat from Sacramento; we fired a salute and a deckhand, who was sitting on the bow with his legs hanging over the guard, nearly fell overboard when he heard the report; evidently thinking that we were gunning for deckhands.

Every time that we passed a clearing the inhabitants would flock to the banks and gaze in admiration at the yacht as she sailed by. Ceice tried to charm them with his melodious voice aided by the guitar, and succeeded completely—they would immediately take to the hills, and even the cattle on the banks would give a wild lingering look and "ramrod" their tails as they fled to seek pastures new when Ceice sweetly warbled "Oh how we suffered." I also had a fine voice, though the others tried to discourage me because I never knew more than two lines of any song; so that when I tried to join in there was such beautiful melody floating around in chunks that poor Will would go forward and sit on the end of the bowsprit. Will did not claim to be a Mario or Campanini, and when the discord was at its height he would produce his violin and dash off a few selections from Wagner, Offenbach, and other classic composers, so the people of Sacramento Valley will remember with affection one of the trio who did not torment them with alleged music.

We soon passed Isleton, on Andrews Island, and showed the natives what skillful navigators we were by piling up on a sandbar. We stepped overboard and by means of our shoulders under the bow we managed to slew her head around, and then by flattening in the sheets and laying the yacht on her bilge we slid her off into deep water, all the time trying to look as though the whole occurrence was just what we intended to do. Two months previous some of our club boats, the Cisne, Capt. W—, discovered the same bar, Capt. — had a great faculty for discovering bars, afloat or ashore. When she struck he stepped overboard and put his shoulder under the counter to try and boost the boat around, forgetting that he had been wearing a low-cut shirt in the hot sun. He gave a tremendous lift, but instantly stopped and climbed aboard, looking for vaseline, finally going below to nurse a sore spot as large as a flapjack, and meditate upon the miseries of a yachtsman's life; his shipmate meanwhile kedging off the yacht.

The wind was falling lighter all the time, and it looked doubtful whether we would make Walnut Grove by night; at one time we gave up the attempt, as we could not get by a certain point, but one of the boys went ahead in the small boat, and by means of stiff "jay hawking" he managed to get us by, we then having a good breeze dead aft. At last we sighted the town, and having a straight reach before us, ran up to it in great style, rounding to and firing a gun as we came to anchor. We did not like the spot we had chosen, so we decided to drop below and anchor again in Georgiana Slough, as this was as high up the river as we intended to go, the breeze being so light that it was only wasting time to try to stem the current. There was a ferry at the mouth of the slough, and we could see a line stretched across. Ceice thought that he could push the line down so that the yacht would pass over it, so we hove up anchor and drifted down, but when we were near it we saw that it was a wire cable, stretched with a purchase. We at once dropped our anchor, but the current was stronger than we had calculated, and we dragged upon the cable until the stern fouled it and she slewed around broadside. For a time matters looked serious, the current was running five miles on hour, and as the cable was working up the rigging and the broadside of the boat was exposed to the stream, it looked as though it would undercun us and heel the boat until she filled, which would have been a fine ending to our cruise.

The whole scene presented itself to us in an instant and we set to work to do all we could to save the boat. We first clapped a lashing on the cable to keep it from getting over the cabin top, for if it had once got over the cockpit rail it was all up with the Cyretta. I could not bear the thought of such an ignominious end, in a slough hardly wide enough to tack in, to the noble little boat that had carried me through many a tough blow without a mishap. We finally got the stops fast after the wire rope had risen within an inch of the top of the coaming and then we were safe for the present; but it was a puzzle what to do next.

We carried an anchor out and tried to warp her head up stream, but the anchor would not hold, and soon came home, when we tried two anchors with the same result. The cable could not be slacked away, as we would bear down on it as fast as it paid out and it could not be cast off entirely. Finally we bent all the spare line to the large anchor and carried it 200yds. up the stream. With so much scope it held, and we slowly hove her head around and pointed against the current, casting off the forward lashing from the cable as the strain came on the anchor line. After she was once headed up stream it was not much trouble to haul clear of the obstruction.

By the time we were clear and had begun to breathe freely once more the ferryman put in an appearance and asked us whether we wanted to go down the slough. We intimated that this was what we were trying to do and probably would have done had it not been for his cable, so he slacked it off and we passed safely over it, tying up to the willows a hundred feet below.

That night we took a walk through Walnut Grove, passing the evening in a country store, with a congregation of neighboring farmers, who had come after the mail and remained to talk and to blame the mail boat for being behind time when they got home late. During our stroll about the town Ceice wandered into a Chinese gambling den, and when we found him he was surrounded by moon-eyed Chinamen absorbed in a game of "tan." He was anxious to try the game and see how it worked, but not having any money with him, he was obliged to forego the glorious chance of breaking the bank—or more probably of being broke himself—and after a time he reluctantly joined his less speculative companions.

Next morning, after purchasing some provisions, we started on our return trip down the slough. The first part is very narrow and there was not wind enough to give us headway on account of the high trees, though it was blowing a fresh breeze overhead. We took night to towing with the small boat, only working hard enough to keep the yacht's head clear of the bank, the current drawing us along fast enough without any exertion on our part. The slough is 14 miles long, well wooded on the banks, with fine fruit farms and big dogs inland, the land being the best in the State. The danger every winter of the river overflowing its banks, and the great expense of keeping the levees in condition retards the settlement of the country; the fever and ague also driving away many of the farmers, though we passed many clearings with cosy farm houses nestling among the trees. When about eight miles down the slough widened and we set sail. Some Chinamen were clearing the land for cultivation at this point; soon after leaving their camps we came to the marsh lands of the lower river. As we were leaving the woods, we passed a place where a large number of coots had located, and we had fine sport shooting them as they circled overhead. Passing the large steam dredge that was scooping the mud out of the slough and depositing it on the banks to form levees, another reach brought us to the mouth of Georgiana Slough and into the Mokelumne River.

The wind was fresh as we beat down, passing Boulding Landing at 5 P. M., and soon after we entered the broad San Joaquin River. Here we met a heavy chop sea, which was quite an agreeable change from the calm and passive sailing that we had met up to this time. We made a tack across the river and soon had all the wind we could stagger under, so after another short leg we decided to reef all around, for the seas were very heavy, throwing water over us at every jump. We went along nicely after reefing, sending the spray in sheets half way up the mast, but it was what we were looking for, we had a keen longing for a wet deck, and now we felt in our element again. The yacht seemed to appreciate the change by the way she bounded along, now dipping to a comber and then lifting and shaking off a cloud of spray which flew aft in a refreshing shower. It was a grand transformation, from sluggish waters to tumbling seas, and we kept on beating down until the shades of night warned us to seek a harbor while it was yet light enough to see; so at 7 P. M. we ran into Clark's Slough, and after going far enough up to get out of the swell from the river, we anchored; then shifting our wet clothing for dry, we cooked a sumptuous dinner and did full justice to it.

About this time Will began to feel the pangs of a guilty conscience, the weather had been very warm on the trip, and his nose had turned to a vivid red, Ceice delighting in telling him that when he reached home all his friends would conclude that he had been off on a protracted spree. This worried Will; though not a teetotaller, he had a dislike for drinking men, so he put in all his spare time anointing his nose with vaseline, until it drew the flies. What with our chaff, the flies, and the fear of the suspicion of his friends when we reached port, he became quite melancholy, but a return of cloudy weather caused the nose to lose some of its glow, and restored his peace of mind.

Next morning we hung out our wet clothes to dry and sat around to smoke and argue; Ceice and I always differed on a question, so we had plenty of friendly bouts. He had been sailing on large craft and always held up their advantages over small ones, and while he admitted that he had never been on a pleasanter cruise than this, he still maintained that for general yachting a large craft is preferable. I held to the contrary, saying that in a single-hander I was always free to go where I wished, and while I enjoyed company, I was not dependent on others each time I wished to take a sail.

Another thing is the expense. As soon as a boat becomes so large as to require the aid of paid hands, it is beyond the means of the majority of yachtsmen, and the most enthusiastic of these are the young men who cannot afford a craft that they cannot run themselves. Generally a partnership is unsatisfactory. I know of several cases in which yachts are owned by two or more, and the bulk of the work and responsibility falls upon one of the owners alone, which soon creates dissatisfaction on his part. While in some localities where open-water cruising is practicable a large yacht may be the more desirable, on our coast there is no good outside cruising; all the yachting is done on inland waters, and with a small yacht one can get safely to places where larger ones would be debarred. The great advantage in all cases of a large yacht over a small one is the headroom, and this is not important enough to justify the extra labor in handling the heavy canvas, gear and anchors.

We were two weeks afloat in the Cyretta on this cruise, and during this time we never ate or slept ashore, and we never lost a night's sleep. The little time we were below we were generally sitting or lying down, so that unlimited headroom would have been no great benefit; and many times we dropped the anchor for a swim or a run ashore when, if it had been as heavy as is necessary for a large yacht the work of getting under way again would have been more than the fun was worth. I speak from a true Corinthian standpoint, where an owner does all the work about his boat, only hiring a man to wet down decks and dry sails during the week. A yachtsman takes a pride in his work if, after inviting a couple of friends for a sail, he overhears comments on the shipshape appearance of things, and knows that it is his own doings. He also learns to be a true sailor, taking interest in every rope and spar, knot and splice, seeing just what is the matter the instant that any thing goes wrong, and knowing what to do to right it.

While there is some work about yachts that is not yachting, even while you are scraping a spar or scrubbing bottom you are learning to appreciate a well kept boat, and are also getting up a ravenous appetite for sailing when the work is over, when without doubt your enjoyment will be the keener for the previous labor. I cannot see how any one who really loves yachting can have any true zest for the sport when in the hands of his "friends," as the politicians say, or rather, of his sailing master and crew; he cannot feel the least responsibility or freedom of action. When I go aboard my boat I like to put off all restraint, get into the oldest clothes I can find, and scrub decks, set up rigging, or do anything else needed, without the necessity of maintaining my dignity. When I go sailing I do not care to be told that the steward is drunk, or that some of the crew have deserted, so that roustabouts from the city front have to be shipped for the trip, only to prove worse than useless, or else that no sailing is possible. Some may like to show their friends a magnificent vessel, for which they get the credit of paying, for work on a 25ft. boat is too much for one man to do in his spare time without curtailing his sailing. As I have come to the conclusion that my little boat is about as near the right thing as I can get, I am in that contented state of mind that is the envy of my friends who own large yachts and talk about the great expense and annoyance of running them.

After the clothes were dry we put on our old suits and prepared for a beat to windward, as from our snug quarters we could see the whitecaps piling up in the river. We started out at 9 A. M. for Antioch, a long beat, but the exhilarating feeling of the boat rushing against the heavy sea made the time fly quickly, and we soon passed Jersey Landing, a place now in ruins from the winter floods, though formerly fine orchards lined the river where now all is waste. Of the Landing, all that remains is a dilapidated wharf and a hotel with some farming implements stored on the front porch, the remnants of a once thriving district. After a hard tussle to windward we made Antioch at 3 P. M., anchoring west of the wharf. After tidying up the ship we made our usual expedition to the town, mailed letters and bought fresh provisions. It was at this place that some thieves who had burglarized some of the Corinthian Y. C. fleet about a month before were stopped by a constable. On notification by wire to look out for them he watched and saw them coming along the other side of the river and caught them; so that they are now in durance vile, no doubt meditating upon the folly of going yachting in another man's boat without his permission. We hunted the constable up and thanked him, in the name of the C. Y., for his vigilance.

As we were going aboard we saw a sloop that looked familiar, and when she sailed in and anchored below us we made her out to be the Agatha, formerly of our club. Ceice rowed down to her and made himself known, inviting the owner to visit us in the evening. We then had dinner and passed the rest of the afternoon in talking with an old duck hunter who was repairing his ark near by. He was a typical market hunter and had been at the business for years; there was not a slough or inlet within miles that he did not know of, and being an entertaining talker we spent a couple of hours listening to his yarns of shots, large bags he had made and of adventures he had gone through. In the evening Captain Adams and his wife, of the Agatha, made us a visit. Being a farmer who had just taken up yachting he amused us greatly with his descriptions of his recent cruises and adventures.

At 10 P.M. it commenced to blow and as we had a wharf close under our lee, and the seas began to roll in heavily, we decided to shift our anchorage before we dragged and came to some damage. This was no easy matter, the wharf being within 20ft. of us, allowing no room to make sail, with a strong tide setting us down on it. We finally got out the kedge abeam, then by heaving up the anchor we swung to the kedge and cleared narrowly the end of the wharf, when we set the jib and ran under a lee and made snug for the night. We got away at 6:30 next morning, after kedging off a mud bank, and beat down New York Slough into Suisun Bay, passing several scows on the way. Here we met more salmon nets and spent a good deal of time in running between them to try and get by; they seemed innumerable, and no sooner had we passed one than another appeared ahead and we had to slack sheets and run around it, continuing until the tide turned and the fishermen pulled up to go home.

At one time we hove to and Ceice went aboard one of the boats and purchased a salmon weighing 50lbs. for half a dollar. Our heaving to and boarding one of their boats caused great anxiety among the fishermen, the law being that they shall not use a net with meshes less than 4in. across, and inspectors being around to enforce it. When we laid by and Ceice boarded a boat all the other boats in sight stopped fishing and the crews watched anxiously to see what was going to happen, thinking that we were one of the patrol. After seeing nothing startling they became reassured and went to work fishing again.

The tide was now flowing strong, and we did not make much in beating against it, so we ran into Mallard Slough and had a boiled salmon dinner with egg sauce, of which we ate so heartily that after dinner we all fell asleep, and before we woke the afternoon had passed away. As soon as we could we got under way and beat down Suisun Bay in company with a schooner scow past the Middle Grounds. Suisun Bay is very shallow, and when the wind blows against an ebb tide there is a nasty chop sea kicked up that makes it wet for all hands. After thrashing to windward for some miles it commenced to get dark, and we ran into Hastings Creek for the night.

At the mouth of the creek there were some fishermen's arks, and as we sailed by a couple of cats set up such a mewing that Ceice rowed back with a piece of salmon and some water for them. The arks were deserted and there was no knowing how long the cats had been there, for they seemed ravenous; how they lived is a mystery, as they could not leave, being surrounded by miles of rule marsh land. After a supper of boiled salmon we turned in.

Next morning the tide was not high enough to allow us to get out of the creek until 10 o'clock, at which time we got under way to beat to the mouth of Petaluma Creek. The tide was a strong flood and it was rather slow work forcing it, the wind being ahead, but we made the Salano shore after much tacking and rounded Benicia Point. Just before reaching Carquinez Straits we fouled a fisherman's net, not being on the lookout for one in such open waters, but I do not think that we did any damage, for we immediately slacked sheets and getting sternway drifted clear. We passed Benicia at 3 P. M., and meeting the ebb tide, we ran through Carquinez in an hour and a quarter, passing Mare Island Light at 4:15.

The wind seemed to have blown itself out now, for the weather settled down fine, so we shook out our reefs that we had carried for the last three days, and carried all sail, with jibtopsail and sprit, to reach Petaluma Creek before dark. We hoped to make it by 7 P. M., but the wind hauled ahead and as we neared the Petaluma shore we had to beat, and with getting stuck on the mud we were delayed until 9 P. M. before we dropped anchor below the drawbridge. Our cruise was now drawing to an end, the C. Y. C. programme called for a club cruise to the mouth of Petaluma Creek on the 30th, and we put in the next day cleaning up the boat and setting things shipshape; airing clothing and blankets and giving everything a general overhauling. We then shifted to a better berth, so as to see the yachts as they came up the bay, but luck was not with the C. Y. C. on this trip, for we waited until 10 P. M. but no boats appeared. Then we took the small boat and rowed up to Sonoma Landing, about a mile off, and burned red fire and fired the gun so as to signal any boats that might be within sight or hearing, but it was a dead calm, so in a short time we returned and turned in.

I had just fallen asleep when I thought that I heard the yacht Freda's foghorn; I soon heard it again and called all hands, and we fired the gun and burned a redlight. Soon the Freda hove in sight, having spent most of the night in trying to get up. Some of the others that started had anchored again, there being not a breath of wind on the lower bay. In the morning the Lark and Ceres came up, and after a general jollification on board we got under way for home. The wind was very light and progress slow, and after drifting most of the day, at 6 P. M. the club house came into view through Raccoon Straits; we ran up to our moorings and were once more at "Home, sweet home."

Our midsummer cruise had been a success, and now that it is all over I cannot think of anything that could have added to our pleasure or to the success of the trip; we accomplished all we attempted. The trim little craft returned in better condition than when she left, as many spare moments were put in at knotting and splicing and other sailor's fancy work. Our stores had been so well selected that only a few odd cans were left; our bill of fare having been varied and abundant. Our course had been over entirely new ground, and savored of a trip of exploration. We

met with no accident of any consequence, and nothing but good fellowship and contentment reigned. Some friends predicted that we would be tired of the cruise before our time was up, but as the end drew near our constant longing was that we might have another week. It is said that "all's well that ends well," but I think that all is better that commences well and keeps on improving throughout. HARRY L. JONES, Yacht Cyretta, C.Y.C. SAN FRANCISCO, Cal.

THE AMERICA'S CUP.

AFTER a good deal of talk which amounts to nothing, the situation so far as a challenge is concerned rests exactly where it did when the negotiations were broken off in the summer of 1889. The New York Y. C. is now willing to accept a challenge with less than 10 months' notice and with only the waterline length, and also to assent to any reasonable terms for the races. All this, however, is precisely what was offered to Lord Dunraven two years since, and the club is not willing to go a step further now than it was then. If British yachtsmen are ready to retract all the hard things they have said about the new deed, and to recognize it as binding for all future races, they can send a challenge by the first steamer, naming only the waterline length, and there is little doubt that it will be accepted, and the same terms granted as were offered to Lord Dunraven.

The only change that has taken place in the two years is in public opinion, the dimension clause is no longer held in such high esteem, and many would gladly annul it if such a course were possible without destroying the whole new deed with it. This latter course the New York Y. C. is not yet ready to take, having still a hope that British yachtsmen will be the first to back down. In a recent interview in the *World* Com. Gerry is reported as saying "that there would be no race until the Englishmen made up their minds that the New York Y. C. is immovable in insisting that all future races shall be sailed under the new deed of gift. When they had made up their minds to this, there would be a race, and not before."

The following interesting interview with Gen. Paine appeared in the *Times* of Jan. 8:

"I shall only remain in the city a day or two," said Gen. Paine, "but before I go home I hope to learn definitely whether anything developed during Lieut. Henn's visit here which will bring a challenge for the America's Cup. I understand that Lieut. Henn said he knew a challenge would be issued, provided the dimensions of the challenging yacht do not have to be sent with the challenge. As for this there can be no question but that it rests entirely with the New York Y. C."

"Then you believe that the mutual agreement clause of the deed of gift gives the power to waive the dimension clause?" suggested the *Times*'s reporter.

"Of course it does," said Gen. Paine positively, "and what is more, it gives power to waive, as it distinctly says, any and all conditions of the match. There is only one thing in the present deed which would have to be insisted on. That is that the cup must be held by whoever wins it subject to the deed.

"The present deed of gift is a pretty good document to study. In my opinion it is a fair one. The party challenged and the challenging party can arrange a race around the world with boats of any size if they desire. This does not seem to be generally understood, but it is nevertheless true. As a matter of fact there is not even a limitation as to the size of vessels to race if the parties do not want the size limited.

"Although the dimension clause may be waived entirely, as it stands it is more to the advantage of the challenger than the challenged. English yachtsmen especially do not appear to see this point. For instance, you remember that when the challenge came from Lord Dunraven, owner of the 70-footer Valkyrie, the dimensions were sent and immediately several gentlemen in this country wanted to build a seventy-footer to meet this foreign yacht. If the dimensions of the Valkyrie had been withheld the desire here would have been for ninety-footers and the Valkyrie would have been greatly outbuilt. This is only an example of the power to outbuild the challenging vessel. When the dimensions are sent, it is the aim to meet the foreign yacht with a boat of her size. The dimensions asked in the deed—beam at the load waterline, extreme beam, and draught—are only approximate dimensions and are to give the party challenged an idea of the boat he has to meet. But, as I have stated, the dimension clause may be waived.

"All that is necessary ever is a challenge to start matters going, the deed giving the power to arrange the conditions of the match mutually. I look for the time when the challenging party, as well as the party holding the cup, will have trial races to determine the vessel which is to sail for the cup, and it may also come in the next ten or fifteen years that single-stick yachts of more than ninety feet on the load-water line will be the contestants."

"At present, if the dimension clause were waived, could not a foreign yacht club send a boat of over ninety feet?"

"No, it could not exceed the ninety-foot limit in yachts of one mast unless both parties agreed to waive everything pertaining to size."

"You mention a single-sticker of over ninety feet; how far above this do you think you can go and still retain the American idea of power?"

"That can only be found out by experiment. I am convinced that a ninety-footer can be built and handled, but in going beyond this to any extent steel masts and metal booms of some substance which will not affect the compass will have to be tried. Enough men could be carried without any trouble to handle the sails, but the difficulty would be in making a boom that would answer the purpose. A donkey engine might help in getting in the main sheet, but it would not be necessary."

"Do you think E. D. Morgan will be successful with the Consolidation if he turns her into a sloop?"

"Well, I should not want the job, but then he may handle her without much difficulty. It would be an interesting experiment and one cannot tell what may become of it."

"The Volunteer is still for sale, is she not?"

"I suppose she is," answered the General hesitatingly. "When I advertised her for sale I meant it as a sort of declaration that I did not intend to enter her in any more trial races, but I would have let the New York Y. C. have her if it desired had the Valkyrie challenge resulted in a race."

Gen. Paine manifested his usual keen interest in yachting, especially in international affairs, and expressed a hope that a challenge would be received, although in this event he did not wish to reveal his plans.

Gen. Paine's interpretation of the "mutual agreement" clause is a very liberal one, but it is not in accordance with the precedents thus far established by the New York Y. C., nor even with the wording of the new deed. In the original deed of gift, the "mutual agreement" clause is the most prominent feature, the requirements as to date of notice, tonnage, name, etc., being merely contingent on a disagreement over the terms. When the second deed was made this order was retained, save that a notice of not more than seven nor less than six months was required as the preliminary to overtures for a mutual agreement. At the same time the New York Y. C. has twice declined to enter into a mutual agreement under the plea that it was bound not to accept more, not less, than seven months notice. This was the case when the challenge of the Royal Clyde Y. C., of Sept. 21, 1886, was received and declined because it did not name a day within seven months, and it was again the case a year later when Mr. Sweet's challenge was quietly and promptly disposed of by the hasty alterations of the deed of gift. In the former case the club decided that it could not waive the seven months notice, and also, that a "mutual agreement" must be preceded, and not followed, by a formal challenge, giving name and tonnage of the challenging boat.

The phraseology of the new deed plainly indicates the same course, first a number of restrictions on size, motive power, nationality, etc., are enumerated; then follow minute details of the challenge and all the particulars which must be included in it; then comes the "mutual agreement" clause, specifying clearly the matters which may be subject of such agreement; dates, courses, number of trials, sailing rules, "and all other conditions of the match." The inference is that the "conditions of the match" refer only to actual details of the races, and do not also include the size, the motive power, the transportation, but only the 10 months' notice, which is specifically mentioned as being subject to the will of the holders. A careful reading of the deed indicates as the only method of procedure on the part of a challenger, not a mere request for a conference with a view to a mutual agreement on size, etc., but that the first step must be a formal challenge giving the day of the race and the full dimensions of the challenging yacht.

While Gen. Paine's explanation of the deed is the fairest one, and fully in accord with the spirit of the original deed, it is not borne out either by the actions of the New York Y. C. in regard to overtures for races in the past, or by the plain wording of the new deed.

His defence of the dimension clause is also very unsatisfactory. He treats the length alone and the four separate dimensions called for as though they were identical, instead of very different. What he says as to the advantage of the "dimension clause" to the challenger would be partly true if length only were concerned, and if the New York Y. C. would have met Valkyrie with a 70-footer, and not Volunteer, but applied to the four dimensions asked for it is entirely incorrect. Any possible advantages to Valkyrie would have been all secured to her by the simple statement that she would be near the upper limit of our 70ft. class. The statement that it would have been of advantage to Lord Dunraven in addition to have the draft and the beam in two places of Valkyrie in the possession of Messrs. Burgess, Smith and Gardner, is simply contrary to the facts. The sole advantage would have been on the side of the American designers, who would have known very nearly the power of the boat they were called upon to beat.

The statement as to approximate dimensions is contradicted by two plain facts, in the first place by the demand for the beam not only at the widest point but at the waterline; and in the second by the fact that "approximate" dimensions are not recognized in yachting. Even in a trivial race between 20ft. boats measurements are taken with the utmost accuracy, and the main reason given for the presence of the "dimension clause" in the new deed was the difference between Mr. Watson's idea as to the approximate length in the case of the Thistle, and the opinions of the New York Y. C. on the same subject.

In the interests of that "friendly competition between foreign countries," which was the aim of the five original donors, we should be glad to see Gen. Paine's interpretation of the new deed indorsed by the New York Y. C. In this case it would only be necessary for a foreign club to write such a letter as that of the Royal Clyde Y. C., before mentioned, expressing a desire to arrange for a series of matches, the size of yacht to be used by each party to be agreed upon, with all other details. In this connection it would be no more than fair, as suggested by Gen. Paine, to allow the challenger also to select a yacht by means of trial races, so long as she agrees with the size decided on. If the New York Y. C. is prepared to interpret the new deed in this liberal spirit, the whole question of its legality and the fairness of the disputed clauses will disappear forever, and international racing will begin again immediately.

QUAKER CITY Y. C.

THE monthly meeting of the club was held on Jan. 7 at the club rooms, Vice-Com. Brerefon Pratt presiding.

The board of trustees reported the election of 14 new members, as follows: Hubert Brock, J. Percy Warr, Jr., Edgar Scott, Alexander Van Rensselaer, Harry F. West, William H. Addicks, Henry G. Freeman, Jr., Morton J. Henry, George R. Preston, William S. Rhodes, L. Newton Hannold, Franklin C. Read, Charles Heebner and Edward Samuel. The river house committee reported the purchase of the Tinicum Fishing Club property. The law committee reported that application had been made to the courts for permission to change the name of the club from Quaker City to Philadelphia Y. C., which would probably be done before the next club meeting. Lieut.-Com. E. T. Strong, U. S. N.; Lieut. B. O. Scott, U. S. N., and Ensign W. S. Sims, U. S. N., officers of the Pennsylvania Nautical Schoolship Saratoga, were elected honorary members. The following were appointed a special improvement committee to take charge of all plans and improvements for the river club house: J. Howard Gibson, John H. Sloan, Arthur Colburn, O. D. Wilkinson and C. W. Lyon. Important amendments to the constitution and by-laws were offered, and will be acted upon at the annual meeting on Feb. 4. Among them were, instead of monthly meetings having six general meetings per year, in January, February, April, June, October and December; limiting the membership to 500; increasing the entrance fee to $30 and annual dues to $25. The resignations of C. Edward Murray and R. R. Whitehead were read and accepted. The board of trustees announced the following nominations for the next year: Com., Edward R. Coleman, schooner Norna; Vice-Com., Brereton Pratt, schooner Flossie; Rear-Com., Robert K. Neff, Jr., cutter Nannie; Sec., A. F. Bancroft; Treas., C. W. Lyon; Meas., S. A. Wood; Fleet Surgeon, S. B. Howell, M.D.; Board of Trustees, J. H. Sloan, A. Colburn, R. K. Neff, Jr., and H. F. Smith; Regatta Committee, A. F. Bancroft, Francis Green, J. A. Lehman; House Committee, W. B. Henry, O. D. Wilkinson, B. Pratt, S. B. S. Barth, H. E. Howell, C. W. Lyon, J. H. Sloan; and in addition to the regular nominees J. L. McDaniel, H. L. Williamson and Thos. D. Whitaker; Committee on Lectures and Entertainments, M. R. Muckle, Jr., C. L. Wilson, E. L. Young; Library Committee, G. M. Freeman, H. P. Lloyd, T. S. Manning; Committee on lines, models and exhibits, C. D. Middleton, C. H. Brock, C. E. Ellis; Law Committee, Wm. B. Mann, J. H. Sloan, W. Wilkins Carr.

SEAWANHAKA CORINTHIAN Y. C.—The annual meeting of the Seawanhaka Corinthian Y. C. was held on Jan. 13, the following officers being elected: Com., George H. B. Hill, schooner Miranda; Vice-Com., Ralph N. Ellis, schooner Iroquois; Rear Com. Henry Stanton, sloop Vandal; Sec., Léon F. d'Orémieulx; Treas., Walter C. Hubbard; Measurer, John Hyslop; Fleet Surgeon, J. West Roosevelt, M.D.; Fleet Chaplain, George R. Vandewater, D.D. Trustees, Messrs. J. Frederic Tams, Walter L. Suydam and J. Langdon Ward. Race Committee, Messrs. M. Morris Howland, William A. Haines, Walter C. Kerr, William H. Plummers and J. Langdon Ward. House Committee, William A. Haines, Henry W. Hayden, Ashton Lemoine, Herbert L. Satterlee and Theodore C. Zerega. Committee on Lectures and Entertainment, Lieutenant Commander Leonard Chenery, U. S. N.; Charles A. Post and J. Frederic Tams. Committee on Lines and Models, Messrs. John Hyslop, A. Cary Smith and William P. Stephens. Library Committee, Messrs. Arthur Pell, A. B. Simonds and T. C. Bronson. Committee on Exhibits, Messrs. John F. Lovejoy, R. Alexander Rutherford and William Whitlock. Law Committee, Messrs. Sidney Webb, Cary P. Rogers and Charles W. Wetmore. The secretary's report showed 140 yachts and 308 members. The treasurer's report showed a surplus of $1,500 for the year.

ST. LAWRENCE Y. C.—At a recent meeting the St. Lawrence Y. C. approved of a scheme which had been prepared by an influential committee, looking to the establishment of a permanent summer club house and sanctioned the purchase of a building site. This has been done and a beautiful piece of ground, with a frontage of 190ft. on the waters of Lake St. Louis, has become the property of the club. The lot is situated at the bottom of a beautiful and well-sheltered bay and is almost the center of the very scattered fleet. It is intended to proceed with the erection of a comfortable, if simple, club house as soon as the weather permits and it is hoped that when the season of 1891 opens the club will be settled in its new home. From the nature of the site it will be possible to provide not only a club house but a set of ways, for hauling out and repairing, and provide other facilities for handling yachts, the lack of which have seriously interfered with the growth of yachting about Lake St. Louis. As a result in great measure of the adoption of classification by corrected length a veritable boom in yacht building has been commenced in connection with this club. Five boats, ranging in size from a 30ft. C.L. to an 18ft. C.L. single-hander, are now actually under construction, three others are on the designing board and several others are being talked of.

ELECTION OF OFFICERS.—*Dorchester Y. C.*—Com., William P. Whitmarsh, yacht Mudjekeewis; Vice-Com., W. H. Swift, yacht Marion; Sec'y, H. W. Smith; Treas., Omar F. Loring; Meas., George Mans. Directors: W. H. Canterbury, George E. Curry, Laban Pratt, Hartford Davenport, James E. Swan, W. W. Whitmarsh, the Com. ex-officio. Regatta Committee: F. C. Blanchard, yacht Flora Lee; C. E. Bockus, Jr.; H. W. Burr; D. H. Mason, yacht Meteor; J. F. Small, yacht Ustane. House Committee: Walter S. Fox, W. S. Nickerson, Henry D. Wing. Membership Committee: G. B. Carter, George H Collyer, Charles B. Peer, F. W. Porter, H. W. Smith. *Hudson River Ice Y. C.*—Com., Henry F. Allen; Vice-Com., John E. Drew; Sec'y, Henry Newton; Treas., R. V. Freeman; Fleet Surgeon, Dr. Ambrose W. Becker; Meas., Robert Murray; Stewart, John T. Hufnagel. Board of Trustees: W. S. Bingham, B. Alexander, Joseph Stilger, August Buckholdt, Conrad Roth. *Dauntless Y. C.*—Com., John Clark; Vice-Com., Frederick Heins; Sec'y, Frank Van Winkle; Treas., Charles A. Cordner; Meas., E. L. Jones; Trustee, John Flaherty.

AMERICAN OWNERSHIP OF FOREIGN-BUILT VESSELS.—Senator Frye, of Maine, last week introduced in the Senate three important bills relating to the American ownership of foreign-built vessels, one of which relates especially to yachts. According to the brief reports, a duty of $30 per gross ton is to be imposed on all such yachts that have been for more than six months in American waters, while tonnage dues of $1 per ton will be exacted at each American port. A fine of $30 is imposed on any yacht not a documented vessel of the United States which shall fly the American flag. We hope to obtain the full text of all the bills shortly.

ICE YACHTING.—As usual, the ice yachtsmen are ready, and racing will begin as soon as the weather permits. From the drawings and description of an English ice yacht in the last issue of the *Field*, we should say that English ice yachtsmen might learn a great deal in construction from a study of the Poughkeepsie craft built by Mr. Buckhout, the leading builder of these craft. On Jan. 13 a handicap race for the Kidd pennant was sailed on Orange Lake, over a 10 mile course in a west wind, Cold Wave, Com. Higginson, winning out of five starters in 25m. 57s.

THAT 90FT. BOOMLET.—Mr. W. H. Langley has declined the honor of being the prospective owner of an Ellsworth 90 and proposes to do little yachting next season.

U. S. NAVAL INSTITUTE.—The quarterly number of the Proceedings of the U. S. Naval Institute contains a very interesting paper on the protection of the hulls of vessels by lacquer, by Lieut. J. B. Murdock, U. S. N. Other papers treat of the system of naval training and discipline required to promote efficiency and attract Americans, and on a study of the movements of the atmosphere.

GREAT HEAD Y. C.—This prosperous club, established in 1884 at Winthrop, near Boston, will soon occupy a fine new club house with a stage 14×26ft., a hall 52×47ft. a bowling alley, billiard room, and many other conveniences. The house will be on a stone wharf, with deep water at all stages of the tide.

AUXILIARY NAPHTHA YACHTS.—Two of the fleet of the New Haven Y. C., the centerboard sloops Marguerite and Ceres, will be fitted with 10 H. P. naphtha engines this winter.

CORINTHIAN MOSQUITO FLEET.—The annual meeting of the Corinthian Mosquito Fleet will be held on Jan. 19, at 8:30 o'clock, at the Sturtevant House, 29th street and Broadway, New York.

CHANGES OF OWNERSHIP.—Nirvana, keel sloop, has been sold by Wm. Buchanan to John Moller. Milicete, c.b. cutter, has been sold by A. B. Turner to J. Abbey, of New Bedford.

DORCHESTER Y. C. FIXTURES.—Club races, June 27, July 11 and Aug. 29; open race, Saturday, July 25. Other events will be announced later.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

Officers:

VICE-COM.: C.V.Winne, Albany, N.Y.
REAR-COM.: T. P. Gaddis, Dayton, O.
PURSER: Howard Brown, Albany, NY
EX. COM.: J. K. Bakewell and H. M. Stewart.

NORTHERN DIVISION.

Officers:

VICE-COM.: W. H. Cotton, Kingston.
REAR-COM.: J. C. Edwards, Lindsay.
PURSER:
EX. COM.: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION.

Officers:

VICE-COM.: J. W. Cartwright, Jr.
REAR-COM.: G. L. Parmele, Hartford.
PURSER: R. Appollonio, Winchester.
EX. COM.: Paul Butler, E. S. Towne and Sidney Bishop.

ATLANTIC DIVISION.

Officers:

VICE-COM.: I. V. Dorland, Arlington
REAR-COM.: E. D. Anderson, Trenton
PURSER: Rich'd Hobart, Newark, N.J.
EX. COM.: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

FIXTURES.

FEBRUARY.

6. Canoe Reunion, Harvard Rooms, New York.

JUNE.

6. Hoisting Sail Competition, Brooklyn. 13. New York, Annual, S. I. 27. Brooklyn, Ann., Bay Ridge.

JULY.

11-26. W.C.A. Meet, Ballast Island.

AUGUST.

6-27. A. C. A. Meet, Lake Champlain.

AMATEUR AND PROFESSIONAL.

THE question of defining an amateur in canoeing has been thoroughly discussed without a satisfactory conclusion being reached, as in many cases the letter of the rule may be infringed while observing closely the spirit, and conversely, no one having yet suggested a rule that covers all classes of racing under both sail and paddle. The last case that has come up, however, seems a very clear one, the offender being in every way a professional, and not in any sense an amateur canoeist.

Mr. E. A. Rappaleye, the "*Mail and Express* canoeist," applied for membership last spring in the American Canoe Association, and being unknown to the members his name attracted no attention, and was not objected to. Mr. Rappaleye, at the time of joining the Association, was not a canoeist, and had done no canoeing, but as it now appears, he had in view the very much advertised cruise which has lately brought him into notice. In connection with this cruise, the expenses of which were defrayed by the *Mail and Express*, a number of cash prizes, amounting to about $600 in all, were offered by the paper for various achievements, including the novel one of scalping, several of them being won by Mr. Rappaleye, who has pocketed openly the cash, amounting to $310. The fact that the whole competition was a bogus one, amounting simply to an advertising dodge, only serves to aggravate the offense, and under the circumstances Mr. Rappaleye's resignation from the A. C. A. would no doubt be very promptly accepted.

The line between the amateur and professional has always been very loosely drawn in one direction in the A. C. A.; the fact that a man depends on canoeing for his livelihood, that he builds or deals in canoes, does not bar him from membership so long as he is a gentleman and a canoeist. From the earliest days of the sport in this country it has included among its followers a large number of journalists and writers who have cruised and written of their cruises, but in a very different way from that of the "*Mail and Express* canoeist." The fact that a man buys or accepts a canoe for use in his business as a reporter or advertising agent by no means makes him a canoeist; and even if it did, he can no more claim recognition as an amateur than the men who sail sloops and catboats off Coney Island with advertisements of soap and patent medicines painted on the sails, can claim to be Corinthian yachtsmen.

A PRIZE FOR HOISTING SAILS.

IN order to encourage a shipshape and seamanlike rig on canoes Mr. Zerega, of the Seawanhaka C. Y. C., has announced a competition for a prize which he offers for the best hoisting and lowering rig for a canoe, the competition to be open to members of the Brooklyn, New York and Passaic River clubs, and to be held at the house of the Brooklyn C. C., Atlantic Basin, on June 6, 1891, from 1 P. M. to sunset. The conditions have not been fully decided on, but will be nearly as follows: At least three canoes must compete; canoes must be afloat and underway, the sails must be hoisted, reefed once and stowed, the boat must be maneuvered under full and reefed canvas, on and off the wind, tacking and wearing. The points to be counted are setting, reefing and stowing sails, qualities of rig as shown in maneuvering, and excellence of design and neatness of finish. The nature of the prize and the full conditions will shortly be announced. Mr. W. P. Stephens has consented to act as judge.

ORANGE C. C.—The annual election of officers of the Orange C. C. took place at their boat house on Passaic River, at West Arlington, N. J., last week, with the following result: C. W. Burrough, Commodore; R. W. Strachan, Vice-Commodore; C. G. Daus, Purser; M. M. Forrest, T. McMullen, and J. M. Lowden, Trustees; G. Manley, A. Crawford, and J. C. Massa, Boat Committee. The meeting was well attended and much enthusiasm manifested.

A CANOE CRUISE DOWN THE SUSQUEHANNA

THIS matter of a canoe cruise down the Susquehanna had been planned and talked over for months back, even during the winter all one could talk about that would be of any consequence, especially to Doctor, was the great trip next season. Winter with its chilly winds, accompanied by snow storms, cold rains and ugly weather in general, soon passed away, and the canoeing season was opened in earnest. Notwithstanding the heavy flood throughout the country in June, we still had the month of July to enjoy canoeing. In this we were not mistaken, as we had nice weather during the whole month. August was now upon us and preparations for the trip were renewed with interest. The days were soon numbered, and on the night preceding the 10th of August we all assembled to arrange our kits and to make all necessary preparations for a good start on the morrow.

There we all were, Doctor, Mac, Ed, Commodore and myself, sitting around the table in the club house arranging our lists, so as not to have too much of one thing and not enough of the other, as we intended to mess together. We left the club house that night with very poor hopes of favorable weather, as not a star was visible, nor the moon, although it was time for her to appear.

Aug. 10.—Saturday morning loomed up with a slight rain that made us feel anything but joyful. Toward the middle of the morning the clouds faded away, allowing the sun to shine forth, which made a day as beautiful as a canoeist could wish. The canoes were all packed, and by 3 P. M. we were all ready for the start. Just at this time Mac broke in upon us with word that we should start, as business delayed him, and saying that he would meet us at Middletown.

After being photographed by Doctor, the amateur photographer, with his detective camera, the remainder started from the shore under a stiff ash breeze. The run from home to Poplar Island, opposite Middletown, was made in two and a half hours. It was uneventful, save that while opposite Steelton, three miles below Harrisburg, Ed lost the Doctor's tin cup, which worried the Doctor terribly; but, as is his nature, he soon cooled down and looked at it in a different light, more we judged because he had to.

In our course down the river we stopped on the upper end of Poplar Island. Commodore got out and went up to the house, when from around the corner came two little urchins, their pantalettes protruding from their dresses, looking as if they had just been interrupted in baking mud pies.

They at once set up a cry of "Oh, mam, lookee here, see them little boats." About this time "Mam" appeared from her daily work with an axe in hand, as she had just finished cutting wood for supper, accompanied by a large, fierce-looking animal about six hands high, whose sole occupation seemed to be to pay considerable attention to our commodore, who, feeling somewhat nervous, kept one eye on the dog and looked at "Mam" with the other. Getting in her good graces he backed down the island so that he could look at the dog; as he afterward remarked, he never saw such a nice animal. After settling in our canoes we paddled to the lower end of the island and there struck camp. Ed got on shore, and the first thing he saw was a garter, not being content till he had searched for the owner, but she or he was absent. I, although not the owner, was presented with it, and for its preservation as as a relic of the camp it decorated my pennant. Unpacking our kits, Doctor and I strung our hammocks, while Ed pitched his tent and the Commodore hunted firewood for supper.

First making preparations for our night's rest, Doctor and the Commodore went up the island to interview "Mam" for milk, while Ed and I amused ourselves carrying logs for the night's camp-fire. About this time the boys appeared with buckets full of milk—from the pump—with which we had to be contented. All hands began getting things in shape for supper, and we were about sitting down to our repast of fried eggs, potatoes, coffee, bread and butter, pickles, cold ham, crackers and cheese, when on looking up the river we saw Mac with sail set making for the island, as a light breeze had sprung up. The whole camp began operations on the table, and it was soon cleared of its contents. Clearing up and making prepartions for the night, we boarded our canoes and paddled over to Middletown. The moon was riding high in the heavens, and the night consequently was turned into day. We ran up the Swatara Creek, and landing on the bank we rushed into town, Mac carrying a large tin bucket for ice.

Our first desire after getting into the town was to strike for an ice cream saloon, and after scouring the place we found one and satisfied our desire. From there we visited a dozen or more tin shops in search of a tin cup for Doctor, and finally replaced the lost one by a ladle. The Doctor having too large a growth of hair upon his pate, succumbed to our teasing to get it cut, and after the operation we resorted to our canoes and paddled across to camp.

Replenishing the camp fire, Mac and Ed turned in, while the Doctor was down on the shore in Mac's canoe, grumbling and making quite a racket about his photographs; the Commodore and myself being busily engaged writing our logs. The camp retired about 11:45, although the Doctor and I could not rest in our hammocks, and had to resort to our old way of sleeping on the ground, toes to the fire, where we quietly slept till morning.

Sunday, Aug. 11.—The Doctor and I arose at 6 A. M., and after a good bath we aroused the others. As a man had landed on the island preparatory to going to the other side of the river after milk, we induced the Doctor after many entreaties to go along.

During his absence we got breakfast and were ready to eat when he came back. Clearing up we packed again for a good start, and were ready in a short time, with the exception of Ed, who had to tarry awhile to polish his canoe—his usual occupation. Moving down the river we went through Middletown Ripples in fine style, taking them about mid-distance from the shores, and 50ft. to the port of a large black rock. The run to the island at the head of Conewago Falls was without interest, comparatively smooth all the way.

Reaching the lower part of the island, we all got out and walked down to the end, at which place we had an elegant view of the falls.

The waves roll and bound over the rocks, throwing the water seven and eight feet into the air. The falls were terribly fierce, but all of us were somewhat disappointed, as they had been pictured to us much more formidable than they were. The Doctor took several views of the falls, also as we were astride a rail fence gazing intently he caught a rear view of us. He wanted to go through the rapids, or at least said he did, but as he was the only one who wanted to make the run, we decided, as we had no way of digging a grave and as his body would be too much trouble on our hands, that he had better postpone it.

Walking back and embarking, we crossed to shore at a point some 50yds. above Falmouth Station, making a portage up a bank 18ft. above the water's edge into the canal, which took us a half-hour.

After a paddle of ten minutes down the canal we encountered a lock, and, as we were all opposed to portages, Ed. was elected to go up and see the lock-keeper. He negotiated with the old gentleman, and talked and talked, but all in vain, as he would not lock us through on a Sunday.

Of course, there was nothing else to do but to make a carry, which consumed another half hour. Commodore started off ahead, and when he had covered about 100yds. he got out and went to see the middle of the falls, which are visible from the canal. We all followed suit, and it was well worth the climb over the numerous boulders to see the waves leap and dash over one another in their mad rush through the narrow channel, impressing upon one's mind a view never to be forgotten. Numerous photographs were taken both of the enormous rocks and of the main channel of the rapids.

We proceeded back to our canoes and paddled to the lock at Collins station, where we again tried to be passed through, but were subject to another disappointment. Just at this point we made a carry of 150yds. to the river. That portage made us remark that it would be the last one we would make. We got into nice water at this place, with a good north wind, but decided not to hoist sails as rapids were ahead. The boys, with the exception of the Doctor and I, paddled straight ahead, but we floated and enjoyed ourselves on the milk left from breakfast.

I put in a spoon and while passing Bainbridge, a few miles below Collins, caught a very fine bass. We passed Bainbridge to the right of the island, and while we four ran on down Mac paddled over to the York county shore and hoisted sail, as he had it in the bottom of his canoe and could not get it out to hoist it on the way.

One half mile below Bainbridge we struck Chestnut Ripples and ran them through the channel about 150yds. from Lancaster shore. Running these successfully we floated to watch Mac come through with sail set, but seeing him make the run in good shape we crossed over at the head of a small island and ran the second Chestnut Ripples toward the York county shore; by taking this course we avoided a large drop to the left of the island. This was our first large rapid since the start and the canoes acted like old veterans, tossing upon the waves, sometimes being almost out of sight and then again bobbing up serenely on the crest of the next wave. Some water was shipped, but of no consequence. About one-quarter of a mile below this rough water we all tried our voices on Echo Mountain and ran in on shore to get a drink at a mountain stream.

It was now about 2 P.M., and we were all getting tired and hunry on account of our portages, and the general cry was for a camping place. Commodore said we would camp at Wild Cat Falls, but when Wild Cat was reached we found no suitable place so kept on down hunting a nice place, but found the bank muddy and no farmhouse for reinforcements in the way of eatables. We paddled along the shore, amid the grumbling on all sides, but were kept amused by Mac in his endeavor to sail and trying to see how near he could come to unsetting without doing so. We next found ourselves opposite Marietta, two miles below Wild Cat Falls, and still on the hunt. We now passed Chickies, which is situated opposite the end of the mountain. Here we had slight ripples all the way to the head of Columbia Dam.

Commodore said we would camp on the island in the dam, above the bridge, but when we ran the noses of our canoes on the shore we found it in the possession of about 25 fellows, enjoying themselves on numerous beverages. After that reception we decided to go further and paddle over to the Columbia Canoe Club house and landed. We all went up in town and had a slight lunch, and while the Doctor, Commodore and myself went to the post office, Mac and Ed got some ice.

We then found out that there was a good camping place at a picnic grounds just opposite. Commodore and Ed started across the dam, while Mac, Doctor and myself got in tow of a ferry steamer which took us across in a short time. We were carried up to the steamer's landing and had to paddle down. Meeting the other two we paddled up a small creek in hopes of finding a camp, but were again disappointed. Returning we decided, after a council of war, to make another portage over the dam. It was now 6 P. M. and we were nearly starved, as well as broken up in general. We accomplished the portage in a half hour and got into our canoes again. About 50yds. below the breast of the dam we encountered a small rapid, but ran it successfully, and straightway heading for Mud Island we established camp. The spot was a resort for shad fishermen, and we found it an excellent place. We all carried our canoes up on shore, and then made preparations for something to eat.

We cooked our supper in an old stove that was on the island, and soon sat down to a repast of biscuits, bread and butter, preserves, cold ham, pickles, boiled potatoes (two kinds), roasting ears, beef and coffee. Our meal was eaten by the light of the lanterns, as it had begun to grow dark by the time were half finished. The way we went at that table of eatables was a caution, as we had had nothing to speak of since 7 A. M., having made 22 miles of a run not counting portages and stops. After clearing away the dishes, as that was all that was left of our supper, we prepared our cots for the night. We, all being tired, decided not to hunt wood for a camp-fire, but instead turned in as it was getting late.

The night was cold, and about 4 A. M. I had to get out of my hammock and hunt wood for a fire, and then came near freezing in my tracks. Getting warm at the fire, I then bunked with Commodore and Mac in the tent, saying to the Doctor, who was still in his hammock, that such an article was no place for me on a night.

Monday, Aug. 12.—We arose at 7:30 and soon had breakfast under way, while I trolled, but had no luck. After breakfast the Doctor, Commodore and I crossed to the shore and walked up the tow path to Wrightsville and then crossed the river to Columbia. Making some purchases we got in the ferry steamer and crossed the dam. Walking down the tow path to opposite the camp we whistled for Mac, as he had promised to come across for me. After making ourselves tired we three got in the Doctor's canoe, which he had left over, and crossed to the island. We found the fellows pretending to be asleep under a tree and Mac said he did not hear us, but, of course, we had to doubt his veracity.

Taking a lunch we immediately got under way at 2 P. M., and kept to the York country side of the river till we reached a point opposite Turkey Hill, about five miles below Columbia, where we crossed to the opposite side. The Doctor took the lead, as the Commodore had appointed him pilot, and now the sport began, as we were aware of the fact that we had 25 miles of rough rapids to go through.

The Doctor struck the channel, but Ed struck on a rock and was thrown out. Mac went through all right, but the Commodore and I got out on shore to take a survey. By this time Ed was standing on a rock holding his canoe, and muttered in a queer tone that could be heard above the roar of the rapids, "What shall I do?" Finally he got in and ran through nicely. The Commodore and I started, and when about 100yds. below I ran over a rock and the wave filled me up, swamping me entirely. I struck for shore and bailed out, while the rest of the fellows laid by. We again started and encountered more rough water, as the river is a mass of boulders and the water running at a very high speed, making elegant canoeing.

Safe Harbor, 10 miles below Columbia, was reached in short time, and at several places the camera was brought into use, as the scenery was magnificent. The course of the mountain stream can be seen for 200ft. trickling down the huge mountain sides, making miniature falls that flash in the sunlight like so many mirrors. At almost every one of these streams we stopped to taste of the cool, refreshing water.

Our course now lay through a country of wild, fascinating scenery, the river running at the base of a very high mountain, with the Port Deposit & Columbia Railroad between on the left, and to the right nothing could be seen save boulders of every description, large and small. The water at this point was quiet, and as we had experienced some of its kind before, we knew that something in the shape of a fall in the river or heavy rapids were before us, and we had not long to wait, for rounding the bend, we heard the roar of the noted Eshelman's Falls, about one and three-quarter miles below Safe Harbor and 1,000ft. above Shenk's Ferry. We ran down about 50yds. above the falls, and then Doctor and I got out and walked down the railroad to look them over to find a good channel.

There are two channels at this place, the one inside along the left shore being very quiet but rocky; while in the rafting channel the water was running at a terrific speed, and the waves as they dashed over the rocks were thrown 5ft. in the air. As Doctor and I sat on the bank talking it over, our Commodore came along and joined us. At last the Doctor got up with the exclamation that he was going to run the raft channel or something serious would happen. Sliding down the bank, we got into our canoes and paddled for the middle to make a good run, and as we went down Doctor took the lead, I next, and Ed and Mac following. But when Doctor struck the first breaker he was shut out from sight, and when he reappeared I saw him in the wake, canoe bottom up, to which he was holding, trying to battle the current and waves. At that moment I gave up, as I knew if he had turned over in his decked canoe, I could never get through without doing the same in an open one. So, as I went down I resigned myself to fate, and cutting the waves they dashed over, the water completely covering me; but when I came up I was very much surprised to find myself on even keel, but filled up to gunwale. With a strong left-hand stroke of my double blade I sent the old Tru-de into the eddy of a large rock and ran her nose into a clump of grass, jumping out into the water waist deep. Then I heard Doctor call to me to try and do something for him, and tearing off the oil cloth on my deck I got a piece of bell cord. Swimming out to a smaller rock I stood up and threw it to him. It fell short. I again coiled it and threw it once more, the eddy helped him toward me, and this time he caught the rope and made it fast. After a short struggle we landed on the rock high and dry. TRU-DE.

[TO BE CONCLUDED.]

G. LIVINGSTON MORSE.—On Jan. 12 Mr. Gilbert Livingston Morse, one of the founders of the New York C. C., died very suddenly at his residence in Yonkers. Mr. Morse, who was a nephew of Prof. S. B. F. Morse, was born in New York in 1842, graduating with high honors from the College of the City of New York in 1863. Since this time he has been engaged in business in New York, being connected prominently with many important enterprises. With his cousin he built the handsome Morse building in Nassau St. Mr. Morse began his canoeing about 1870, in company with Aiden, the Schuylers, Dr. Mosher, Norton, Judge Smith and a few others, and was a charter member of the New York C. C. He owned the big canoe Rosalie and afterward the Walrus, and in them made a number of long cruises. As a member of the Alpha Delta Phi fraternity of his college he was a visitor at the old Camp Manhattan on Lake George, and when the A. C. A. was organized near the same spot he at once joined, attending the early meets, his hearty genial presence being one of the pleasant memories of the meet of '81. He was no less prominent in rifle shooting than in canoeing, being one of the organizers of the Amateur Rifle Club, of New York, and later Inspector of Rifle Practice in the 5th Brigade, with the rank of major. As a member of the Yonkers Rifle Club he was foremost in the establishment of the Morsemere Range. He also gave a part of his time to photography. In Yonkers, where his home, Morsemere, is situated, he was prominent in the church and Sunday school as well as in public life, holding various local offices. Mr. Morse leaves a wife and eight children.

THE CANOE REUNION.—The date of Friday, Feb. 6, has been finally decided on for the reception to be held at the Harvard Rooms, 42d street and 6th avenue, New York.

NEW YORK C. C.—The New York C. C. has selected June 13 as the date for its annual regatta. The club house has been repaired and towed back to Staten Island.

CANOEING IN ENGLAND.

Editor Forest and Stream:

Those of your readers who have kept up with English canoeing literature are no doubt quite familiar with the hostile attitude which Mr. Baden-Powell has always adopted toward the British Canoe Association. His arguments, however, have never been sufficiently powerful to injure the Association or to prevent canoeists from all parts of the United Kingdom, principally members of the R. C. C. and other kindred clubs from joining its ranks.

We are told by Mr. Baden-Powell that the Association holds only a small percentage of British canoeists. This, of course, is a matter of opinion, but it may interest your readers to know that after a three years' existence the B. C. A. numbers within a very few the same members as the R. C. C., and as I have already stated, its members are in the majority of cases, members of existing clubs. I may emphasize my remarks by pointing out that on the same page of your issue that Mr. Baden-Powell's letter appears, is an account of the R. C. C. challenge cup. I observe in the list of entries that out of twelve, six are by members of the B. C. A., and out of the six who really sailed the race, four belonged to the Association. The only leading canoeist in England who objects to the Association is Mr. Baden-Powell himself. The Association was formed to provide that which existing clubs in England have never succeeded in doing, namely, encouragement for cruising. It has certainly no "racing definitions," inasmuch as racing was specially excluded from its programmes in order that no interference might be offered to the legitimate functions of existing clubs.

As regards qualification for membership, it is not imperative any more than in R. C. C. or any other club that a member should be a canoe owner. So far as the latter part of your correspondent's letter is concerned, I will leave your American readers to discover the fallacies for themselves. On a question of racing machines I will not attempt to cross swords with Mr. Baden-Powell, but will allow that he is *facile princeps;* on questions of cruising, however, his authority, except as a prolific newspaper contributor, is not considered great.

H. WILMER, R. C. C., Vice-Com. B. C. A.

STRATFORD, Jan. 1.

W. C. A. EXECUTIVE COMMITTEE.—The meeting of the Executive Committee of the W. C. A. was held on Jan. 10 at the Wellington, in Chicago. It was decided to hold the annual meet at Ballast Island from July 11 to 26, inclusive. A dinner was given in the evening by the Chicago C. C., the following canoeists being present: Geo. W. Gardner, G. H. Gardner, Cleveland; Geo. B. Elfard, Chas. Weeks, H. D. Crane, C. J. Stedman, T. T. Gaff, Cincinnati; O. A. Woodruff, W. H. Crawford, Dayton, O.; T. J. Kirkpatrick, Springfield, O.; H. D. Spencer, Bloomington, Ill.; S. B. Mettler, G. G. Case, John Helmer, Jackson, Mich.; Col. J. W. Bartlett, Fremont, O.; H. C. Mense, Peoria; J. H. Ware, C. W. Lee, J. B. Keogh, A. W. Kitchen, W. M. Dunham, N. H. Cook, Dr. C. H. Matson, P. F. Munger, R. P. Marks, D. M. Lord, D. H. Crane, N. B. Cook, G. M. Munger, G. Hessert, Jr., F. S. Waters, H. B. Cook, E. S. Shaw, C. S. Stevens, Wm. Lewis. Mr. Hough, of the FOREST AND STREAM, who was among the invited guests, was unable to be present on account of illness, so that no full report of the meeting has yet reached us.

BROOKLYN C. C.—The annual dinner of the Brooklyn C. C. was given at the comfortable quarters of the Crescent Athletic Club on Jan. 12, Com. Rudd presiding. A number of guests were present, including Vice-Com. Dorland, of the Atlantic Division, and Purser W. H. Brown, of the Central Division. The house of the club, at the Atlantic Basin, was lately roobed by boys residing in the neighborhood, all of whom were apprehended. The value of the articles taken was small, but all the lockers were broke open.

RUSHTON CANOES AND BOATS.—We have received from Mr. J. H. Rushton, Canton, N. Y., a new and handsome catalogue of the large line of canoes and boats built by him. Within the past two years many minor improvements have been made in the various models and the methods of construction, which have advanced these long popular boats to still greater favor. The catalogue includes a large line of sails of all patterns. Mr. Rushton has lately added the Butler steering gear and mizen traveler to his list of fittings.

THE MEET AT JESSUP'S NECK.—A member of the A. C. A. who has lately spent some time in the vicinity of Sag Harbor, states that the townspeople of that ancient port estimate that at least $4,000 was spent there by members of the A. C. A. during the two weeks of the meet. It is needless to say that they would welcome another meet at Jessup's Neck.

CRESCENT C. C.—The destruction of the Cresent C. C. house at Greenville, on Newark Bay, is attributed to tramps. The house, which was insured, will be rebuilt by spring. About half of the canoes had been removed when the house was closed, and of the others all but two were insured.

KNICKERBOCKER C. C.—At the annual meeting of the Knickerbocker C. C. on Jan. 8, the following officers were elected for the ensuing year: Com., Lafayette W. Seavey; Vice-Com., Frank C Moore; Treas., James R. Steers, Jr.; Sec., James K. Hand; Measurer, Dudley D. Gessler.

DIMPLE NO. 4.—Through an oversight we last week credited the building of Dimple No. 4 to Mr. Joyner; the canoe was not built by him, but by the St. Lawrence River Skiff, Canoe and Steam Launch Co., who deserve the credit for her handsome appearance and neat workmanship.

A. C. A. MEMBERSHIP.—Eastern Division: J. Arnold Wright, New Bedford, Mass.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. B., Topeka, Kas.—You had better advertise.

J. G. L.—What would be the effect of castration on a foxhound now two years old. Would it diminish his courage, endurance and desire for hunting game? Ans, It is apt to make him fat and lazy.

H. V. S., Dublin, N. H.—Please give me the address of the secretary of the Brunswick Fur Club; also the address of W. Walling, who entered fox beagles at the Brunswick Fur Club trials, Nov. 10, 1890. Ans.—J. H. Baird, Auburndale, Mass.; he can also give you Mr. Walling's address.

J. R. A., Philadelphia.—At a recent contest a bird was gathered on the boundary fence; whether that bird is a "dead bird" or a "lost bird" would decide the match. The umpire decided that it was a "lost bird." Was this correct? Ans. If the bird was gathered within the boundary line, without reaching over the line, it was a dead bird.

CONSTANT READER, Hartford.—In New England and many other States the ruffed grouse is commonly called partridge. In Maryland and some other States the quail is called partridge. In some districts the ruffed grouse is called pheasant. To answer your query then, we can only say that the partridge is in certain regions the same bird as the grouse.

F. W. G. J., Sorel, P. Q.—I have some English setter pups, whelped Dec. 20, and am desirous of training two of them as described in "Training vs. Breaking." The climate here is very severe in winter, much like Minnesota and Dakota, and am therefore keeping the youngsters for the present in the house. When would it be safe to put them outside? Could I put them in a stall in an unused stable, with plenty of straw, and if so at what age? They are all well and strong. Ans. In this you must use your own judgment to a great extent. If the pups are still suckling we should think they would be warm enough, with her, to be put in the barn when a month old. You will find that a large dry goods box set in the stall, with plenty of bedding and an opening made in it just large enough for the bitch to crawl through, will keep both mother and pups warm in the coldest weather. The lid of the box, of course, nailed down.

TARPON FISHING.

Anglers contemplating a trip to Florida this coming season will find it to their advantage to inspect our celebrated

Tarpon Rods, Reels and Lines.

The largest tarpon (184 lbs.) ever killed on a rod and reel was taken with one of our Noibwood Tarpon Rods. They are pronouuced **"PERFECT"** by all who have used them.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

Theory of the Steam Engine.
Boiler Efficiency.
Boiler Mountings.
The Engine and its Parts.
The Screw.
Laws Applicable to Steam Yachts.
Extracts from Lloyd's Rules.
Racing Steam Yachts.
Management and Care of Machinery.
Principal Types of Yacht Machinery.
The Design of Hulls.
Addenda: Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

Scientific Education of Dogs

FOR THE GUN.

A new work by an English writer, "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in Forest and Stream says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."
